NOTICE is hereby given pursuant to R. S. O. 1897, Chapter 123, section 38, that all creditors and others having claims against the estate of James Watson, late of the Township of Richmond in the County of Lennox and Addington, deceased, are required on or before the 23rd. day of May A. D. 1906, to send by post prepaid or to deliver to John English, Solicitor for the Executrix of the said James Watson, their names and addresses and a full statement and particulars of their claims and nature of the securities, if any, held by them.

And further take notice that after the said 23rd. day of May A. D. 1906, the said Executrix will proceed to distribute the assets of the said deceased among the parties entitled thereto, having regard only to the claims of which she shall then have notice and that the said executrix will not be liable for the said assets or any part thereof to any person or persons of whose claims notice shall not have been received at the time of the said distribution.

JOHN ENGLISH, Solicitor for the Executrix.

Dated at Napanee, this 23rd. day of April, A. D., 1906.

PUBLIC NOTICE

Notice is hereby given that a By-law will be passed at the next meeting of the Municipal Council of the Corporation of the United Townships of Denbigh, Abinger and Ashby, for the establishing or adoption of the following portions of Public Roads.

1.—A portion of a Road to be located on or near the line between Lots Number Three and Four, in the Tenth Concession of the Township of Abinger.

2.—One Road starting on the Road known as the Swamp Road, running in a westerly direction and crossing Lots Number Seven, Eight, Nine, Ten, Eleven and Twelve in the Fourteenth Concession of the Township of Denbigh.

3.—One Road starting on the Glenfield Road and running in a westerly direction, crossing Lots Number Seven, Eight, Nine and Ten, in Third Concession of the Township of Denbigh.

Any person interested, objecting to the establishment of the above described Roads is requested to file a statement containing valid reasons for his objection with the undersigned, on or before the First day of June 1906.

PAUL STEIN, Clerk, Denbigh, Abinger, and Ashby.

Dated at Denbigh this Fifth day of April, A. D., 1906.

CAN YOU GUESS THE ONE BRIGHT SPOT IN NAPANEE.

Hand in your guess at **LAWRASON'S - DRUG - STORE.**

First One Guessing right **RECEIVES REWARD.**

HIGHEST AWARD ST. LOUIS, 1904.

NORWAY'S LOAN SYSTEM.

To encourage working people to establish homes of their own, Norway has founded a bank for workmen. It lends money at 3½ and 4 per cent., and gives the borrower 42 years in which to pay the loan. The total cost of the house must not exceed \$800, and the area of land must not be more than five acres.

Sunlight Soap is better than other soaps, but is best when used in the Sunlight way. Buy Sunlight Soap and follow directions.

It was the first time little Bess had seen an alligator. "Oh, mamma," she exclaimed, "here's a big lizard with a valise skin on!"

FEROVIM, WHAT IS IT? It is the name of the best tonic. It builds up the system, gives new life, makes people well and strong. Be sure you get the genuine "Ferovim."

Visitor to farmer's boy in the field: "Digging potatoes—eh?" Farmer's Boy: "Yes." Visitor: "And what do you get for digging the potatoes?" Farmer's Boy: "Nothing. But I get somethin' for not diggin' 'em!"

The Iceman's Troubles.—"My business," says John Gray, ice dealer, of Wingham, Ont., "is one of the most fertile fields under the sun for sowing the seeds for rheumatic suffering. For five years I was a great invalid, words cannot convey the faintest idea of my intense suffering and constant pain I endured. 6 bottles of South American Rheumatic Cure permanently cured me."—146

Teacher: "Tommy, what are 'household words'?" Pupil: "Tommy, if you don't behave yourself I'll skin you!" They're the words I hear the most when I'm in the house."

A cough is often the forerunner of serious pulmonary afflictions, yet there is a simple cure within the reach of all in Bickie's Anti-Consumptive Syrup, an old-time and widely recognized remedy which, if resorted to at the inception of a cold, will invariably give relief, and by overcoming the trouble, guard the system from any serious consequences. Price 25 cents, at all dealers.

Stella: "So you are really going to marry old Milliums? I had no idea you were so mercenary!" Maude: "I am not. I am going to marry him to reform him." Stella: "Reform him? I didn't know he had any bad habits." Maude: "Yes, he has one. His friends say he is miserly."

They Drive Pimples Away.—A face covered with pimples is unsightly. It tells of internal irregularities which should long since have been corrected. The liver and the kidneys are not performing their functions in the healthy way they should, and these pimples are to let you know that the blood protests. Parnelee's Vegetable Pills will drive them away, and will leave the skin clear and clean. Try them, and there will be another witness to their excellence.

LONDON'S TOLL OF FIRES.

14,000,000 Gallons of Water Used to Put Them Out.

One hundred persons lost their lives and 269 were injured by fires in the County of London, England, last year, according to the annual report of the London Fire Brigade for 1903.

Of those who lost their lives, 46 were under eight years of age, and fourteen over 60. No fewer than 67 persons were dead or had been removed before the brigade was called.

Excluding chimney fires, the total number of fires reported to the brigade was 3,511, or 105 less in the previous year. The number classified as serious was 64, or only 1.82 per cent. of the total.

Thirty-eight lives endangered by fire were saved by the efforts of the firemen. The number of accidents to firemen due to service was 194.

The quantity of water used for extinguishing fires in the County of London during the year was fourteen million gallons, or 62,500 tons. Of this quantity more than one-third was taken from the river, canals and docks, and the remainder from the street pipes.

SPRING ADVICE.

Do Not Dose With Purgatives and Weakening Medicines — What People Need at This Season is a Tonic.

Not exactly sick — but not feeling quite well. That's the spring feeling. You are easily tired, appetite variable, sometimes headaches and a feeling of depression. Or perhaps pimples and eruptions appear on the face, or you have twinges of rheumatism or neuralgia. Any of these indicate that the blood is out of order, that the indoor life of winter has left its mark upon you and may easily develop into more serious trouble. Don't dose yourself with purgative medicines in the hope that you can put the blood right. Purgatives gallop through the system, and weaken instead of giving strength. What you do need is a tonic medicine that will make new, rich, red blood, build up the weakened nerves and thus give you new health and strength. And the one medicine to do this speedily and surely is Dr. Williams' Pink Pills. Every dose of this medicine makes new, rich blood which makes weak, easily tired and ailing men and women feel bright, active and strong. If you need a medicine this spring try Dr. Williams' Pink Pills and you will never regret it. This medicine has cured thousands and thousands in every part of the world, and what it has done for others it can easily do for you.

Medicine dealers everywhere sell these pills or you can get them direct from the Dr. Williams' Medicine Co., Brockville, Ont., at 50 cents a box or six boxes for \$2.50.

KAISER'S IRON DISCIPLINE.

Army Officer Who Neglected to Pay Debt Severely Punished.

A young lieutenant recently found that he had no money with him while dining at a Berlin restaurant, and bor-

KAI WANG;

A TALE OF SOUTHERN CHINA.

CHAPTER II.—(Continued).

"The present Emperor is a mere weak puppet in the skillful hands of the Dowager Empress, who, when he dies, will fill his place as she pleases; and, as our friends, the party of Li Hung Chang, are in direct opposition to her, you can see what frightful chances we took when we decided to invade the Sacred City and have the royal seal attached to our papers.

"Kai Wang was our guide, and none other, I believe, could have conducted us safely across the barriers that were intended to shut out the would-be intruders.

"I shall not linger, dear cousin, over this part of our adventure—let it suffice that we penetrated beyond those frowning walls, perhaps the first foreigners who ever saw the secrets of the island palace, certainly the only ones who ever laughed to scorn the devices of the Celestials for strict privacy.

"Yes, we even made our way to the presence of the unhappy Emperor, and our astonishing arrival gave him such hope for a new lease of life that he threw aside his wretched fear of the Empress, and, asserting his royal rights, signed and sealed the documents that meant millions to Dr. Jack, and for which the British-American syndicate will still pay millions to Dr. Jack's widow, for I have saved the papers, and no one, not even the powerful Dowager Empress, will dare dispute the royal seal. So much for Kai Wang and his knowledge of how things should be conducted in the land of the dragon."

Larry had done himself proud thus far, and had almost arisen to heights of eloquence in his burning zeal to tell the salient points connected with his adventure, so that this brave and devoted woman might realize what perils they had faced in their endeavor to carry out the tremendous task which they had assumed.

"It was while we were on our way back to the barrier, intending to leave the sacred city in the same way we had entered it, that we were betrayed by a man in whom we had put our trust, and whom Kai Wang afterward declared must have sold out to the party of the Dowager Empress.

"So we were suddenly set upon by the guard, and everything seemed lost. I saw Jack in the midst of a dozen, fighting like a hero and piling up his foes before him in a barricade—then he went down, and, as I said before, the Black Flags rushed in from all sides with upraised swords.

"Just at that moment I was knocked down myself by Kai Wang, who dragged me off as though I were his individual property; but I shall never forget the diabolical shouts that came from the pirates who swarmed over poor Jack's body.

"How the maker of gods managed to get me out of Peking alive and on board a steamer for Canton I never have learned, but he did it, wonderful fellow that he is, and here at his own house: have lived, recovering from my wounds and waiting for you to come to claim the papers that will give you a fortune, and to mourn with me over the loss of the best fellow in all the wide, wide world."

Poor Larry quite broke down at the finish, and great tears trickled down his cheeks; still Avis maintained her amazing self-possession—the fountain of her

Larry was told to follow him into an adjoining apartment, and when he reappeared a short time later, Avis would have experienced much difficulty in recognizing her cousin only for the old familiar hop and a skip, by means of which he injected himself into the room.

He was now a full-fledged Celestial, and the queue of black hair was so arranged as to completely hide those miserable little blond tufts that projected alongside either ear, so dear to his heart that Larry would have as soon thought of yielding up his life as sacrificing his whiskers.

There is always some weak spot in a man's armor, and with Larry it took the form of a positive adoration for those yellow clutches of hair which he caressed so tenderly, and was wild enough to believe constituted the main force of his claim to the title of a "lady-killer."

"Will I pass muster, cousin?" he demanded as he went strutting up and down on his clogs and putting on all the airs of a mandarin in miniature.

"Admirably, if you keep from speaking. That would be a fatal blunder, you know."

"Just so—stricken dumb as soon as I leave this room until you absolve me. Don't forget now, that is a good girl. How will you go—the same way as you came, cousin?" asked Larry, once more dropping his levity.

"Why not? My coolies are waiting, and they are faithful; yes, they shall bear me to the British consul."

"And I shall be just behind, seated in a Japanese jinrickshaw, where the eyes of the people may see and admit. I should imagine, by Jove, it isn't every day they are able to gaze upon so noble-looking and richly-dressed a mandarin. They'll be rubbing their noses in the dirt before my triumphal progress. Notice this peculiar collar Kai Wang insisted on giving me—the design is unique; but only those in the secret know that it designates the loyal followers of the Emperor, the party of the great viceroy, which the dowager seeks to disrupt for her own personal gains."

"Are we to go now? The evening is not far away, and much needs to be done."

Who could blame her for being eager. This brave soul, who had suffered the most staggering blow that could come from outrageous fortune?

True, her hopes did not amount to more than the mournful desire of looking upon the spot made sacred by her husband's life blood, but even such a motive may assume a force that drives all else before it.

Kai Wang, who seemed proud of his work, bowed and nodded and smiled as he led the way.

Avis could not but marvel what was the secret of this wonderful devotion to Dr. Jack and all that pertained to his fortunes; it was not enough that the Chinaman was also deeply interested in the grand Anglo-American concession which had been so successfully engineered, though at the cost of a precious life it seemed, nor yet that the maker of idols belonged to the party of the great Li; there must be something else, some cause more personal, that bound Kai Wang to the American with such sublime affection.

Who knew better than Avis what a wonderful power there had been in the personality of her Jack? She had her-

way they should, and these plumpies are to let you know that the blood protests. Parmelee's Vegetable Pills will drive them away, and will leave the skin clear and clean. Try them, and there will be another witness to their excellence.

"You couldn't select anything nicer than this bracelet," said the salesman. "I guess I'll take it," said Mrs. Nurich. "Are you sure it's made of refined gold?" "Oh yes," "Because I do detest anything that ain't refined!"

Apoplexy. — Dr. Agnew's Cure for the Heart is effective in apoplectic symptoms. If you have unpleasant dizziness, lightness or sudden rush of blood to the head, take precautions against a recurrence. This great remedy will remove the cause. The press of the land has daily a list of sudden deaths which would not have been chronicled if Dr. Agnew's Cure for the Heart were used.—147

"Is it true Blanche Pouchard is going to be married?" "Yes," to Major Blumman; she lost his arm in an engagement, you know. "Hum! He's certainly lost his head in this case."

For "Run-down" People there's nothing known in medical treatment today so effective and certain of a cure and so magical in its building up power as South American Nerve, because it strikes at the root of all nervous ailments, the digestive organs, makes rich red blood, drives away emaciation, puts on flesh and makes over physical wrecks generally.—148

Clara, aged four, suddenly burst out crying at the dinner table. "Why, Clara, what is the matter?" asked her mother. "Oh!" sobbed the little miss, "my t-teeth stepped on my tongue."

AN UGLY FAMILY of skin diseases is the one generally described by the word Eczema. In all its forms it resists ordinary treatment, but is completely cured by Weaver's Corate used in connection with Weaver's Syrup.

"What has become of the big man who used to beat the bass drum?" asked the private of the drum-major. "He left us about three months ago." "Good drummer, too, wasn't he?" "Yes, very good. But he got so fat that when he marched he couldn't hit the drum in the middle."

It Lays a Stilling Hand on Pain.—For pains in the joints and limbs and for rheumatic pains, neuralgia and lumbago, Dr. Thomas' Electric Oil is without a peer. Well rubbed in, the skin absorbs it and it quickly and permanently relieves the affected part. Its value lies in its magic property of removing pain from the body, and for that good quality it is prized.

Molly—"Have you seen Mabel's engagement-ring?" Dolly—"Seen it? Why, I wore it all last summer."

A father recently received the following note from a young man:—"Dear Sir.—Wood like your doffer Jessie's hand in marriage. She and I are in luv and I think I made a wife.—Yures, Henry." The father replied by letter, saying:—"Friend Henry.—You don't need a wife. You need a spelling-book. Get one and study it for a year. Then write me again."

KAISER'S IRON DISCIPLINE.

Army Officer Who Neglected to Pay Debt Severely Punished.

A young lieutenant recently found that he had no money with him while dining at a Berlin restaurant, and borrowed \$5 from the head waiter. This he failed to repay, with the result that the waiter lodged a complaint, and the lieutenant, it was decided, should be tried by court-martial.

The matter came to the ears of the Kaiser, who, considering that sufficient severity had not been exercised, requested the resignation of all the superior officers of the regiment, including the colonel himself.

The lieutenant had meanwhile gone to England. He has now returned to Germany and has been sentenced to seven months' imprisonment. His brother, who saw him off at Berlin, has been dismissed from the army.

CHILDHOOD'S PERILS.

The so-called soothing medicines contain poisonous opiates that deaden and stupefy, but never cure the little ailments of childhood. Baby's Own Tablets are guaranteed to contain no opiate; they act on the stomach and bowels and thus remove the cause of nearly all the ills that afflict little ones. In this way they bring natural, healthy sleep, and the child wakes up bright and well. Mrs. A. Weeks, Vernon, B. C., says: "I have used Baby's Own Tablets and can cheerfully say that I have found them all you claim for them." These Tablets are good for children of all ages from birth onward. Sold by all medicine dealers or sent by mail at 25c a box by writing The Dr. Williams' Medicine Co., Brockville, Ont.

"Is Mr. Scadds a man of scientific distinction?" "Yes, indeed," answered Miss Cayenne. "He has so many college degrees that when he sends in his card you can't be sure whether it is his name or a problem in algebra."

Got a Constant Headache? — Ten chances to one the secret of your suffering is that "white man's burden." Catarrh. Here's a sentence from one man's evidence for Dr. Agnew's Catarrhal Powder — "One application gave me instant relief, cleared the nasal passages and stopped the pain in my head." It's a quick, safe and sure treatment, and it never fails to cure. 50 cents.—145.

A HUNT FOR GOLD.

Adventurous Expedition to Tierra del Fuego.

An expedition is starting from England on an adventurous quest for gold in the wild and little-known region of Tierra del Fuego, near Cape Horn. Prospectors discovered alluvial gold as far back as 1880, but hitherto the gold mining industry has been of small account. The purpose of the expedition is to dredge for gold, the sands of certain rivers being said to be full of particles of the precious metal, washed down from the higher country.

The vessel to be used in the expedition is a shallow steam barge of metal, capable of carrying five tons of the "golden sand," drawing only two feet of water with a full load. She can steam five knots an hour, and will act as tender to the dredger, carrying the sand to the headquarters of the prospectors to have the gold extracted.

Great secrecy is being preserved as to the expedition, as naturally the discoverers of the "golden rivers" do not desire competition.

It has long been known that gold exists in considerable quantity in Patagonia, and at various times discoveries of the precious metal have been made on the islands to the south of the mainland.

HE COULDN'T.

Mr. Borem — Could I see Miss Fibbs? Maid — Faix! that's what she was wonderin' as ye came across the street. Mr. Borem — Ah! then she's in. Maid — Yes. But she's not at home.

the papers that will give you a fortune, and to mourn with me over the loss of the best fellow in all the wide, wide world."

Poor Larry quite broke down at the finish, and great tears trickled down his cheeks; still Avis maintained her amazing self-possession—the fountain of her tears seemed to have dried up, although her grief had taken on that stony nature which refuses to be comforted and find solace in woman's ordinary resort.

"The ways of Providence are past finding out, cousin, and we may never know why God's hand has been so heavily laid upon us. Others suffer daily just as bitterly—it is the common heritage of man to work and woman to weep, but though I would give much to cry, my brain seems hot and feverish, so that the tears refuse to flow. I am sure you understand. Perhaps I may have the blessed consolation of tears when I look upon the spot where my dear husband gave up his life in the endeavor to win the smiles of fickle fortune."

Larry Kennedy opened his mouth to speak, but no sound came forth—indeed, now that his worst fears had been realized and he understood what mad scheme had entered the mind of his fair cousin, he began to tremble far more than when the murderous emissaries of the Dowager Empress had assailed him hip and thigh, for it was not his own life that seemed in peril, but one more precious—even that of Avis.

"That would be tempting Providence, my dear girl, and surely no good could come of it," he finally managed to say, huskily.

"Notwithstanding the peril, I should be satisfied with nothing less, nor could I know peace of mind in this world if I did otherwise. I do not understand what this strange feeling is, but something within forces me to desire what I have said."

"You may lose your life," he pleaded. "That is a matter to which I give little concern; if my Jack is gone life can never hold happiness again for me. So I beg of you do not waste time trying to persuade me."

He looked at her keenly for a moment and read his ultimate defeat in the firm lines of her face.

"By Jove, cousin, you are the bravest of your sex," he said, with sudden enthusiasm.

"Say rather the most desperate and miserable now," she returned with a sad smile.

"And since you are dead-set in your determination to see the spot where Jack went down, bless me if you shall go to Peking alone," blustered the little man, pulling himself together.

"Larry, I knew you would stand by me."

"On one condition," he said, cunningly.

"Tell me what it is."

"That you go with me to the British consul and see that these papers are placed in his hands. They insure your future—the fortune Jack wrung from adverse destiny. Do you promise, cousin?"

"Wherever you please, only let it be soon," she replied.

CHAPTER III.

When Avis begged Larry to lose as little time as possible in conducting her to the British consul's public office, she had really no idea that he was in a fit condition to force immediate action.

Her own resolute bearing seemed to have aroused the other to renewed life, and he even showed much of his pristine liveliness as he hastened to clap his hands together, after the Oriental fashion, in order to summon a servant.

Kai Wang's presence was needed, for Larry dared not venture upon the streets of the Chinese city in his ordinary dress, since he knew emissaries of the angry Dowager Empress were on the watch for a fellow about his size, and his knowledge of thugs and highbinders in general gave him at least a fair idea as to what would be done with him should these chivalrous secret agents of her imperial majesty chance upon him in Canton's streets.

As usual, the maker of images proved himself to be the man for the emergency.

Idols belonged to the party of the great Li; there must be something else, some cause more personal, that bound Kai Wang to the American with such sublime affection.

Who knew better than Avis what a wonderful power there had been in the personality of her Jack? She had herself experienced it from the very beginning of her acquaintance with the doctor, and had seen him sway many people under the influence of his steadfast will.

There was no time now to consider such matters; all would be made clear in the future, should Heaven smile upon their enterprise, and a safe return be made.

Presently she had again vanished behind the curtains of gorgeous yellow silk, and her stout coolie bearers were heading once more for the region where European customs held sway.

And behind came a jinrickshaw, in which Larry was sprawled in a fashion that might have aroused curiosity and a humorous sensation in the breast of a foreigner, but which appeared to strike the crowds of burden-bearers and loungers in the streets as exceedingly dramatic and majestic on the part of a proud and mighty mandarin, who wore the blue velvet collar, and scattered handfuls of copper cash to the importunate though respectful beggars.

It was fortunate for Larry that his disguise proved to be so effectively constructed, for these same smiling and bowing crowds would have rent the air with their enraged cries had they known the truth, and made it pretty hot around that region for a fraudulent mandarin about his size.

At least he was discreet in so far as he remembered his vow, and through all his expansive smiling not an intelligible syllable escaped his lips.

Strange though the scenes around might be, Avis expressed little curiosity concerning them. Her own sorrow weighed too heavily upon her heart for amusement to find lodgment there.

Thus they wound in and out, heading for that favored island section of the Chinese southern metropolis where European and American progress had brought order out of chaos—where cleanliness could be found, clear drinking water obtained and the ordinary comforts of civilization enjoyed.

Once Avis parted the curtains and eagerly surveyed the scene spread out on one side. They had reached a spot where a fair glimpse could be obtained of the crowded mart from whence they had just issued previous to crossing the canal that separated them from the European section, and the spectacle was bound to appeal even to her depressed state of mind.

It may be conjectured she was not sorry when they left the narrow streets with their swarming tens of thousands behind, and entered upon brighter scenes, where the comfort of present and future generations was the prime consideration, rather than a stilled respect for dead and gone ancestors.

And finally the coolies lowered their burden in front of a building, over the door of which floated the familiar flag of Great Britain.

Avis waited for Larry, who was close at hand, and it was a sight for the gods to see the eccentric and polite little mandarin assisting the veiled lady from her vehicle of transportation.

At least one pair of eyes in the consulate building viewed the highly dramatic proceedings with considerable amusement.

Thus Larry escorted his cousin into the public offices where the business was carried on.

Fortunately, just at this hour there chanced to be a dearth of ship captains and English travelling merchants at the consulate, looking after their invoices, so that the opportunity seemed favorable for a speedy transaction of the business that had brought them hither.

Once under the beneficent shelter of that friendly flag, Larry no longer deemed it necessary to carry out his part as a mandarin; he even indulged in a few sly tugs at the ridiculous little yellow tufts of hair that had worked out from behind the disfiguring queue.

The gentleman at the window, a big,

A CAMPBELLTOWN BUILDER SPEAKS

HE FOUND NOTHING TO EQUAL DODD'S KIDNEY PILLS, FOR THEY CURED HIM OF HIS TROUBLE.

Mr. W. H. Wallace is a Well Man Today, But He Was Pretty Bad Before He Got Cured by Dodd's Kidney Pills.

Cambelltown, N.B., Apr. 23 (Special).—"It was a cold started my trouble," says Mr. Wallace, of this place, "I am a contractor and builder and my work causes me to be out and exposed to all weathers so I suppose it was in that way I got cold. Anyway it settled in my kidneys and made me pretty sick. I got Lumbago in the back, cramp in the muscles, pains in the loins, shortness of breath, a dragging pain at the loins and my urine was thick with dark sediment. Then I knew the kidneys were to blame so I took Dodd's Kidney Pills and they soon put me in shape and cured me so that I have had no trouble with my kidneys since."

broad-shouldered fellow, had not turned as yet, and seeing that Larry for some reason was backward about addressing him, Avis started to unfasten her veil.

At this moment Larry glided forward with a stage-like movement, tapped the gentleman sharply on the shoulder, and, as he turned, pointed with his thumb toward Avis, and then made a most profound salaam.

Avis stood there rooted to the spot. Though years had passed since last her eyes beheld the owner of that face, she had not forgotten that some of the most painful hours in her existence had been caused through his instrumentality.

"Lord Rackett Plympton!" she murmured, almost unconsciously speaking his name.

The big Englishman's face grew redder than ever; he even took an eager step forward and half extended his hand, only to let it fall again when he saw alarm rather than pleasure upon the sad yet beautiful face before him.

"Avis—Mrs. Dr. Evans—I am delighted to see you again. You have not forgotten me; allow me to hope that with the passage of years you have at least forgotten my madness of that day, remembering the cause. No one could deplore it more sincerely than myself. I have never been able to atone for such base conduct. Pray, let bygones be forgotten—be merciful, be kind!"

She saw that he was sincere, and that woman can long continue to despise one who has been led to sin through the madness of his love for her?

Besides, there were other reasons to induce her to accept the truce.

Larry had started back when he caught sight of the other's face; alarm seemed to have swept over the little man; his recollection of many stirring scenes associated with ill-fort were not such as inspired confidence in his friendship, and Larry's first instinctive act was to try and draw a weapon; but, alas! the mandarin's sword with which he had been endowed by the generous Kai Wang could not have seen the light of day, at least since the Tai-Ping rebellion, for it was hermetically sealed to the scabbard, and obstinately refused to budge an inch, despite his frantic endeavors.

Then, to Larry's intense amazement, he saw Avis hold out her hand, with the intention of making friends with this former enemy.

He could hardly restrain himself, but was compelled to jump up and down, being deprived of speech through his rash vow, and in this way signify his disapproval of the truce.

Lord Plympton appeared to be sin-

my repentance. And now, Mrs. Evans, how can I serve you and your husband?"

This brought to her mind the recollection of what a calamity had befallen her.

"I am in trouble, Lord Rackett, and I have come here to ask the consul's assistance."

"He is out of the city for the present."

"That is a misfortune."

"But I represent him meanwhile, and whatever lies in the power of an English gentleman to do, that you may count upon."

There was something in his voice to inspire confidence; once she had feared and even hated this man because he persecuted her with his mad love; but Lord Rackett had evidently seen a great light in the years that had since flown, and his character had taken on a newer polish more in keeping with his position in society.

"Now tell me what has happened?" he said, after he had brought her a seat. "I have lost my husband," she replied, steadily.

The other started and seemed shocked. Once he had even vigorously pushed a scheme having for its definite object the removal of this same Dr. Jack, nor had he hesitated to apply all his energies to carrying out the infamous undertaking.

Such a complete change had time made in his character that he now viewed this catastrophe with dismay and horror, as it brought to mind the misdemeanors of the past, so that they stood out in glaring letters, and accused him of having once conspired to ward the same end.

(To be continued.)

CROWN LIFE INCREASES CAPITAL.

Progressive and Prosperous Canadian Company—Low Premium Rates and Liberal Policies.

Steady and substantial progress is shown by the Annual Report of the Crown Life Insurance Company which has just been published. The Crown Life has now nearly \$1,000,000 of high class insurance in force upon its books and the total surplus to policyholders, including the insurance reserve fund maintained in accordance with the Government Standard, amounted, on December 31st last, to \$852,479.60.

The financial position of the Crown Life is now being further strengthened by the introduction of a large amount of additional cash capital, which will enable the management to materially improve the Company's business with profit to all concerned. The object of the Directors from the first has been to make the Company a success from the policyholders' standpoint, and this increase in cash capital will specially promote the interests of the policyholders of the Company.

The Crown Life policies are indisputable from date of issue and include guaranteed loan, cash surrender and paid-up values. There are no restrictions in regard to residence, travel or occupation. The premium rates of the Crown Life are lower than those charged by most other companies.

The officers of the Crown Life are: Col. The Hon. D. Tisdale, P. C., K.C., M.P., President; John Charlton, 1st Vice-President; H. M. Mowat, K. C., 2nd Vice-President; Randolph Macdonald, Chairman Executive Committee; Charles Hughes, A.A.S., Managing Director and Actuary; H. T. MacNeill, M. L., L.R.C.P., Edin., Medical Director; A. H. Selwyn Marks, Secretary and Treasurer; William Wallace, Superintendent of Agencies.

HEAD OFFICE, TORONTO.

An agency for the Crown Life in this district offers a splendid opportunity for an energetic and reliable man.

At a recent school examination the following question was asked:—"Where in the British Isles was the first electric tramcar run?" "On the rails," came the quick response of a small boy.

Mother Graves' Worm Exterminator

We Own The Largest Stock Food Factory In The World.

It covers over a city block, contains over 16 acres of floor space, cost \$500,000. Size of our office 50x120, 200 office people, 150 typewriters and we use fifty million letter heads and envelopes every year. A car-load every 30 days. Our chemical laboratory is one of the best. Our office is one of the great sights of the business world. Many very small concerns advertise large buildings. We invite you to visit our factory and see that we have everything we claim.

LANDS In Western Canada

Two cornering sections, selected lands in Saskatchewan, only 5 miles from two railways, C.P.R. & G.T.R. Strong soil, 90 per cent. plough land, spring creek, no sloughs. About 60 miles N.E. of Indian Head. Price \$10.00 per acre. Write for map and full particulars.

R. PARSONS, 91 Wellesley Street, Toronto, Canada.

He could hardly restrain himself, but was compelled to jump up and down, being deprived of speech through his rash vow, and in this way signify his disapproval of the truce.

Lord Plympton appeared to be sincere, and his face had an honest, contrite look that went further than words to declare his regret for the past.

"I have never forgotten that ride on the motor, plunging down the Susquehanna valley, and how you cowed the fire-eating Chilian colonel before the engine-driver tossed him overboard. That smash of the train ended the business for me; it was on my arm Dr. Jack leaned when he was assisted to a place of safety. From that hour I have never ceased to regret my inexcusable folly. If the opportunity ever came, I determined to prove to you and to your husband how sincere my repentance was."

"Perhaps that time has come," said Avis, looking him straight in the eyes. "Then trust me."

Larry could stand it no longer, but, taking hold of his cousin's arm, he caught her attention and shook his head violently in the negative, pointed to the big Englishman, then to himself, rapped on his puffed-out little chest vigorously, and ended by again making a futile attempt to drag his unwilling steel from its scabbard.

This astonishing pantomime was not without its effect upon the other; at first he had been puzzled to account for the strange actions of one who should, according to his exalted station, be the epitome of dignity; but when he detected one of the supposed mandarins hands steeling up to feel for its customary solace, a great light suddenly burst upon him.

"What! Larry Kennedy, too, and in this disguise! Bless my soul! What a noble figure you cut, my boy—such dignity, such wonderful grace! If his highness, the Emperor, could only see you, nothing at his disposal would be refused."

Evidently Lord Rackett had not forgotten that the one weak spot in Larry's armor was his vanity, and he knew how to open the door of his heart.

Such base flattery considerably mollified the excited little man, though he was loth to accept the hand which the other offered, and, while finally doing so, obeyed the look he received from Avis rather than the dictates of his own heart.

"I don't blame you a bit, my dear fellow; words are cheap enough. Heaven knows; let actions prove the depth of

TEETH DRAWN BY MAD DENTIST.

Deputy's Secretary Forced to Submit to the Ordeal.

A terrible adventure befell the secretary of a well-known French deputy while visiting his dentist recently, and the details have just become public at the trial at Paris.

He had been suffering from toothache, and went to have the troublesome tooth extracted. He sat down in a chair, and had just begun to explain his trouble when the dentist shouted, "All right! I'll have them all out for you in a minute."

The secretary attempted to state that he merely wanted one tooth taken out, but he stopped short when he saw the dentist produce a revolver. Pointing the weapon at the secretary's head, the dentist exclaimed: "If you move a muscle while I'm taking out your teeth you are a dead man."

The secretary saw that he was at the mercy of a madman, and remained perfectly still while the dentist put the revolver back in his pocket and proceeded to draw out the teeth. One by one they were pulled out, the madman drawing the revolver whenever the patient exhibited any signs of protest.

When eight teeth had been wrenched out the madman said: "That will do, you have been very quiet. Three francs if you please."

The secretary paid at once, staggered out of the room, and went to the nearest police station. A force of police was sent, and when they entered the room the madman opened fire on them. He shot one of the constables in the arm and another in the leg before he was knocked down and handcuffed.

A coquette is a rose from which every lover plucks a leaf—the thorns are reserved for the husband.

R. PARSONS, 91 Wellesley Street, Toronto, Canada.

YOU DON'T WANT "ENGINE EYES."

"Some people are apt to enlarge upon the difficulties of driving a railway locomotive in the dark, or during heavy rain," says an engine-driver; "but for my part, nothing ever gave me more anxiety and trouble than continuous glaring sunshine. Color-blindness is said to be frequently nothing more than intense pain in the eyes caused by watching objects which reflect the light, and upon which the sun is shining. In a run of several hours the glare from the rails which strikes the eyes while watching for track obstructions, and more particularly for rails which have been forced out of line by the heat, is very trying, and often when I have left the locomotive after such a run I have found the greatest comfort in resting in a room where complete darkness prevailed. A man is afraid to wear smoked glasses, lest he should be suspected of color-blindness, and lose his position. But some protection of this kind would greatly prolong the career of many an engineer and fireman."

RHEUMATISM AND PARALYSIS.

Their complete home cure. Post free to readers of this paper. For limited period only.

A handsome illustrated treatise, giving full description of Rheumatism and Paralysis, with instructions for a complete home cure, describing the most successful treatment in the world, recommended by the Ministry and endorsed by medical men. This highly instructive book was written by W. H. Veno, a gentleman who has made a study of these diseases. The preface is by a graduate of the University of Wurtzburg. Send postal to-day and you will receive the book free by return.—Address, The Veno Drug Co., 24 King St. West, Toronto.

"How long is it going to take to get through with this case?" asked the client, who was under suspicion of housebreaking. "Well," replied the young, lawyer, thoughtfully, "it'll take me about two weeks to get through with it, but I'm afraid it's going to take you about four years."

It is only necessary to read the testimonials to be convinced that Holloway's Corn Cure is unequalled for the removal of corns, warts, etc. It is a complete extingisher.

"It's strange that you should always be so gaunt," remarked the bear to the wolf. "Well, you see," replied the wolf, "it's all because of the part I'm compelled to play in life. You see I'm all ways obliged to keep from the door until there's not anything left in the house to eat."

MARTYRDOM DESCRIBED

Kingston Man tells how he Suffered and How he was Released.

"For years a martyr," is how Chas. H. Powell, of 105 Raglan Street, Kingston, begins his story. "A martyr to chronic constipation, but now I am free from it and all through the use of Dr. Leonhardt's Anti-Pill."

Many who are now suffering from this complaint will be glad to learn from Mr. Powell's story that there is hope for the most stubborn case. He continues: "I was induced to try Anti-Pill by reading the testimony of some one who had been cured of constipation by it. I had suffered for eighteen years and had taken tons of stuff recommended as cures but which made me worse rather than better. Doctors told me there was no cure for me."

Dr. Leonhardt's Anti-Pill is for sale by all Druggists or by The Wilson-Fyle Co., Limited, Niagara Falls, Ont.

Mr. Powell will verify every word of these statements.

She — "Emma is the prettiest, but Lena is the smartest. Now, which would you rather marry, beauty or brains?" He (very for none) — "Neither; I'd rather marry you."

BANKS ARE DOING BUSINESS

The Conditions Are Much Improved In San Francisco.

A despatch from Oakland, California, says: Conditions are still looking up. The restriction against entering the city is now practically off. The electric cars are running on Market Street again. The banks have both a name and a local habitation. They have found a row of private residences on Laguna Street, a thoroughfare heretofore a stranger to commerce, and from the windows of these houses flags proclaim that the Crocker-Woolworth, the Nevada and all the others are doing business within.

The Clearing House, representing the local commercial banks, has been meeting every day. They have arranged a plan for paying off depositors for temporary needs on a proportionate scale, each withdrawal to be limited to \$500. Correspondents of the several banks in London, Paris and New York will transfer certain sums to their credit. The Mint will be the cashier's window for all the banks. The cheques will be made out in the usual form, endorsed by the cashier, and taken to the Mint, where they will be cashed. Superintendent of the Mint Leach says that he will co-operate in this as soon as he can get enough clerks. The savings banks report a satisfactory condition. They will open on the same day as the commercial banks.

A GRIM WARNING.

Business men who attempted on Saturday to secure assets from safes dug out of the earthquake and fire debris met with disaster. Several of the safes containing books, records, stocks, bonds and negotiable securities were forced open. The instant the latent heat in the interior of the thick strong-boxes came in contact with the first rush of air there was a blaze, and in an instant the contents were consumed.

This fact served as a grim warning to bankers who have millions of dollars locked up in safes and vaults. Many of the vaults are still buried in the debris, but scores of safes have been dragged out and left to cool in the streets.

LABOR SUPPLY INCREASING.

The market price for laborers is \$2.50 a day, with the supply limited, but increasing. Besides the authorities, the War Department and street railways, private concerns want men to clear up their premises and erect temporary structures. Happily, we are almost clean again. The restrictions on the use of water for anything but external use have been removed.

DANGER OF EPIDEMIC OVER.

Every day the danger of epidemic seems smaller. There is absolutely no increase in the number of smallpox cases, no typhoid has appeared, and the cases of measles and scarlet fever are few.

SAFES ARE STILL COOLING.

Donkey and construction engines were hauled into the ruined business district to get the safes of business men out of the ruins. They are in the same fix as the banks; they dare not open the safes until they are thoroughly cooled. In cases where floors fell, five or six safes are often jammed together in the basements. The owners get them all out and identify their property. They will be left in the streets to cool for the present. The work of razing the dangerous walls goes on smoothly. The next important stage of this work will be the laying of railroad tracks down the main business streets, to get out the great masses of wreckage.

property was contained in an equal territorial area. Within the district were nearly 100 banks alone, some of the finest office buildings outside of New York, thousands of mercantile and manufacturing establishments, and about 250,000 inhabitants, together with about 25,000 transients.

These facts may give some idea of the size of the ruin and of the loss involved, but they also emphasize the small loss of life from earthquake, fire and shooting. For the death list may not go over 700, and will almost certainly not reach 1,000. This is a striking proof of the masterly manner in which the authorities, civil and military, ran things.

MANY RESIDENCES UNINJURED.

The homes of more than 150,000 are standing practically uninjured. There still remain the great shipyards at the Potrero, the Pacific Mail docks, and the busy district immediately surrounding them, the stock yards at South San Francisco, the wharves along the waterfront from Mission Creek to Hunter's Point, the Mint, the Post-office, and the large retail district on Fillmore and Devisadero Streets. After all, a big city remains in San Francisco.

The Chinese Consul-General registers a kick. He says that the soldiers have been collecting graft from his countrymen. When the first crowd of refugees was taken from the ruined district the soldiers made the Chinamen pay toll, usually \$5 a head, to be guided to the ferry. He makes a further charge that the military guard was withdrawn from Chinatown yesterday, allowing crowds of white toughs to poke through the ruins and help themselves to the stocks of Chinese stores. He said that a large amount of property was stolen in this way, while the Chinese stood by and took it all in. Being Chinese and in California, they had to.

EXODUS IS SLOWING UP.

The exodus is slowing up. The feeble and the timid have about been cleared away, and the crowds at the railroad offices for transportation and passes are sensibly smaller. The people are looking forward now to the time, a few weeks ahead, when passenger traffic shall have turned the other way, when artisans, architects and business men will be coming to help in building the new city. The air is full of projects. Herbert Law, a capitalist, who had prepared to lease the Fairmount Hotel and build an annex to it just before the fire, went east in a hurry two days ago. It is said he went after a conference of men of money to lay a proposal before Congress. This is nothing less than a request of a Government loan of \$100,000,000 at 2 per cent. interest, to be used in rebuilding and to supplement the insurance payments. According to the plan, the loan is to run for 25 years, and to be secured by city real estate.

The police estimate that there are 2,000—mostly men, women and children—in Oakland, separated from their families and awaiting developments. Every hour of the day lost members of families are restored to each other.

The opening of stores along Market and Fillmore Streets has greatly reduced the number of people in the bread lines. Families of moderate means are paying for their food. Up to this time, even the rich, whose house supplies were low, had to stand in line and wait their turn with the "bums" of the Barbary Coast and the scarlet women from Belden Place. All dangerous walls on Market street are now dynamited.

There are still little shocks at the rate

ONTARIO LEGISLATURE

WHAT THE LEGISLATURE AT TORONTO IS DOING.

TAX ON RAILWAYS.

Hon. Col. Matheson's Railway Taxation Bill, was brought in under the official title of An Amendment to the Supplementary Revenue Act. Before touching on the railway question it provides that a tax of \$25 shall be imposed on each agency of a bank in any municipality instead of \$25 on one agency, which is the system at present obtaining no matter how many branches a bank may have.

The system of taxation by mileage is continued, the present charges being doubled. In the application and distribution of the revenue from this source, however, the measure strikes out on new lines. After the deduction of \$30,000 for expenses of collection, etc., and for maintenance of the Railway Commission, half of the remainder will be handed over to municipalities in proportion to population, and from this fund they will be asked to contribute to the support of the provincial asylums. The increase to the revenue, Col. Matheson stated, would be about \$180,000, of which the municipalities will get \$75,000, or perhaps a little more, while their contribution to the asylums will be considerably less than this.

RAILWAY BILL AMENDED.

Several amendments to the Temiskaming and Northern Ontario Railway Act were proposed by Hon. Dr. Beaulieu. The first of these is to empower the Railway Commissioners to lease a branch or spur line not exceeding ten miles in length. Another proposes to allow the commissioners to sell, lease or otherwise deal with mining rights along the right-of-way and on town sites.

PASSED PROSPECTUS BILL.

After a few amendments had been made, Mr. Hayle's bill respecting prospectuses issued by companies was given its third reading. The main alteration was to the effect that where subscriptions for stock have been made on the strength of verbal representations, they shall not be deemed binding unless the purchaser has seen the company's prospectus.

AFTER AUTOMOBILISTS.

The Municipal Committee discussed the various proposed amendments to the automobile legislation. Hon. Mr. Hanna, the chairman, thought that if a clause could be added to the present law providing for the arrest on sight and summary dealing with offenders it would go a long way toward putting a stop to reasons for the present numerous complaints. The Government could then give the so-called frontier police something to do to earn their salary by distributing them along the roads running to the frontier, but not close to the line, say, ten to fifteen miles back, with orders to arrest all automobilists breaking the regulations. If the offenders were then properly punished the effect would be salutary. A few object lessons of that nature would be sufficient, he thought, to impress the automobilists with the necessity of obeying the law.

THE MUNICIPAL ACT.

A number of bills making various amendments to the municipal act were approved of. One of these gives municipalities the right to take stock in or guarantee the bonds of utilities situated outside the boundaries of the municipalities supplying them.

LIQUOR LICENSE ACT.

The Lieutenant-Governor's assent was given to the Liquor License Act on Friday. As the annual reissue of licenses takes place on May 1st, all hotels and liquor stores will thus begin from that date to pay the higher license provided for in the measure. The bill received its third reading in the Legislature on Thursday.

EDUCATION DEPARTMENT.

Hon. Dr. Pyne's bill respecting the

POST-OFFICE BURNED.

Toronto Building Gutted and Engineer Lost His Life.

A Toronto despatch says: Early on Sunday morning the General Post-Office, on Adelaide Street east, was visited by a fire which left in ruins the basement and the entire main floor of the building, extending back as far as Lombard Street. Geo. Latrey, night engineer, was suffocated at his post in the boiler room, and his dead body was not recovered until the huge quantities of water which the brigade poured on the flames had found an outlet from the cellar. Quantities of letters awaiting delivery suffered damage by water and smoke, but through the efforts of the firemen and those of the post-office staff who were within calling distance the major portion of it reached the street in safety. Scarcely any letters were burned. The registered mail was locked in a fireproof vault, and is intact. The building at the corner of Lorne and Front Streets, opposite the Queen's Hotel, was fitted up for temporary premises, and all the post-office business will be handled from there until a new building is erected.

FAMILY'S NARROW ESCAPE.

The wife and 13 children of George Ross, chief post-office inspector for Canada and deputy postmaster of the city, occupied the third storey in the front part of the post-office. The entire household, 15 in number, was in danger of being cut off by the flames shortly after the fire broke out, and in the excitement which prevailed they rushed to a small upper storey, from which they were rescued by the firemen. A long ladder was extended to the upper windows, and the family, one by one, were conveyed to safety to Lombard Street by way of the rear roof, which is only one storey in height. Mr. Ross' fine setter dog Rex, a family pet, was left behind and died by suffocation.

DANGER FROM VESUVIUS.

Rains Start Avalanches—Torrents of Sand and Ashes.

A despatch from Naples says: Another disaster has occurred in the Vesuvian region. Throughout Friday night torrents of rain fell, accompanied by a heavy gale of wind, causing large avalanches of mud, sand, ashes and cinders to fall over Somma and Santa Anastasia, destroying bridges, blocking the roads, flooding many habitations, interrupting communication by telegraph and carrying portions of the railway. Troops and military wagons were hurriedly despatched to the assistance of the sufferers.

The inhabitants of the stricken places mentioned were awakened by a roaring, rushing sound, which was absolutely new to them, and on running out of their houses they found their property threatened by a new horror, the fall of avalanches of sand, ashes, etc. The terror was extreme. The women and children fled, screaming with fright, into the open country as if pursued by a living monster. But, in spite of the avalanches, floods and gales, no loss of life had been reported up to the time this despatch was filed.

Everybody is praying for fair weather, as it is believed that while the storms rage Vesuvius is liable to be a continual menace to life and property, and the people in the region of the volcano may have visitations of a more serious nature than Friday night's avalanches.

SENTENCED FOR LIFE.

Gunner John Barry Was Found Guilty of Manslaughter.

A despatch from Quebec says: The trial of Gunner John Barry, a former member of the Royal Canadian Garrison Artillery, charged with the murder of a comrade named Gunner Richard Kidd Hall, at the Citadel in November last, concluded on Thursday night at

portant stage of this work will be the laying of railroad tracks down the main business streets, to get out the great masses of wreckage.

THE FIRE-SWEPT AREA.

After a careful survey the engineers of the Board of Public Works estimate that the area swept by the fire is about 15 square miles. There are few cities in the world where so much valuable

the Barbary Coast and the scarlet women from Belden Place. All dangerous walls on Market street are now dynamited.

There are still little shocks at the rate of one or two a day, and will be, the weather people say, for at least a fortnight. Few people pay any attention to them. Everyone understands that after a big tremor like this the little trembles must continue.

LEADING MARKETS

BREADSTUFFS.

Toronto, May 1. — Flour — Ontario — 90 per cent. patents are selling at \$3.10, buyers' bags, outside for export. Manitoba — \$4.30 to \$4.50 for first patents and \$3.90 to \$4 for seconds.

Wheat — 820 asked, buyers' bags, Toronto.

Wheat — Ontario — No. 2 white, 80½¢ asked outside; red 80½¢ asked; No. 2 mixed, 79½¢ asked outside.

Wheat — Manitoba — No. 1 northern, 82½¢ asked, Owen Sound and Point Edward, 82½¢ bid, track, Midland. No. 2 northern, 82¢ asked, track, Port Huron, Owen Sound or Collingwood.

Peas — 75¢ bid f.o.b., 78 per cent. freight paid.

Oats — No. 2 white, 36½¢ asked, 78 per cent. points, 38½¢ asked, Toronto, to arrive; mixed, 35½¢ bid, main line, M. C. R.

Barley — 49¢ bid, 51¢ asked, outside.

COUNTRY PRODUCE.

Butter — With heavier receipts the market all round is assuming an easy tone. Creamery — 22 to 23¢ do solids — 21 to 22¢

Dairy lb. rolls, good to choice 18 to 20¢ do large rolls — 15 to 16¢ do medium — 16 to 17¢

Cheese — Old is quoted at 14¢ for large and 14½¢ for twins, and new at 13¢.

Eggs — The demand is rather more active and the tendency of prices is firmer. New laid are quoted at 15¢ to 16¢, and storage are quiet at 13¢.

Poultry — Choice dry plucked turkeys, 16¢ to 18¢; fat chickens 12¢ to 13¢, thin 7¢ to 8¢; fat hens 8¢ to 9¢, thin 6¢ to 7¢; ducks, 12¢ to 13¢.

Potatoes — Ontario, 65¢ to 75¢ per bag out of store; eastern, 70¢ to 80¢ on track and 10¢ more out of store.

Baled Hay — \$9.50 to \$10 per ton for No. 1 timothy in car lots on track here. No. 2 being 7¢ to \$7.50 per ton.

Baled Straw — On at \$7.50 to \$8 per ton for car lots on track here.

MONTREAL MARKETS.

Montreal, May 1. — Grain — Business is quiet in local grain circles. Oats No. 2, 41¢ to 41½¢; No. 3, 40¢ to 40½¢; No. 4, 39¢ to 39½¢; peas, 71¢ to 75¢, f. o. b., per bush; barley, No. 3 extra, 52¢ affoot, May; No. 4, 50¢; corn, No. 3 mixed, 56¢; No. 3 yellow, 56½¢, ex track.

Flour — Manitoba spring wheat patents, \$1.20 to \$1.30; strong bakers', \$1.20 to \$1.30; winter wheat patents, \$1.20 to \$1.25; straight rollers, \$1.30 to \$1.35; do., in bags, \$1.75 to \$1.85; extras, \$1.40 to \$1.60.

Milled — Manitoba bran, in bags, \$18 to \$19.50; shorts \$20 to \$21 per ton; Ontario bran, in bulk, \$18.50 to \$19.50; shorts, \$20; milled mouille, \$21 to \$22; straight grain mouille, 25 to 27 per ton.

Rolled Oats — Per bag, \$1.95 in car lots, \$2.05 to \$2.10 in small lots.

Cornmeal — \$1.30 to \$1.40 per bag.

Hay — No. 1, \$9 to \$9.50; No. 2, \$8 to \$8.50; clover mixed, \$6.50, and pure clover, \$6.

Beans — Prime beans, \$1.05 to \$1.70 per bushel; hand-picked, \$1.80 per bushel.

Honey — White clover, in comb, 13¢ to 14¢ per pound section; extract, 7¢ to 7½¢; buckwheat, 5½¢ to 6¢.

Provisions — Barrels heavy Canadian short cut pork, \$22.50; light short cut, \$21.50; barrels clear fat back, \$22.50, compound lard, 7½¢ to 7¾¢; Canadian pure lard, 11½¢ to 12½¢; kettle rendered, 12½¢ to 13½¢; hams, 13½¢ to 15¢, according to size; breakfast bacon,

16¢ to 17¢; Windsor bacon, 15¢ to 15½¢; fresh killed abattoir dressed hogs, 80.25 country dressed at \$9.25 to \$9.50, alive, \$7.65 to \$7.75 for selects.

Eggs — New laid, 14¢ to 15¢ per dozen.

Butter — Choicest creamery, 19½¢ to 20¢; under-grades, 18½¢; dairy, 16¢ to 18¢.

Cheese — Colored, 11½¢ to 12½¢.

BUFFALO MARKET.

Buffalo, May 1. — Flour — Firm. Wheat — Spring easier. No. 1 Northern, 83½¢; Winter, no offerings. Corn — Dull; No. 2 yellow, 53½¢; No. 2 corn, 52¢. Oats — Firm; No. 2 white, 36 to 36½¢. Barley — Quiet; not offered at 47 to 52¢. Rye — Stronger; No. 2 held, 66½¢, carloads.

NEW YORK WHEAT MARKET.

New York, May 1. — Spot firm; No. 3 red nominal elevator; No. 2 red, 90¢ f.o.b. affoot; No. 1 Northern Duluth, 88½¢ f.o.b. affoot.

CATTLE MARKET.

Toronto, May 1. — Moderate deliveries of cattle were recorded at the Western Cattle Market to-day, and prices were steady to strong in the better grades.

About the usual number of export cattle were brought forward, and prices ranged from \$4.75 to \$4.90 for fair loads. A few extra choice loads brought \$5.15 to \$5.30.

Choice butchers', \$4.75 to \$5; medium, \$4.40 to \$4.60; cows, \$3.25 to \$3.75; bulls, \$3 to \$3.50; canners, \$1.50 to \$2 per cwt.

Short keels, 1,150 to 1,250 lbs., \$4.40 to \$4.60; feeders, 950 to 1,150 lbs., \$3.85 to \$4.00; stockers, 700 to 850 lbs., \$3.75 to \$4; stock calves, 400 to 650 lbs., \$3 to \$3.90 per cwt.

Export ewes, \$4.75 to \$5.25; culls and backs, \$3.50 to \$4; grain-fed lambs, \$5.75 to \$6.50; calves, \$3 to \$6 per cwt; Spring lambs, \$3 to \$6 each.

Quotations for milk cows and springers was \$30 to \$55 each.

Hogs were offered in larger numbers. Quotations were as follows: — Selects, \$7.15; lights and fairs, \$6.90 per cwt.

WILL MAKE NO CONCESSION.

Operators Send Reply to Latest Proposals of the Miners.

A despatch from New York says: The anthracite mine operators, through their sub-committee of seven, on Friday replied to the latest propositions of the mine workers for an adjournment of the existing differences in the anthracite fields, refusing to modify their position heretofore announced. The operators call upon the miners to renew for a period of three years the award of the Anthracite Strike Commission or else to accept the operators' proposition that the Strike Commission arbitrate the question as to what changes, if any, shall be made in the scale of wages fixed by the commission in its original award. The miners have heretofore declined this offer. The letter points out that all demands but that of increase in wages, based on the impression that wages in the anthracite industry are unduly low, have been abandoned. The operators, after giving figures in detail, say that to accept the sliding scale of wages proposed by the miners would mean an increase in the price of coal to the public of 35 cents a ton. The present profit to the operators, they say, is but 20 cents a ton.

It is reported that the Government will introduce a Bill to provide for the transmission of cheap power.

provided for in the measure. The bill received its third reading in the Legislature on Thursday.

EDUCATION DEPARTMENT.

Hon. Dr. Pyne's bill respecting the Education Department, was passed through the committee stage.

THE MINES ACT.

The new Mines Act was reviewed in committee, and a number of suggestions offered by private members on both sides of the House will be considered before it comes up for its third reading.

THREE IMPORTANT MEASURES

were introduced by the Minister of Agriculture. One of these provides for the creation of an Advisory Board in connection with the Ontario Agricultural College. The second is intended to prevent fraud in the manufacture of cheese and butter by appointing sanitary inspectors, and the third provides for the suppression of foul brood among bees.

THE NEW DRAINAGE ACT

by which the province is divided into two districts, and a second inspector appointed for the Eastern division, was read a second time.

TEMISKAMING RAILWAY.

The Amendment to the Temiskaming railway Bill also received its second reading. By this Act the commission is empowered to lease or sell spur lines of 10 miles or less.

TO START RELIEF WORK.

Authorities Coping With the Situation in St. Petersburg.

A St. Petersburg despatch says: Thanks to the conciliatory attitude of the city representatives, the threat of a repetition of the great labor demonstration and the bloody events of "Red Sunday," January 22, 1905, on account of the destitution of thousands of idle workmen, has been obviated for the moment. The City Council on Wednesday night decided to begin public works amounting to \$1,500,000, and, pending their initiation, to assign \$250,000 among those out of work, the number of actually destitute at present, according to labor representatives, being not over 20,000. A commission, of which one-half are workmen, was held to plan the works and supervise the distribution of money.

The situation is threatening, as the measures of relief are purely artificial. The army of the unemployed, because the factories are running on half force on account of the lack of orders, is constantly increasing.

At Wednesday's conference one workman said:—"We speak in the name of the great Russian proletariat, which headed the revolution. Heed our demands and warning. If you refuse we will rank you with the enemies of the fatherland, and we will transmit your refusal to the proletariat, with which you must reckon. Your blood and theirs be upon your hands."

OUTBREAK OF PLAGUE.

Many Deaths Occur in Kashmir, Northern India.

A Lahore, India, despatch says: A serious outbreak of the plague has occurred at Jammal, in Kashmir, northern India. There have been many victims among the members of the palace household and the imperial service troops. Two hundred and eighty-five deaths occurred during the past week.

THE NATAL UPRISING.

Disorder Among the Zulus Increasing and Reserves Called Out.

A London despatch says: The Government has called out the first reserves in seven districts of Natal to cope with the native insurrection. The disorder is spreading among the Dini Zulus. Chief Irunduna's mission on behalf of the Colonial Government to Chief Sigamanda has failed, and he reports that Sigamanda's tribe is in a state of rebellion. The natives in Swaziland are showing signs of uneasiness, and Europeans there are appealing for protection.

trial of Gunner John Barry, a former member of the Royal Canadian Garrison Artillery, charged with the murder of a comrade named Gunner Richard Kidd Hall, at the Citadel in November last, concluded on Thursday night at 7 o'clock, when the jury returned a verdict of guilty of manslaughter, and the presiding judge sentenced him to penitentiary for the rest of his natural life. The jury took it into consideration that the prisoner was insane when he committed the act and is still suffering from dementia, which influenced their verdict. The Minister of Justice may have the condemned man examined, and, if found insane, incarcerated in the Kingston Penitentiary lunatic asylum. The prisoner was oblivious of all that was passing during the trial, and even when the verdict was rendered and the sentence pronounced he did not realize his position, and when the guards sought to remove him from the dock he resisted, though he uttered no words, but gazed about him with a vacant stare.

SIXTY-FIVE MILLION DOLLARS

Gigantic Losses of British Companies in San Francisco Fire.

A despatch from London says: The British fire companies are beginning to get from their San Francisco agents preliminary estimates of the liabilities on account of the earthquake and fire. The Royal's agents cable that the company's loss may reach \$1,350,000. This is about sixty-three times the premium income received by the company and its subsidiary company from San Francisco during 1905. Taking this ratio for the basis on which to calculate the liabilities of all the British companies and their subsidiaries, it works out that these companies in the aggregate may be called upon to pay \$13,000,000. It would appear, however, that the British companies ultimately will pay considerably less than the amount of their normal liabilities, for the present indications are that they will not indulge in generosity towards their San Francisco clients, but will pay strictly according to the

CRUSHED BY HUGE ROCK.

A Dynamite Explosion Causes the Death of Two Men.

A Kenora despatch says: A double fatality occurred at Videon & Parsons' construction camp at Parrywood, about 11 o'clock on Wednesday morning. A driller named Ben Carlson and his assistant, Johnson, were charging a hole when the dynamite suddenly exploded, causing a huge rock to fall on two muckers, working in the cut below, killing them both instantly. Carlson and Johnson escaped with some severe injuries to the head, the eyes of the unfortunate men suffering worst. The names of the two men killed could not be learned. It is not likely an inquest will be held. Carlson, the man who was charging the hole, states that he has had a long experience in the use of dynamite and never knew it to explode in this manner before.

YEAST BACILLUS FOR CANCER.

Dr. Doyen Tells Medical Congress at Lisbon of New Cure.

A despatch from Lisbon says: Dr. Doyen, the French scientist, announced at the Medical Congress here that he had cured cancer by inoculating the patients with yeast bacillus. He believed that investigation in this direction would lead to discoveries of the greatest value.

MORE LICENSES IN WINDSOR.

Commissioners Renew All and Issue Four New Ones.

A Windsor despatch says: Notwithstanding an effort to not exceed the number of liquor licenses issued in this city last year, if not to actually reduce the number, the license commissioners renewed all those of last year and in addition granted four new ones.

DOMINION PARLIAMENT

NOTES AND PROCEEDINGS OF THE OTTAWA HOUSE.

YUKON GOLD OUTPUT.

Mr. Blain was informed by Hon. Mr. Oliver that the gold output in the Yukon for the years from 1897 to 1905 was as follows:

1897	2,500,000
1898	10,000,000
1899	10,000,000
1900	22,275,000
1901	18,000,000
1902	14,500,000
1903	12,250,000
1904	10,500,000
1905	8,327,000

MUSEUM BUILDING.

Mr. Fowler learned from Hon. Mr. Hyman that the contract for the new museum building on Elgin Street called for Canadian stone, but did not specify any particular quarry.

VOLUNTEERS' SUPPLIES.

Col. Hughes was informed by Sir Frederick Borden that the prices quoted in the Auditor-General's report for supplies for volunteers at camp last year were not correct. Sir Frederick quoted the correct prices, which, he declared, had been obtained by members of his department after very minute investigation, and which differed very materially in many instances from those mentioned in the Auditor-General's report. As to the reason for the volunteers from Ontario being supplied with provisions presumably inferior to those provided for the volunteers from Quebec, Sir Frederick said that in all these cases tenders were obtained by public advertisement, and the contracts given to the lowest tenderer.

CAMP AT COBOURG.

Col. Hughes was also told by Sir Frederick Borden that the annual camp for the Third Military District this year would be held at Cobourg, commencing June 18. It was to be transferred from Kingston because of the lack of rifle ranges there. All arms would drill at Cobourg, but this arrangement was only for the present year.

ANNUITIES PAID.

Mr. Maclean was informed by Hon. Mr. Fielding that the annuities paid to Privy Counsellors under the Act of last session were as follows:—Sir Hector Langevin, \$2,446; Sir Charles Tupper, \$2,795; Sir Mackenzie Bowell, \$2,795; Sir A. P. Caron, \$2,446; Sir John Carling, \$2,446; Sir Herbert Tupper, \$2,154; Hon. John Costigan, \$2,446; Hon. John Haggart, \$2,446; Hon. George E. Foster, \$2,446; Hon. J. I. Tarte, \$2,154; Hon. A. G. Blair, \$2,446; and Hon. Clifford Sifton, \$2,446. Sir Herbert Tupper and Hon. J. I. Tarte had been paid up to the end of February and the others to the end of March.

BINDER TWINE.

Mr. Elson was told by Hon. Mr. Fitzpatrick that the Government manufactured binder twine at Kingston Penitentiary, and on March 30 last there were 736,200 pounds on hand. There had been some twine left over from last year unsold. The Government also manufactured rope at Kingston Penitentiary. The probable price of twine for the coming season would be, in small lots, 11½ cents a pound for pure manilla, and 10½ cents a pound for mixed. In ton lots it would be 11 cents a pound for pure manilla and 10 cents for mixed.

THE CREAM OF IMMIGRATION.

Dr. Bryce, chief medical officer of the Immigration Department, told the Agriculture Committee that Canada was getting a far better class of immigrants than the United States. The United States had sent back over 7,000 people who were considered paupers, while Canada did not require to send back any for lack of money, and none of the municipalities were asked for any aid by destitute immigrants.

MUST BE BRITISH SUBJECTS.

ON THE FARM

PREPARING POTATO SEED.

See that your seed stock is fairly uniform, and this brings up a question that is so big that my first thought was to steer around it. Much is being said row about pedigreed stock in plant as well as animal life. With animals and with all plants grown from the seed, too much cannot be said in favor of careful selection of breeding stock. But with plants grown from cuttings, runners or tubers, the case is very different. True, a Frenchman by staking his most vigorous hills of potatoes and planting their product did succeed in improving his crop for a time. I have always thought that by planting fair to large-sized potatoes that had been well kept and not exhausted by sprouting, a variety may be kept up longer in its full strength and usefulness, just as the prime of manhood will last longer, under favorable conditions, than where nature's laws are not observed, writes Mr. L. E. Scott. But in either case death will eventually come and we must give up our favorite varieties when they become unresponsive to good tilth, and choose some other youthful variety, with newer life drawn from the seed ball.

I would not ignore selection entirely. Potatoes, especially new varieties, will sport. I have seen clear white potatoes mixed in a crop grown from a deep rose colored seed. These are sports and should be thrown out, together with the long tapering looking runt with eyes thickly set that show clearly a lack of vigor. But just how much a particular variety may be modified in type by selection is a question.

With corn a marked difference may be noticed in two or three years. But that is grown from seed and the change of type has been effected by pollination. Not so with the potato. It is simply a tuber. A continuation of the old plant, if you please, and not the seed. A temporary change of type may be caused by local environment alone.

To illustrate, I have seen a row of Rurals 80 rods long, where 20 rods run through a dark, moist loam and the potatoes were greatly elongated and flat. This was so marked that they would hardly be recognized as Rurals. Running up the same row on a gravel ridge, the tubers, for several rods, were round and slightly different in color, while beyond, upon a white clay flat and where the growth was checked by drouth and revived by late rains, the product was ill shaped. That these different shapes or irregularities, caused by local conditions, would reproduce themselves in the next crop seems highly improbable. My own experience has seemed to disprove the theory.

In short, I would not discard the strong and vigorous looking potato in selecting seed stock on account of a slight irregularity in shape. When prices have been high, I have often planted potatoes a little under market size with very satisfactory results. But in this case it is well to plant a few rows from selected stock, from which to save your seed the next year, as I believe the continued use of small potatoes a bad policy.

CARE OF SEED.

The selection of seed stock once made it is important to keep it in a cool, dry place during the winter. At the first indication of sprouting, shovel to another bin. This will check the process for a time. In the spring, spread in a single layer on the floor of some outbuilding, or upon wide shelves built for the purpose. They will then send out short, warty green sprouts that will hardly be broken off in planting and a better stand will be insured. With heavy rains immediately after planting last season in my own crop there was a marked difference in stand between potatoes treated this way and those taken directly from the cellar. I believe in cutting medium to large

seed. At the rate of \$4 a bushel it costs 57 cents an acre for seed.

The country boy seldom realizes the great advantage that he has over the boy-born and raised between the walls of a great city. The city raised lad knows the city and its usages, and all the things that make up the artificial life of the city, but when it comes to life in general, the real natural life of the country, he is the greenest of green creatures.

Past neglect has produced many woodlots in which the healthy trees of the best kind are choked with unsound and dead trees and trees of inferior kinds. For such cases improvement cuttings are needed. It will pay to spend the time and labor necessary to remove the dead, crooked and diseased trees, with the weed trees, so that the remaining stand may be composed of good timber trees in sufficient number, under conditions favorable for their best development. This can be done gradually, as the material can be utilized.

THE PLAGUE SPREADS.

Modern Methods Bow to Ravages of the Disease.

A London despatch says: Medical science seems powerless to stem the progress of the two terrible scourges, the plague and the sleeping sickness, or beriberi. During March in India the plague increased rapidly in every province and reappeared in a district from which it was supposed to have been banished. Bengal has been reporting 5,000 deaths a week, and Calcutta had forty deaths in one day in March. Bombay has 150 deaths every day. Matters are equally bad in the central provinces, in spite of the splendid efforts to crush the disease by segregation, inoculation, etc.

The sleeping sickness is proving equally deadly in tropical Africa, and has now reached the west shores of Lakes Mweru and Tanganyika, where the natives are dying by the thousand. British Central Africa is threatened, and there is every reason to fear that the disease in time will reach the thickly populated country.

SAD END OF W. W. OGILVIE.

Young Montrealeur Shoots Himself by Accident.

A despatch from Montreal says: W. W. Ogilvie, a son of the late W. W. Ogilvie, of the Ogilvie Flour Mills Company, died on Sunday afternoon at the Royal Victoria Hospital as the result of an accidental bullet wound inflicted by himself while examining a revolver in his room at the family residence. The weapon was accidentally discharged and the bullet lodged in the right side of his head. Mr. Ogilvie was at once removed to the Royal Victoria Hospital, where he died two hours later. Mr. Ogilvie, who was in his thirtieth year, was one of the best known young men in the city, being a prominent member of the St. James Club, Montreal Hunt Club and other organizations. A sad feature is that Mr. Ogilvie was to have been married next week to a daughter of S. P. Stearns, ex-Consul-General for the United States.

FIRE AT INSTRUCTOR.

Sergt. Foy of the Mounted Rifles Under Arrest at Winnipeg.

A despatch from Winnipeg says: Sergt. Foy of the Royal Canadian Mounted Rifles quarreled with Sergt-Instructor Docherty on Friday, and in a moment of exasperation shot at the latter with a rifle. He was at once placed under arrest and has been handed over to the civil authorities. The trouble between Sergt. Foy and Sergt-Major Docherty arose over a woman, and culminated in the mess room when the latter struck Foy with a riding whip and made a slighting remark concerning his finances. Foy drew a revolver

CONDENSED NEWS ITEMS

HAPPENINGS FROM ALL OVER THE GLOBE.

Telegraphic Briefs From Our Own and Other Countries of Recent Occurrence.

Edmonton has been finally chosen as the capital of Alberta.

Two hotel licenses have been cut off in Peterboro'.

The James Bay Railway will run into the city this summer.

Canada took over the Esquimaux fortifications on May 1.

Minneapolis capitalists will establish a flax mill at Regina.

Wentworth County Council have appropriated \$37,396 for county roads.

On May 8th five or six hundred Australian immigrants will arrive at Vancouver.

Calgary will spend \$25,000 in beautifying the parks, cemeteries and boulevards.

The Canadian Northern are adding 83 locomotives to the motive power on their western lines.

Mr. Andrew Carnegie has offered Victoria College \$50,000 on condition that the college raise a similar sum.

Hamilton Board of Works will reduce the number of electric street lamps by eighty and institute natural gas.

James T. Hackett was committed for trial at Montreal on Saturday on the charge of murdering Edith Ahern.

The new Grand Trunk elevator at Montreal, one of the finest in the Dominion, was opened on Saturday.

John Wiggins, farmer, of McCreary, Man., while attempting to rob an owl's nest, had his right eye torn out by the bird.

Thomas O'Dowd, treasurer of the cigarmakers' union at Hamilton, was arrested on Friday on a charge of misappropriating \$70 of union funds.

Mackenzie and Mann are contemplating a grain line from French River to Ottawa, to connect with the Great Northern, says a Montreal rumor.

The Saskatchewan Board of Trade suggests that a western deputy postmaster-general be located at Winnipeg in order to look after the increased business.

The Dominion Government will grant \$10,000 to an exhibition to be held in Charlottetown this fall, open to all Canada. The Provincial Government grant is \$4,000.

The Canadian Pacific Railway Company are offering five free scholarships covering four years' tuition in applied science at McGill University to apprentices and others of their own employees under twenty-one years of age, as well as to minor sons of employees.

GREAT BRITAIN.

Great Britain will insist on the withdrawal of Turkish troops from Egyptian territory.

The C. P. R. steamer Empress of Britain on her trial trip around Ireland averaged eighteen knots in stormy weather.

London insurance men estimate British fire insurance companies' liabilities in San Francisco at \$65,000,000. All legally proven claims will be paid.

A committee of American ladies who have either married into the nobility or are wives of United States Officials in Great Britain, has been formed, to extend aid to the sufferers in the San Francisco disaster.

UNITED STATES.

The anthracite mine owners are preparing to fight the strikers.

Contributions from New York State to San Francisco relief fund will aggregate \$3,500,000.

A Buffalo youth attended a Toronto wedding wearing a suit of clothes said to have been stolen. He is under arrest.

William A. Brewer, jun., formerly President of the Washington Life Insurance Co., has been indicted at New York for perjury.

than the United States. The United States had sent back over 7,000 people who were considered paupers, while Canada did not require to send back any for lack of money, and none of the municipalities were asked for any aid by destitute immigrants.

MUST BE BRITISH SUBJECTS.

The special committee of the House took up the consideration of Mr. Lancaster's bill respecting certificates to masters and mates of ships. One provision is that the Canadian certificates shall be confined to British subjects. In the United States certificates are granted only to those who take the oath of allegiance, and Mr. Lancaster deems it only fair that we should have some such law here. The clause was adopted substantially as it stood.

RAILWAYS GOT \$255,649,235.

According to the annual report of the railway statistics brought down there have been granted by the Dominion Government as bonuses to railways up to the 30th of June last a sum of \$178,322,802, and as loan \$15,964,533. Of this the Grand Trunk Railway Company is credited with \$15,142,633. Provincial bonuses given are as follows:—

Ontario	\$14,630,520
Quebec	13,942,133
New Brunswick	4,157,638
Nova Scotia	3,780,947
Manitoba	1,016,952
British Columbia	37,500

The total loans by all the Governments of Canada to railways is \$20,613,489, and by the municipalities \$4,046,854, making the total loans \$24,660,343. The bonuses by the Dominion and local Governments total \$215,613,850, and by municipalities \$12,743,542, making a grand total of bonuses \$228,357,392.

In addition, the Province of New Brunswick and many of the municipalities in Ontario and Quebec subscribed for shares and bonds to the amount of \$2,611,500. The grand total of aid from all sources granted to steam railways is \$255,649,235.

EGYPTIAN UNREST.

The Frontier Troubles Call for Large Reinforcements.

A London despatch says: In the House of Commons on Thursday George Peabody Gooch, Liberal, asked what increase was contemplated in the strength of the garrison in Egypt, and whether it was to be permanent or only temporary.

Sir Edward Grey, Secretary of State for the Colonies, replied that Lord Curzon considered that the existing unrest there, due to frontier troubles, necessitated reinforcements. It was impossible to say for how long it would be necessary for them to remain in Egypt.

TROOPS FROM CRETE.

A Cairo despatch says: A battery of Horse Artillery and three companies of Infantry Fusiliers, now in Crete, have been ordered to Egypt.

BABY BURNED TO DEATH.

It Was Sleeping Alone in the House Which Was Destroyed.

A Winnipeg despatch says: Particulars of the fatality which occurred at Williams' quarry, north of this city, on Tuesday, when the infant child of James Aphani was burned to death in a fire which destroyed the parents' home, have been received. The baby was asleep alone in the house, which was a small frame structure, when the fire broke out in some mysterious way, and the building was enveloped in flames before it was noticed, making the rescue of the baby impossible.

McAULIFFE'S SENTENCE.

Gets Three Years and a Half For Manslaughter.

A Peterboro' despatch says: Thursday morning Patrick McAuliffe was found guilty of manslaughter, with a recommendation to mercy, at the Assizes here, and was sentenced by Mr. Justice Anglin to three years and six months in the penitentiary. McAuliffe's crime consisted in having dealt Frederick Hudson a blow in the course of an altercation in the bar of the latter's hotel, from which he died a few days later.

out short, warty green sprouts that will hardly be broken off in planting and a better stand will be insured. With heavy rains immediately after planting last season in my own crop there was a marked difference in stand between potatoes treated this way and those taken directly from the cellar.

I believe in cutting medium to large potatoes in four pieces and smaller ones in from two to three pieces in as chunky a form as possible. I have tried all methods and have had good and poor results from each, but I have had more good crops where this method has been followed. The most satisfactory results at the experiment stations have been obtained by this method. My experiments also show a loss from discarding the blow or seed end, as it is commonly called. The practice belongs to a past age. Nothing is gained by cutting very long before planting. Sometimes there is a loss, which might be avoided by right usage.

If you have sand, well and good, for market, although a well-drained loam will produce a better flavored potato for home use. If you haven't sand, make your soil as sandlike as possible, by draining, by working only when reasonably dry and by keeping it full of vegetable matter.

Enrich with good stable manure during the fall, winter or spring and plow under a young growth of clover, in absence of clover, sow rye and plow under just as it begins to shoot. This green matter will render the soil more acid and thus kill the scab germ, counteracting any injurious effects the manure might possibly otherwise produce. Spring plowing should be harrowed as fast as plowed. A thorough preparation of the soil, securing a deep, mellow seedbed will pay every time.

HOW TO SUCCEED WITH CLOVER.

Why does clover fail is a question that hundreds of our farmers are asking. Most writers tell us that we have been turning under vegetable matter and applying acid phosphates so long that our land has become sour. As clover does not like an acid soil, we are no longer able to grow the crop as formerly. If this is the case, a light application of lime will put the land in shape to grow clover again. It may be that our land is clover sick, that is, a heavy crop of clover has been taken off the land and a condition has been set up in the soil that will prevent it from growing clover for a number of years.

Experiments with clover in England have been made by Laws and Gilbert for 50 years, and they say that no direct supply of manure, in ordinary form of farm-yard dung, or of the current artificial fertilizers, is capable of restoring the soil from which a heavy crop of clover has been taken to a condition of immediate productiveness for the same crop. If this is true, it seems that in cases of clover sick land, the best thing to do would be to practice a form of five-year rotation, and thus get our land in shape for clover. We often get a stand of clover in the spring and at harvest our crop looks all right. Then, we are apt to let it shift for itself, thinking that our clover crop for the following year is a sure thing.

Right here is where we make a great mistake for ragweed, foxtail and other filth spring up, shade the clover and pump the moisture out of the soil. Consequently, when a short drouth comes our clover perishes, and the following spring finds us without our desired crop. All this trouble can be avoided by running our mower over the field and clipping the weeds and stubble just above the tops of the young clover, and instead of the filth being a detriment to the crop, it acts as a beneficial mulch, and helps retain the moisture in the soil for the tender clover.

FARM NOTES.

Don't get so busy making money that you forget all about making your home what it should be. The home is the most important of all, and the needs of the family should be supplied.

We must not be afraid to buy or select good seed corn. If you are going to buy the seed do not be afraid to pay even \$3 or \$4 a bushel for good

seed. A fine rice was at once placed under arrest and has been handed over to the civil authorities. The trouble between Sergt. Foy and Sergt.-Major Docherty arose over a woman, and culminated in the mess room when the latter struck Foy with a riding whip and made a slighting remark concerning his finances. Foy drew a revolver and made Docherty write and sign an apology on his knees. He claims he did not shoot, but threatened to do so.

THREE FLOORS COLLAPSE.

Granger Bros.' Stationery Warehouse at Montreal Wrecked.

A Montreal despatch says: The warehouse of Granger Bros., stationers and dealers in religious articles, was wrecked early on Friday morning by the second floor giving way under the heavy weight of goods and carrying the first and ground floors with it into the basement. The walls remained almost intact. Fortunately the crash came at 5 o'clock, an hour when there was no person in the building. The damage to stock will amount to perhaps fifty thousand dollars and to the building about ten thousand.

EDMONTON IS THE CAPITAL.

Motion Favoring Calgary Defeated by 16 to 8.

A despatch from Edmonton says: The capital question occupied the Legislature on Wednesday and resulted in the seat of Government remaining in Edmonton. Cushing (Calgary) and Stuart (Edmonton) moved for its removal to Calgary, but the motion was defeated 16 to 8. Motions for removal to Red Deer and Banff were withdrawn.

RUSSIAN OFFICIAL SHOT.

Police Inspector of Odessa Mortally Wounded.

A despatch from Odessa says: Revolutionists on Saturday shot from ambush and mortally wounded Police Inspector Pogrebnoi and killed his orderly. Both were prominent in the massacres which took place last October.

GREAT PRAIRIE FIRE.

Green Ranch Hand Started it by Setting Fire to his Tent.

A despatch from Winnipeg says: A green ranch hand set fire to his tent in the lower Little Bow range, Lethbridge, and then let the fire get away, on Thursday. As a result 360 square miles have been burned over.

SWEPT BY A TORNADO.

Flames Now Completing Destruction of Bellevue, Texas.

A despatch from Fort Worth, Texas, says: Meagre advices state that Bellevue is destroyed, twelve or fifteen persons being killed and many injured and missing. Fire is destroying the ruins caused by the tornado. A special train has been started from Bowie, Texas, 125 miles distant, for the scene. Bellevue has 1,500 inhabitants.

Landlady — "I believe in letting coffee boil for thirty minutes. That's the only way to get the goodness out of it." New Boarder (tasting his, and leaving it) — "You have succeeded admirably, ma'am."

Yeast — "I saw the doctor's carriage at your door to-day. Anybody ill?" East — "No; he called to present his bill." "Oh, I see. You didn't call him?" "Yes, I did, too; I called him everything I could think of."

Dobbs — "There's a man who shaves several times a day." Wiggon — "You don't mean it! I should think there's nothing left on his face." Dobbs — "It doesn't hurt his face at all. He's a barber."

San Francisco relief fund will aggregate \$3,500,000.

A Buffalo youth attended a Toronto wedding wearing a suit of clothes said to have been stolen. He is under arrest.

William A. Brewer, jun., formerly President of the Washington Life Insurance Co., has been indicted at New York for perjury.

The C. P. R. steamer Amur arrived at San Francisco on Saturday with 500 tons of provisions from the people of British Columbia.

The United States plant in Indiana on the shores of Lake Michigan to cost \$75,000,000, will be the largest in the world.

After being kept three years, the body of Thomas Guy was buried in the potter's field at Kansas City. He left extensive estates which were claimed by a married daughter, who then disappeared.

GENERAL.

Plans of all the great Russo-Jap battles are being prepared, under instructions of the German Emperor, for the purpose of educating his army.

BRIGADES FOR SOUTH AFRICA.

Alleged Destination of the First Aldershot Division.

A despatch from London says: The First Division of the Aldershot Army Corps has been ordered to prepare for mobilization, in view of serious developments in South Africa in connection with the native rising there. The Tribune which alone gives the report, adds that, although its Aldershot correspondent says the troops will go to South Africa it is equally, if not more, likely that the precautions are being made because of the bellicose action of the Sultan of Turkey regarding the British claim that Tabah is Egyptian territory, which Turkey refuses to concede. The Sultan is determined to push his claims in reference to the Egyptian frontier, supporting them with military force. The division, which, according to the Tribune, is to be mobilized, consists of two brigades, including four battalions of foot guards, four battalions of infantry of the line, two artillery brigades, a field company of engineers and three regiments of cavalry.

SEEDING IN THE WEST.

Crop Report of the Canadian Pacific Railway.

A despatch from Winnipeg says: According to a report issued on Wednesday by the C. P. R., wheat-seeding is finished at several points, among which are High Bluff, Burnside and Elm Creek in Manitoba, and at Moosomin and Hague. The latter point is on the C. E. branch, and indicates that progress is uniform all over western Canada. It is well advanced everywhere along the company's lines, and completion is only a matter of a few days now. Oats and other grains will then be rushed in, and if the present favorable weather continues the work will be finished in nearly record time. The company's report generally is remarkably optimistic. Land is in prime condition, and the warm balmy weather is causing vigorous growth; already many fields are tinged with green, and at Cleator, Qu'Appelle, Nishnab, Union Point, Carroll, Lorraine, Saskatoon and other places wheat is well advanced.

AN IDEAL HOTELKEEPER.

Sudden Death of William Sullivan at St. Catharines.

A St. Catharines despatch says: William Sullivan of the Lennon Hotel, who died suddenly here on Thursday, was called "the ideal hotelkeeper." He would not sell a drink to a man who appeared to be the worse of liquor, refused to allow any loafers around his house, whether they had money or not, and closed up his bar promptly at 11 o'clock every night, although the regular hour here is 11. He never was known to break the law.

Does Your Heart Beat

Yes. 100,000 times each day. Does it send out good blood or bad blood? You know, for good blood is good health; bad blood, bad health. And you know precisely what to take for bad blood—Ayer's Sarsaparilla. Doctors have endorsed it for 60 years.

One frequent cause of bad blood is a sluggish liver. This produces constipation. Poisonous substances are then absorbed into the blood. Keep the bowels open with Ayer's Pills.

FIRST CARRIAGE IN MAINE.

How a Minister Came to Buy It and Why He Sold It.

The Rev. Francis Winter was a native of Boston and a graduate of Harvard college. He went to Bath early in 1767 and, after preaching on probation for the orthodox church, was invited to settle, which invitation he accepted. He was ordained in the autumn of the same year. He went to Bath on horseback in company with Lemuel Standish. Mr. Winter came from Boston, where he had associated with such eminent men as Adams, Otis and Warren, himself becoming an ardent patriot, taking the lead in the Revolutionary measures adopted in Bath during that memorable period.

Mr. Winter married Miss Abigail Alden in 1768, and it is through her that the Winters of today trace their ancestry back to the "Puritan Maiden" of Plymouth.

Three years after the marriage of the Rev. Francis Winter and Abigail Alden they started to visit a sister of Mrs. Winter living in Connecticut and intended to ride all the way on horseback, but Mrs. Winter became so fatigued that Mr. Winter sold one of the horses for a carriage and harness. It was the first carriage that ever came into Maine and was called a chaise. Traveling was so difficult that two negroes were employed to accompany them with shovels and axes to clear the road. Several times the chaise had to be taken apart and lifted over fallen trees. The minister's parishioners thought that it was putting on too much style for their pastor to ride in a carriage, and in consequence Mr. Winter sold it. This was in 1771. It was a two wheeled chaise, the body resting on leather braces, which were attached to wooden springs.

A DAZZLING EFFECT.

Old Time Illumination With Lanterns and Candles.

In these days of electric lights, with all their capabilities for brilliant illumination, it is amusing to read what the subjects of George II. considered a dazzling effect. A Frenchman visiting in London at the time of the coronation of that monarch in 1727 writes enthusiastically in praise of the lighting of the city as well as of a banquet display.

"Most of the streets," writes M. Saussure, "are wonderfully well lighted. In front of each house hangs a lantern, or large globe of glass, inside of which is placed a lamp which burns all night. Large houses have two of these suspended outside the doors by iron supports. Some even have four."

How one are light would have dazzled the good people of that day!

"When the coronation procession entered Westminster hall," the writer continues, "the light of day was beginning to fade. Forty chandeliers, in shape like a crown, hung from the ceiling, each having thirty-six wax candles.

"On the king's appearance all suddenly lighted, and every one in the room was filled with astonishment at the wonderful and unexpected illumination. Little cords of cotton wool, imperceptible to the eye, saturated with sulphur of saltpeter, spirits of wine and other ingredients, had been prepared and arranged so as to carry the flame rapidly from one candle to another. The arrangement had been so skillfully prepared that scarcely a candle failed to take fire."

THE CENTAUR COMPANY, 77 MURRAY STREET, NEW YORK CITY

ANCIENT WATER VILLAGES.

Relic of Old Customs Prevailing In the "Spreevald."

One of the most interesting regions in the "old fatherland" is the so called "Spreevald," the forest of the Spree, situated not far from the German capital, in the province of Brandenburg. Each village is a little Venice, every house a little island, and these islets are connected by bridges sufficiently raised to allow boats to pass under them. Most of the houses, with their barns and stables, rest on piles, and there is generally a strip of artificial terra firma either in front or at the rear of every building. By means of these land strips and of the bridges the slender land communication is kept throughout the district, but most of the business and amusement are carried on through the canals, which not only form the main highways, but penetrate and cross and recross the whole region. It is on these lagoons that all traffic is conducted in boats during the period from spring when the last vestiges of frost and ice are disappearing until the end of autumn. You see the latter earlier shoot up and down the canals, performing his duties in his frail craft; the police glide leisurely along the banks, watching everything going on; persons bring the products of their toil to the nearest towns; children go to and from school; young couples are seen in their Sunday

Albert College Belleville, ONT.

Business School founded 1877. Practical and thorough. Five complete courses. Many graduates occupying important places as book-keepers and shorthand reporters. \$37.00 pays board, room and tuition, electric light, use of gymnasium and baths, all but books laundry, etc., for 10 weeks—longer time at same rate. Special reduction to ministers, or to two or more entering at same time from same place. A specialist in book-keeping, who is also an expert penman, and a specialist in shorthand in constant attendance. The teachers in the literary department also assist in the work. The high character of the College is a guarantee of thoroughness. New Commercial Hall one of the finest in Ontario. Catalogue with specimen of penmanship FREE.

The Danes and Britain.

John Ackworth, an English dialect novelist who made a special study of the dialects of Lancashire, Yorkshire, the east coasts and also of the Danes, shows that the Danes by their early landings and sojournings in England have influenced the language of the east coasts of Britain to an extraordinary degree and that the Danes and the British, in spite of apparent differences, are one practically in speech and language as well as in the relationship of blood. "So strong is the

the British, in spite of apparent differences, are one practically in speech and language as well as in the relationship of blood. "So strong is the English of the east coasts of England impregnated with Danish," John Ackworth once said, "that I am sure that if a fisherman from the east coasts of England were to be wrecked on the shores of Denmark and he would only speak in his true native dialect that fisherman would be able to make himself understood."

The Christian Era.

The Christian era was suggested or devised by Dionysius Exiguus, a Roman monk, who, in 527, began its use and proposed that all public and private documents should be dated "in the year of our Lord." It did not come into general use in France until the eighth century nor in England until July, 846; in Spain it was not adopted until the eleventh century; in Portugal it was made legal in 1415; in the empire of the east it was established by royal edict in 1462, a few weeks before the fall of Constantinople.

Rhodesia's Largest Nugget.

Weighing 21.62 ounces, a gold nugget which measures five and a half inches in length and three inches in width was recently found near Bulawayo. It is believed to be the largest yet found in Rhodesia, and is now in the British South Africa company's museum at 2 London Wall buildings, E. C.—London Mail.

The Woman of It.

Mother (impatiently)—You have been very naughty today, Juanita. I shall have to tell your father when he comes home. Juanita (aged seven)—That's the woman of it! You never can keep anything to yourself!

The Determining Factor.

Helen—Sometimes I like waiting and sometimes I do not. Ethel—It depends on your mood? Helen—It depends on my partner.

Of all persecutions, that of calumny is the most intolerable.—Marditt.

CURED HIS WIFE of LA GRIPPE

Quebec Man tells how the Great Consumptive Preventative was an all-round Benefit

"My wife took La Grippe when she was in Ottawa," says R. N. Bates of Northfield Farm, Que., in an interview. "She got a bottle of Psychine and after using it for a few days she was quite well. I took a cold and am using it and am getting all right. I think Psychine is one of the best topics on the market to-day."

There you have the whole matter in a nutshell. La Grippe and colds are among the forerunners of consumption.

This man had one, his wife had the other. Psychine not only cured both but it built them up so that their bodies are strong enough to resist disease. All seeds of consumption are killed by

PSYCHINE

(Pronounced Si-leep)

50c. Per Bottle

candle failed to take fire."

For Dosing Oneself.

A physician recommends rochelle salts for amateur doctoring. He says that it is an excellent thing, several times a day, to take as much of the salts as may be put on a cent in a little water. That will sweeten the stomach and act as a very desirable spring medicine. He also speaks highly of soda, having no patience with those timid people who have an idea that it is a dangerous dose, doing some vague harm to the coating of the intestines. "Why, everything we eat, almost, has soda in it," he cried in disdain. "It is an admirable thing to take half rochelle salts and half bicarbonate of soda, as directed, several times a day. I know of few gentler and still more beneficent general medicines."

A Poisonous Frog.

People in general look upon all species of the frog as being perfectly harmless. Should you be traveling in New Granada (United States of Colombia), however, you would do well to let a certain little tree croaker severely alone. He secretes a poison equally as deadly as that of the rattlesnake. It exudes from his skin in the shape of a milky liquid and is used by the natives as a poison for their arrows.

Write as You Feel.

If you would write to any purpose, you must be perfectly free from within. Give yourself the natural rein; think on no pattern, no patron, no paper, no press, no public; think on nothing, but follow your impulses. Give yourself as you are—what you are and how you see it. Every man sees with his own eyes or does not see at all.—Emerson.

Wouldn't Trust Him.

"Of course," said the sarcastic man, "you always do your wife's bidding." "Gracious! No!" replied Mr. Henpeck. "She wouldn't let me. When she goes to an auction sale she never takes me with her."

Contradictory.

"Has your son arrived at years of discretion?" "Oh, yes. He's about to be married." "How you contradict yourself!"

A pain must be to teach some good in the end.—Browning.

Really a Human Being.

The story is told in China that years ago a missionary made his appearance upon a platform there and that the native orator who introduced him closed with these words: "When I have finished a gentleman from the west is going to address you. He is not a foreign demon. His appearance and his clothing may seem strange to you, but look carefully at him. He has two arms and two legs, two ears and two eyes, a nose (though a long one) and a mouth; and I assure you his teeth are made of bone, just like yours. He is really a human being, and I hope you will regard him as such."

A Rank Fraud.

Mrs. Nuwed—Here's the bread I started to make today. Isn't it too annoying? Mr. Nuwed—Why, it isn't baked at all. Mrs. Nuwed—I know it isn't; that's just it. I put plenty of baking powder in it, but it doesn't seem to have worked.

CASTORIA.

going on; persons bring the products of their toil to the nearest towns; children go to and from school; young mothers, dressed in their Sunday clothes, are bowed to church, carrying in their arms a small, queer looking bundle from which two large eyes in a tiny face stare at the stranger in wonderment—Baby is going to be baptized, an important moment with this strongly religious people.

DREAM MYSTERY.

The Events That May Be Crowded Into a Few Seconds.

The duration of a dream is so seldom accurately measured that a story published in the St. Louis Medical Record is worth repeating.

The writer, a doctor, was seized with an uncontrollable drowsiness during a call and was struggling to keep awake when he was asked by his companion, "How long may you stay in B.?" His answer, which came promptly enough, was, "That depends on the Western Union," and, catching himself, he explained that he was expecting a telegram. In fact, however, his answer related to the facts of a dream which had been sandwiched between the two parts of the sentence.

"After hearing the words 'How long' the doctor had dozed off, dreamed that after long and tedious experiments he had invented a wonderful apparatus for holding telegraph poles in a vertical position, had negotiated with the

\$100 Reward \$100.

The readers of this paper will be pleased to learn that there is at least one dreaded disease that science has been able to cure in all its stages, and that is Catarrh. Hall's Catarrh Cure is the only positive cure now known to the medical fraternity. Catarrh being a constitutional disease requires a constitutional treatment. Hall's Catarrh Cure is taken internally, acting directly upon the blood and mucous surfaces of the system, thereby destroying the foundation of the disease, and giving the patient strength by building up the constitution and assisting nature to do its work. The proprietors have so much faith in its curative powers that they offer One Hundred Dollars for any case that it fails to cure. Send for list of testimonials.

Address: F. J. CHENEY & CO., Toledo, O.

postal company for its sale, but unsuccessfully, and had finally gone to the authorities of the other company. They, in the dream, told him they were considering a German invention for the same purpose, and the dreamer crossed the ocean to examine the rival device, returned, explained the differences to the intending purchaser and was writing a reply when he woke in time to hear the end of his companion's question.

The events of the dream had apparently consumed months, yet the actual time that elapsed was merely that required for uttering about four short words.

Precedent For "Governess."

Albert VII., archduke of Austria, married Isabella Clara Eugenie, infant of Spain, who brought to him as dowry the sovereignty of the Low Countries, etc. When Philip IV. of Spain ascended the throne in 1621 he took from his aunt the sovereignty of the Low Countries, but left her the title of governess. Her husband died soon after, whereon she took the veil, though still retaining the reins of government. She died at Brussels in 1633, aged sixty-six. Here there is precedent for the use of the word governess when a lady holds the post.—London Notes and Queries.

"There is no short cut to fame," remarked the wise guy.

"How about the upper cut?" suggested the simple mug, looking up from the sporting page.

Ennui.

"Oh, dear, how the hours do drag! I wish I knew how to hurry them on."

"Why don't you apply the spur of the moment?"

Trust to Nature.

A great many Americans, both men and women, are thin, pale and puny, with poor circulation, because they have ill-treated their stomachs by hasty eating or too much eating, by consuming alcoholic beverages, or by too close confinement to home, office or factory, and in consequence the stomach must be treated in a natural way before they can rectify their earlier mistakes. The muscles in many such people, in fact in every weary, thin and thin-blooded person, do their work with great difficulty. As a result fatigue comes early, is extreme and lasts long. The demand for nutritive aid is ahead of the supply. To insure perfect health every tissue, bone, nerve and muscle should take from the blood certain materials and return to it certain others. It is necessary to prepare the stomach for the work of taking up from the food what is necessary to make good, rich, red blood. We must go to Nature for the remedy. There were certain roots known to the Indians of this country before the advent of the whites which later came to the knowledge of the settlers and which are now growing rapidly in professional favor for the cure of obstinate stomach and liver troubles. These are found to be safe and yet certain in their cleansing and invigorating effect upon the stomach, liver and blood. These are: Golden Seal root, Queen's root, Stone root, Bloodroot, Mandrake root. Then there is Black Cherrybark. The medicinal principles residing in these native roots when extracted with glycerine as a solvent make the most reliable and efficient stomach tonic and liver invigorator when combined in just the right proportions, as in Dr. Pierce's Golden Medical Discovery. Where there is bankrupt vitality—such as nervous exhaustion, bad nutrition—and thin blood, the body acquires vigor and the nerves, blood and all the tissues feel the favorable effect of this sovereign remedy.

Although some physicians have been aware of the high medicinal value of the above mentioned plants, yet few have used pure glycerine as a solvent and usually the doctors' prescriptions called for the ingredients in varying amounts, with alcohol.

The "Golden Medical Discovery" is a scientific preparation compounded of the glyceric extracts of the above mentioned vegetable ingredients and contains no alcohol or harmful habit-forming drugs.

FARMERS' FIELD MEETINGS.

The cost of labor in fighting weed insect and fungus pests, which like the poor are ever with us, is one of the most serious problems with which farmers have to contend.

The Seed Control Act has had the effect of increasing the price paid to farmers for their pure seed and of reducing the price for their low grade seed.

Ar even greater discrimination in prices is likely to follow.

New weeds continue to be introduced. The trade in agricultural seeds has been a fruitful means for spreading them. The shipment, for feeding purposes, of screenings from Western grown wheat to points in the Eastern Provinces is another source of immediate danger that should not be overlooked. The noxious nature of new weeds that are being introduced in various ways is seldom well understood or their danger appreciated by farmers until they have become well established.

The Dominion and Provincial Departments of Agriculture are more than ever alive to these dangers which threaten to become a serious loss in crop production, and in the Eastern Province they are co-operating again this year holding field meetings during the month of June, when weeds, insects, fungus diseases and plant growth are most in evidence.

Seventy of these field meetings are being arranged by Supt. G. A. Putnam, in connection with the Farmers' Institute System of Ontario. The services of Prof. Lochhead of the McDonald Agricultural College at Ste. Anne de Bellevue have been secured to conduct similar farmers' nature study meetings in the three Maritime Provinces.

Here is provided an opportunity for farmers to get at first hand, information that cannot be given or demonstrated in hall meetings during the winter months.

WHAT OTHER PAPERS SAY.

Toronto Globe.

The letting of the contract by the Grand Trunk Pacific Company for the construction of the fifty miles between Winnipeg and Portage la Prairie implies two things: the early completion of the whole line between Winnipeg and Edmonton, and the establishment of an arrangement between the Grand Trunk Pacific and the Canadian Northern as to terminal facilities in Winnipeg.

Raymond's Record.

It's all beneath your hat, sir; underneath the spot where you part your hair, that is where your throat lies, that is the spot that makes you rich or poor a great man or an ignoble one. Your hat will wear out, your hand will weaken, the engine of your body will slow down as the fires grow dim, there will be a flicker, then darkness death—you are gone. Gone, did I say; no; never; the spot you left remains. That is supreme.

Galt Reformer.

France is on the verge of nervous prostration on the return of every May Day. What a privilege it is to live in the Anglo-Saxon country, where nothing more strenuous occurs than a dog-fight or a female hair-tugging incident!

Toronto Star.

One thing that makes so many backyard gardens go wrong is, no doubt, the habit so many men have of sowing the ground with violent language.

TRAINING DOGS.

Poodles the Easiest to Teach, Dachshunds the Most Difficult.

A poodle is the easiest of all to train, and the dachshund is the most difficult, the latter not because he is too stupid, but because he is too smart. A dachshund readily understands what you want him to do, and he can do it, but he thinks he knows a better way, and he invariably tries his way first. As a result, he is never trained in anything that is really difficult. A dachshund seems to be always poking fun at one and getting no little amusement out of it for himself. Collies are easily trained, but they are more or less unreliable, and they are such flatterers. They make you think things are all right and then they run away at the very first opportunity. In preference to other dogs, collies are trained almost exclusively in the militia of Vienna for carrying, in time of war, messages and medicine to and from the camp and the sick soldiers, but they are chosen more for their speed than their faithfulness. Fox terriers are natural acrobats. Within a few weeks one can be trained to turn a somersault. A few weeks more and he will do a double turn. To teach him to do this the trainer calls the animal to him, and as he comes jumping playfully against the trainer he is caught and turned quickly in the air, much to his surprise. He thinks it is play, and he comes jumping up again. After each turn he is given a small piece of meat. In a few weeks he will run up and try independently to do the turn over in the air for the meat, and if he is encouraged it will not be long before he is an accomplished acrobat.

ERRATIC ENGINES.

Locomotives That Act as Though They Were Bewitched.

You never see a ship launched on a Friday, and similarly a new locomotive hardly ever makes a trial trip on that day or on the 13th of the month. Even though the superintendent may fear at the superstition, yet he knows too well to set it at naught, for just as sailors consider that some ships are unlucky so do train hands credit certain locomotives with a sort of demoniacal possession.

It is certainly very strange the difference that may be observed between two locomotives built from the same plans, at the same time, of similar material. One goes on her way quietly and smoothly, never breaks down, costs little or nothing for repairs. The other causes trouble from the very first, runs off the line, kills the drivers, gets into accidents of all kinds and generally acts as though possessed by some evil spirit.

There was a famous instance some years ago on the South Florida railway. A locomotive killed so many people that she got the name of "the hearse," and no fewer than three engine drivers actually left the employ of the company rather than continue driving her. The odd thing was that she never seemed to injure herself. Eventually the owners were forced to break her up, although she was by no means worn out.

Of actual ghosts in trains or railway engines one very seldom hears.

The Art of Flattery.

There are those who have an instinct which prompts them to offer verbal caresses to all with whom they come in contact, and there is no doubt that, if such people are gifted at the same time with good hearts, they greatly sweeten life. They do not know how to say

Why Red Rose Tea is Economical

RED Rose Tea has all the good points of two good teas and none of the weaknesses of any. You never drank a cup of straight Ceylon or Indian tea that could compare in strength, richness, delicacy and fragrance with the "rich fruity flavor" of Red Rose Tea.

Yet Red Rose Tea goes further and costs no more than either Indian or Ceylon teas alone.

Red Rose Tea is better than either Indian or Ceylon tea and is more economical because it goes further.

Red Rose Tea

is good Tea

DRS. KENNEDY & KERGAN

The Leading Specialists of America. 25 Years in Detroit. Bank Security.

Nine out of every ten men have been guilty of transgression against nature in their youth. Nature never excuses, no matter how young, thoughtless or ignorant he may be. The punishment and suffering corresponds with the crime. The only escape from its ruinous results is proper scientific treatment to counteract its effects.

The DRAINS, either by nightly losses, or secretly through the urine, must be stopped—the NERVES must be built up and invigorated, the blood must be purified, the SEXUAL ORGANS must be vitalized and developed, the BRAIN must be nourished. Our New Method Treatment provides all these requirements. Under its influence the brain becomes active, the blood purified so that all pimples, blotches and ulcers disappear; the nerves become strong as steel, so that nervousness, bashfulness and despondency disappear; the eyes become bright, the face full and clear, energy returns to the body, and the moral, physical and sexual systems are invigorated; all drains cease—no more vital waste from the system. The various organs become natural and manly. We invite all the afflicted to call and consult us confidentially and free of charge. Cures Guaranteed or no Pay. We treat and cure: Varicocoele, Blood Diseases, Stricture, Gleet, Emissions, Urinary Drains, Spermatorrhoea, Unnatural Discharges, Kidney and Bladder Diseases.

CONSULTATION FREE.

If unable to call, write for a QUESTION BLANK for Home Treatment.

STOMACH TROUBLES
ARE THE WORLD'S BIG WORRY

GET ON TO THE TRAIL OF NINETY-NINE OF EVERY HUNDRED OF OUR EARTHLY ILLS AND YOU CAN TRACE THEM BACK TO THE STOMACH.—YOU CAN BANISH STOMACH TROUBLES FOREVER WITH

Dr. Von Stan's Pine-apple Tablets

Doesn't it stand to reason that nature herself has in herself a cure for our ills—and doesn't it stand to reason that nature rebels at many of the nauseous so called remedies, that pass as cures for stomach ailments?—

Dr. Von Stan's Pine-apple Tablets are nature's cure in very deed, because they're purely vegetable and are extracted from one of the most luscious fruits that grows—and what a boon they have proved themselves to be, is best expressed in the hundreds of unsolicited testimonials that could be printed here—and which will be produced if you're a bit credulous.

How is your stomach affected?—Do you have sour stomach—distress after eating—weight on the stomach—wind on the stomach—Loss of appetite—dizziness—nausea—sick headache and other uncomfortable derangements?—the first tablet will give you relief and persistence will cure—and there's no case of stomach trouble so stubborn as to baffle Dr. Von Stan's Pine-apple Tablets.

35 cents a box at all Druggist and medicine dealers.

USE DR. VON STAN'S OINTMENT FOR SKIN ERUPTIONS 35c

One thing that makes so many backyard gardens go wrong is, no doubt, the habit so many men have of sowing the ground with violent language.

Exchange.

It appears that in the San Francisco earthquake, the confidence of the people in their city was about the only thing that remained unshaken.

Washington Star.

"Think of the men of genius who lacked the necessities of life!" exclaimed the studious young woman. "Yes" answered Mr. Cumrox, "and in nearly every case it was because they didn't know how to advertise."

Kingsdon Whig.

The tone of the federal parliament is being lowered by personal recriminations and bitterness of debate. Foster is to blame for it all. He has a bad tongue, and he provokes retaliation by the perverse use he makes of parliamentary privilege.

Toronto Globe.

The only real temperance measure that has been passed recently is that passed by the hotelkeepers in raising the price of drinks.

It is surely bad management when the Legislature has no business before it in the last few days of the session. The members met yesterday only to adjourn. There was enough of this at the beginning to intitle us to expect that no more time would be lost. Let us hope, however, that the delay will give us the ardently-hoped-for power oil.—Toronto Globe.

Montreal Witness.

A lustre has passed since the last mining shares debacle, and the public memory is short. Therefore the invitation of the brokers to "walk into my parlor" will be very extensively accepted. The witness is often requested to advise its correspondents as to whether or no it would be wise to buy a few shares of this or that mining stock. On general principles our advice is always "Don't." If one has certain information about a property and those who are developing it, and would not miss the money if it were lost, the case is different; but the man who buys the ordinary ten-cent-a-share mining stock advertised in the newspaper or speculated in on the street is often not even helping to dig a hole in the ground.

Paid For the Opinion.

Shortly after Chief Justice Purley of the court of appeals of New Hampshire had retired from the bench and resumed the practice of his profession a man called on him to get his opinion in a certain matter. After stating his case clearly he said, "Well, judge, what do you think of my case?" The judge promptly replied, "I think you are a scoundrel." "How much do I owe you for that opinion?" inquired the client. "Ten dollars," demanded the judge. The fee was promptly paid.

A Doubting Thomas.

She—Did you let father know you owned a lot of house property? He—I hinted at it. She—What did he say? He—He said, "Deeds speak louder than words."

A Common Delusion.

One of the commonest of delusions and one of the fatallest is where a man thinks he's in a hurry.—Puck.

No man can enjoy life or feel that he is really living who has no work to do. —Success Magazine.

when prompts them to utter verbal caresses to all with whom they come in contact, and there is no doubt that, if such people are gifted at the same time with good hearts, they greatly sweeten life. They do not know how to say, much less write, a disagreeable sentence. They see with their mind's eye the exact spot where a flattering word would produce pleasure or save a smart, and the temptation to say it is very great. The pleasure they produce delights them, and they study to produce it again. No doubt they practice an art, but not a very black art, and it is difficult not to like them, especially if they are women. Real flattery—the really false article—can hardly exist with a warm heart. Plenty of folly and too much desire to be popular may go with that, but nothing else.

Church Built of Bulrushes.

The first place of worship in Western Australia was unique in two respects—the materials of which it was built and also the several purposes to which it was devoted. This remarkable building was made at Perth by soldiers shortly after their first arrival in 1829 and was composed almost entirely of bulrushes. In addition to its use on Sundays for divine worship, it occasionally served as an amateur theater during the week and during the whole time as a barracks.

The Pawnbroker's Sign.

The pawnbroker's sign came from the sign used by the Lombard bankers, who took it from the sign used by the Medici family of Florence. The founder of the house had been a medicus, or physician. His descendants became bankers and brokers, and their sign was their ancestor's golden pills. When they became nobles they assumed as arms six golden pills or balls on a blue field.

Sunny People.

The world delights in sunny people. The old are hungering for love more than for bread. The air of joy is very cheap, and if you can help the poor on with a garment of praise it will be better for them than blankets.—Henry Drummond.

JUDICIAL NOTICE TO THE CREDITORS OF THE NEILSON-ROBINSON CHEMICAL COMPANY, LIMITED.

PURSUANT to the Winding-up order made by the High Court of Justice in the matter of the Winding-up Act and Amendments thereto and in the matter of the Neilson-Robinson Chemical Company, Limited, bearing date the Third day of April 1906, the creditors of the above named Company and all others who have claims against the said Company formerly carrying on business in the Town of Napanee are on or before

7th DAY MAY A. D., 1906.

to send by mail postpaid to C. M. Warner, Esq., or W. F. Hall, Esq., Liquidators, of the said Company, addressed to them at Napanee their christian and surnames, addresses and descriptions, the full particulars of their claims and the nature and amount of the securities (if any) held by them and the special value of such securities verified by oath and in default thereof they will be peremptorily excluded from the benefits of the said Act and Winding-up order.

The undersigned Master of the High Court of Justice at Napanee will on the 11th day of May, A. D. 1906 at ten o'clock in the forenoon at his Chambers in the Court House in the Town of Napanee adjudicate upon the claims of creditors submitted to him pursuant to this notice and let all parties then attend.

Removed the Growth.

DOUGLAS & CO., NAPANEE, ONT.

DEAR SIR,—During year 1890-91 I was troubled with a large lump growing on the right side of my neck near the ear. Had consulted several physicians and used everything I could hear of, all to no use. Was told to use

Douglas' Egyptian Liniment.

I did, and before I had used half a twenty-five cent bottle was permanently cured. Since then I have used it for everything where outward application is required; am yet to learn of anything in reason that I cannot cure with it. No man has any idea of its value until he has used it; would not be without it under any circumstance!

Respectfully yours,

NATHANIEL W. REID.

Enterprise P. O.

Frost Fences Are Strong All Around

The laterals of a Frost Fence are High Carbon No. 9 Hard Steel Cold Wire, thoroughly galvanized—that can't be broken until the strain reaches from 1500 to 2200 pounds.

The stays are No. 7 on this same No. 9 wire. And the two wires are locked with the Frost Locks. That braces the fence in all directions—up down and diagonally.

We are so sure that Frost Fences are the strongest and best that we guarantee to repair, free of charge, any fence that goes wrong. That's fair, isn't it? Frost Wire Fences are for sale by—

Boils and Pimples

Red Rash, Eczema, in fact any skin disease, disfigures the complexion because the bowels are constipated—or because the kidneys do not rid the system of waste—or because the skin itself is unhealthy.

Ointments, salves and soaps are useless. Because the trouble is with the blood.

Owing to defective action of bowels, kidneys or skin, the blood becomes laden with impurities. It is these impurities—deposited by the blood—that make boils, pimples, and painful, disfiguring skin diseases. It is because the trouble is with the bowels, kidneys or skin, that FRUIT-A-TIVES cure these diseases

Fruit-a-tives

OR "FRUIT LIVER TABLETS"

act directly on the eliminating organs—correct their irregularities—strengthen them—and thus clear the skin and make the complexion clear and soft.

If you have any skin trouble—or any fault with constipation, liver trouble, biliousness, headaches, indigestion, rheumatism—cure yourself with Fruit-a-tives. They are made of fruit juices and tonics—and never fail to cure.

50c. a box or 6 boxes for \$2.50. Sent on receipt of price if your druggist does not handle them.

FRUIT-A-TIVES
LIMITED,
OTTAWA.

Resting a Model.

Many artists have the reputation of being inexorable in their demands upon the model's strength. A characteristic example appears in an anecdote of the late Adolphe Menzel, the German painter, who at one time was engaged on a work of mural decoration and kept a man posed in an exceedingly fatiguing position on a scaffold for two hours. The great painter worked away, heedless of his model's discomfort. Finally the victim called down, "Herr Professor, how about the recess?"

"Certainly, my dear sir. Come down right away, and you shall have your recess."

As the model was descending from the scaffolding his limbs assumed a position which was one for which the artist had long been looking.

"Stop!" Menzel thundered. "Hold! Ah, fine! Keep that while I make a little sketch of it!"

The artist drew vigorously for half an hour, at the end of which he called out imperatively: "There, that will do for now. Get up on the scaffold again. We have had our recess."

This Life.

Says Charles Baudelaire: "This life is a hospital where every patient is possessed with a desire to change his bed. This one would prefer to suffer by the stove, and the other thinks he would recover by the window."

Visitor—Johnny, give me the name of the largest diamond. Johnny—The ace. —Boston Globe.

Her Guardian

By FRANK H. SWEET

Copyright, 1906, by McClure, Phillips & Co.

"Then you think you have everything you will need, may need?"

"Everything? Oh, Mr. Barclay!"

The girl's eyes were misty with tears. "What makes you so thoughtful of me? At school there was no other girl who had such beautiful and dainty things. And it was not money, for many of them were wealthy. They said I had such exquisite taste, and it was not I at all, but you who procured them and who influenced me into the way of wanting such things, and it used to be the same before I went to school and has been so since I graduated and came home. You are always influencing me toward what is most beautiful in life and then bestowing it on me, so lavishly."

Mr. Barclay's hand moved uneasily among the papers.

"I promised your father"—he began, when she interrupted him with an imperious motion of her hand.

"Yes, yes, I know, but most guardians would have been satisfied with keeping a general oversight and paying the bills. You have been my most intimate friend from the time my father died, when I was only twelve. Why," laughing, and her voice quavering a little, "I have told you my secrets and love affairs as few of the girls I know tell their own mothers. It has seemed perfectly natural. You were interested in them, or appeared to be, and never requested me to keep away from the boys. Indeed, I think you always favored my going with them, only you were careful to inquire about their habits."

She was in a reminiscent mood, and, though her eyes were still moist and tender, her lips were half parted in amused recollection.

"What a lot of boys I must have told you about, Mr. Barclay," she went on, "all those of my early school days, then the ones I met at college and now the young men who have been calling on me during my six months here. You know about the ones I like best and those I just tolerate."

"I am afraid you are a sad flirt, Elinor," he said.

"Yes, I am afraid I am," she agreed readily, her face becoming clouded. "But what can I do? The boys seem nice, and I like them, but some way when I come to know them better they all fall a little short, and I have to let them go. I have felt awfully sorry for some of them, but there was no other way. Two or three who are coming here now are really talented and will make successful men, I am sure, but I have a premonition what my verdict will be. They almost reach my ideal," the lurking mischief again returning to her eyes, "but not quite."

"Perhaps your ideal is too high."

"Perhaps," demurely, "but you fixed it for me, and you have made it so much of my being that I cannot stoop to a lower one now."

"Well, I am glad. The ideal will come along some day, and then there will be no mistake. Are your trunks all packed?"

"Yes. I can get ready in a few minutes, and there is over an hour. That

is why I came down to have a—last talk with you, Mr. Barclay."

He winced ever so slightly. She had always called him uncle until the past few months. Now it was Mr. Barclay. She was older, of course, and was growing away from him. And she would be absent for two whole years. What would it be like when she returned?

"Yes," he said, his voice a little dreary with the thought, "I was waiting for you to come down. It will be a long, delightful two years for you, and I hope you will enjoy them thoroughly. Mrs. Carruth has the reputation of being the best chaperon in the country. She will take you everywhere, and you will meet nice people. I will give you letters to some I wish you to know. Dr. Laurens is going abroad on the same steamer, I hear, so you will have a chance to meet him after all. I was sorry for his peremptory summons to the hospital that day I invited him here, but of course his professional duties should come first. I shall ask him to look you up and request Mrs. Carruth to present him. Dr. Laurens is one of the most brilliant and noble men I know and is making himself an enviable reputation, and he is only three years older than you are, Elinor."

"Don't, Mr. Barclay!" she implored, with sudden pain in her voice. "Please do not talk that way. You mean well, but I—I do not like it just now. This is the only home I remember much about, and I am going away for a long, long time. Let us not talk of other people. When I left college I looked forward to coming home and living quietly, as we did before I went away, when we read books and played chess and talked over things. But you thought I should go into society and meet people, so you left your books and took me everywhere and introduced me to everybody. I think I must have met all the noted people, especially the young men, in the whole city and surrounding country. And now I am to go abroad to meet people and people and people! I suppose it is for the best and my good, but I am not brilliant enough to appreciate it. I—I should have liked the chess and books so much better."

His face was turned away from her now, but his voice was steady.

"Yes, it is for the best, Elinor. It is right for a girl to marry, and she should know men before she is ready to make a choice. Some girls are acquainted with only a few, and the best of these is her standard of manliness. Perhaps just outside her limited area there are a hundred who are stronger and nobler in every way. This girl has been cheated. I do not want your life like that. I have done the best for you in the way of an education. As a conscientious guardian could I do less for the rest of your life? It is not that I want you to go, Elinor; it is not that I have any inclination to be a matchmaker. It is because—because I can do nothing else, being myself." He looked at his watch abruptly. "Twenty minutes," he suggested.

"So late? Well, I will go and get ready."

At the door she paused, looking back. "You must excuse my talk about your liberality, Mr. Barclay," she said wistfully. "But—but I could not go away without saying something."

Halfway up the stairs she paused again. She had forgotten the letters of introduction, and it would be more convenient to put them in her bag before starting.

When she re-entered the library Mr. Barclay's face was buried in his arms upon the desk. He was tired, she thought, and perhaps grieving a little at her going away.

GRETNA

Farmers have begun sowing and are busy working on their land.

And accident here on Monday evening. As M. Cranston, his mother and sister were coming home from town, Mrs. Cranston and Miss Cranston were seriously injured, but are improving.

Miss Bessie Mellow, daughter of John Mellow, passed away on Saturday morning, April 14th, at the early age of 17 years and 10 months. She was a bright girl, loved and respected by all who knew her, for her Christian qualities. She will be greatly missed by the entire community and especially in the church and Sunday school services, at which she was a regular attendant and faithful worker. The bereaved family have the heartfelt sympathy of the whole community.

Elmore Hamby had a barn raising on Monday of this week.

Ed. Moore, Deseronto, has moved into the house lately occupied by D. Field

A GENEROUS CRITIC.

Story of John Oxenford, a Once Famous London Character.

John Oxenford was for years the leading theatrical critic of London. Mr. Oxenford was troubled with a serious bronchial affection, which occasionally disturbed the audience, for he refused to give up his beloved theater, although desperately ill. A certain rising young actor was very anxious to obtain Oxenford's valuable opinion on his work, and the tender hearted old gentleman literally left his bed and came down to the theater on a bitter cold night to do a good action to a clever youngster. In the middle of one of the actor's finest scenes on came the cough from the Oxenford box. It continued so long that it unnerved the actor, and he came to a dead stop. To the surprise of everybody he advanced to the front and said, "Ladies and gentlemen, I am sorry to say that unless the old gentleman with the irritating cough retires temporarily from the theater I really cannot go on. I forget everything. It is painful so to address you, but I am powerless in the matter and place myself in your hands."

The disturbance at once ceased, and the box was empty. When the curtain fell a friend rushed around and, breathless, said to the distressed actor: "Do you know what you have done? Do you know who it was that you turned out of the box?" "I neither know nor care," was the reply. "Why, it was John Oxenford!" The actor was paralyzed, but he got his good notice all the same. The veteran critic went home coughing to praise the young actor who had turned him out.

The Sultan's Kiosks.

In every city of the Ottoman empire there is a kiosk set apart for the sultan, who never even sees it. These palatial abodes are built of rare marbles and finished in fine woods, enameled in silver and gold, with mirrors and lustres from Vienna, mosaics from Florence and Rome, and are nominally guarded by major domos, who live there in royal ease and luxury unparalleled. Hundreds of millions of francs are thus squandered, while not a sou is spent in making roads, fertilizing valleys or constructing ports.

WHO SI

Good. So are we. That is, if it's

NEWBURGH.

Congratulations are extended to Herbert McKim on passing his final year in dentistry.

Miss Ella Chant entertained on Friday in honor of her cousin, J. Nelles Gardiner, Kingston.

An enthusiastic baseball meeting was held in Percy's hall, on Tuesday. J. W. Yeomans was elected president and G. B. Thompson, secretary-treasurer and manager.

On Friday there passed away one of Newburgh's most respected residents, Mrs. William Nugent. Mrs. Nugent's illness lasted only four days. The funeral service was conducted at the house, on Sunday morning, by Rev. J. F. Mears. A large number attended to pay their respects to one who was esteemed and respected by all. The beloved husband and family have the sympathy of a wide circle of friends.

The high and public schools reopened on Monday.

Judge Madden and Miss Cora Madden spent Sunday at Mrs. A. Madden's.

Miss Mary Beeman was the guest of Miss Maude Anderson, Napanee, last week.

Ray Farley spent a few days with William Anderson, Napanee.

Mrs. Finkle, Napanee, spent a few days last week with Mrs. A. Madden. The "Irish Town Sluggers" Baseball Club have organized for the season and are out to meet any team; average sixteen.

Judging by the improvements being made, W. W. Adams is going to have an up-to-date establishment in his new quarters.

Leonard York, Bath, spent Sunday in the village.

Herbert McKim, of the Dental College Toronto, is visiting his mother, Mrs. McKim.

Herbert Ryan was successful in his science exams. at Queen's.

Miss Helen Finkle was the guest of Miss Jeane Duff, Kingston, last week.

DESERONTO ROAD.

The weather continues fine and seeding operations are in full swing.

Miss Ethel Joyce, daughter of Wm. Joyce, has a position in Napanee with the Robinson Co, and goes up and down on her wheel every day.

Master Percy VanVlack entertained a number of his friends last Friday afternoon, it being their ninth birthday. All report a very enjoyable time.

Mr. Fred Wilson, Butcher, is this week moving, on the premises lately occupied by Alfred Keech, and owned by Manley Conger.

Bricklayers have commenced operations on Mr. Austin Kimmerly's house but owing to previous engagement they were compelled to quit the job for a while and are working on the New Methodist Church Napanee.

Word was received by Mr. Andrew Oliver that his son, residing in the ill-fated city of San Francisco, escaped unhurt. It was indeed good news.

The strike of longshoremen has commenced at Buffalo. Indications are that the strike will hamper navigation.

MRS. W. F. HOFFMAN.
601 North 6th St., KANSAS CITY, KANS.

Mrs. E. M. Merald, 128 W. 28th St., Indianapolis, Ind., member of A. D. Straight Circle of the Ladies of the G. A. R., writes: "I am to-day enjoying perfect health, thanks to Peruna. For nearly four years I suffered with ovarian troubles.

"The doctor insisted on an operation as the only chance to get well, but I had always dreaded an operation and strongly objected.

"My husband felt disheartened as well as I, and when a friendly druggist advised him to bring me a bottle of Peruna he did so, and I started to use it.

"In a short time my health began to increase, and my aches and pains diminished. Within eighteen weeks I was like another being, in splendid health.

"Words fail me when I try to tell you how glad and grateful I am."—E. M. Merald.

Address Dr. Hartman, President of The Hartman Sanitarium, Columbus, Ohio.

All correspondence held strictly confidential.

MRS. M. BRICKNER.
99 11th St., MILWAUKEE, WIS.

Mrs. M. Brickner, 99 11th street, Milwaukee, Wis., writes: "I have strong faith in the efficacy of Peruna to cure the ills peculiar to women. A short time ago I found my condition very serious.

"I had headaches, pains in the back and frequent dizzy spells, which grew worse every month.

"I tried two remedies before Peruna, and was pretty discouraged when I took the first dose; but my courage soon returned as I could see that I was being benefited, and in less than two months my health was restored."—M. Brickner.

A reward of \$10,000 has been deposited in the Market Exchange Bank, Columbus, Ohio, as a guarantee that the above testimonials are genuine; that we held in our possession authentic letters certifying to the same. During many years' advertising we have never used, in part or in whole, a single spurious testimonial.

Every one of our testimonials are genuine and in the words of the one whose name is appended.

Mixed Wives.
In the early part of the last century there lived in an old New England town a Mr. Church, who in the course of his earthly life was bereft of four wives, all of whom were buried in the same lot. In his old age it became necessary to remove the remains to a new cemetery. This he undertook himself, but in the process the bones became hopelessly mixed. His "New England conscience" would not allow him under the painful circumstances to use the original headstones, so he procured new ones, one of which bore the following inscription:

ges. For my house I paid \$5 a month rent. My servants I paid 50 cents a week. Mutton cost 3 cents a pound. Eggs were 2 cents a dozen. Chickens were 5 cents apiece. Fish cost a fifth of a cent a pound. The finest of fresh fruits and vegetables—fresh fruits and vegetables in February—were so cheap that they were not sold in quantity. You got all you wanted for so much a week. All I wanted for my household cost me a quarter weekly. An American resident of Antioch told me that he and his family lived comfortably on \$175 a year."

their mother, combined forces to restore the family fortune. They argued that the medicine which was so good for their woman friends and neighbors was equally good for the women of the whole world.

The Pinkhams had no money, and little credit. Their first laboratory was the kitchen, where roots and herbs were steeped on the stove, gradually filling a gross of bottles. Then came the question of selling it, for always before they had given it away freely. They hired a job printer to run off some pamphlets setting forth the merits of the medicine, now called Lydia E. Pinkham's Vegetable Compound, and these were distributed by the Pinkham sons in Boston, New York, and Brooklyn.

The wonderful curative properties of the medicine were, to a great extent, self-advertising, for whoever used it recommended it to others, and the demand gradually increased.

In 1877, by combined efforts the family had saved enough money to commence newspaper advertising and from that time the growth and success of the enterprise were assured, until to-day Lydia E. Pinkham and her Vegetable Compound have become household words everywhere, and many tons of roots and herbs are used annually in its manufacture.

Lydia E. Pinkham herself did not live to see the great success of this work. She passed to her reward years ago, but not till she had provided means for continuing her work as effectively as she could have done it herself.

During her long and eventful experience she was ever methodical in her work and she was always careful to preserve a record of every case that came to her attention. The case of every sick woman who applied to her for advice—and there were thousands—received careful study and the details, including symptoms, treatment and results were recorded for future reference, and to-day these records, together with hundreds of thousands made since, are available to sick women the world over, and represent a vast collaboration of information regarding the treatment of woman's ills, which for authenticity and accuracy can hardly be equaled in any library in the world.

With Lydia E. Pinkham worked her daughter-in-law, the present Mrs. Pinkham. She was carefully instructed in all her hard-won knowledge, and for years she assisted her in her vast correspondence.

To her hands naturally fell the direction of the work when its originator passed away. For nearly twenty-five years she has continued it, and nothing in the work shows when the first Lydia E. Pinkham dropped her pen, and the present Mrs. Pinkham, now the mother of a large family, took it up. With woman assistants, some as capable as herself, the present Mrs. Pinkham continues this great work, and probably from the office of no other person have so many women been advised how to regain health. Sick women, this advice is "Yours for Health" freely given if you only write to ask for it.

Such is the history of Lydia E. Pinkham's Vegetable Compound: made from simple roots and herbs; the one great medicine for women's ailments, and the fitting monument to the noble woman whose name it bears.

self, but in the process the bones became hopelessly mixed. His "New England conscience" would not allow him under the painful circumstances to use the original headstones, so he procured new ones, one of which bore the following inscription:

"Here lies Hannah Church and probably a portion of Emily."

Another:
"Sacred to the memory of Emily Church, who seems to be mixed with Matilda."

Then followed these lines:
Stranger, pause and drop a tear,
For Emily Church lies buried here,
Mixed in some perplexing manner
With Mary, Matilda and probably Hannah.

The Last Versailles Bourbon.

There is at Versailles an orange tree some five centuries old. This tree, which was taken from Fontainebleau of Versailles on the completion of the orangery, was already famous under the title of the Grand Bourbon. According to tradition, the tree had been planted in 1421 by a Princess of Navarre and after several changes of owners came into the possession of Francois I., by whom it was placed at Fontainebleau. When it reached Versailles the king came to visit it, and two grand Bourbons were then face to face. The man passed, and even his bones, torn from their tomb at St. Denis and tossed into a trench, have perished. Not a pinch of his dust remains. But the tree lives and blooms and bears fruit, the only Bourbon at Versailles, serene, invincible, enthroned.

In Darkest Africa.

A weird tale of witchcraft comes from the interior of Africa. A recent trial at the Lilongwe court proved that a native woman killed by a lion had been partly eaten by another native who was accused of impersonating the lion. The prisoner confessed freely that he had eaten of the woman's dead body, the excuse being that he had purchased from a "witch doctor" a medicine which enabled him to turn into a lion at will—in other words, to indulge in cannibalism in its lowest form as the mood took him.

The Indian and the Railroad.

Gail Hamilton said if there never were to be any railroads it would have been an impertinence in Columbus to have discovered America. The Indian's knowledge of the location and direction of the rivers and lakes and of the positions of the portages and his readiness under the right sort of persuasion to put this knowledge at the service of explorers, missionaries and settlers "stood off" this stigma from Columbus before the railways came. Indians guided Captain John Smith, Champlain and La Salle through the wilderness. Indian trails blazed pathways for the pioneers through forests and over mountains. Sometimes these trails were utilized by the railway builders. At the Louisiana Purchase exposition at St. Louis and at the Lewis and Clark fair at Portland were monuments to the heroic Shoshone girl, Sacajawea, who piloted Lewis and Clark across the Rocky mountains and through the wilderness on each side of that range in their exploration of the Pacific.—C. M. Harvey in Atlantic.

Cheapest Place to Live.

"The cheapest place in the world is Antioch," said a globe trotter. "I once passed a winter there, and all it cost me, though I leased a fine house and kept three servants, was \$4 a week. Antioch is in Asia, on the Mediterranean. The climate is all right for winter—as good a winter climate as Monte Carlo, Palm Beach or Los Angeles."

wanted for so much a week. All I wanted for my household cost me a quarter weekly. An American resident of Antioch told me that he and his family lived comfortably on \$175 a year."

Crushed the Lawyer.

Some years ago in Alabama one of the most talented lawyers practicing in the south was the late Colonel Bragg, but he had a peppery temper.

Not only did Colonel Bragg's disposition involve him from time to time in serious differences with his colleagues, but it also led him to break off amicable relations with a Judge Robinson, a most estimable jurist, who while presiding over a suit in which Bragg was interested had by his decision incurred the resentment of the advocate. So for a long time the colonel declined even to speak to the judge save when it was absolutely necessary in the course of business.

Finally, however, his better nature getting the upper hand, Colonel Bragg determined to apologize to Judge Robinson and endeavor to effect a renewal of their former comparatively pleasant relations. Meeting the judge one afternoon on the steps of the statehouse, he impulsively thrust out his hand and said:

"See here, judge; let's be friends again. This thing has gone on long enough."

"Why—er—Bragg," asked the judge in the meekest and mildest way imaginable, "what's the matter?"

"Simply this, judge," continued the fiery Bragg—"I admire you so immensely that I cannot for my life be content to remain on bad terms any longer. I felt that I must speak to you."

"Why—er—Bragg," piped the judge in the thinnest of voices, a well feigned look of astonishment on his face—why—er—Bragg, haven't you been speaking to me?"

At this the lawyer wilted.—Lippincott's.

Creosolene is a boon to Asthmatics

Creosolene is a long established and standard remedy for the diseases indicated. It cures because the air rendered strongly antiseptic is carried over the diseased surface of the bronchial tubes with every breath, giving prolonged and constant treatment. Those of a consumptive tendency, or sufferers from chronic bronchitis, find immediate relief from coughs or inflamed conditions of the throat.

FAITH.

No Man Ever Became a Martyr for a Truth He Received at Second Hand.

"This is the victory that overcometh the world, even our faith."—1. John v., 4.

You cannot believe little things and do great ones; you cannot believe in small successes and accomplish whole ones. A man's faith sets the boundaries of his work. He will do what he believes and accomplish what he believes can be accomplished. Mountains are not subdued by men who stand discouraged at a molehill. A man must conquer the fatigues of the way in his own heart or he will never set out on the road.

Back of all free action lies some creed, some conviction. All great battles have been fought and either lost or won in the heart. The simple or stubborn confidence that leads to all-conquering effort, this is faith; the vision that vitalizes. The eye of faith sees the prize at the end long before it is reached; the eye of fear looks so closely at the difficulties and dangers of the course that the prize is not seen at all.

There is a good deal of fatalism seeking to pass as faith. People say we must have faith in God; let things take their course and they will come out all right. The church long commended the slothful who let things drift, and called their laziness resignation. But faith feels the

CERTITUDE OF A HARVEST

because it has first diligently plowed and sown and because of the goodness that has ever brought the seedtime and the harvest.

Superstitious credulity is not faith. It is more than the foresight that feeds on visions of a future heaven; it is the clear eye looks keenly at the things of to-day. No truth is the better for being taken on trust; it cannot be possessed until it is known, not on the authority of another but on your own experience.

Only a first hand faith is a force in the world. It is born of life; it deter-

mines life. Your faith forms you. If you do not believe men, how can you be a man? If you do not believe in things better, nobler, purer, how can you move toward them? If at bottom your faith is in things mean, sordid, sensual, base, then thither turns your life, and no extraneous efforts, no badges, buttons, or creeds can change its course.

You can measure a man's weight in this world by the strength and clearness of his convictions. Poor you may be, fringed, alone, weak, unlearned; but all this can be overcome if bright in the heart there burns the unquenchable flame of some great passion, some high faith. Given this fire within them, all the tools shall be found, but without it the finest endowment of brain and body is valueless.

Given by some great principle, some purpose that becomes a holy passion,

SOMETHING THAT LEADS YOU.

like one of long ago who "steadfastly set his face to go up to Jerusalem," then all power is yours. The man who has faith to remove mountains always finds the picks and the steam shovels somewhere. He takes the tools he has, though they may seem but toys beside his task, and let some morning when the dreamers awake the mountain is no longer there. Faith has had her perfect work.

No worthless word was ever said of the divine man than that which spoke of him as the leader and completer of faith. So great a work was possible only with sublime confidence in the glorious possibilities of mankind, only with unshakable assurance that all that was good and true in the universe was working with him for the good of all. With him faith was an eye that saw man's hidden good, a hand that grasped the infinite might moving for the best.

THE S. S. LESSON JAP AND ENGLISH WOMEN

INTERNATIONAL LESSON,
MAY 6.

Lesson VI. The Parable of the Tares.
Golden Text: Gal. 6. 7.

LESSON WORD STUDIES.

Note.—The text of the Revised Version is used as a basis for these Word Studies.

A Sequel.—In the Parable of the Sower, or, as we designated it in the Word Studies for last Sunday, "The Parable of the Four Soils," Jesus taught that the Kingdom of God does not include all men alike without discrimination. Some there are who have not the capacity, or willingness, to receive the word of the kingdom and to bring their lives into harmony with its teachings. The true, or invisible, church may therefore not be coextensive with the visible church, some who seem to be subjects of the kingdom being in reality not such. To the teaching of this parable the one we shall study in our lesson for to-day contains the sequel.

Not only are there those in the Christian church who do not really belong to Christ, but the good and evil within the fold of the church are not always distinguishable from each other, and hence men, who necessarily err in judgement, should not try by force to separate the evil from the good. This

A YOUNG LIEUTENANT'S CANDID OPINION.

Says She is Too Harsh, too Masculine,
and Her Hair is Too
Red.

A voluble little Japanese lieutenant of the battleship Kashima, just prior to its departure from London, confided his thoughts, ungallant though some of them were, to a surprised press.

During their sojourn in London the Japanese sailors have been entertained in a "glorious" manner, and therefore the candor of this particular lieutenant is the more surprising.

HAIR ALWAYS RED.

"I must make a confession to you," said the lieutenant, "though I fear it will be thought unkind. I don't altogether care for the English woman. She is too harsh, too masculine, and her hair is too red. When I say the Englishwoman's hair is always red, foreigners laugh at me and say I must be color blind, but every woman I see in this country has a reddish look to me and to every Japanese.

"Englishwomen are too much inclined to push themselves forward. I own it shocks one to see a woman struggling for a seat on an omnibus. Our women have too much respect for the men. From childhood they are taught to re-

WORLD ON HAIR TRIGGER

THE VERY SLIGHTEST SHOCK IS DANGEROUS.

Collapse of an Inch in the World's Crust
Plenty to Shake Cities Into
Ruins.

Garrett P. Serviss, writing to a New York paper, attributes the earthquake at San Francisco to a collapse of the earth's crust in the immediate neighborhood of the Golden Gate, though perhaps many miles beneath the surface.

Earthquake vibrations, he says, are transmitted through the earth as a whole, and also along its surface, where they become horizontal waves. In this case the Rocky Mountains and the coast ranges interposed an obstacle to the progress of the surface undulations. For this reason the vibrations recorded at Washington undoubtedly were transmitted directly through the body of the earth passing under the bases of the mountains.

RUSHED THROUGH EARTH.

By comparing the recorded times of the occurrence of the first shock at San Francisco and of the beginning of the vibrations at Washington, we can deduce the speed with which the earthquake wave rushed through the solid globe. The first shock at San Francisco was at 5.13 a. m., Pacific time. That would correspond to 8.13 a. m., eastern time. The first vibrations reached Washington at 8.30, eastern time. Consequently, the actual time elapsed while they were crossing the continent was seventeen minutes!

This corresponds to a speed of 176½ miles per minute, or 15,532 feet per second, assuming that the total distance traversed was 3,000 miles, and that the times as given in the despatches are accurate. This is somewhat above the highest recorded speed of earthquake waves hitherto known, although they have been found travelling more than 10,000 feet per second.

LINKED DANGERS.

The Pacific coast is marked from Alaska to and beyond the southern border of the United States by a line of more or less extinct volcanoes, like Mount Ranier or Tacoma and Mount Shasta, and wherever there are volcanoes, even though they may be inactive, there is always a possibility of earthquakes.

Not only are volcanic eruptions and earthquakes liable to occur simultaneously, but it often happens that a great explosion of volcanic energy in one part of the world is closely preceded or followed by severe earthquakes in other parts, which may be thousands of miles distant.

In the case of California we should look for a connection of its earthquakes with the state of the volcanoes either along our own Pacific coast or on the groups of volcanic islands in that ocean, particularly in Hawaii. In the severe earthquake of 1868 in California such a connection appeared to be shown by the outbursts in the same year of the Hawaiian volcanoes, Kilauea and Mauna Loa.

GENERAL DISTURBANCE.

At this time, as the news of the past two weeks has shown, there seems to be a general seismic disturbance in many of the centres of earthquakes and volcanic phenomena, and it is probable that the disaster at San Francisco is to be ascribed to this broad general condition of the earth's crust arising from its slow shrinkage, rather than to direct connection with any particular outbreak such as the eruption at Vesuvius.

When, as is the fact, we have evidence that shocks can be transmitted directly through the great 8,000-mile ball of the earth, it is not difficult to understand that such shocks may act like a touch upon a hair-trigger, setting off explosions whose preliminary conditions have been long before pre-

Fashion Notes.

FORERUNNERS OF SUMMER.

The lingerie feature is the keynote of this season's waist, as, indeed, it is of every detail of the season's fashions. Not that the waist must come under the term lingerie, strictly speaking. It may simply be fashioned in imitation of those soft, fluffy handmade washable waists that rightfully deserve the name. We find the dainty summer waist of 1906 lingerie, tailored, jumpered or gilded.

The strictly lingerie waist is discovered to be the one article of wearing apparel suitable for wear with any combination, any material and anywhere.

You may fashion it of mull, lace, linen, batiste, Swiss—no matter which as long as the outline is soft and drooping; the surface encrusted with a wealth of embroidery, hand-run tucks and lace insertion, the seams whipped and hand rolled, and the sleeves of elbow length and fluffy—these are the 1906 requirements of the lingerie blouse.

Valenciennes lace, of the German variety, and the French meehlins, in widths varying from a half inch to even two-inch widths are circled around delicate clusters of hand wrought flower embroideries, forming medallion motifs upon the soft, sheer lawn or mull bodies.

For the woman not particularly deft with the needle, there are shown exquisite machine made embroideries, so cleverly imitative of the French or Japanese hand work that none but an expert would note the difference, and these are being made up into blouses quite as effective and far less expensive than the strictly hand made.

These embroideries are shown in combination of English eyelet and solid work patterns so arranged that they may be easily separated for working into medallion shapes. They are used more than any other form of trimming and will be seen upon many a delicate hand made waist framed with bits of lace, the lace ruffled or in Richelieu platings.

A model that well indicates latest tendencies has a pointed lace yoke formed of four rows of inch wide Valenciennes lace insertion—separated through its centre by a single vertical band of the insertion reaching from collar to waistband; below the yoke this insertion is supplemented on each side by paralleled clusters of tucks and flutings of lace joined to the waist foundation of all over embroidered mull by a narrow curved application of white lace braid. It will be noted that the yoke is the simplest portion of this waist, the greater part of the trimming appearing on the body portion and sleeves.

This fact is illustrated even more strongly upon the bloused portion of another waist made entirely of heavy all over embroidery introducing Irish medallions, attached to the round yoke of all over Valenciennes lace by rows of tiny vertical tucks.

Another method of using embroidery insertions is to outline the curved motifs with slightly fulled ruffles of narrow lace, allowing the fullness to decrease as the strips approach either the necks or waist bands. The soft, bouffant effect of puffed sleeves is effectively increased by such ruffle applications.

A new method of employing embroidery patterns consists in outlining them with white or colored rice braids, which mark the pattern with telling effect, especially if associated with other trimmings of baby Irish or Cluny lace.

All lace waists continue in favor and are shown in intricate combinations of net, Lierns, Cluny and point Venise lace medallions and insertions. One with a foundation of white net showed this body material in spots only. The collar formed the nucleus for a series of radiating point Venise and Lierns lace medallions, these joined together with insertions of Cluny and baby Irish lace. The sleeves, reaching to the elbow, had pretty tops puffed and supported by inner lawn caps run with rods of featherbone. The wide bands above the bend of the elbow were form-

men children who do not really belong to Christ, but the good and evil within the fold of the church are not always distinguishable from each other, and hence men, who necessarily err in judgement, should not try by force to separate the evil from the good. This will be done at the time of harvest, in the day of final judgement, when the works of all men shall have fully matured and revealed their true character.

Verse 24.—Another parable—One of a group of eight parables mentioned in the introductory note to our last lesson, which compare.

25. While men slept—At night. It should be noted that no particular men are designated, it being the stealthiness of the enemy, rather than any negligence on the part of the men who slept, which this part of the parable emphasizes.

Sowed tares—Darnel. This plant or weed in the other stages of its growth resembles wheat, from which it can scarcely be distinguished at first. This close resemblance gives added force to the parable.

27. Servants—Literally, bond-servants. 28. An enemy—Literally, a man that is an enemy.

29. Haply—Perchance.

Root up the wheat with them—The similarity between the wheat and the tares noted above made this a real danger, but added to this the roots of the plants would be intertwined in the soil, and thus it would be almost impossible to remove the one without also uprooting the other.

30. Gather up first the tares—This would be impossible in actual practice in harvest fields with which we are familiar. In ancient times, however, when the grain was all cut with a small hand sickle and harvesting was not so complicated or extensive a process as now, and especially among a people with whom time counted for little, this separation of the tares from the wheat at harvest time was not an impossibility.

36. In verses 31-35 which intervene recorded two other parables which Jesus spoke in connection with the one under consideration. It was not until after he had finished speaking that he left the multitudes and went into the house, the house referred to being, probably, that of Peter and Andrew at Capernaum.

37. The Son of Man. — A title issued by Jesus frequently in referring to himself.

38. The Field is the World—Probably Jesus intended with the term world to designate actually the whole world, though some have thought that the interpretation of the parable requires a limitation of the word to that part of the world included in the kingdom which he was to establish. Such a limitation, however, seems wholly unwarranted. In interpreting the parable we must remember that it was not intended that the details of any of Christ's parables should be forced farther than Jesus himself carried the interpretation. Each parable has one main thought or teaching which it emphasizes and any endeavor to interpret details of the figurative language employed leads into difficulty.

39. The sons of the kingdom — All believing disciples.

40. The end of the world — Margin, the consummation of the age.

41. All things that cause stumbling, and them that do iniquity — Not persons only, but things also that are evil and a hindrance to the final consummation of God's plans for his children shall be removed.

43. The righteous shine forth as the sun—Jesus doubtless had in mind the prophecy of Daniel: "And they that are wise shall shine as the brightness of the firmament; and they that turn many to righteousness, as the stars for ever and ever."

COULD BE STEADFAST.

Father — But I am afraid he is a young man of fickle character.

Daughter — Oh, no, he isn't, papa. He has smoked the same brand of cigarettes for nearly six months.

English women are too much inclined to push themselves forward. I own it shocks one to see a woman struggling for a seat on an omnibus. Our women have too much respect for the men. From childhood they are taught to regard men as their superiors. A Japanese woman would not think of helping herself to anything until her husband's or brother's wants had been satisfied. Here everyone worships women, at least, outwardly, and I don't think they are any the better for it.

SHOULD BATH FREE.

"Some years ago I spent a few months in England, and was struck by the difficulties put in the way of personal cleanliness. I used to find myself charged 2s. for a hotel bath—sometimes more. In my own country a bath is always included as part of the hotel service, and no one would think of charging for a bath any more than for a plate or a knife. I can't understand why, with people so clean as the English, such a system is tolerated.

LOVE OF DISPLAY.

"One thing I have noticed in your English houses is that your chief desire seems to be to display everything you have as conspicuously as possible. When I go to an English house, pictures, china, ornaments, and everything else confront me at one glance, and cry aloud, 'See how rich I am!' In Japan, however much we have, we only show a little of it at a time. I have an uncle who has pictures, rare porcelain, and lacquers worth £20,000, but if you went into his house you would only see a tiny bit displayed. The rest is kept in a warehouse. When tired of one set of ornaments he stores them and puts another set in their place.

ADMIRE THE BOYS.

"One thing that I have been greatly struck with is the self-reliance of the English boy. There we have much to learn from you. In Japan our parents have so much authority, and keep the children under such control, that a boy of fifteen or sixteen has very little initiative of his own, and would be lost if he found himself on his own resources. Here I find boys of all classes are perfectly able to take care of themselves.

"We are learning to go in for games like you, and baseball is very popular in our schools, though we have never mastered cricket. But the Japanese youth is too sedentary, and spends his time reading silly novels or playing a game called 'Go,' rather than anything in open air sports."

QUEER METHODS OF SUICIDE.

Horse-Slaughterer Killed Himself With His Own Machine.

A complete novelty in suicide has been introduced by Alfred Coles, of Lord Street, Birmingham, England, who has just taken his own life with a patent horse-slaughtering machine. He carried out his idea unflinchingly.

To kill horses, nowadays, in place of a pole-axe or gun, a tube is applied to the head of the animal and then by means of a percussion cap, struck by a wooden mallet, death occurs immediately. Coles put the apparatus to his own head and then gave the blow of death.

Some elaborate attempts at self-destruction have failed recently. One man placed the point of a dagger against the skull in the frontal region, and then drove it into his brain with a blow from a mallet. This man lived a short time.

Yet another curious case—highly original in the way of which the attempted suicide failed—was that of a young woman who jumped from the Clifton suspension bridge, and fell nearly 300 feet. Her clothes acted as a kind of parachute, and she was picked up by a boatman below, little the worse save for a few bruises.

TRUE IN HIS CASE.

First Kid — When pa gives me a lickin' it always hurts him worse'n it hurts me.

Second Kid — Aw, they jist say that.

First Kid — But my pa's got the rheumatism.

directly to the great 8,000-mile ball of the earth, it is not difficult to understand that such shocks may act like a touch upon a hair-trigger, setting off explosions whose preliminary conditions have been long before preparing in consequence of the strains in the slowly setting and shrinking crust of rock.

INCH DROP ENOUGH.

The shrinkage needs to be but very slight, and absolutely invisible, as measured by the decrease in the diameter of the globe. A drop or a slip of a single inch in the underlying rock would be sufficient to account for all the destruction wrought in San Francisco, and, indeed, for a much greater calamity, provided that the part of the earth's crust affected by the slipping and shrinkage is of considerable extent. Fortunately, it is probable that the worst was over after the first shocks on this occasion.

TRACKING LIONS.

A Hunter's Experiences in the Wilds of East Africa.

The sportsman hunting lions in East Africa has to depend upon being favored by circumstances. He may find himself unarmed just when his chance has come. Lions often hunt in combination, says the author of "Flashlights in the Jungle." They drive their prey toward each other and seem to communicate by their roars.

In 1900, writes Mr. Schillings, I had an encounter with three lions which might easily have proved fatal to me. Following the course of a stream, I went out for a short walk round the camp, armed, contrary to my usual custom, with only a fowling-piece. Suddenly I came upon the tracks of several lions.

Almost involuntarily I followed the tracks for two hundred yards or so, and was about to make my way down into the dried-up bed of a stream when I became conscious of a shadow to my left. Turning round, I beheld a lioness twenty-five paces off, eyeing me quietly. Almost simultaneously I saw, six or eight paces from her, two other lions moving forward, half-covered by the grass.

For several seconds neither I nor the lions made a move. But the lioness presently turned away from me quite calmly, took several steps along the border of the gorge, and then disappeared suddenly among the bushes. The others disappeared simultaneously. I waited motionless for a minute where I was, then hastened back to the camp.

In 1900 I witnessed a very interesting spectacle. I had been for several hours following up the tracks of some lions when I came suddenly upon an ostrich's nest, with some young ostriches in it only just out of their shells, and with some eggs within a few hours of hatching. To my astonishment, the lions seemed to have disdained the young birds.

But on examining the tracks more carefully, I learned better. The old ostriches had evidently espied the lions in good time in the clear moonlight, and, as the tracks indicated unmistakably, had enticed them away from the nest by effecting a speedy retreat. The lions had followed the ostriches for about a hundred yards with long springs, but had then, seeing the pursuit was hopeless, fallen back into their ordinary stride. In this way the ostriches succeeded in saving their threatened brood.

ICELAND HORSES.

Icelanders have a strange but effective plan for preventing horses from straying away. They tie the head of one horse to the tail of another, and the head of this to the tail of the former. In this state it is impossible for the horses to move on, either backward or forward. If disposed to move at all it will be only in a circle, and even then there must be mutual agreement to turn their heads the same way.

with insertions of Cluny and baby Irish lace. The sleeves, reaching to the elbow, had pretty tops puffed and supported by inner lawn caps run with rods of featherbone. The wide bands above the bend of the elbow were formed of nine rows of ruffled Valenciennes lace with a double lace edged flounce of net to define the sleeve edge.

These dressy waists are considered quite the correct accompaniment for jaunty little demi-tailored street suits now being worn, and are especially appropriate with the short-coated suits of white, pale blue or hairline striped English mohair and lightweight suitings. As almost all of these suits are made with short sleeves, the waist will have sleeves of corresponding length, although later, when the coat is discarded, and one of the long sleeved blouses showing handsome lace inserted cuffs will be found quite correct; indeed the shoes are showing little partially between the long and the short sleeves, which is news the too slender armed women will hail with joy.

These waists, fluffy and frivolous, demand harmonious girdles and accessories. Handsomely embossed or embroidered ribbons, slurred or buckled, are exceedingly smart and effective for this purpose. In one very swell shop, a girdle of pink satin ribbon had its long cash ends curved and applied with five rows of narrow ruffled ribbon. Doubtless the girl that selects that dainty sash girdle will see the value of knotting her elbow frills with ribbons to match, as is the custom among Southern women.

But these ribbon girdles and frilly waists don't do for the tailor-made girl. While in the minority this year, she is still a factor and has conceded quite a few of her primpings in that she accepts her summer with lingerie innovations.

Her golf waist, made of pongee, or linen, has a bit of embroidery upon its plaited Gibsonsque front, and the square Dutch neck accompanying, minus any collar, has its edges buttoned with cream colored silk in very fetching simplicity.

The waist described has its sleeves cut short at the elbow, while a companion waist, made of white Shantung, carries a long sleeve, reaching quite to the wrist and finished with a little turnover cuff, buttoned with red silk buttons. A round turned down collar was held at the throat by a splashing red silk tie, while a row of red silk covered buttons like those used on the cuffs fastened the tailored front band.

IDENTIFYING THEM.

Some lady visitors, going through a penitentiary under the escort of the superintendent, came to a room in which three women were sewing.

"Dear me" whispered one of the visitors, "what vicious-looking creatures! Pray, what are they here for?"

"Because they have no other home. This is our sitting-room, and they are my wife and two daughters," blandly replied the superintendent.

SEEING

VAIN HOPES OF 'FRISCO

HOPED SOON TO BE THE NEW YORK OF THE WEST.

Real Estate Was Booming and Values Were Increasing by Leaps and Bounds.

San Francisco was the sixth city of the United States in population. It claimed over 500,000 people. It hoped in ten years to have more people than either Boston or St. Louis. It was the fourth seaport of importance on the American continent in the value of her shipping and marine commerce. San Francisco expected in the near future to be to the West what New York is to the East.

REAL ESTATE BOOMING.

Eastern investors had a great deal of money in San Francisco. They bought real estate, though the prices were continually rising. Fortunes were made in real estate dealing in the city. One block of land on Market street sold at \$10,000 per foot a few months ago. In the past three years real estate values in some quarters of the city had increased by three hundred and four hundred per cent.

The demand for additional dwelling, mercantile, and manufacturing houses was enormous, and buildings were being erected as rapidly as possible.

San Francisco was described by a writer a few months ago as the wealthiest, most prosperous, and most powerful city of its size in the world.

The James Flood office building, and the land on which it stood, represent an investment of \$5,000,000. It was one of the largest office buildings in America. The post-office recently finished, cost \$3,000,000.

The city's hotels, restaurants, and theatres were pronounced to be the most elegant in the world.

A GAY CITY.

Paris is the only city in the world which rivals San Francisco in her love of brilliant electric illuminations. At night the streets were a blaze of light, and crowds of people promenaded on them.

The police and fire departments of the city ranked among the best in the United States.

San Francisco has three suburbs, Oakland, Berkeley, and Alameda, with a combined population of 100,000. Two ferry systems carried the people between the city and the suburbs.

ADVANCED LEGISLATION.

The city is supposed to have the most advanced charter ever granted to a municipality in the United States. Several years ago the political bosses were routed, and the charter movement began. A new organic law for the city was adopted. It took effect in January, 1900, and was prepared by a Board of Freeholders, elected by the people. It conferred large powers and responsibilities on the Mayor.

It meant home rule to the city. The administration of the city was divorced entirely from that of the State. The city did not need to go to the State Legislature to ask for any law.

Big public improvements were planned recently. By a two-thirds vote, the people approved the issuance of bonds for \$17,000,000 for parks and playgrounds, school houses, a drainage system, a library, and a hospital.

PROPERTY VALUE \$650,000,000.

The assessment roll of city property amounts to \$524,000,000, and the tax rate for city, county, and State purposes is about \$1.60 on every \$100. Property was assessed at about 75 per cent. of its market value. So that the value of property would be about \$650,000,000.

San Francisco had many parks, but most of them were small. The pride of the city was the Golden Gate Park, comprising 1,013 acres, and stretching from the city to the sea.

YOUNG FOLKS

JUST A SMILE.

You can drive the clouds away
With a smile,
Just a smile;
Turn the darkness into day
With a smile,
Just a smile;
Oh, there's nothing when a man
Feels the weight of sorrow's yoke.
In this whole wide world that can
All distress and grief revoke,
As a smile,
Just a smile.

How the way is brightened up
By a smile,
Just a smile;
Sweetened is the bitter cup
By a smile,
Just a smile;
Oh, the world may frown at you,
And your spirits try to blight,
But the skies are ever blue,
If you always have in sight
Just a smile,
Merry smile.

It's a simple little thing,
Is a smile,
Just a smile;
But 'twill joy and gladness bring
Will a smile,
Just a smile;
Many hearts will dry their tears
And go singing on their way,
And they'll put away their fears,
Thinking of the glad to-day.
By your smile,
Glad some smile.

How the heavy burdens fall,
By a smile,
Just a smile;
Hope again beams over all,
By a smile,
Just a smile;
Lonely lives are cheered each day,
Duties lightened, hearts made glad,
Heaven's beauty fills the way,
If to kindly words you add
Just a smile,
Happy smile!

SIR ROBIN THE BOLD.

I am going to tell my young friends a story about a robin redbreast. The tale was told to me by an English lady, who saw the bird with her own eyes, and knows that every word is true.

In the busiest part of the town of Coventry, in England, at the corner of two streets where electric cars are running, and people are passing to and fro the whole day long, there is a large confectioner's shop. One cold morning last November, my friend was just about to enter this shop when, to her great surprise, she saw a robin come flying down from a house opposite, pick its way between the people who were crowding the sidewalk, hop cheerfully up the doorstep of the shop and disappear within. Of course she supposed it was a pet bird, but when she followed Sir Robin inside the shop, the people told her they had never seen the bird before!

There he was, however, apparently quite at home, and happy as a prince, feasting on the abundant crumbs to be had for the taking. Customers coming and going didn't seem to disturb him in the least; it was as if he had taken a good view of the shop from his house-top before he came in, and so knew exactly what to expect.

When he had finished his meal he made his way from shelf to shelf, till he found a dressing-room to his taste. Then, after preening his feathers, and showing off his rich-colored little self to the best advantage (as all bipeds, feathered or unfeathered, are wont to do) Sir Robin proved his good breeding by paying for his entertainment with a song. My friend left him singing away and everybody listening.

About a week later she called at the confectioner's again, and there was Po'bin, large as life, bolder and more at home than ever! He would take his

WHAT THEY DID IN 1868

MARK TWAIN TELLS THE STORY OF A FORMER EARTHQUAKE.

Curious Happenings Were Innumerable on that October Sunday Afternoon.

Mark Twain has the faculty of seeing the funny side of anything, even an earthquake. In '68, when San Francisco was visited by its most serious earthquake before the present one, Mr. Clemens was a reporter on one of the local papers. He describes the earthquake as follows:

"It was just before noon on a bright October day. I was coming down Third Street. The only objects in motion anywhere in sight in that thickly-built and populous quarter were a man in a buggy behind me and a street car wending slowly up the cross street. Otherwise all was solitude and a Sabbath stillness. As I was turning a corner around a frame house there was a great rattle and jar, and it occurred to me that here was an item! No doubt a fight in that house.

"Before I could turn and seek the door there came a really terrific shock; the ground seemed to roll under me in waves, interrupted by a violent joggling up and down. There was a heavy, grinding noise as of brick heels rubbing together. I fell up against the frame house and hurt my elbow. I knew what it was now, and from mere reportorial instinct—nothing else—took out my watch and noted the time of day. At that moment a third and still more severe shock came, and as I reeled about on the pavement trying to keep my footing, I saw a sight.

THE FIRST CRASH.

"The entire front of a tall, four-story brick building in Third Street sprang outward like a door and fell sprawling across the street, raising a dust like a great volume of smoke. And here came the buggy—overboard went the man, and in less time than I can tell it, the vehicle was distributed in small fragments along 300 yards of street. One could have fancied that someone had fired a charge of chair-rounds and rags down the thoroughfare.

"The street car had stopped, the horses were rearing and plunging, passengers pouring out at both ends. One fat man had crushed half way through a glass window on one side of the car, got wedged fast, and was squirming and squealing like an impatient madman.

"Every door, every house, as far as the eye could reach, was vomiting a stream of human beings, and almost before one could execute a wink and begin another, there was a massed multitude of people stretching in endless procession down every street my position commanded. Never was solemn silence turned into teeming life quicker. The wonders wrought by the 'great earthquake'; these were all that came under my eye; but the tricks it did elsewhere, and fire and light over the town, made toothsome gossip for nine days. The destruction of property was trifling—the injury to it was widespread and somewhat serious.

ODD HAPPENINGS.

"The 'curiosities' of the earthquake were simply endless. Gentlemen and ladies who were sick or were taking a siesta, or had dissipated to a late hour and making up for lost sleep, thronged into the public streets in all sorts of queer apparel, and some without any at all. One woman who had been washing a naked child ran down the street holding it by the ankles as if it were a dressed turkey. Prominent citizens who were supposed to keep the Sabbath strictly rushed out of saloons in their shirt sleeves with billiard cues in their hands. Dozens of men with their necks swathed in napkins rushed from

HEALTH

THE DAILY BATH.

A witty woman, the president of a college for women, said once that the world may be divided into two classes—those who bathe daily and those who do not. This division can be made, of course, just as any other separation of one class from another, but it should not be made in disparagement of those who do not take the morning tub.

The daily cool or cold bath is an excellent institution, promotive of cleanliness, health, vigor, and a feeling akin to dislike for those who do not take it, but it is not an absolute necessity, even for cleanliness. It is not possible to lay down any rules of hygiene which are of universal application without modification. The best that can be done is to treat of the average person, and those above or below this average must make modifications in one or the other directions to suit the individual needs. This is the case with the morning tub.

For the average person in average health, a daily bath in cool water is of the greatest value for both health and cleanliness. For the latter a warm bath is often said to be necessary, but this is not so ordinarily. One who bathes every morning, soaping the body well before stepping into the tub say on two mornings of the week, has no need for the Saturday night scrub in hot water. The daily bather, especially if the underclothes are changed two or three times a week, on soap days, is clean enough for this wicked world without further attention.

The temperature of the bath should be as low as one can endure with comfort; it should never be so low that the bather feels cold after driving the body. For the young with strong hearts a temperature of fifty degrees is a fair average; but as age advances this temperature should rise say one degree with each year over forty, so that for a person of fifty years the bath may be at sixty degrees, and for one of sixty years at seventy degrees. After sixty years one should observe caution regarding the tub bath, and it is better to get the doctor's advice, for if the water is too cold or too hot, a weakened heart may receive a dangerous shock. Sponge-bathing is then better as a rule.

The temperature of the air in the room should in general be about that of the bath water, or a little above. The glow of the reaction which comes with the rubbing is more readily produced in a warm room. For this purpose a good rough towel should be used vigorously in order to bring the blood to the surface and stimulate circulation generally. Indeed, from the health point of view, this rubbing is a most important part of the bath.—Youth's Companion.

HEALTH AND BEAUTY.

Housemaid's knee may be avoided by using a cushion to kneel on instead of the bare floor.

In cases of measles the child must be guarded from a strong light. A warm bath may be given if fever is high.

Hiccough may be relieved by sipping cold water, or holding the breath may also effectually check it. If these methods fail, a teaspoonful of bicarbonate of soda in a half tumbler of water should be taken.

Dandruff in adult persons may lead to premature baldness, and should be treated with care. Brushes and combs should be washed daily in strong soda-water; the hair should be washed daily with soap and water, and afterwards with an alcoholic solution of perchloride of mercury, and thoroughly dried.

Value of Milk.—Good pure milk is nutritious and flesh-forming. Take a glass of hot milk the last thing at night if troubled with insomnia, or if you wish to gain flesh. Milk must always be taken slowly—sipped, in fact—and take quite ten minutes over a glass.

San Francisco had many parks, but most of them were small. The pride of the city was the Golden Gate Park, comprising 1,013 acres, and stretching from the city to the sea.

MAN'S WEAKER HALF.

One Side of His Body Always Stronger Than the Other.

The popular belief is that the left side is weaker than the right, and, as in all popular beliefs, there is much truth in this. In most cases, says the Grand Magazine, the right arm is decidedly stronger than the left, the bones are larger and the muscles more vigorous. When we come to consider the lower limbs, however, we find a precisely opposite state of affairs; the left leg is stronger than the right in the great majority of cases. This want of symmetry is noticeable all through the body. Nine times out of ten we see better with one eye than with the other, and hear better with the left than the right ear, or vice versa.

Not only so, an injury to the body—a burn or a cut, for instance—causes more pain on one side than it would were it inflicted on the other. Even diseases attack one side on their first onset in preference to the other. Eczema, varicose veins, sciatica, and even tuberculosis begin, invariably, to manifest themselves on our weaker side. A blistering plaster, too, will provoke an eruption only if applied to the right side of certain individuals; in others, only if applied to the left side.

The simplest way, apparently, of discovering which is our weaker side is to observe which side we lie upon by preference when in bed, as it is certain that we will instinctively adopt the attitude which is most agreeable, or, rather, which causes the least inconvenience; in other words, we will lie upon the side the muscles of which, being more vigorous, are less sensible to the pressure upon them of the weight of the body.

Statistics and observation go to prove that in about three cases out of four it is the left side which is the weaker, thus giving reason to the popular dictum. Curiously enough, however, pneumonia, it has been noticed, unlike most diseases, usually attacks at first the right—that is to say, the stronger side of the body.

ONCE A WARSHIP, NOW A MILL.

It is not by any means widely known that the Chesapeake, famous for her historic encounter with the British ship Shannon in 1813, is in existence to-day, but she is used in the somewhat inglorious capacity of a flour-mill in the little Hampshire parish of Wickham. After her capture by Sir Philip B. V. Broke she was brought to England in 1814, and in 1820 her timbers were sold to Mr. John Prior, miller, of Wickham, Hants. Mr. Prior pulled down his old mill at Wickham and erected a new one from the Chesapeake's timbers, which he found admirably adapted for the purpose. Many of these timbers still have the mark of the Shannon's grape-shot, and in some places the shot are to be seen deeply embedded in the pitch-pine.

NG HIM OFF.

paying for his entertainment with a song. My friend left him singing away and everybody listening.

About a week later she called at the confectioner's again, and there was Robin, large as life, bolder and more at home than ever! He would take his bath quite fearlessly in a saucer of water which was placed for him every morning on the floor. He hopped about the shelves all day picking up the crumbs he liked best (for, of course, in such a place he had quite a choice), and even at night he remained in the shop. One of the girls told my friend she had tried to see if she could get him out, one night, but he refused to go. It really looked as if Sir Robin had determined to spend the winter in his snug quarters.

So famous did he become, that the Coventry newspapers talked about him and his curious ways, and there is no knowing how much extra business he might have brought to that shop (for, of course, everybody in the town wanted to see him), if it hadn't been for an enemy in the camp. This enemy was the confectioner's cat. When Sir Robin first stepped upon the stage, she had not welcomed him very warmly—in fact, there had been some little unpleasantness between them. But afterwards, Puss seemed to understand that whatever her own private feelings might be, she and Robin were expected to be friends—or, at all events, to keep the peace.

Robin, for his part, was quite willing to have it so, and placed full confidence in Puss's good faith. For, knowing as he was, he didn't know how crafty a cat can be. And it came about that exactly two weeks from the day that Robin entered the confectioner's shop, Puss had the meal she had set her treacherous heart on!

Poor, plucky, trusting Sir Robin! That was a sad, sad ending to his little tale!

LETTER FROM CHARLES DICKENS.

On the Eve of Death He Protested His Veneration for the Saviour.

An interesting letter by Charles Dickens, written on the eve of the great novelist's death, has been discovered under curious circumstances.

A few days ago an old "History of England," purchased twenty years ago from a second-hand bookstall, was taken to a book-shop in Junction Road, Upper Holloway, London. The book was practically valueless, but within its pages was found a letter, which bore evidence of being genuine, written by Charles Dickens to Mr. John M. Mackleam.

The letter, which had reference to a passage in "Edwin Drood," was as follows:

Gad's Hill Place, Wed., Eighth June, 1870.

Dear Sir,—It would be quite inconceivable to me—but for your letter—that any reasonable reader could possibly attach a Scriptural reference to a passage in a book of mine reproducing a much-abused social figure of speech impressed into all sorts of service on all sorts of inappropriate occasions without the faintest connection of it with its original source. I am truly shocked to find that any readers can make the mistake.

I have always striven in my writings to express veneration for the life and lessons of our Saviour, because I feel it, and because I rewrote that history for my children, everyone of whom knew it from hearing it repeated to them long before they could read, and almost as soon as they could speak.

But I have never made proclamation of this from the housetops.

Faithfully yours, CHARLES DICKENS.

John M. Mackleam, Esq. Dickens died on June 9, 1870, and therefore, the above interesting letter, possibly the last he wrote, was penned within a few hours of his death.

DEAD SURE NOW.

"The doctors have finally agreed upon the cause of Jenkins' illness." "They've held another consultation, eh?" "No: a post-mortem."

by the ducks as it were a dressed turkey. Prominent citizens who were supposed to keep the Sabbath strictly rushed out of saloons in their shirt sleeves with billiard cues in their hands. Dozens of men with their necks swathed in napkins rushed from barber shops, lathered to the eyes, or with one cheek clean shaved and the other still bearing a hairy stubble. Horses broke from stables, and a frightened dog rushed up a short attic ladder and out to a roof, and when his scare was over had not the nerve to go down again the same way he had gone up.

INTERIORS DESTROYED.

"The plastering that fell from ceilings in San Francisco that day would have covered several acres of ground. For some days afterwards groups of eyeing and pointing men stood about many a building, looking at long, zig-zag cracks that extended from the eaves to the ground. Four feet of the tops of three chimneys on one house were broken square off and turned around in such a way as to completely stop the draft. A crack a hundred feet long gaped open six inches wide in the middle of one street, and then shut together again with such force as to ridge up the meeting earth like a slender grave.

"A lady sitting in her rocking and quaking parlor saw the wall part at the ceiling, open and shut twice like a mouth, and then drop the end of a brick on the floor, like a tooth. She was a woman easily disgusted with foolishness, and she arose and went out of there. One lady who was coming down stairs was astonished to see a bronze Hercules lean forward on its pedestal as if to strike her with its club. They both reached the bottom of the flight at the same time. The woman insensible from the fright.

IT WAS SUNDAY.

"The first shock brought down two or three huge organ pipes in one of the churches. The minister with uplifted hands was just closing the service. He glanced up, hesitated, and said:

"'However, we will omit the benediction.' In the next instant there was a vacancy in the atmosphere where he had stood.

"After the first shock an Oakland minister said: 'Keep your seats. There is no better place to die than this,' and added after the third: 'But outside is good enough.' He then skipped out of the backdoor.

"Such another destruction of mantel ornaments and toilet bottles as the earthquake created. San Francisco never saw before. There was hardly a girl or matron in the city but suffered losses of this kind. Suspended pictures were thrown down, but oftener still, by a curious freak of the earthquake's humor, they were whirled completely around, with their faces to the wall. Thousands of people were made so seasick by the rolling and pitching of floors and streets that they were weak and bedridden for hours, and some few for even days afterward. Hardly an individual escaped entirely."

QUEER OLD CUSTOMS.

Halmagen, in Roumania, possesses a unique public festival. It is a little town of about 1,200 inhabitants, and on the morning of its annual fair day the population from about 80 villages comes trooping in swarms. Then there go out to meet them all the young women, married or single, of Halmagen, each bearing a small flower-garlanded vessel of wine, and all attended by their godmothers. As the visitors approach the young women offer to each a taste of wine and a kiss. This strange custom is supposed to have its origin in the escape centuries ago of some Halmagen women, after being carried off by Turks. As they neared their own homes their joy caused them to embrace every neighbor at sight.

"What struck you most at school today, William?" "The teacher, sir." Time flies—therefore the successful flying machine is only a matter of time.

Value of Milk.—Good pure milk is nutritious and flesh-forming. Take a glass of hot milk the last thing at night if troubled with insomnia, or if you wish to gain flesh. Milk must always be taken slowly—sipped, in fact—and take quite ten minutes over a glass.

Care of Digestive Organs.—Nervous breakdown is oftener due to overworking the digestive organs than to mental strain as such. Abstemious habits in eating combined with some attention to exercise make it possible for one to do an immense amount of hard brain-work without injury.

A good Stimulant.—Hot milk, heated to as high a temperature as it can be drunk, is a most refreshing stimulant in cases of cold or over-fatigue. Its action is very quick and grateful. The effect of hot milk is far more beneficial and lasting than that of alcohol. It gives real strength as well as acting as a fillip.

Shampoo Substitute.—Orris-root powder dusted over the hair is a good substitute for frequent shampooing. Sprinkle the powder into the hair and rub it well into the scalp, then brush it out. Oris is one of the few powders which may be used for this purpose, as it will not stop the pores. It is cleansing and will give a faint, sweet odor to the hair.

The Study of Health.—The clearness, and consequently the beauty, of the skin depends so much upon the health of the body that no one can hope to have a brilliant and healthy complexion who suffers from indigestion, neuralgia, anaemia, etc., therefore due regard must be paid to everything which affects the general health if you want your skin to be in good condition. The best aids to beauty are abundant abstinence of the entire body, wholesome and easily-digested food, plenty of fresh air and sufficient sleep.

To Stave Off Wrinkles.—It is highly important that grime accumulated during the day should be removed before lying down. Neglect of this rule will cause sallowness and blackheads. The face should be washed with hot water and soap, be rinsed in many waters, and be dried thoroughly. Next a really good skin food, quite free from wax, spermaceti, or salled lard, and containing little or no glycerine, may be applied. If a liquid it should be brushed over the parts. If more solid it should be gently spread. Any massage below the eyes, or at the eye corners, is sure to make wrinkles. A brush has a marvellous effect on the softer skin lines.

SOCIETY GOT INTO HIM.

"I hear you're getting into society," said the friend of the successful man. "No," replied the poor man, brushing aside a pile of his wife's bills. "Society is getting into me."

WORKING OVERTIME.

Ascent of Vesuvius

Frederick Chamberlain describes a visit to Vesuvius during a recent eruption:

As we neared Naples in the September night almost nobody on board went below, for we had learned at Port Said that Vesuvius was in eruption, and likely to continue for some days in that unwanted state. All hoped to see the giant of the old mountain before he again drifted into one of his long naps. For more than thirty years now had he been resting, so that we were to be given our one chance of a lifetime, probably, to see him awake.

At about ten o'clock, when the darkness was intense, there was suddenly on the starboard, far up in the air, a red light. It appeared to be one that had just disappeared. It was so large and so elevated that we knew we were not far from it. In almost exactly a minute it reappeared. "There it is!" somebody cried. Instantly there was a rush for the rail. Opinions were about evenly divided as to whether the light came from a lighthouse or from the volcano. Its regularity, however, decided some of us. It must be something made by man.

But we were mistaken. It was Vesuvius. The ship's officers assured us that there was no seaman's light in that locality, and then before long, as we few nearer to the red flame, it became evident that the light was hundreds of feet above. But there was not ten seconds variation in the periods between any two appearances of the beacon.

At midnight the anchor cut the waters of the bay and our long voyage from the Far East of nearly 30 days was over. Naples is built so that it rises for the seaside clear to the top of the hill. Except only the appearance of Hong Kong at night, and I believe the view of Naples from the bay when all "the evening lamps are lighted" is the most beautiful I have ever seen.

Vesuvius may be ascended by two methods — by carriage road or by the electric. Whichever one may prefer, there is a long ride of perhaps an hour through the poorer portions of Naples to where the city fades away into the hills whose sides are covered with vineyards of the blue and white grapes.

Our ride to the railroad station was rough and hot and one of our party had an experience on the way that ended her day's enjoyment.

She, with a young man of twelve, occupied a landau, which wheeled close behind that in which I was riding.

Suddenly, I heard a scream and noticed a boy running down the sidewalk as if he were much frightened. I leaped from the carriage and discovered the boy in the rear nearly beside herself. The boy I had seen scampering away had run beside her and snatched at a golden chain that carried a diamond set locket suspended about her neck.

There was a sharp quick struggle between the owner and thief. Her frightened cry, however, had determined that and left in possession of her treasure, which, however, was broken.

As we rode along it was readily seen that the people disliked us, and that nearly all the homes comprised gardens in the rear which were of the pure Italian style, with many regular, sanded walks, uniformly cut shrubbery and, almost invariably, some statuary.

At 2 o'clock we were seated in the electric car, which had doors at the sides between each two seats, and were being propelled by an overhead trolley system up the small hills that lead to Vesuvius.

After a ride of about half an hour, we stopped at a hotel which overlooked Naples and its bay. Here all the feminine members of our party, except one, left us.

of rocks and cinders which could be plainly seen flying in all directions. After ascending for, perhaps, 100 feet, they fell back with a clatter, and rolled down the mountain side. Had we been much nearer, it is plain that none of us could have escaped serious, if not fatal, injury. The rain of rocks was too thick to permit dodging. A half-dozen rolled down upon us, and the party speedily grew smaller, only two guides and two of us with kodaks being silly enough to repeat the experience.

In the course of half an hour we secured a number of pictures of these violent explosions.

Two of them plainly show scores of rocks flying in the air. Upon more than one occasion we dodged to escape a descending piece of lava. We found these fragments to be often as large as a human head and they were so hot as to retain the impression of a seal or any metal that one cared to hold upon them.

By 7 in the evening we were again at our hotel, the whole trip having occupied six hours, and entailing an expenditure of about \$5 for each person. We had seen the most famous volcano in the world in eruption and taken photographs of it within 50 yards of its crater, and had stood within the area of its rain of lava—surely a rare experience, and all in all the most intensely weird, impressive day of our journey except that at Canton, the show place of all the world.

LIFE IN A "HOVEL."

Typical Case of Poverty Revealed at Inquest.

A sad tale of poverty was disclosed at an inquest on the nine-year-old son of a dock laborer living at No. 5 Causeway Court, Stepney, London.

Mary Ann Pittman, the mother, said the deceased had always been healthy, but on Wednesday night complained of headache, and went to bed at 7.30 p.m. Witness, at his request, put him in her bed, and found him dead the next morning. He had not disturbed her in any way during the night. She had had 13 children, but only three were now alive.

The Coroner—If all were to die at that rate, England would soon become a very small place. Dr. Stonham said that death was due to acute double pneumonia, and that the deceased must have been seriously ill for some days.

The mother was recalled and said that the "house" in which they lived consisted of two rooms only. The night the deceased died the father slept on the floor.

The Coroner—What rent do you pay for this "little box"?

Witness—Five shillings a week, but I owe three weeks.

The Coroner—I think the system of living and the accommodation gives an inkling of the heavy mortality in the family.

The Coroner's Officer—The parents are very poor; the husband has been out of work.

A Juror—Hard up all round, and living in a hovel.

Another Juror—It is a further illustration of how the poor live.

A verdict in accordance with the medical evidence was returned.

COURTSHIP IN ALASKA.

The Mothers Arrange the Preliminaries for the First Meeting.

In the village of Tigara, in Northwestern Alaska, one sees a young man beating out a piece of metal and fashioning a finger ring, it is usually intended for some young woman; but it remains for the meeting of the two mothers to arrange matters.

The two families may be living close together, yet the mother of the young man will call on her neighbor and tell her how she has intended to be more neighborly, but she has been so busy.

The neighbor will declare how delighted she is to meet her.

THE 'BUS IS VANISHING

MOTOR VEHICLE IS TAKING ITS PLACE IN LONDON.

The Great City to Get Rid of 42 Miles of Horseflesh in Order to Save 27 Days' Time Each Day.

London is losing what always has been one of its chief attractions to visitors—the picturesque horse omnibus. When this year's trans-Atlantic visitors arrive here they will have to look hard for this old-fashioned, rumbling and much belabored conveyance, with its garrulous driver and its leisurely horses, says a London correspondent. As a partial compensation, they will be able to get from one point of interest to another as fast, and perhaps a little faster than they would be able to at home, by means of the new motor omnibuses which, before many months have passed, are pretty sure to supersede the familiar horse 'buses altogether.

Almost at every turn in London these swift travelling omnibuses may be seen, heard, and—it may be said—smelt, for the atmosphere is beginning to reek with the fumes of petrol. And though it may yet take some little time to replace the 1,850 omnibuses now in London by these motor vehicles, the work is going ahead rapidly, and each day sees one or two new motor 'buses on the streets. Up to the present there are about 500 of them plying over the 120 miles of roads which go to make up the principal London thoroughfares.

Persons of artistic temperament and those who have plenty of time on their hands, may look with sadness on the disappearance of the horse 'bus from the streets of

"DEAR OLD LUNNON."

It is true that human interest attaches to the 'bus of the early days, which dates back to 1829, when the first 'bus was seen in England. It was driven by a man named Shillibeer and—appropriately enough—its course lay between one London saloon and another. The 'buses were hauled by three horses abreast—as is the case on some of the Paris streets to-day—and the fare for a four-mile journey was 25 cents, which included the use of a newspaper.

As a substitute for the newspaper in modern times, visitors will recall with pleasure the talkative driver, ever ready—with a tip in the offing—to point out the names of public buildings or to dish up London history at so many words a mile.

The disappearance of these horse vehicles from the London streets will make a void; for all things considered, the 'bus was one of the most typical of London's popular institutions. Every 'bus taken from the streets means the emancipation of twelve horses. The total number of animals now employed is 22,200. It has been estimated that there are 42 linear miles of horses now running on the London roadway. The removal of this number will be an immense help in affording space in the congested thoroughfares.

The introduction of the motor 'buses has not only relieved the horse, but liberated the drivers by bringing their hours of labor down from fourteen a day, and sometimes seventeen, to eight and ten; while their wages have been proportionately increased. It has been found that the old 'bus drivers make the best motor 'bus chauffeurs; so the sentiment that still clings to the profession of busdriver is not shocked.

NO TALKING ALLOWED.

At the same time there is a vast difference between the driver of a motor 'bus and one of the horse 'buses. The quiet talks on the box must be done away with, for the motor chauffeurs sit quite away from the passengers. The isolated position is necessary owing to the complicated mechanism under their feet, which requires all their atten-

tion, \$4,500 each, being far less expensive than the street cars, as no rails are required. Even on tram lines already having a service, it is proposed to put motor 'buses instead of cars and to dispense entirely with the electric power supply, making each car independent of the others. As is well known, if one car on an electric system comes to a standstill for any reason, the whole line must be paralyzed for the time being.

As the street car lines are now operated in London the speed is limited to ten miles an hour, and the average journey of a sixteen-hour run, allowing for stoppages, is only about 100 miles a day. In America and other cities, where street cars are operated and run by electricity, the average day's run is 160 or even 180 miles.

With motor 'buses the average speed in London is fourteen miles an hour, and in outlying districts, where traffic is less congested, this speed is considerably increased. The average earnings of each motor 'bus in London are from \$50 to \$60 a day. Passengers are carried on top as well as inside, the seating capacity of each motor 'bus being about 60 persons. When it is considered that the average takings of the horse 'bus were only \$10 a day, and that nearly 27 days in actual hours are lost each day in London owing to delays in horse 'bus traffic, it no longer remains a mystery that the horse 'bus is to go.

RISE IN LAND VALUES.

Some of the Best Speculations in Land on Record.

To those who are skeptical of the wisdom of investing money in real estate there are numerous instances of cities where every inch of land is of great value which have been built upon sites formerly sold for little or even given away. The United States and Canada are rich in such examples. Canada especially has been the scene of great bargains in land. During the first years of its history James I. made a free gift of the whole of Canada, together with Newfoundland and Nova Scotia, to the famous Lord Stirling. Some two hundred years later a member of the suite of the Governor of the colony was granted 100,000 acres of land by William IV. Later this was increased by the addition of 500,000 acres. Sixty years later a Canadian land company was given 3,000,000 acres, 2,000,000 being paid for at the rate of 60 cents an acre, and the rest a free gift. As late as 1880 the Canadian Government actually made the Scotch-Canadian company a present of \$2,500,000 in cash, as a bonus, with a free grant of 25,000,000 acres. As there were many conditions as to the development of the territory in the terms of the grant, the bargain was not so one-sided as it at first appears.

Every one knows that the whole of Manhattan Island was sold by the Indians for \$24. Yet a plot of ground which was once a farm, and was granted and still belongs to Trinity Church, yields a yearly income of \$10,000,000.

Pennsylvania, the second most populous State in America, containing scores of prosperous cities, has an area of about 45,000 square miles. This tract of land was given over to William Penn in settlement of a comparatively trifling debt which Charles II. owed to Penn's father, and which he found himself disinclined or unable to pay in cash.

The same improvident king was the one who rented 2,700,000 square miles of the land about Hudson Bay for a yearly rental of two beavers and two elk per annum. This has proved to be one of the best speculations in land on record. Some two hundred years after the deal the company of owners sold the major part of this vast territory to the Canadian Federation for \$2,500,000, and in the meantime it had been bringing in an average income of \$500,000 a year.

Not more than 270 years ago the present site of Liverpool was sold for \$2,250 by a small London syndicate, who had

Vesuvius.
After a ride of about half an hour, we stopped at a hotel which overlooked Naples and its bay. Here all the feminine members of our party, except one, left us.

In fifteen minutes we were at the very base of the cone. Here we changed conveyances, and were taken by a cable line up the very steep side of the volcano. This last section of our way was, perhaps, half a mile in extent. The cable line terminated some 20 feet below the crater. All the way from Naples to the summit of the volcano we could see that the hidden giant of the great black mountain was still smoking. Every minute, by the watch, he would emit a cloud that would sail away and leave behind no traces of the old fellow's dissipation till he blew out the next whiff.

Upon descending from the cable car some ten of us found that we were still some hundred yards from the smoke. There was no vegetation. Long ago we had left the vineyards beneath us. There was nothing at the top of the volcano except ashes, cinders and huge boulders of lava. There was square mile after square mile of lava. Nobody could say how deep it was, but one could often discern that it exceeded ten feet.

The ascent after leaving the cable line was in ashes and cinders, into which the foot sank as in dry sea sand, which rendered progress laborious.

A flock of guides and helpers, with ropes, sticks or chairs surround us, their ingenuity bent upon securing our patronage.

Several hired cunes, while one accepted the free end of a rope, the other extremity of which was attached to a stout Italian gentleman who took the part of the tugboat. But nobody rode to the chair. It was made clear to us that the law required that nobody should farther ascend without a guide. His fee was half a dollar.

With much labor we reached a point about 50 feet below the level of the crater. Here we were informed that we could proceed no farther, as it was dangerous beyond.

The precaution seemed silly, for the giant was simply putting away just like any peaceful old gentleman enjoying his after-dinner smoke.

Upon every hand were holes in the cone, from which steam was emanating. I visited half a dozen of them, and found the smoke hot and the earth warm for quite a distance about. The whole top of the mountain was nothing but a thin sieve. Far down to the southward, some four or five miles away, beside the sea, was Pompeii. It was about as distant as Naples, which is to the northwest of the volcano.

Pompeii looked like a small, burned town, many of whose roofless walls and gaunt chimneys still remained upright.

Some of us expostulated with the guides for not approaching nearer to the crater, but they were obdurate. They replied that they had not dared to approach farther for a week, as those who had studied the phenomenon for long periods had declared the danger of violent explosions was very imminent, and no one could say when the peril was most intense.

We tried every device from bribery to daring them, but to no purpose.

To all our entreaties, inducements and reproaches, they observed that if we would delay for a while we would doubtless learn that they were not over-cautions at all unless we desired to lose our lives or seriously imperil them.

Events soon proved the wisdom of their seeming overcaution, for of a sudden the giant altered the rate of his puffing. For two minutes he held the smoke in his lungs. When it became evident that he was doing this, the guides warned us to keep a sharp lookout. You may be sure that we did.

Ah! A sound of the grating of thousands of stones as they rushed up and brushed the rocky sides of the crater on their way to the clouds filled the air. A huge column of smoke four or five times as high and large in diameter as any we had seen, burst out and piled up like a huge pillar, several hundred feet in elevation, while the air was full

of the two lammies may be living close together, yet the mother of the young man will call on her neighbor and tell her how she has intended to be more neighborly, but she has been so busy.

The neighbor will declare how delighted she is to meet her.

Then mother No. 1 begins to tell what a great hunter her son is, and how he is. Mother No. 2 remarks that her daughter is such a lovely cook. Paving taken lessons, she knows how to cook everything.

Mother No. 1 declares that they are never hungry in their igloo, as son is always successful and brings lots of seals home.

Mother No. 2 remarks that her daughter is such a good sewer and knows how to chew a beautiful boot sole.

It is finally decided that the young man shall enter the girl's family, on a sort of trial. If the girl turns up her nose and makes faces he may as well leave, as the match will never amount to anything; but should she greet him with an occasional smile and allow him to sit by her side in the evening, it will all be clear sailing, and they will unite as husband and wife.

MEDALS FOR HEROES.

King Edward Awards Medals for Gallant Acts.

The King has awarded the Albert Medal of the first class to Mr. Leslie Urquhart, British Vice-Consul at Baku, for conspicuous bravery in saving the lives of four British workmen last September on the occasion of the riots in the Russian oilfields.

The Englishmen were surrounded by insurgents in an isolated position. When news of their peril reached Mr. Urquhart he, accompanied by two Cossacks and several Tartars, started to relieve the beleaguered men. No one in the British colony expected he would live to return. Mr. Urquhart's courageous and spontaneous action was awarded with success. He got through, although he was fired on from time to time, and found the four Englishmen in a serious condition, especially on account of water. After feeding them he persuaded them to go with him in carts. Immediately afterwards the bulletwounds were carried by storm, and everyone found therein was put to death.

The King has also conferred the Albert Medal of the second class on Mr. Patrick Cullinan, an inspector of the Great Southern and Western Railway Company in Ireland. A woman fell in front of an approaching train at Ennis Station. Although the train was only 15 yards off, Inspector Cullinan jumped on the track and succeeded in dragging the woman to safety.

A TREE WITH MANY USES.

Among the remarkable trees of the world is the argan, which abounds in southern Morocco, but is seldom seen elsewhere. A "forest" of argans has a curious scattered appearance, because the trees grow singly and far apart. They are very leafy, but seldom exceed 20 feet in height. The branches put out horizontally, and begin a yard above the ground. Sheep, cattle and camels feed on the leaves, and goats will stand on their hind legs to reach them, but horses and mules refuse to touch them. The wood is very hard, and extremely useful to the natives, who make charcoal from it. The fruit, resembling a large olive, is used to feed cattle and manufacture a valuable oil. It also furnishes the principal sustenance of many of the poorer natives.

ORIGIN OF THE WOOLSACK.

The Woolsack, on which the British Lord Chancellor sits, is a large square bag of wool covered with red cloth. It was first used in the time of Edward III. to remind the peers of the great importance of the wool trade to England, and the consequent necessity of keeping friendly with Flanders.

Do not let your keenness overshadow your kindness.

'bus and one of the horse 'buses. The quiet talks on the box must be done away with, for the motor chauffeurs sit quite away from the passengers. The isolated position is necessary owing to the complicated mechanism under their control, which requires all their attention. The average wages of 'bus drivers and motor chauffeurs is about \$10 a week. The life of the old 'bus driver, with its long hours and poor pay, was looked upon as a hardship by many persons not well acquainted with it, but the recent case of the driver who came into a fortune of \$15,000 and yet continued his work at the lines has proved that the occupation is not so arduous as is generally supposed.

The rapid conquests made by the motor omnibus within the last year, not only in London, but in Paris and Berlin, have attracted attention to that vehicle as a solution of the street traffic problem. The demand for these vehicles in London alone is so great that several large motor companies have orders already for two years ahead, and are turning away business. The big companies are turning out motor 'buses as rapidly as their works will allow, and no less than \$50,000,000 worth of capital is invested in motor 'bus manufacture.

Many of these concerns—or nearly all of them, it might be said—are rivals; some building petrol carriages, others electric and others steam. The various types may be seen bidding for passengers on most of the streets; and there is considerable discussion as to which form of motive power has come to stay. According to the latest reports,

THE STEAM 'BUSES

are great favorites; there is less vibration in their motion, and the certainty of reaching their destination seems more assured.

The progress has raised important questions about certain bodies. Though the London county council has recently expended hundreds of thousands of pounds in building street-car lines, or tramways, run on the ordinary rail system with electric power underground, the advent of the motor 'bus has already begun to threaten the existence of these lines. The statement's made that before another ten years has passed, the public will disdain to patronize street cars, which will be almost as old fashioned as horse 'buses are today. The great disadvantage of the London tramways is the fact that they are limited as to speed, and are made to crawl along; while the motor 'bus, with a fair field and no favor, and the power to go around obstructions, is permitted to whiz through the streets and along the outlying suburban roads at a speed more than double that of the tram systems.

At the rush hours in London it has already been found that the tram lines, though working to their full capacity with the utmost number of cars, are inadequate to cope with the demands of passenger business. When the vast number of passengers that daily enter and leave the central districts of London is considered, a fair idea of the magnitude of

THE TRAFFIC PROBLEM

may be obtained. For instance, the daily working population is 3,000,000 people—2,907,866 are on the move. In the central area—about the bank and the Royal Exchange—774 'buses and other passenger-carrying vehicles pass a given point every hour during the busy times. With the present 'bus arrangements great delays take place all along the lines of route, and the board of trade has recently estimated that not less than 329 hours a day are lost in London owing to the slow movements of horse traffic. With the introduction of motor 'buses throughout the metropolis a big difference will be felt, and busy Londoners will be able to get from place to place in one third the time now occupied.

Movements are now on foot to prevent the further building of street railway lines, and the substitution in their place of fast moving motor 'buses. These 'buses cost on an average about

major part of this vast territory to the Canadian Federation for \$2,500,000, and in the meantime it had been bringing in an average income of \$500,000 a year.

Not more than 270 years ago the present site of Liverpool was sold for \$2,250 by a small London syndicate, who had bought it from Charles I. for even less.

The site of Johannesburg and most of its gold mines, which are said to contain over \$14,000,000,000 worth of the precious metal, were sold less than thirty years ago to an Englishman named Pratt for the sum of \$1,500. In spite of its cheapness it was a bad bargain for him, for because of his activity in the first Boer war his property was confiscated and he was driven to England in a penniless state.

AID FOR EMIGRANTS.

Leith, Scotland, is the First Municipality to Adopt the Plan.

Municipal aid is now being furnished to emigrants from Leith, Scotland, and the result is being watched with great interest. The unemployed workmen act of 1905 authorizes the appointment of distress committees by the local authorities of cities and towns and provides that "the central body may, if they think fit, in any case of an unemployed person referred to them by the distress committee, assist that person by aiding the emigration or removal to another area of that person and any of his dependents, or by providing or contributing toward the provision of temporary work." Any expenses incurred which shall not be met by voluntary contributions are to be paid out of the rates or taxes.

Leith is the first municipality in Scotland, if not in the United Kingdom, to adopt an emigration scheme. There are about four hundred unemployed workmen in that city, and it is proposed by the distress committee to send to Canada as many as are physically fit for farm work and are willing to emigrate. A limited number of married men, with their wives and children, will be included in the list.

To insure the physical fitness of emigrants for residence in the Dominion the applicants are medically examined. Each adult emigrant receives two new complete outfits of clothing, a steerage ticket and \$5 or \$6 pocket money. It is calculated that the cost to the taxpayers will slightly exceed \$40 for each adult person sent abroad, not including the outfits of clothing, which, it is believed, will be largely provided by contributions of apparel and money. The first party of emigrants have been guaranteed work for twelve months on dairy farms in Ontario. Four are married men, over thirty and under forty years of age. With one or two exceptions the single men are between the ages of twenty and thirty.

The development of the Leith emigration scheme is watched with much interest and not without misgiving by the people of Edinburgh and other communities in Scotland. The extent to which it can be carried seems measurable only by the very elastic term "unemployed."

WOMEN PREACHERS.

The women preachers and ministers of religion have increased throughout the United States during the last decade in the ratio of 300 per cent. In 1890 the women clergy—"men" of America licensed to preach and marry couples numbered only 1,143, whereas there are now 3,378.

THE ROCK OF REFUGE.

In Hawaii, one of the Sandwich Islands, there is a spot called the Rock of Refuge. If a criminal reaches this rock uncaptured he is safe so long as he remains there. Usually his family supply him with food until he is able to make his escape, but he is never allowed to return to his own tribe.

The railway companies of Great Britain employ about 350,000 men.

CANADA AND THE STATES

POSTS BEING SET OUT TO ESTABLISH DIVISION BETWEEN THEM

They are Made of Brass or Copper Plates and Set in a Bedding of Cement.

The boundary between United States and Canada is being carefully marked. A band of surveyors representing both countries, is going over it, running new lines from the Atlantic to the Pacific and putting up brass posts to mark them. I have been upon the line several times during my travels in Canada, writes Frank G. Carpenter from Ottawa to the Chicago Record-Herald.

At the town of Laurier, in British Columbia, I found the depot built on both sides of the boundary. There was a mark drawn diagonally across the platform, on one side of which was painted in red an enormous American eagle with the words United States below it, and on the other side Canada and a picture of the maple leaf. I planted one of my feet on the eagle and the other on the leaf and stood for a time astride the division which separates John Bull's American possessions from those of Uncle Sam. Looking to the south I could, in my imagination, see the Rockies rolling onward for thousands of miles to our Mexican boundary and at the north the mountains of Canada and the snow and ice of the British America extending almost to the pole.

In company with C. E. Stone, the general passenger agent of the Great Northern Railroad, who was with me, I walked eastward a few steps to look at one of the brass posts which had just been put up to mark the boundary. The posts are only a few miles apart and they are being put up along the whole line, with the exception of the great lakes, from the mouth of the St. Lawrence to Puget Sound. As I stood beside the post it reached to my shoulder. It is, I judge, about five feet high, eight inches thick at the bottom, tapering to four inches thick at the top, where it ends in a little pyramid as sharp as that which caps the Washington monument. The post is made of brass or copper plates soldered together, and so set in a bed of cement that it looks like solid metal. Indeed, I did not know it was hollow until I tapped it with my knife.

LINE MARKED BY POSTS.

One side of this post bore the word "Canada" in raised letters, and the opposite side "The United States." On another side was the inscription: "Treaty of 1846. Line established 1857 and 1861. Surveyed and marked 1903-1907."

Standing at the post I could look for several miles east or west through a wide road which had been cut along each side the boundary right through the forest. I am told that such marking has been done all along the line.

I understand that the boundary posts along the eastern end of the line are in bad condition and that they are being replaced by posts of copper and granite. The original ones between Quebec and Maine, New Hampshire and Vermont were made of iron. They were put up about sixty years ago, but the frost and thaws have displaced many of them and thrown others out of perpendicular. Some of these posts have been moved. The surveyors who have been going over the line during the past year found two of the posts on the northern arm of Lake Champlain missing. One was sixty feet away from the line, and it had probably been carried there by an ice shove when the water was unusually high. Some of these posts stood near roads and they had dropped over into the gutters. Many were browned with rust and surrounded with weeds. The most of these have been reset or replaced with granite pillars, so bedded that they will resist the ravages of time.

There is a custom house at Laurier, and our baggage was examined by the

duty free on any day she chose to name.

It is said that Europe is like an armed camp. Its every country has fortifications at the places where it could most easily be attacked by its neighbors and enormous military establishments are kept up with a view to possible wars. This line of 3,000 miles or more between Canada and the United States is practically free from military defences. There is a great fort at Quebec, with old guns and a few soldiers. There is a coaling station at Esquimaux in British Columbia, which until last year was garrisoned by British troops, but which is now held entirely by Canadians. The British, in fact, have withdrawn their forces from Canada, and from now on the Canadians will handle their own military establishments throughout. Indeed, Canada has practically no defences along the land boundary to speak of, and it is the same with the United States. According to our treaty, neither nation can keep more than one naval vessel on the great lakes, and this is more for police duties than for national protection. Neither country is afraid of the other, neither keeps a large military force, and the relations which now prevail and have always prevailed between the two lead to the belief that we will always have international peace.

RULES FOR GOOD HUBBY

THEY WERE FRAMED BY A FRENCHMAN'S WIFE.

Six Amusing Commandments Laid Down For Alphonse Which He Did Not Observe.

The marriage commandments of the French wife, who has just obtained a divorce in Paris, were six only, not ten, but they were too many for Alphonse, her husband, to observe, and his disobedience brought the affairs of the household into court.

The couple had been married twenty years, the wife working in a tobacco factory. A wife-beater is the only description to hand of her husband.

Some time since the wife left home because of her husband's cruelty, and would not return until he had solemnly set his name to the six commandments drawn up by her on paper. Here are the six:

1. I shall keep the money of the household, and I do not want to account for it every day, as I used to be silly enough to do. It is for the husband to account to the wife.

2. I do not wish you to meddle with my management. I shall buy what I like without your coming to tell me that it is too dear, for I am not in the

MR. WILL THORNE TALKS MARRIED WOMENS' DEBTS

LABOR MEMBER OF THE BRITISH PARLIAMENT.

He Tells What He Would Do If He Had His Life to Live Over Again.

"Hard work and self-reliance—these are the two chief things I would rely on if I had to live my life again," says Mr. Will Thorne, the burly giant who represents West Ham in the British Parliament. He has had a bitter struggle for success.

EARNED WAGES AT SIX.

"It's difficult to say exactly what you would do with another start in life, he said; "so much depends on the chances you get.

"My father was a brickmaker, and my chances were not very bright when I started. But things have changed since, and, however poor my parents were, I should be bound to have a better chance now.

"I started working when I was six. At that age I earned a shilling a week by helping a barber on Saturdays and Sundays. When I was seven my father was killed, and I went to work for a rope-spinner, turning his wheel for nine hours a day for 2s. 6d. a week.

"When I was eight I went to a brick-field, where I got 7s. a week for two years, and in that time I often made extra money by working in addition to the daily work.

"It sounds strange in these days to hear of a boy of eight working thirty hours with less than six hours' rest, but I often had to do it two or three times a week.

"I mention this because it may help to explain one of the chief objects of my present life, which would be one of my great ambitions if I had to live again.

NEVER AT SCHOOL.

"Well, if I had to start now I should get a better chance. As a child I never had a single day's schooling, and now, at any rate, I should get that benefit.

"As a youth I am pretty sure I should be a rolling stone for a little while. I worked in a barber's, a rope-spinner's, a brick-field, a metal-rolling mill, a wagon-maker's, on a railway, and in two gas works when I was young. This happened to be forced upon me in the struggle for my daily bread. But I believe in a boy trying various things until he finds the work he is best suited for, and I am pretty sure with a fresh life I should have to hunt around for it."

Asked for the rules which he would take to guide him to success, the Labor

BIG DRAPERS' FIRMS ARE HELPLESS IN ENGLAND.

Business Houses Are Not Protected From Loss Resulting From Connivance.

If it were not for the fact that mankind, as a whole, is honest, English drapers doing extensive business with people of means would have to shut their doors at once. They are absolutely unprotected by law. A statement to this effect was made by the managing director of one of the best-known firms in London. He referred especially to the case of Paquin, Limited, v. Holden, in which the House of Lords has just decided that the suing firm's appeal must be dismissed without costs, and to the proposed appeal to the Prime Minister that the law may be altered.

EASILY SWINDLED.

"The position briefly is this. If a wife says she is acting as her husband's agent, she cannot herself be sued for a bill. When the husband is sued for goods he has only to say he has forbidden his wife to pledge his credit—it may be merely a private remark passed across the breakfast table—and he also is exempt from payment.

"A married couple who set themselves to swindle us could exhaust their credit and our patience and then not pay a penny by getting up these two separate and contradictory defences and claiming that the goods were not necessities.

MOTHER WOULDN'T PAY.

"We have had case after case, but it is not worth our while to fight them," said the head of another large firm. "Two young ladies bought goods from us and then could not pay. Their father said they had an allowance, and beyond that he would not be responsible. We wrote this transaction off our books as a loss."

Another firm said: "A girl of sixteen or seventeen bought £12 worth of dresses. We knew her mother to be a wealthy woman, and believed the girl was authorized to buy the clothes. Her mother declined to pay, and the girl was a minor. What could we do? Married women are even more difficult to deal with. If they will not pay, we cannot make them.

"We cannot ask a lady if she is authorized by her husband to buy goods, for she would simply leave the shop. Introductions and references are no safeguards, and as all the best trade is done on a credit basis we are obliged to accept these risks or close our doors. We ourselves never bring actions against our customers, for other customers, who may genuinely mean to

with weeds. The most of these have been reset or replaced with granite pillars, so bedded that they will resist the ravages of time.

There is a custom house at Laurier, and our baggage was examined by the United States officers as soon as we crossed over. There are some other towns situated here and there along the line, and there are in some places what are known as boundary stores, half on one side and half on the other. Such stores were more common in the past than now. One-half of a building, for instance, might be in the province of Quebec and the other half in the State of Vermont. Behind one were shelves of American goods and behind the other great stores of Canadian wares. The customer paid his money and took his choice, and the tariff laws were about as little regarded as are those of Moses in a mining camp.

BOUNDARY STORES LAP OVER.

Such stores were also desirable resorts for criminals, who, standing on one side of the room, could snap their fingers at the officers on the other side, and refuse to be arrested without a requisition.

Our boundary with Canada winds in and out at all sorts of angles for the first thousand miles or so from the Atlantic. It begins at the ocean and crooks and turns around Maine, keeping pretty well away from the St. Lawrence until it touches that river at the northeastern edge of New York. It runs with the river to Lake Ontario and then winds its way through the middle of the great lakes until it reaches the land again at the northeastern end of Minnesota on Lake Superior. From here it winds a little through the Rainy River country to the Lake of the Woods and then takes an almost straight shoot across the prairies and the Rockies to Puget Sound. Just how long the whole boundary line is I do not know, but it must be considerably more than 3,000 miles.

Two of the great offences committed on both sides of the boundary in the West are smuggling and cattle rustling. The pastures of Canada are better than those of the United States, and the American ranchmen frequently drive their stock across the boundary to feed on Canada's grass. Such depredations are carefully watched by the mounted police. They patrol the international line weekly and arrest such cowboys as have their stock on the wrong side. They say that all stock that comes into Canada pays duty, and they carefully examine all cattle brought in for tuberculosis, Texas fever and other diseases.

In the past there was a great deal of smuggling of Chinese through Canada into the United States, and some of this goes on to-day. There are numerous trails through the mountains of British Columbia, and if the Chinese can escape paying the duty which is now charged by Canada on each celestial immigrant they are liable to find their way into our country.

MUCH OPIUM SMUGGLING.

Opium smuggling is another crime frequently perpetrated. The opium is said to be prepared at Victoria and carried across in small packages. The duty is very high and it does not take many pounds to bring a profit to the smuggler of a thousand dollars. Our customs officers are on the watch against such criminals, and the Canadian Government does all it can to help them. There are custom houses at all boundary points, and an American consul is stationed at almost every town of size.

Nevertheless, there is a great deal of smuggling from Canada into the United States. I have bought goods in Ottawa and have had the merchant tell me that they could send anything over to me free of duty at any time I chose to order it. A lady friend of mine examined a fine fur cloak in Quebec the other day. The price was several hundred dollars, and she told the merchant she could not afford to take it and pay the duty. He replied that she need not worry about that, and that he would deliver it to her at her home in New York

for every day, as I used to be busy enough to do. It is for the husband to account to the wife.

2. I do not wish you to meddle with my management. I shall buy what I like without your coming to tell me that it is too dear, for I am not in the habit of throwing money out of the window.

WANTS A HALF DAY.

3. Under no pretext will I receive in the house your friends, comrades or colleagues, any more than we shall go to them, because I do not want people to talk about me, and if I were annoyed by people's talk in society I should be sure to behave foolishly. As for going out you shall take me to the theatre with our own money, when we can afford it, without being beholden to anybody; or we could go into the country as we used to do, but there must be no disputes on the way over a three-penny omnibus fare.

4. I want a half day at home for mending or other matters without your grumbling about lost time. If I stay away from the workshop when I am feeling ill you are not to treat me as if I were a lazy woman, for you know that is untrue.

NO DISPUTES.

5. There must be no disputing about my going to see your family. I am fond of your mother and respect her. But I do not like things which I am forced to do. Therefore, if you want me to go and see her, and I do not, you will go alone without any dispute.

6. As we have often disputed about my daughter, I will have no more to do with her. You shall be responsible. While I do the cooking you shall make her do her duty, and shall teach her to read and write. You will punish or reward her and perhaps we shall then have peace. If not, I shall put her in a convent.

Simple as they are, the burden of the six commandments was too heavy for Alphonse. He tore up the whole table of the law, and returned to his habit of wife-beating.

Therefore he is divorced.

NEW VEGETABLE.

A Delicacy Found on the Sea Coasts of Scotland.

Quite the latest addition to the already comprehensive range of vegetables which now grace the tables of the gastronomic cognoscenti is lava, pronounced "lay-va," and served hot with roast mutton, instead of, or in addition to, the time honored red currant jelly. Lava, when served, looks like spinach, save that the rich emerald tint of spinach is replaced by a mingled deep green and amber, a dark neutral shade, like the corner of a Rembrandt canvas. To the palate lava brings a subtle commingling of pleasant salinity as of marinated fish, and a delicate hint of the sub-acid of lime or lemon—a lingering bonne bouche that produces a desire for further acquaintance.

Lava is a marine legume, and is found among the wild rocks of Scotland's iron-bound coast. It grows there at the water's edge in long waxy fronds and when in the sea displays a brilliancy of beryl and ruby.

It is purveyed by the fishmongers, by whom it is put through a course of maceration in weak brine. When served from the hands of a chef lava is flavored with lemon. Gourmets welcome lava as a highly palatable and very nutritious recruit to the table, and physicians classify it as a valuable diuretic.

FEEDING OF FISH.

Fishes have no eyelashes, and necessarily sleep with their eyes open; they swallow their food whole, having no dental machinery. Frogs, toads and serpents never take food except that which they are certain is alive. Serpents are so tenacious of life that they will live for six months or longer without food.

Greatness may doubt its own importance, but egotism never does.

it will find the work he is best suited for, and I am pretty sure with a fresh life I should have to hunt around for it."

Asked for the rules which he would take to guide him to success, the Labor M.P. answered without hesitation:—"Hard work is the first thing. I believe everyone should be compelled to do his share in the work of the world. I don't think there is any punishment too heavy for the shirker. I have heard of a scheme which is said to have been used on the continent for making the confirmed idler work. He is put into a big tank into which water is continually pouring, and unless he pumps hard to keep it below a certain level he drowns. That's the way an idler ought to be treated. If you want any sort of honest success in life you have got to work hard."

SELF-RELIANCE.

"Next to industry I should place self-reliance. Life is a struggle for most of us, and the man that cannot rely upon himself is not worth his salt. I have had as many hard knocks as most, and I expect I shall have some more yet, but I think I can still fight for myself."

The giant stood up and braced himself, as though to meet a physical opponent, and, looking at the strong, determined face and mighty form, it was impossible to doubt that he would meet the world's buffetings—in Parliament or out of it—with every chance of success.

"After those two things," continued Mr. Thorne, "I should rely upon reading, and the words of men wiser than myself. I cannot say how much I owe to both. Whenever I got a chance, I always went to hear lectures on all the subjects I was interested in—I learnt much from listening to Mr. Bradlaugh—and I have always read all I possibly could."

"Then when I got on a bit I should turn to the work I have before me now, for I know it will not be finished in my present lifetime."

CHANGES NEEDED.

"I believe that if the worker were given a better home and happier conditions, it would solve many of the problems that puzzle our politicians to-day. I think, for instance, that Lord Roberts would have little trouble in popularizing rifle shooting. Let a man have a good home to fight for, and a few hours' leisure, I say, then give him a rifle and he will soon learn to shoot to defend the home and country he has such reason to keep inviolate."

"Is there anything else I would strive for? Well, perhaps, I might try to get the procedure of the House of Commons altered. At present it seems to me there is far too much talking and far too little work. To a working man like myself it is heart-breaking. But that is a state of affairs I hope to see improved in this life before many years are past."

THE TESTING OF STEEL.

In these times, when the call is all for speed and high pressure, extraordinary care is needed in testing the quality of the steel used in high-grade machinery. High-speed motors, steam turbines, and many of our modern engines would not be possible without improved steel, and the new steels demand more rigid tests. Racing automobiles would be mere death-traps if constructed of untrustworthy metal. Of late, says Capt. R. Sankey, of the Royal Engineers, retired, there has been noticeable a gradual separation of steel tests into two kinds, the one static, the other dynamic. The static tests are applied to materials that have simply to resist stresses like those sustained by bridges and roofs, but the dynamic tests, which are called impact tests, are used for materials employed in machinery that has to endure shocks like the moving parts of high-speed engines and rails. Captain Sankey, as the result of a series of experiments, concludes that the tendency to rely on impact tests alone for steel used in high-speed engines is a mistake, and that both static and dynamic tests should always be employed.

shop. Introductions and references are no safeguards, and as all the best trade is done on a credit basis we are obliged to accept these risks or close our doors. We ourselves never bring actions against our customers, for other customers, who may genuinely mean to pay, think we invariably sue for backward accounts, and do not return to us when their own bill is settled."

CURIOUS HUMAN DIARY.

Leaves From Last Journal of Marquis of Anglesey at Monte Carlo.

The last diary kept by the late Marquis of Anglesey before his death at Monte Carlo is a curious human document. The book is bound in crocodile, delicately scented with the Marquis' favorite perfume. On the back is a glittering galaxy of diamonds, set in gold, forming the monogram of the two crossed A's, surmounted with the golden Anglesey coronet.

The following are extracts from the diary, which we reprint from the Liverpool Daily Post:—

October 17.—Seedy. Didn't get up.

October 18.—Go to see hospital with G. at two o'clock.

October 21.—goes to England for flat hat. They are all taken. I am seedy.

November 7.—Have the carriage. Don't go out. Storm.

November 8.P.—Drive out. Weather so so. Feel a wee bit better. Choose wall paper.

December 11.—Cold; go out. Gramophone arrives.

December 12.—Awful storm; don't go out.

December 16.—Feel better. Arrive Paris 6.15; E. P. Hotel.

December 19.—Dull; Lunch with L.; then shop. Leave for Monte 7.30. Very seedy all night.

December 20.—Fine. Arrive Monte 11.30. Very tired. Go to bed at once.

December 25.—Lovely. Lunch Cap. Martin with W's. Feel so so.

December 26.—Lovely. Don't go out. Feel seedy. Get shock in evening by visit Comtesse G.; great scene.

December 27.—Lovely. Have to go take tea with Comtesse G. — comes in v. late.

December 28.—Lovely. Drive out. Feel so so.

December 29.—Lovely. Drive alone. Feel so so. See G. Seedy at night. Dine in bed.

January 8.—Lovely; rest all day in bed. Monkey arrived.

January 14.—Lovely; cold. — tells his troubles to me; I pity him. Don't get up.

January 17.—Rain all day; don't go out.

Then begins the last page. It is the death flurry in a sense. It has only one complete entry and part of a second, which reads thus:—

4 p. m.—100 point 7.

This evidently refers to his temperature.

Then follows the last unfinished entry:—

8 p. m.—

There is no date here, and the Marquis died soon after it was written.

PIGEON FARM.

Nowhere in the world, in all probability, can so many tame pigeons be seen in the air as on the pigeon farm or ranch which is to be found near Los Angeles, in Southern California. This part of the world is especially favorable for pigeon-rearing. They have few natural enemies, hawks being very scarce, while the perpetual summer is an important factor. The farm covers about eight acres of sandy, gravelly soil, and there is an abundant supply of fresh water. Fifteen thousand birds fairly cover the ground and lofts, so that at times from a distance it appears as though some of the snow from the neighboring mountains had been dropped upon the roofs. The increase of this gigantic flock is enormous, but the demand is better than the supply, and 40,000 pigeons are sent to market each year.

THE BEST FLOUR. DAFOE'S NONESUCH DAFOE'S MANITOBA PATENT

[By numerous tests by the best Bakers
the above mentioned grades have been
proven to be the best Flours in the market.

When buying Flour ask for Dafe's, and
patronize your home mill, thereby produc-
ing Bran and Shorts that you can purchase
cheaper than the product of the Western
mills, which has to be transported thousands
of miles at great expense, and usually, when
it reaches you, of inferior quality.

The grocer complains if the farmer or
the mechanic sends to Toronto or to out-
side points for an article he can get at the
home store just as good, but he does not
hesitate to buy Flour from mills hundreds
of miles away, and sell you an inferior
Flour for more money than you can pur-
chase the home product for, every bag of
which is guaranteed.

CHOICE CORN MEAL and BUCK-
WHEAT FLOUR always on hand.

FEED GRINDING a specialty, with th
best feed mills known to the trade.

A full stock of the best ANTHRACITE
COAL. Also in the market for the purchase
of all kinds of Grain.

Ask for prices at the big Mill before pur-
chasing your Flour, Feed or Coal.

market. Would the parties who have
our wire stretchers for this fence out
kindly bring them in, we are in need
of them. MADOLE & WILSON.

A quiet wedding was celebrated at
the R. C. church, yesterday morning
at 8 o'clock, when Miss Mary A. Hughes
Bath, became the bride of Vincent
Kouber, one of Napanee's well known
citizens. Rev. Father Hartigan per-
formed the ceremony. The newly
wedded couple took the noon train for
a honeymoon in Toronto and Hamilton.

Cyrus Miller, of Morven, was haul-
ing a load of cheese to Napanee Tues-
day. When coming down Roblin's
Hill, the front board of the wagon
slipped or broke and let the cheese
down upon the horses, who resented
this by running away. Mr. Miller
managed to hold on to the lines and
bring them to a standstill, but the
cheese was scattered and the boxes
broken.

Lead. You can procure them all at
The Red Cross Drug Store—Napanee.
T. B. WALLACE.

A Royal Slave.

"A Royal Slave" is one of the most
elaborate and beautiful melo-dramatic
productions on the road. The scenery
is the best that the studios can furn-
ish and is painted from photographs
made in Mexico. The costumes and
stage accessories are very rich and the
powerful and thrilling dramatic situa-
tions, make the play a series of beau-
tiful stage pictures. Though it is a
melodrama of the sensational sort,
there is not a shot fired during the en-
tire play, and it is possessed of real
literary and dramatic merit of a high
order.

Brisco Opera House, Wednesday, May
9th. Prices, 25c, 35c, and 50c.

"Herpicide" guaranteed to cure Dandruff,
stops hair falling, and prevents baldness,
10 cts. an application, at
THE PLAZA BARBER SHOP
A. WILLIS.

The Bijou Comedy Co.

The Bijou Comedy Co., of which Mr.
H. Wilmot Young is proprietor, appear
in the Brisco Opera House, to-night
and to-morrow night. It is undoubt-
edly the most popular company that
has ever appeared here and on the
opening night it was greeted with a
well filled house. The bill was "The
Princess of Patches," a comedy abound-
ing in amusing and thrilling situations.
Mr. Young, as the tramp, and Marjie
Adams, his wife, as the "Princess of
Patches," played their parts exceedingly
well. They were supported by a
strong company and altogether the
audience was delighted. The bill for
Friday night is "A Winning Hand"
which will be well put on. "Harry
Tracy the Bandit," which closes their
three nights' engagement and is the
best play in their repertoire, will be
Saturday night's attraction.

New Cure for Hay Fever.

The latest treatment for the preven-
tion of Hay Fever prescribes systematic
and continued exercise taken in timely
advance of the season for the appear-
ance of the complaint. Specialists in
the disease do not understand its nature.

It is not now thought to be a form of
catarrh and local applications have
been largely abandoned. The theory
that it is rheumatism of the mucus
membrane is not accepted. A more
favored idea attributes the inception of
Hay Fever to sluggishness of the liver
and bicycle riding is recommended to
keep this organ in an active and healthy
condition. After Hay Fever has
arrived, the sufferer will find neither
comfort or relief in bicycling, but
systematic and easy wheeling during
the preceding months is warranted to
greatly modify the severity of an
approaching attack, or to entirely
prevent it.

The ladies were kept busy for over an
hour serving their patrons. A high
tea was also served in the afternoon.

Mr. George L. Mair has received a letter
from his son, Fred who was in San Fran-
cisco at the time of the earthquake. The
letter states that the house, in which he
and his wife were living was lifted and set
upon end just as one would set a trunk, and
that he and his wife packed two trunks
with their belongings and waited until late
in the afternoon to get some sort of conve-
yance to take them and their belongings to a
place of safety, but none offering, they
packed some clothes in two bundles and
started to walk out of the then burning city
a distance of ten miles. When they had
proceeded six miles they were obliged to
throw away their bundles and run for their
lives, and by two o'clock in the morning
reached a place of safety outside the city
limits.

The following is the programme
which will be rendered at the "Mite
Box" opening, held under the auspices of
the Ladies' Aid Society of the E.
M. Church, on Friday evening, May
4th:

PROGRAMME:

WILTON.

The funeral of the late George Botts,
Moscow, was conducted in the Metho-
dist church by Rev. Farnsworth, Yar-
ker, on Saturday afternoon last. De-
ceased was formerly a resident of
Wilton. His death was very sudden,
caused by appendicitis. Much sym-
pathy is felt for the bereaved wife.

The electric storm on Sunday night
was very severe, though but very little
rain fell. An elm tree, near Mrs.
Burt's house, was struck, and the
wires were burned out.

We were pleased to note that Oliver
Asselstine was successful in receiving
the degree of M. A., at Queen's, this
spring.

The regular quarterly services will
be held in the Methodist Church next
Sunday morning.

Mrs. R. K. Owens, who has been suf-
fering from bronchitis, is improving.
Mrs. James Forsythe is also under the
doctor's care.

N. A. Asselstine has been having a
well drilled near his barn.

Mrs. Levi Perry spent a few days
last week visiting her sister, Mrs. Bell,
Kingston.

Mr. and Mrs. Milton Cloakie and
Mrs. Lake, Hartington, spent Satur-
day at Mrs. Owens.

S. Kilpatrick, Kingston, paid Wilton
a business trip last Friday.

Mrs. Ernest Gandier, Newburgh, is
at her father's, James Forsythe.

Mrs. Clement Booth and children,
New York, are visiting her father,
Ruggles Storms, who is very ill.

ing friends in Picton.

Mr. Wm. Moffat, Picton, has pur-
chased the Anglo-American hotel
Belleville, and will take possession next
week.

OBITUARY.

PHOEBE ANN CHURCH.

Relict of the late Wm. Church, of
Fredericksburgh, eldest daughter of
the late Adam Hubbs, died at the
family residence, Main Street Picton,
at an early hour Monday morning aged
75 years and 5 months. She had been
ill for some time. Mrs. (Lt.-Col.) Thos.
Bog is the only surviving sister, and
Mrs. J. O. Wilson and Miss Kemp are
nieces; Mrs. A. D. Cotter, granddaughter;
and Mr. Reginald D. Solmes a
grandson. In all the relations of life
she was a most excellent woman and
her death is a distinct loss to her rela-
tives and acquaintances, of whom
there is a very large circle here and
elsewhere.

See BRUTON'S display of up-to-
date Fireworks.

Church Consecrated.

The Bishop of Ontario has signified
his intention of consecrating the
Church of S. Mary Magdalene, on Fri-
day morning June 1st, 1906. On the
evening of the same day the annual
visitation and Confirmation into the
place. A large class of candidates in-
cluding many adults, is in course of
preparation. It is the intention that
a grand reunion of the Congregation
former members, shall be held on the
day previous to the consecration. A
meeting was held on Tuesday evening
last, when committees were appointed
to arrange and carry out the program
of proceedings in connection with the
services. These Committees will re-
port at a meeting to be held on Tues-
day next, May 8th, at 8 p. m.

Good Paint

is Ramsay's Mixed Paint, one gallon
covers 350 square feet 2 coats.—Price
35c, imperial quart, at the Red Cross
Drug Store.

T. B. WALLACE,

Military Camp for 1906.

The annual training of the 47th,
Regiment will be held in all probability
in Cobourg the 18th. June, this year,
as new regulations are out to the effect
that all names of parties wishing to
enlist, must be in the service eight
days before camp. Lieut. F. R. Maybee
wishes those requesting to join the
Company this year, to hand in their
names at once. These new regulations
are imperative, and no person or per-
sons can go into camp unless their
names appear in the roll sent in, at the
date mentioned. The pay will be the
same as last year, and a first class
Company is expected to go from here.
The 47th Batt. Band will accompany
the boys to camp this year. Any per-
son wishing to join, will call and see,
or write, Lieut. F. R. Maybee, Napanee
Box 166. Further particulars will be
given later on.

One gallon of Prism Brand
Paint will cover 360 sq. ft., two
coats. Every can guaranteed.
The Medical Hall.—Fred L.
Hooper, sole agent for Napanee.

Milk Cans second to none, first
class material and workmanship, dairy
pails creamers, pans and Melott Cream
Separator, three sizes.

MADOLE & WILSON.

Extract from Letter of Mr. Thomas
Delworth to Canadian Horticultur-
ist.

I arrived at Napanee on March 23
and hunted up the vegetable growers.
There are not many market gardeners
here, but there are a large number of
farmers engaged in growing vegetables
for the canning factory. These men I
found nursing a very sore grievance.
The canning factory has been running
only one season, and I was informed
that about the middle of the tomato
season, at the heaviest picking, the
factory refused to accept delivery.
These growers had no other outlet for
their crop. One grower told me he
turned his cows into his tomato patch;

THE cost of living is
an important thing
in most homes. You
may have to figure close-
ly in these matters. A
little extra on a barrel
of flour may look big to
you.

But there is a differ-
ence between spending
money wisely and spend-
ing it foolishly.

Sometimes it is econo-
my to spend instead of to
save. It is in the case of
Royal Household Flour.

Those few extra cents
a week, that give you

Royal Household Flour

in preference to inferior flour, buy health.

Nothing contributes so much to the food you
eat as flour, and therefore nothing should be more
carefully bought. Ogilvie's Royal Household Flour
is the whitest, cleanest and most nutritious flour that's
milled. It is the only flour
that is absolutely pure.

Ask your grocer.

Ogilvie Flour Mills Co., Ltd.
Montreal.

"Ogilvie's Book for a Cook,"
contains 130 pages of excellent
recipes, some never published be-
fore. Your grocer can tell you
how to get it FREE.

ELEGANT FURNITURE.

Your home, if furnished with GIBBARD Furniture, will be
in correct style.

Our Furniture is unsurpassed for beauty of finish and quality
of materials used.—Our Designs are of the very latest
style.—Our Prices are the lowest, considering the quality of
the goods offered.

See Our Baby Carriages and Go-Carts,
a Large Stock to choose from.

The Gibbard Furniture Co.,

of Napanee, - Limited.

My daughter, Mrs. McManis, is touring during a very sore grievance. The canning factory has been running only one season, and I was informed that about the middle of the tomato season, at the heaviest picking, the factory refused to accept delivery. These growers had no other outlet for their crop. One grower told me he turned his cows into his tomato patch; others allowed them to rot on the ground. I believe the factory people claim that since it was their first season their plant was in a partly unfinished state, and the crop came in faster than they could handle it. This year, with a completed plant and better equipment, they expect no trouble. However, the loss last year seems to have fallen entirely on the growers (as usual), their contracts with the factory apparently allowing them no redress, and it is not surprising that some of them are feeling disgusted.

I met a number of the growers at the town hall, and talking matters over and explaining the objects of the Ontario Vegetable Growers' Association, they organized a branch and elected Mr. Vandebogart, president; Mr. Thompson, vice-president, and E. M. Sherman, secretary-treasurer.

Lawn Mowers, Garden Hose, largest stock, greatest Variety and best prices at **BOYLE & SON.**

Mrs. W. McKenzie, Picton, spent last week with friends in Ernestown.

Mrs. S. McCoy, Stratheona, is visiting friends in Picton.

Mr. Wm. Moffat, Picton, has purchased the Anglo-American hotel Belleville, and will take possession next week.

C. M. Warner went to Toronto last Saturday, returning on Monday accompanied by Mrs. Warner.

Mrs. Rev. Costigan and children, Deseronto, are the guests of her father H. M. Deroche, K. C.

MARRIAGES.

LEWIS-CARTER—At Morven, by the Rev. H. Thomas, Mr. Edward L. Lewis, of Ernestown, to Miss Edith May Carter, of Napanee.

Wherever Tuck's Rheumatic Bone Oil has been introduced everybody is talking about its wonderful curative powers. Here is what one sufferer writes:—

A Letter of Thanks.
Dear Sirs—I want everyone to know, what Tuck's Bone Oil did for me. I suffered for a year and nine months from a sore leg and at times the pain was almost unbearable. If I moved about the house I was obliged to go with my knee on a chair. I was under the doctor's care for months and was six weeks in the hospital from which my husband brought me home not much improved. A neighbor told me of Tuck's Bone Oil and advised me to try it. I did so and at once began to get relief. Four bottles cured me and I can now walk over town and back again at my ease. I think Tuck's Bone Oil is the best medicine ever made.

Mrs. J. Hopkins,
Smith's Falls.

For rheumatism, lame back, neuralgia, sprains, coughs, colds, quinsy or bronchitis, in short for any and all kinds of inflammation there is nothing to equal Tuck's Bone Oil. A bottle should be on the shelf in every home. For sale by all medicine dealers at 50c. a bottle or sent prepaid by The Tuck Bone Oil Co., Limited, Smith's Falls, Ontario.

Economy is a Virtue.

DIAMOND DYES

Will Save Money for Every Home in Canada.

When times are hard and dollars scarce, the smart and bright women of our country find that the Diamond Dyes are important helps in economizing. By the use of Diamond Dyes the husband, mother and children can be well and stylishly dressed, although nearly all the clothing may be old material dyed over.

Diamond Dyes make such lasting and beautiful colors that goods dyed with them cannot be told from new. Anyone can use them, as the directions are so plain and simple that no skill is needed. The colors of Diamond Dyes never grow dim; they never wash out. In order to secure the best results in home dyeing, every woman should see that her dealer or merchant should give her the "Diamond Dyes," as other package dyes are only poor imitations.

Sore Throat and Coughs

Everybody's Automobile.

Although the automobile has now reached the stage of being a practical and reliable vehicle it does not by any means displace the bicycle.

The bicycle is light and convenient; can be ridden almost anywhere that you can walk; covers the distance quickly and can get set aside when not in use about as easily as your umbrella.

And the price is within the reach of all. Soon pays for itself in the saving of time and car fares.

The Bicycle is Everybody's Automobile.

CARPET BUYERS, ATTENTION.

We call your special attention to the advisability of careful consideration before purchasing your Carpets. When you buy a Carpet it comes right into your home, you live with it for a long time or a short time, according to the way you bought it. Madills only stock the 'long time' Carpets, the makes that are reliable, and will wear as long as you expect them to. Then all our patterns are exclusive, and quality considered, we always save you in prices. There's more for you to choose from than any stocks hereabout. Stop, think for a moment and come where your interests are being carefully considered. Better designs, better colorings, better qualities and better prices, are the main features on which our Carpet business has grown.

CARPETS

in Axminsters, Velvets, Brussels, Wiltons, Tapestry, Wools, Unions, and Jutes.

RUGS

in Axminsters, Brussels, Velvet, Tapestry, Wool, and Hemp, in a complete range of sizes and prices.

LINOLEUMS

An extensive range of beautiful floral designs, more noticeable in the 4 yard widths. A visit here will convince you.

Jap. & Chinese Mattings

Our stock being large will enable you to make a better selection. All prices, ranging from 15c yd.

Two Specials for Saturday at 10 a. m.

Ladies' and Children's Vests, and Ladies' Hose.

In order to open up a bright new season with a bright new sample lot of Vests and Hose the decision is they must go on Saturday clearing at wholesale and less figures. The Vests are in 3 lots, and the Hose are in 2 lots.

Vests worth from \$1.25 to \$2.00 doz. wholesale, for	10c each.
" 2.25 to 3.00 doz. "	10c each.
" 3.10 to 4.50 doz. "	25c each.
Hose worth from \$1.75 to \$2.50 doz. wholesale, for	15c each.
" 2.75 to 4.50 doz. "	19c each.

The Vests are all summer weight, sleeveless, short sleeves and long sleeves, with tape and lace trimming. This is something you will need in the near future so take advantage of this special discount Thursday at 10 a.m. (See Window)

ESCAPED FROM ASYLUM.

Kingston, May 8.—A daring and successful escape of a life prisoner occurred from the penitentiary here about 3 o'clock this morning.

The man at large is Joseph Chalabran alias Chartrad, who was sentenced two years ago at Sault Ste. Marie to be hanged for murder but whose sentence was commuted to life imprisonment. Chalabran was in the insane ward though he was never considered very simple. Last evening he was in his cell, and this morning at 6 o'clock his cell was empty.

Chalabran had not been found tonight. His flight from the penitentiary was the most daring and puzzling that has occurred at the institution in a quarter of a century. The manner in which the convict got away was so plain that the prison authorities can scarcely realize that one shut in a cell could have got clear away as Chalabran did. Guard James A. Fegg was on duty in the insane ward, where the murderer was domiciled. Every hour he passed the cell, and wound the clock, which is just alongside. Nothing within indicated that the convict was other than asleep in his cot. When it was discovered that the bird had flown it was seen that a kind of dummy, made of flower-pots, had been put in the cot, and this appeared like the sleeper. At what hour Chalabran took his departure it would be difficult to say. He may have got away before midnight, or perhaps some hours later. The mode of escape was this:—After fling through three window bars the murderer took off the pulley ropes on which the window worked. These he tied together, and on the end he fastened the handle of his pail, which served as a hook. Placing the hook around one of the solid bars, he let go the rope and slid down from his third-storey window to the ground.

Paints, Oils, Varnishes and Glass, Best Boiled Oil, Elephant Brand White Lead and Ready Mixed Paint. It pays to buy the best.

HIS HEAD CRUSHED.

An unknown man was killed, instantly, in a shocking manner on the G. T. R. west-bound express, Sunday morning. When the express had pulled out of Kingston station, some sixty feet westward, blood was noticed on the tracks, and later, on examination about three miles east of Napanee, where the train stopped on account of trouble with the air brake, led to a ghastly sight, a human being with head crushed, in a small space between the express and the blind baggage cars. The man had been instantly killed, his skull smashed flat. He had evidently been stealing a ride, and had chosen a place sufficiently small to admit of a person, but dangerous in that once stationed there, one was held in a vice-like grip until the train came to a full stop. The train had come to such a sudden stop that the crowding cars had crushed him between two vestibules. It was a shocking fearful find.

On the arrival of the train at Napanee the Chief of Police was notified and three other young men who were stealing a ride, were arrested and held as witnesses. From the appearance of the young man he had only been dead a short time as his body was still warm. But life was extinct. The other three say they do not know his name but from a paper found upon his person it is supposed his name is Fred. King. The paper shows that the person hired at Glasgow, on the 19th April, on the steamer Castalia, for five shillings, presumably to work his way over for that amount. He was dressed in a working suit and nothing else of value was found upon his person.

An inquest was held at Carscallen's undertaking rooms and the jurors after viewing the body adjourned until Wednesday evening until the G. T. R. train crew could be summoned.

The following is a description of the young man: Height, five feet eight inches; weight, probably 165 pounds dark brown hair and eyebrows; rather poorly dressed, navy blue coat, tweed pants, black cotton shirt with cord running through it, high laced, heavy boots, black cashmere socks and red knitted cuff on left arm. The names of the three who were with the young man are: William Cordner, Patrick Flood, Montreal, and Richard Chadwick, Omaha, Neb.

On Wednesday evening the adjourned inquest was held in the Council Chamber, a number of witnesses were examined.

Richard Chadwick, deposed that he found the dead man lying between the baggage cars, while trying to find a warm place to ride, and described the position of the body when found.

WHEN you should buy your New Spring Hat is something for you to decide.
WHERE you should buy it is also in your own hands.

But we owe it to our great gathering from the style starting points to tell you something about it—to suggest that before you buy you see what's here.

THE COXALL CO.

Chamber, a number of witnesses were examined.

Richard Chadwick, deposed that he found the dead man lying between the baggage cars, while trying to find a warm place to ride, and described the position of the body when found.

Wm. Cordner testified to having seen the man get off the train at Brockville and get on again, and corroborated the evidence of Chadwick.

Michael Flood testified to having been the first to find the body of the dead man between the cars.

Jas. Garrett, conductor of the train gave it as his opinion that the man had his head crushed between the vestibules while the engineer was placing his engine at Brockville coalchutes.

John Stornberg and Michael Cusack, brakemen, corroborated Conductor Garrett's testimony.

Thos. Sweetman, car inspector, Kingston, gave evidence that he did not see any one on the train at Kingston.

Chief Graham gave evidence of having been summoned to the station on Sunday morning. He also produced the articles found on the dead man, consisting of two rolls French twist, tobacco, part of a package of tobacco, a pipe and a paper, an account of wages of Fred King, spool of thread, a brass watch chain.

A letter was received from Mrs. Thompson, of Galt, asking for a description of the dead man, as a man by the name of Fred King had come out from the old country with her family, and she was interested in him.

The Coroner's Jury brought in a verdict that the man found on the Grand Trunk train came to his death from being crushed between the vestibule arches of train No. 5 on Sunday morning and that the three young men were in no way responsible for his death.

After you have tried hot springs, sulphur baths, patent medicines, electricity etc, bring your case to the

Supreme Court of rheumatism—Tuck's rheumatic Bone Oil. This is a powerful, penetrating oil, which, as its name implies, acts directly on the bone or joint—the lodging seat of rheumatism. If you are troubled with rheumatism, sciatica, lame back or kindred troubles and have not been able to get anything to help you don't get discouraged and make up your mind that nothing can cure you until you have tried Tuck's Rheumatic Bone Oil. It has cured hundreds of cases just as bad as yours. H. S. Brown of Merrickville, Ontario writes as follows:—

Dear Sirs—I am free from rheumatism to-day because I used Tuck's Bone Oil. I had rheumatism in my hands and feet and thought at one time that my life was going to be ruined by it I consulted a doctor and tried various remedies, but while some of them that I took internally made me feel better for a time none of them took the pain away. After I had suffered for six months or more, doctoring all the time, I was advised one day to try Tuck's Rheumatic Bone Oil. I did and I never can be thankful enough to the man who told me to get it. I had not used a bottle until I was better and before the second one was done my joints were loosened up, the pain was gone and I was well. Tuck's Bone Oil did it. That was six years ago and I have not been bothered since.

H. S. Brown, Merrickville

For all inflammation arising not only from rheumatism but from colds, croup, bronchitis, quinsy &c. Tuck's Bone Oil is a sure and speedy cure. Sold by all medicine dealers at 50c. a bottle or sent by mail prepaid by The Tuck Bone Oil Co. Limited Smith's Falls, Ontario.

SELF AND SERVICE

Each Man Must Carry His Cross on His Heart and Brain.

If any man will come after me let him deny himself and take up his cross daily and follow me.—Matt., xvi., 24.

There is such a thing as supremely selfish self-denial. A man retires into the monk's piteous seclusion; he isolates himself from interest in the world battles; he shuts himself from sympathy with the struggles of business, civil, and even social life. To him these things are carnal. He is engrossed with the complication of interpretations of languages long dead, or with visions of an unknown heaven, and this, he thinks, is living the life of self-denial.

The denial of self is not the death of self; it is the leading of the best self into larger life. It is not the dwarfing of the life; it is its development into usefulness. It is not the emasculation of character; it is the submission and discipline of the life to new and nobler motives.

He best denies himself who best develops himself with the purpose of serving his fellows. What Jesus meant was that if any man would be one of his he must cease to make his own selfish pleasures, ambitions, and passions the end of his living; he must make the most of himself that he might have the more to give to the service of mankind; he must make the one motive and end of his life the benefit and help of every other man.

That kind of a life means a change of centre. Instead of regarding the universe as revolving about itself it sees that self as but part of the great machinery of life, planned and operating

FOR THE GOOD OF ALL.

A man begins to deny himself as soon as he begins to love another. Even a yellow dog may act to deflect the heart from its old self-centre. The love of kin and family, of friends, and associates all serve to strengthen the habit of self-denial.

The fewer people a man takes into his plan of life the more likely is he to be selfish. But some lives are but the more selfish because they take in all mankind and look on them as designed to contribute to their single enriching. That kind of a life commits suicide; ever grasping and never giving it dies of

plethora. It had never learned that strange secret of the best self-development, sacrificing service.

We need to guard ourselves against the delusion that the denial of oneself means the impoverishment of the life. There can be no true giving of the life in service unless there is a wise enriching of the self, a thorough fitting for the service. The more of a man you are, the brighter your intellect, the broader your sympathies, the better your service to the world may be. The sloth that sinks the soul in indifference to its own development is the most sinful of all forms of selfishness.

This way of denial is more, the Master tells his disciples, than an emptying of the life. If some of the cares of self are cast out the burdens of others more than take their place. It is a full life, overflowing with the interests, the fears, loves, hopes, and longings of other lives. It bears the cross, not of an ornamental, vanity serving glory, but the cross of

A WORLD'S SIN AND SORROW.

Each man must carry his cross not on his breast, but on his heart and brain. It is what he can do, what he can plan, suggest, undertake toward saving this world. The cross of discipleship will be to some statesmanship, to others science, to others the daily service of a home or the work in the shop; it is the kindly word, the cheering look, the lift by the way; it is whatever is done in unselfish desire to make life better, to bring men nearer to one another and to the Father of all.

You have only to look at the great Teacher to know what self-denial and cross bearing really mean, and you have only to follow him to fully carry out their principles. To him they meant the life of doing good, of seeking the sorrowing, befriending the forsaken, helping the helpless. They who follow Him lead the world; they who seek to minister instead of being ministered to are the world's masters. The value of every life must be measured at last not by what it has gathered to itself but by what it has given for the enriching and help of the whole life of the world.

HENRY F. COPE.

THE S. S. LESSON

INTERNATIONAL LESSON,

MAY 13.

LESSON WORD STUDIES.

Note.—The text of the Revised Version is used as a basis for these Word Studies.

Stilling the Tempest. The group of parables spoken by Jesus on that memorable day at the seaside near Capernaum is reported in part only by each of the synoptic evangelists. Matthew reports seven of the group, omitting the parable of the growth of the seed recorded only in Mark. Mark records, in addition to the one just mentioned, the parable of the sower and the parable of the mustard seed, both of which, in addition to the parable of the leaven, are recorded also in Luke. Mark, in verse 33 of the fourth chapter, at the conclusion of his record of this day's teaching by the seaside, adds "And with many such parables spoke he the word unto them." We are left in doubt, however, as to whether Mark refers in these words simply to those parables recorded

Perhaps the expression on the face of Jesus and his whole manner indicated to the demon what he was likely to say next.

9. What is thy name—Addressed to the unfortunate man to bring him to composure.

Legion—Explained in the next clause "For we are many."

10. Out of the country—In Luke's narrative we read "into the abyss."

13. Gave them leave—We note that Jesus did not command the demons to enter the swine. Matthew is more explicit in quoting the word of Jesus, which he records as having been simply "Depart." We note also that there is here no anticipation of the impending catastrophe.

About two thousand—The estimate of the frightened swineherds.

14. In the city—In Gersa about a mile to the northeast.

In the country—To the farmers in the vicinity.

15. Come—Tenses in Greek express rather the manner than the time of action, while in English the time of action receives the greater emphasis in the verb form; hence the difficulty in translating these tense forms consistently throughout.

In his right mind—In possession once more of his mental powers, which so

HUDSON BAY COMPANY

ITS STORES ARE FOUND IN THE HEART OF THE WILDS.

And Its Territory Is More Than Half as Big as the Continent of Europe.

I had a long chat the other night with a man who handles the biggest combination of capital in British America, writes Frank G. Carpenter from Winnipeg to the Chicago Record-Herald. I refer to the Hudson Bay Company, whose sphere of operations reaches from the icy shores of Labrador to the Klondike and from the United States to the Arctic Ocean. Its territory is two-thirds as large as our own country and more than half as big as the continent of Europe. This company has been doing business there for more than two centuries. It has largely controlled the country, not only in a mercantile way, but politically, and its agents have had power of life and death.

To-day it has stations scattered all over British North America, and its traders are moving on its every stream, lake and river gathering furs for shipment to Europe. It is doing one of the biggest mercantile businesses of the continent. Its department stores are scattered throughout Canada, and are found in the heart of the wilds. This company has its own factories in England and the Dominion. It makes a large part of the goods it sells. It owns flouring mills and steamboats, and almost all the Canadian Indians are tributary to it. No one knows how much the institution has paid out in dividends. It has been making fortunes for its stockholders right along since it was incorporated by Charles II. in 1670, and its stock now is away above par.

The American manager of the institution is C. C. Chipman. He is a Nova Scotian who has held diplomatic positions in Ottawa and London, and who for the past fifteen years has been commissioner of the Hudson Bay Company. I met him first in his office back of the great Hudson Bay stores in Winnipeg, and afterward spent an evening with him at his house here. Mr. Chipman is quiet and unassuming. Like all Hudson Bay men he is rather reticent in speaking about the company, and it was only repeated questions that brought out the information that follows. He is a man of great organizing ability and is notably successful in the handling of men.

IN BUSINESS 230 YEARS.

"The Hudson Bay Company has had an active business existence of more than 230 years," he said. "Its history is well known. It started in the time of Charles II. and has practically managed the greater part of British North America from then until the taking over of the government of the northern wilds of the Canadian Dominion. It would take a book to tell its history, and, indeed, several books have been published concerning it."

"What is the capital of the company, Mr. Chipman, and who are its stockholders?"

"The capital stock is £1,000,000, or \$5,000,000. The corporation is an English one, and the most of the shares are held in England, and especially in London. The stock is not a speculative one and the company does not encourage dealing in it. We would rather not have it rise and fall. Indeed, the shares are not listed anywhere except on the London Stock Exchange. Most of the holders do not care to sell, and much of the stock has not changed hands for generations. It is what might be called a strong-box security—something that is sure to pay its dividends year after year."

"What is the present field of the Hudson Bay Company? I suppose it has been greatly restricted within recent years."

"I think not," replied the commissioner. "The Indians look upon the company as a business partner. Good feeling has always obtained and this is the case to-day. Indeed, our relations with the Indians have been rather patriarchal. They regard the company as their father and their adviser. We have never had an Indian war, and the greater part of the skins bought by the company throughout the generations has been caught by the Indians and sold to it."

"But do the Indians know the value of their furs?"

"Most assuredly. They are shrewd traders and are determined to get all that each skin is worth. We pay more or less for skins according to the place sold, the amount being regulated somewhat by the cost of transportation. Goods, for instance, cost more in Winnipeg than in Montreal, and they must necessarily cost a great deal more at our far-away posts where the difficulty of getting them there is so great."

"Where do you hire your traders, Mr. Chipman?"

"The most of them are of Scotch origin. We bring them over as boys of 17, and, as a rule, they expect to spend their lives with the company. They learn the Indian language and are gradually advanced from post to post. We have civil service rules, and men are seldom discharged except for cause. Some are paid good salaries, and in due time the employees are retired with pensions."

"What are the chief furs now shipped from this continent?"

"The staples are the beaver, otter, mink, fox and muskrat. There are, of course, many other kinds, but these are the chief."

"Where do the world's furs come from?"

"They are mostly from the north temperate zone," replied the Hudson Bay commissioner. "The best are from cold countries. Siberia and northern Russia supply some, but by far the greater part of the furs used by man are from North America and they are handled by us."

"The Hudson Bay Company is the largest fur company in the world?"

"I think so. It markets more skins than any other."

LONDON GREATEST FUR MARKET.

"Where do the furs go after they leave this continent?"

"To London. That is the chief fur market of the world. Skins in the raw state are sent there from Russia, Siberia and North America. Every fur company sorts and grades its own skins before selling them. It matches the furs and keeps the different kinds as far as possible together. They are put up in bunches or strings and are catalogued before sold. At certain times of the year there are auction sales of furs in London. The fur buyers from everywhere come there, and all the furs are put up and sold to those who bid the highest."

"Who prepares the furs for use?"

"That is done by the dealer who buys them. The wholesalers do not tan or cure. They merely sell the raw skins."

"What is the most valuable fur on the market?"

"The silver fox," replied the commissioner. "I have seen skins of that animal about three or four feet long and not more than eighteen inches wide which were worth \$1,500 each. The silver fox is a freak in nature and it is only now and then that one is born. They are greatly prized by the Russians."

"Where do the sables come from?"

"Mostly from Russia. We have very few on this continent."

"Are there many other companies engaged in the fur business besides yours?"

"Yes, there are traders here and there who are buying furs, but there is no organized competition to speak of. The field is open to all, but the Hudson Bay Company has been so long on the ground and its operations are on such a large scale that it is not easy to compete with it. Indeed, it would take a long time and a great deal of money to build up a rival institution that

conclusion of his record of this day's teaching by the seaside, adds "And with many such parables spoke he the word unto them." We are left in doubt, however, as to whether Mark refers in these words simply to those parables recorded in Matthew but not recorded by himself, or whether we are to assume that Jesus at that time spoke still other parables not recorded by any evangelist. When at last the busy day was ended Jesus suggested to his disciples that they cross over to the other side of the lake. This they did without even waiting to the city or to pause for rest and refreshment. In their passage over they encounter a great storm, so great that the sinking of their little craft seemed imminent. But, worn out by his day's labor, Jesus slept calmly in the midst of the storm, until finally the anxious disciples awakened him and pleaded with him to rescue them from the peril in which they stood. A single word of calm command to wind and sea and all was still. Mark records the gentle rebuke of Jesus to his disciples for their fearfulness and closes his account of the wonderful event with the words "And they feared exceedingly, and said one to another, Who then is this, that even the wind and the sea obey him?" At this point in Mark's narrative our present lesson begins.

Verse 1. To the other side—To the eastern shore of the lake about opposite Capernaum.

Gerasenes—Ancient manuscripts differ in the spelling of the proper name here used, though the preferred reading in this narrative of Mark, and also in that of Luke, seems to be the one adopted by the Revised Version. Most of the ancient manuscripts of Matthew's gospel, however, read Gadarenes, as do also some manuscripts of Mark and Luke. (Comp. Authorized Version and Revised Version of Matt. 8, 28; Mark 5, 1; and Luke 8, 26).

Gersa, or Kersa, from which comes the proper noun Gerasenes, was a city on the east side and almost half way down from the northern extremity of the sea of Galilee, a little more than a mile from the shore. The shore at this point is very narrow, a steep slope leading almost abruptly from the high tableland to the water's edge. A small heap of ruins at the foot of the slope bears the same name as the ruins of the city on the tableland above. Gadara, on the other hand, was a city six miles southeast of the sea of Galilee, and south of the Yarmuk, or Hieromax gorge, in ancient times a city of great importance and one of the principal cities of the Decapolis (Comp. Ver. 20). Since Gadara was doubtless much better known than Gersa it is quite possible that the name Gadarenes was later substituted for the very similar though less familiar name Gerasenes, the change first being made by some copyist outside of Palestine who knew of Gadara but not of Gersa. When we remember how often the manuscripts of our gospels were copied and recopied during the many centuries preceding the invention of printing the wonder is that more copyists' errors of this kind than actually do occur are not found in the gospels.

2. Straightway—A common word in Mark's rapid sketch of events.

Tombs—Caves in the limestone cliffs, abounding especially in the vicinity of Gersa.

A man—Matthew mentions two but Luke also only one. Probably there were two, of whom one was the fiercer and acted as spokesman.

With an unclean spirit—For a note on demoniac possession, compare Word Studies for February 18.

6. Worshipped him—Simply paid him reverence. The Greek word is not limited in its application to reverence paid to the Divine Being.

7. What have I to do with thee?—It is the demon that is speaking. Note the strong contrast brought out by the use of the pronouns I and thee.

Thou Son of the Most High God—The demon is represented as recognizing the divinity of Christ.

8. For he said—The word was not yet spoken, and a better rendering possibly would be "He was about to say."

action receives the greater emphasis in the verb form; hence the difficulty in translating these tense forms consistently throughout.

In his right mind—In possession once more of his mental powers, which so long had been under the control of demons.

They were afraid—As afraid apparently of the same man as previously of the madman, or probably afraid rather of the power that had overcome the tormenting demons.

16. They that saw it—Eye witnesses of the miracle.

How it befell him . . . and concerning the swine—They simply related both incidents as they occurred, leaving the hearers to infer the reason of the catastrophe. The exit and ingress of the demons was of course invisible.

18. Besought him that he might be with him—Possibly both fear and devotion entered into the motive which prompted him to make the request.

20. In Decapolis—A group of ten cities east and south of the sea of Galilee.

ROUTING THE TIGER.

An English Surveyor's Map Saved His Life.

How an English surveyor routed a Malayam tiger, with no other weapon than a rolled-up map, is told by the Straits Times of Singapore: "While a well-known local surveyor, who had been kept out late at work on Saturday night, was driving in a rikisha along Tampenis road, about 7.30 p.m., his rikisha coolie suddenly dropped the shafts and ran for his life into the edge of the jungle. On peering into the darkness—the vehicle was not carrying a light—the gentleman saw a large creature standing in the middle of the road. He got out of the rikisha and went towards the beast, thinking it some burge dog that had frightened the coolie. When within six or seven yards he perceived that the brute was a large tiger.

"He had no weapon except a large district survey map rolled up. He saw the futility of attempting to disable the tiger with the rolled-up map, but the thought struck him that he might manage to frighten it by means of his roll. Suddenly he unrolled it with a quick flip, spreading it to its full area of four or five square. With a single bound the tiger cleared off into the jungle.

"The next thing was to find the coolie, who eventually was discovered in a state of collapse in the ditch. He was unable to pull his fare back and it was not until three or four miles had been traversed with both men on foot that he recovered sufficiently to pull the surveyor home."

SATISFIED HIM.

Strangers frequently find difficulty in proving their identity to the officials at post offices. Applicants for letters often go empty away for want of some means of proving that they are what they pretend to be.

The difficulty was, however, surmounted one day recently by a gentleman in the circus business who called at a certain post office for letters addressed "Mr. Space, Acrobat."

The clerk was not satisfied with the applicant's proofs of identity, and refused to hand over the letters, saying: "How do I know that you are the man?"

After a moment's reflection, the applicant said:

"All right, I will give you proofs," and slipping off his coat, he proceeded to make the dull little post office lively with somersaults, contortions, and circus "business" generally.

The clerk, frightened out of his life, and fearing the wreckage of the premises, handed over the letters, and said he was satisfied.

THE WESTERN WAY.

"I was in a Western town once, where the mayor was discovered to be appropriating the public money."

"Did they suspend him from office?"

"No; from a tree."

sure to pay its dividends year after year."

"What is the present field of the Hudson Bay Company? I suppose it has been greatly restricted within recent years?"

"No, that is not so," replied the Hudson Bay commissioner; "our field is practically the same as it has always been. We have about 250 trading posts scattered here and there throughout British North America. They extend from the Atlantic to the Pacific and from the United States boundary to the mouth of the Mackenzie River."

"But how can the company control such a vast territory, Mr. Chipman?" I asked.

"We have the country as carefully organized as any wholesale dealer organizes the territory of his trade. The wilds of British America are divided up into districts and subdistricts. Each district has its chief trader, with subordinate traders under him. The under traders report to their chiefs and the chiefs report to me and I report to the directors at London. Everything is controlled from London and the directors there know just as well as I do what is going on all over the country. We give detailed reports of the conditions at every post. Our system is thorough, and at the same time so simple that we can tell just what the trade is, what goods are needed and what skins we may expect. We can estimate the demands and supplies from year to year."

POSTS WIDELY SCATTERED.

"Nevertheless, the posts must be widely scattered?"

"They are," replied the commissioner. "Some are hundreds of miles apart and some are thousands of miles from our headquarters here at Winnipeg. We have inspectors who visit the posts every year or so, and we know exactly what is going on in them."

"But has not your business changed greatly within recent years?"

"In some respects, yes," replied the commissioner. "Although the most of it is managed just as it was generations ago. The Hudson Bay Company has always been known as 'ancient and honorable.' It now adds the word 'progressive' to its titles. Its great changes came within the settlement of the Northwest. When the railroads were first built across British North America the laborers found that the only places they could get tobacco, clothing and other supplies were at our posts. This started their trade with us and this increased as the settlers came in. We found it necessary to establish stores at various places to supply the new demand, and the result is we have a series of mercantile establishments scattered over the Canadian Dominion. Most of these stores deal in all sorts of goods. They are somewhat like the department stores of your large cities, the goods sold having been adapted to the needs of each community. We are at the same time interested in building up the country about and the towns in which our stores are located. Indeed, I think the Hudson Bay Company is one of the most progressive elements in the new Canada."

"How about your trade? You have for years been supplying the greater part of the furs of the world."

"Our chief business is still in furs," said Commissioner Chipman. "That is carried on at various posts throughout these north lands, and it is as important to-day as it has ever been. When the Hudson Bay Company first entered America it was to buy furs, and it then established its trading relations with the Indians. The savages knew nothing of money, and for a long time all trading was in barter. The beaver was the usual standard of value, and everything was reckoned as worth so many or so few beaver skins. Upon our flag you will see the words 'Pro pelle cutem.' This means skin for skin, and it means that we are always willing to give a fair value for what we buy. In the words of President Roosevelt it might be called the motto of the 'square deal.' The trading is still in barter."

TRADING WITH THE INDIANS.

"Then the company has taken advantage of the Indians?"

field is open to all, but the Hudson Bay Company has been so long on the ground and its operations are on such a large scale that it is not easy to compete with it. Indeed, it would take a long time and a great deal of money to build up a rival institution that could cover the field as we do."

"It must be difficult to get the furs from the wilds to the ports?"

"It is," said Mr. Chipman. "We have every kind of transportation for that purpose. Some of our furs are carried on the backs of men from post to post, others are dragged across country on snow sledges hauled by dogs, some are paddled in canoes by Indians down stream to the traders, and they are also carried in sailboats and steamboats. The Hudson Bay Company has increased its trading facilities by using modern inventions. We have steamers on all the large rivers and we send ships once a year up the Mackenzie to the Arctic Ocean, taking a cargo of goods from post to post and bringing back furs. We have boats upon Hudson's Bay, and our vessels come from England to those posts once a year to bring in supplies and take out the furs. We have now two ships of 800 or 900 tons each for that purpose. We also have telephones and telegraphs in places away up in the far North."

FLOUR MILLS IN THE WILDS.

"How about your flour mills?"

"We have them at several points where no one thought until recently that wheat could be grown. We have a mill several hundred miles north of Edmonton and six or seven hundred miles north of the United States boundary which is grinding flour for our own trade. The wheat is raised near the mills, and we can, of course, make flour much cheaper than we can import it. This enables us to give better terms to the Indians and it also keeps out competition."

"What has the Hudson Bay Company done for Canada?"

"A great deal. Lord Strathcona says that it saved the eastern part of the Canadian Dominion to England, and that had it not been for our company the United States would probably have had possession of this great northwest. You see, our posts were established there long before your people had any hope of a valuable territory in that direction, so that after you had made your Louisiana purchase and had come northward you found us on the ground. Indeed, the whole of western Canada was long controlled and governed by the Hudson Bay Company."

"The company has now given up its political rights, has it not?"

"Yes. The Canadian Government bought out our control of the northern part of British America about a generation ago. We are now a civil institution and not a political one."

"What did you receive from that trade?"

"The price paid was £300,000, or \$1,500,000 cash, and one-twentieth of all the arable lands in what is now called the great farming region of the Canadian Northwest. The land grant comprises about 150,000 acres. We have, in short, about one-twentieth of the wheat belt, or two sections in every township scattered here and there throughout it. We did not take the lands in a block, but they are selected in every part of the new Canada."

"Will your company sell the lands as a whole?"

"No; we want to see the country settled. Our idea is to sell in small tracts and make our money out of the increase in the value of the land remaining."

"Are you selling your lands now?"

"Yes, but we are not pushing them. The company does not want to speculate, and we are trying to handle this matter so as to get all that is possible out of it. We sell at the top prices and shall continue to advance our prices as the market advances."

"This," said the school friend who had not seen her for a year—"this is the girl who vowed to me that she never would belong to any man." "I don't," said she who had been married some few months. "He belongs to me."

HEALTH

PNEUMONIA.

Though modern medical science has decided that pneumonia is an infectious disease that fact need not terrify if one take a little trouble to learn something about the disease. It is produced by a special microbe the existence of which is so common in the mouth of even healthy individuals that it is considered almost as a normal inhabitant of the upper part of the digestive tract. One reason why the saliva of a human being is likely to prove fatal to animals if injected subcutaneously is because the special property of the germ is to produce pus whenever it gains entrance directly under the tissues. It does not produce a purulent inflammation in pneumonia, because it lies on the mucous membrane of the lungs, but does not gain an entrance into the tissues. Sometimes it finds its way into the blood but does not produce serious results unless the patient is much run down.

From these facts it can be seen that the problem of the method by which pneumonia is contracted is exceedingly difficult. The presence of the germ is not sufficient alone to produce the disease, but there must be a certain predisposition on the part of the patient, followed by the deposition of this germ on a mucous membrane.

Though the method of the distribution of the disease is not known definitely it is acquired by mingling with crowds at a time when one is extremely tired, or when, for some reason or other, the interval since taking food has been longer than usual.

Dr. Anders, who is an authority on climatology, says in an article on lobar pneumonia:—"The coincidence of existing low temperatures, high barometric pressure, the direction and velocity of the wind and maximum mortality from pneumonia is so uniformly constant as to suggest a close and direct relation between their combined influence and the progress of mortality from pneumonia. But," he adds, "the major influence exerted by the seasons, however, is probably not direct, that is, by a lowering of the bodily temperature resistance due to the low temperature, high barometric pressure, direction and velocity of the wind, etc., but indirect, namely, by bringing about that effective element in the causation, concentration and increased virulence of the specific poison in consequence of closed doors and windows and lack of free ventilation."

From these facts we see that we may procure immunity from pneumonia by healthy living, and that sanitary conditions are needed rather than protective serums. The Japanese give us a lesson in this, for they are essentially a people who live in fresh air and sunshine. Personal cleanliness is another factor in the prevention of tuberculosis and pneumonia, which are house diseases.

GENTIAN AS A CURE FOR MALARIA.

The root of gentian, often used as a tonic, is considered in many malarial countries a remedy against intermittent fever. Especially is this the case in Corsica in that section of the island near the town of Aleria, which is infested with malaria. The inhabitants recently protested violently against the introduction of quinine on the part of the medical authorities, declaring that they would not abandon the remedy which had been used among the islanders for centuries, namely, the gentian root either powdered or simply masticated. Tancret declared that he has extracted from this root a hitherto unknown substance, which belongs to the chemical classification of glucoses. This he calls genziomarina, and experiments in the laboratory prove that it possesses the same deleterious action upon the malaria bacillus as does quinine. Here, then, we have another example of how popular instinct often anticipates with accurate

WHERE THE RACES MEET

SAN FRANCISCO A GATEWAY TO AN ORIGINAL SCHEME AND HOW IT IS WORKED.

Word Picture of the Fascinating and Picturesque Old Town on the Pacific Coast.

A great charm lurked about San Francisco that was.

One usually entered the city by way of San Francisco Bay. Across its yellow flood, covered with the fleets from the strange seas of the Pacific, San Francisco presented itself in a hill panorama. Probably no other city in the world could be so viewed and inspected at first sight. It rose above the passenger, as he reached dockage, in a succession of hill terraces.

At one side was Telegraph Hill, the end of the peninsula, a height so abrupt that it had a 200-foot sheer cliff on its seaward frontage. Further along lay Nob Hill, crowned with the Mark Hopkins mansion, which had the effect of a citadel, and in later years by the great, white Fairmount. Further along was Russian Hill, the highest point. Below was the business district, whose low site caused all the trouble.

DIDN'T LOOK MUCH.

Except for the modern buildings, the fruit of the last ten years, the town presented at first sight a disreputable appearance. Most of the buildings were low and of wood. In the middle period of the seventies, when a great part of San Francisco was building, there was some atrocious architecture perpetrated. In that time, too, every one put bow windows on his house, to catch all of the morning sunlight that was coming through the fog, and these little houses, with bow windows and fancy work all down their fronts, were characteristic of the middle-class residence districts.

Then the Italians, who tumbled over Telegraph Hill, had built as they listed, and with little regard for streets, and their houses hung crazily on a side hill which was little less than a precipice. For the most part, the Chinese, although they occupied an abandoned business district, had remade the houses Chinese fashion, and the Mexicans and Spaniards had added to their houses those little balconies without which life is not life to a Spaniard.

STRAIGHT UP A HILL.

Yet the most characteristic thing after all was the coloring. For the sea fog had a trick of painting every exposed object a sea gray which had a tinge of dull green in it. This, under the leaden sky of a San Francisco morning, had a depressing effect on first sight and afterwards became a delight to the eye. For the color was soft, gentle, and infinitely attractive in mass.

The hills are steep beyond conception. Where Vallejo street ran up Russian Hill it progressed for four blocks by regular steps, like a flight of stairs. It is unnecessary to say that no teams ever came up this street or any other like it, and grass grew long among the paving stones until the Italians who live thereabouts took advantage of this to pasture a cow or two. At the end of the four blocks, the pavers had given it up, and the last stage to the summit was a winding path. On the very top, a colony of artists lived in little villas of houses whose windows got the whole panorama of the bay. Luckily for these people a cable car climbed the hill on the other side, so that it was not much of a climb to home.

COLLECTION OF PICTURES.

With these hills, with the strangeness of the architecture and the green-grey tinge over everything, the city fell away into vistas and pictures, a setting for the romance which hung over everything, which has always hung over life in San Francisco since the padres came and gathered the Indians about Mission

HOW TO LIVE ON NOTHING

AN ORIGINAL SCHEME AND HOW IT IS WORKED.

Improvement on Present Attempt by Four Men to Live on Eight Cents a Day.

As a test case, four men are at present endeavoring to live satisfactorily on four pence a day in London, England. They are succeeding tolerably well, too; but a genius has loomed up, and gives to his fellowmen who find the expense of living too much for their pocketbooks, a novel plan, whereby they may live on nothing.

He says:—"Moreover, in our scheme of dietary, dates do not appear, desiccated cocoanut is unknown, and bread crusts are irrevocably tabooed.

"In short, our scheme, if properly carried out, combines the maximum of luxurious feeding with the minimum of financial expenditure. The great charm about our system is its childish simplicity."

The following extracts from the diary of a representative who tried the first week's experiment show the working of the scheme:—

WORKED JONES.

Monday.—Called on Jones at breakfast time and said there was a fire at my flat. Jones said, "Had breakfast?" I said, "No." Result: Breakfast with Jones 0
Went into the city, called on Brown at his office, said that I had some inside information as to "a good thing" in South Africans. Suggested talking it over after lunch. Brown said, "Right!" Lunched with Brown 0
Looked up Robinson at his dinner hour (previously ascertained). Said, "How about a box at the Gaiety?" Robinson said, "Splendid. Why not stay to dinner?" Did so. Explained afterwards that box was for another night. Result 0

REALLY VERY SIMPLE.

Tuesday.—Dropped in at Walker's club having previously watched Walker enter. Said that I was interested in a new motor company. Would Walker like to be on the Board? Unlimited dividends, no liability. Walker said, "Would think it over." "Why not think it over at lunch?" "Good idea." Lunched with Walker. Left him thinking it over 0
Met Parker as he was leaving the city. Told him that I had some special information "direct from the stables." Would he keep it to himself? He would. Suggested that as we were together we had better have dinner. Dined with Parker 0

YOUNG FOLKS

A TALE OF A TEA TABLE.

Betsy Bobbity baked a bun—
A beautiful, big, bewitching one,
So light that it fairly shone with pride,
With currants a-plenty safe inside.

Patsy Popitty peeled a peach,
A pear and a plum, and put them each
In a tiny pie with a frosted top,
As fine as those in the baker's shop.

Three little maids to the pantry flew
To look for the dishes pink and blue,
And a terrible tragedy happened next,
And my! but the three little maids were vexed!

Young Puppety Pup came racing by,
And the little red table caught his eye;

Fashion Hints.

SUMMER FASHIONS.

It would seem as though the season's styles must be quite conclusively settled before May-day, and so they are, in a general way. All white gowns are shown, ranging from the mull princess lingerie gown with hand-embroidered panels and pastel-colored ribbon girdle sashes for debutantes, to the more elaborate white gown of lace for the matron, built over a chiffon or thin satin foundation, and accompanied by the little lace coat.

A new model for such a lace gown shows a princess design with the heavy French chochoet lace flounce separated and applied by hand to a round thread lace-net foundation. The coat accompanying is designed along the lines of a man's cutaway, but is really an adaptation of the later Directoire mode. It is made to shape in one cleverly curved piece, with medallions of sheer hand-embroidered linen adorning the front curves, and also placed upon the top of each short sleeve. The coat edges and sleeves, trimmed with curved motifs of Richelieu plaited Valenciennes lace, illustrate the prevailing taste for lace combinations and show the value of a simple lace like Valenciennes to bring out the fuller beauty of the heavier lace which it frames.

But lace gowns do not occupy all of fashion's favor, prominent as they are this season. Chiffon cloth, a more simple and yet most effective material, is very much in demand. It is now being shown in printed patterns, only a gown length of each, with wide, self-colored flower bands; these are already copied in mousselines, organdies and mulls. Built over linings of contrasting color, they produce a gown of strikingly harmonious and artistic beauty.

Nets in any of the plain pastel shades remain favorites and are still very good style. This is not to be wondered at, for there are few materials as sheer and fluffy that retain their freshness as long and as well.

An old friend in a new and vastly improved guise is a kind of maline that has taken to itself the virtue of being moisture-proof; that is, it stands service without crushing and matting with the first change of the barometer. Since there is no material so airy as maline, it is natural that this new, practical form of it should lead to its very general use in party frocks for debutantes and bridesmaid and flower girl costumes. It is most successfully combined with heavier nets, being applied in the form of full ruches, banding skirt and bodice at intervals and a wide ruche-edged sash attached to a folded girdle. Double ruffles stirred through the centre formed an effective trimming to a bridesmaid frock of organdie printed in huge tea roses, the new material being of the deepest rose shade.

Veilings showing revivals of the old, round, thread-woven meshes, somewhat resembling grenadines, are quite new and wonderfully pretty. They will take any amount of fluffy trimming, as a new Franciscan model of coral veiling evidences. It is made over black and white striped lousine, with the veiling appliqued with panels of Richelieu plaited point d'esprit, finished with deep coral-colored velvet ribbon. The bodice, bouffant with more of the point d'esprit plaitings, is prettily strapped with velvet ribbons to suggest the suspender motif already becoming a favorite finish for high girdled gowns.

For semi-dress the latest Parisian idea shows a white Irish lace blouse, the lower edge of which is applied flatly upon the outside of the high, folded silk girdle which accompanies the silk, sun-

prove that it possesses the same deleterious action upon the malaria bacillus as does quinine. Here, then, we have another example of how popular instinct often anticipates with certain sureness the discoveries of science.

AIR AND SKIN.

If people would only realize that air is the chief food of the skin, they would understand how very important a constant supply of it is to health, and, therefore, to the looks. Small wonder that when we go a railway journey we are semi-asphyxiated owing to the manner in which our fellow-travellers insist on shutting both windows. If people would only accustom their lungs to receive constant instillments of fresh air, there would not be a half nor a tenth part of the susceptibility to chill and catarrh that now exists.

APPENDICITIS.

Now-a-days there is a tendency to operate on every case of appendicitis. All we can say is that is as great a mistake to rush hastily for a surgeon in such cases as it is to put off sending for the physician when the patient is ill. Hundreds of cases recover with operation, and some few only get better after an operation has been performed. In the simpler cases medical treatment alone is required, but this must be carried out with extreme care and watchfulness.

A GHOST'S JOKE.

Weird Occurrence Is Reported From Natal, South Africa.

A weird occurrence which happened recently at Pietermaritzburg, Natal, is related by F. W. FitzSimmons, of the Natal Government Museum.

"One evening a few months ago," he says, "the door of one of the rooms in my house was closed and locked in a most mysterious manner. This door had never before been locked, as there never was any occasion to do so, and the key was always in the outside of the door lock.

"On examining it I found the key had been removed and inserted into the other side of the lock, the door was locked and the key still remained in the lock. Suspecting a practical joke, I went round to the window, but found it shut and barred.

"I called witnesses to examine and see for themselves, but they could offer no explanation other than that if it was done by human agency the person who did it must of necessity be inside the room.

"We agreed to break the window, which I did, and inserting my arm, unfastened the catch and entered, fully expecting to find someone inside, but no one was there, and no one could possibly have slipped out unawares, for there were guards at the window.

"The following evening at a seance held in the same house, we were informed that a spirit was present, who desired to write a message. I signified my willingness, and the medium's hand automatically wrote with lightning rapidity the following.

"I see you are sorely puzzled to account for what occurred last evening. I hope you will forgive me, for it was I who did it.

"Don't you remember how I used to declare before I passed over that I would return, and if at all possible, I would give you some convincing test? You know how keen I was on psychical phenomena and tests when I was with you, etc. (Signed) Frederick Brown."

"Mr. Brown," adds Mr. FitzSimmons, "was an intimate friend of mine, who for a couple of years had been one of my colleagues in the practical investigation of the proofs of spirit return and spirit identity. He died about six months before the above occurrence."

HER TROUBLES.

"How often do your housemaids dust?" "Do you mean how often do they fan the furniture?" asked slangy Mrs. Nuwedd, "or how often do they skip out?"

ways into vistas and pictures, a setting for the romance which hung over everything, which has always hung over life in San Francisco since the padres came and gathered the Indians about Mission Dolores.

And it was a city of romance and a gateway to adventure. It opened out on the mysterious Pacific, the untamed ocean, and most of China, Japan, the South Sea Islands, Lower California, the west coast of Central America and Australia that came to this country passed in through the Golden Gate. There was a sprinkling, too, of Alaska and Siberia. From his windows on Russian Hill one saw always something strange and suggestive creeping through the mists of the bay. It would be a South Sea Island brig, bringing in copra, to take out cottons and idols, a Chinese junk with fanlike sails, back from an expedition after sharks' livers; an old whaler, which seemed to drip oil, back from a year of cruising in the Arctic. Even the tramp windjammers were deep-chested craft capable of rounding the Horn or of circumnavigating the globe, and they came in streaked and picturesque from their long voyaging.

VAST SMELTING POT.

In the orange colored dawn which always comes through the mists of that bay, the fishing fleet would crawl in under triangular lateen sails, for the fishermen of San Francisco Bay are all Neapolitans who have brought their costumes and their customs and sail with lateen rigs shaped like the ear of a horse when the wind fills them and stained orange brown.

Along the waterfront the people of these craft met. "The smelting pot of the races," Stevenson called it; and this was always the city of his soul. There are black Gilbert Islanders, almost indistinguishable from negroes; lighter Kanakas from Hawaii or Samoa; Lascars in turbans; thick-set Russian sailors; wild Chinese with unbraided hair; Italian fishermen in tam o'shanter, loud shirts and blue sashes; Greeks, Alaska Indians, little bay Spanish-Americans, together with men of all the European races. These came in and out from among the queer craft to lose themselves in the disreputable, tumbledown, but always mysterious shanties and small saloons. In the back rooms of these saloons South Sea Island traders and captains, fresh from the lands of romance, whaling masters, people who were trying to get up treasure expeditions, filibusters, Alaskan miners, used to meet and trade adventures.

HOW CEMENT PROTECTS IRON.

The protective power of Portland cement over iron and steel embedded in it is generally regarded by engineers as fully established, and the last doubt, a writer in Engineering thinks, should be removed by the results of experiments recently announced at Providence, Rhode Island. Clean, bright sheet iron is embedded in a hollow concrete cylinder with walls three inches thick. The cylinder was then filled with water. At first a little water percolated through, but at the end of two months the concrete became perfectly water-tight. At the end of two years the embedded iron was broken out and found to be as clean, bright, and free from rust as when it was put into the concrete. Similar results were obtained with iron and steel plates embedded in concrete an inch and a half thick and alternately wetted and dried for a period of two years.

CARE OF YOUR UMBRELLA.

Umbrellas should always be set to dry open, with handle on floor. If allowed to dry shut up the moisture stands so long at the top it rots the silk and rusts the wires. Do not keep an umbrella in its case or rolled when in the house, as the silk, thus tightly creased, soon cuts into holes. In rolling up an umbrella for its case grasp the ends of the frame rods tightly with one hand near the handle, and roll from the opposite end with the other hand; unless the frame is thus held in place, it is twisted and loosened in the rolling process.

any; but the three true maids were vexed!

Young Puppety Pup came racing by, And the little red table caught his eye; Then never a bit he cared—not he— That he hadn't been asked to the dainty tea.

But he ate up Betsy Bobbity's bun, With all the currants—every one; The three little pies at a single bite, And everything else that was in sight!

Dora Doppity cried, "Dear me! What a capital time to give a tea!" And she put the little red table out, With three little chairs set round about.

And Betsy Bobbity's Baby Blue, And Patsy Poppity's Precious Prue, And Dora Doppity's Daisy Dee, Were asked to come to a charming tea.

But never a word the three guests said, As they gazed with a smile right straight ahead;

And never they showed the least surprise,

Although, right under their very eyes, The rude and ravenous Puppety P. Ate all that they were to have had for tea!

Which shows us plainly that Baby Blue, And Daisy Dee, and the Precious Prue, Were well brought up, and clearly knew That the proper, ladylike thing to do Was never to make remarks at tea, Whatever they chanced to hear or see!

FRANK'S BEAN VINES.

"When my beans get ripe next fall, I'll give them all to you, auntie," said Frank, as he raked the rich soil of his little garden. "You like baked beans, every one will be for you."

"Thank you, dear," said auntie, "but wouldn't it be better to plant something else? I can give you some flower seeds, if you like."

"No, I'd rather have beans, if you please. You always give me such nice presents, and I want to do something for you."

Frank planted his seeds, but before the plants were out of the ground his mamma had to go home and she took him along. He felt very sorry to leave his nice garden, but Auntie Maud promised to look after it until he could come back to pick the beans.

It was September before Frank could come to see his garden, and he rushed to the back yard almost before he kissed grandma and the rest of the family. What a sight met his eyes! The vines had climbed all over the poles he had helped set for the beans, and wandered off in the grass, and crawled to the roof of the summer kitchen—well, the long sprawling things were everywhere, and not a bean on any of them.

"Why, Frank, what is the matter?" asked auntie, finding a forlorn little heap under the big leaves in the back yard. "We thought you'd be so pleased."

"There ain't any—I guess I didn't plant beans," sobbed the little boy. "What are these big, nasty things?"

"Nasty? Do you think the beautiful gourds are nasty, dear? Why, I would rather have them than beans, wouldn't you? Just see how beautiful and striped they are."

"But I wanted to have the beans to eat," said Frank through his sobs. "I'm so sorry."

"Why, I would rather have the pretty gourds," said auntie. "I'll show you how to make ever so many pretty things with them."

And when Frank saw the dippers and stocking darning and tiny pails and button boxes auntie helped him make out of the gourds he was glad he had made a mistake in the spring and planted them instead of beans.

That was a long time ago, but Frank's mamma still keeps her rings in a little gourd hung from a pink ribbon that Frank made for her.

He (tenderly): "May I see you pretty soon?" She (reproachfully): "Don't you think I am pretty now?"

For semi-dress the latest Parisian idea shows a white Irish lace blouse, the lower edge of which is applied flatly upon the outside of the high-folled silk girdle which accompanies the silk, sun-ray plaited skirt. The lace is not brought to a straight edge, but tacked in graceful points in such fashion as to dispose effectually of the straight top line of the girdle so displeasing to many.

In all cloth suits the lighter color effects are tuned to harmonize with the advent of warmer days. They are shown in light tan, gray and cream-colored henriettes, serges, English molairs and other lightweight cloths. So soft are these fabrics that some sort of facing is necessary in the skirts, and thin haircloth is used to good advantage, as it holds its shape perfectly with the least possible weight. A slight stiffening of this same haircloth is used to good advantage upon the edge of the loose little straight-front coats and again for the proper maintenance of the velvet-faced collars and cuffs.

Another new feature which these light cloth suits repeat is the dainty coat lining of all-over embroidered lawn or batiste, seen earlier in the season upon a few of the dark silk street suits sent from France. Apart from the attractiveness of the idea lies a practical side, for these linings are merely lightly tacked to the coat with ribbon-run beadings and can be removed at will for cleansing purposes.

There's many another suggestion contained in the present broad trend of style that could be evolved from scraps of past fashions. A good idea was worked out on an after-Easter sailor hat of fine white straw. Around its crown was wound a long disused flat chain or necklace of fine violet and green beads, sewn to a foundation of cream-dotted Chantilly lace. The violet note repeated itself in a cluster of Marie Louise violets hugging three small pink roses within its bunched centre.

VIRTUE AND HAIRLESS HEADS.

The Views of Two Experts Are Partially Borne Out.

Simultaneously, from two independent sources, comes striking testimony to the virtues of the hairless head. It is stated that:

1. There are no bald criminals.
2. There are no bald lunatics.

Neither statement is laid down as absolute or infallible, but it is claimed that there are only just sufficient exceptions to prove the rule.

The authority regarding the first statement is J. T. Riley, a magistrate of the Halifax (England) bench, who said in court that he had only met with two bald "charges" in his twenty-three years' experience.

With regard to the second statement the Rev. H. M. Nield, of Bradford, England, quotes "a head official" of the Rainhill Asylum, who assured him that he would never need the hospitality of that institution, as he was quite bald.

It was difficult to find authorities in London who wholeheartedly bore out these two theses. A gentleman who frequently visits Bethlehem Hospital in an official capacity said to a representative of the London Daily Mail: "My impression of the lunatics I meet there is that they are usually a shaggy race."

An experienced police inspector bore out to a great extent Mr. Riley's statement about the lack of bald-headed criminals, but he advanced a commonplace explanation.

"Criminals," he said, "are notoriously a short-lived race. I admit I have seen very few bald-headed men in this charge-room, but by the time a criminal reaches the bald-headed period of life he has either died or has reformed. There is one notable exception, however—that was Charles Peace, the murderer and burglar."

NOT SO SURE.

He—You know—I believe you'd marry the first idiot that asked you. She—Oh, I don't know. Ask me and see.

WAR TACTICS OF ZULUS

HAVE ADOPTED THOSE EMPLOYED BY BOERS AND BRITISH.

A Correspondent Witnessed a Most Awful Inspiring Spectacle in South Africa.

Once more the rising of some of the Natal natives has turned men's thoughts to the famous Zulu tactics. In the minds of most there are associated with the name of Tyaka, the ruthless Zulu conqueror, who wedded into the stock of the Amazulu, the People of the Heavens, all the young men of the various tribes he conquered, incorporating them into regiments, and thus building up a powerful military nation.

Yet it was to Dingisiwayo, the Wanderer, that the inception was due, says South Africa. This man, the son of the chief of the Umletwa, was driven into exile in consequence of an abortive plot to seize up the reins of power. During that exile he lived in Cape Colony and saw the military methods and organization of the British. With instinctive genius he saw how the idea could be adapted to his own nation, and on his return and accession to the chieftainship he divided up his people into regiments, distinguishing them by names and by a special color of shield for each regiment, though for a time they retained the umkonoto or throwing assegai as

THEIR CHIEF WEAPON.

He heard of the great use made by the British infantry of their favorite weapon, the bayonet, and so he replaced the umkonoto by the ixwa, or broad-bladed stabbing assegai.

The peculiarity of the Zulu tactics has earned it the name of the crescent formation for attack, and it is noteworthy that, broadly speaking, it was the method employed by the Boers in their invasion of Natal and adopted by Lord Roberts in his advance through Orange River Colony, and it was the fear of its success which kept the Boers continually on the run. The best thing with which to compare it is the head of the stag headed beetle. Horns are thrown out widely on either flank, while the main body forms the head itself. From the main body a small force is detached to engage the enemy while the horns creep round the flanks.

This force in the days of Tyaka was frequently despatched with the command "Go, sons of Zulu, go and return no more," and death at the hands of their fellows was the fate of those who retired. While this force was holding the enemy the horns carried out their task, if possible, and as soon as a signal was given

THAT THE TWO HORNS HAD MET

in the rear of the enemy the head or chest was launched upon the position, and in the upshot, as a rule, the whole force of the foe tasted the assegai. For in that war no quarter was given or asked.

Perhaps no grander military spectacle was ever seen than that which marked the last use of these tactics on a grand scale. In the gray, cold dawn of July 4, 1897, the British mounted men began to cross the drifts of the White Umfolosi River, where it swept in a horseshoe bend around the camp they held for ten days. Forward they went as a screen before the infantry, which had been formed in hollow square with the big guns and Gatlings at the angles and in the centre of each force. On the whole body of picked soldiers marched burning Nodwengu kraal as it went forward to take position on the ground chosen on the previous day. At last it reached its bourn. The mounted men carried out the orders, fired at the Zulus wherever they appeared, and at last retired to the shelter of the square. Then the onlookers, of whom the writer was one, witnessed a most awe-inspiring

BRITAIN'S ROYAL YACHT

THE VICTORIA AND ALBERT COST \$60,000,000.

Mahogany and Silver and Silken Hangings for the King and Queen.

The royal yacht of England, the Victoria and Albert, cost the pretty sum of \$60,000,000. She was launched in May, 1899, with the present Princess of Wales as sponsor. She is 439 feet long. Her engines are of 11,000 horse-power and she has a speed of about twenty miles an hour. Her coal supply will carry her from England to the Riviera.

The fittings and decorations are quietly rich and sumptuous. Even on the upper deck, solid silver is used for the deck fittings. All the apartments are panelled in enamelled white, while the necessary warmth of color is obtained in the furniture, carpets and draperies. In the King's private stateroom the carpet is a rich blue, which well matches the blue morocco of the chairs. All the furniture here is of grained mahogany, slightly inlaid with other woods. As to the King's bedroom, it is severely simple, with its swinging bedstead of silver plate, without draperies; its satinwood furniture, silver plated metal work and specially woven carpet.

THE QUEEN'S BEDROOM

Is much larger than the King's. It is a model of grace and beauty and its white panelling and stately canopied bed suspended from the ceiling. The furniture is of daintily grained satinwood with silver fittings. The color scheme is a soft green. The coverlet of the bed has an elaborate monogram surmounted by a crown. Queen Alexandra's dressing room is a large apartment with a bath of jasper and dressing tables of inlaid satinwood to an enormous cheval glass forming a movable panel in the wall.

Opposite the royal sleeping apartments is the drawing room. The walls are, of course, panelled in white; the furniture is hand painted satinwood, and the hangings of blue silk. In one corner is a pedestal writing table, flanked by two small semi-circular tables; and opposite the big yet homelike fireplace is a grand piano. Bookcases and lounge seats make the drawing room a delightful retreat in rough weather.

THE STATE DINING ROOM

is an apartment of noble dimensions, occupying one-third of the vessel's length, and lighted by no fewer than twenty-six windows and two large skylights. From floor to ceiling it is panelled in white, accented with a pilaster treatment of great beauty and delicacy. Covers can be laid here for thirty guests. The smoking room is close by.

The grand staircase leads from the reception room up to the state deck, most of which is occupied by royal apartments, including a private dining room. An electric elevator assuages the trials of seafaring royalists.

There is also a well-appointed hospital and dispensary down below, where a titled physician presides over the health of the King and Queen.

The yacht is commanded by a Rear Admiral and he has a crew of 280 men. The officers are selected from the best of the navy.

Although the Victoria and Albert is a commissioned ship, she never fires a salute, not even in reply to the guns of foreign warships. If she is at anchor, the guardship of the port answers for her. If at sea her cruiser escort replies.

The present royal yacht is not the first Victoria and Albert that has flown the royal standard. Her earliest predecessor was an insignificant paddle wheel auxiliary yacht, with a big spread of canvas to help her engines to

ROBBING A CARD PARTY

THE WILEY OLD BUTLER MADE ALL PREPARATIONS.

Helped Himself to Elderly Maiden Ladies' Change and Then Disappeared.

A party of elderly maiden ladies, residing in West Hamstead, London, England, became the victims of a cool act on the part of their butler the other evening, and the police are now looking for the gentleman who did a very ungalant act in a very smart way.

The affair took place at a villa in Priory road occupied by two elderly maiden ladies, the Misses Isaacson. Some little time ago the ladies engaged as butler a German waiter, who came with good references, and his service gave every satisfaction up to the time of the robbery.

It was the custom of the Misses Isaacson periodically to invite a number of lady friends to a card party, and on Thursday night of last week four of the latter were present.

Late in the evening they engaged in a game of poker, playing with counters. Their chatelaines or bags containing their purses and money were hung on the back of their chairs, or were placed in their laps.

ENTER THE BUTLER.

Upon this quiet scene entered the butler, who proceeded to hand round sweets. Suddenly he dashed his tray into a corner of the room and made a snatch at the bag of the lady nearest to him. It was lying upon her knee.

The chain of the bag snapped and it fell to the floor. The butler, without waiting to pick it up, rushed round the table, gathering in the other bags from the backs of the chairs as he went, while the ladies looked on in amazement too great for speech or movement.

Then, as a young lady of the party gave vent to a piercing shriek, he bolted through the door, which he slammed and locked on the outside.

One of the hostesses ran to the electric bell near the fireplace, and gave the alarm, but there was no response. It transpired afterwards that the butler had sent the cook out on a bogus errand and there was no other servant in the house.

The man meanwhile made his way out at the back, clambered over a wall and made his escape. The ladies were released from the front room after a time and the police were summoned; but, of course, there was no trace of the missing butler.

BUTLER'S WASHING.

The Misses Isaacson said that their servant had made all preparations for the robbery beforehand. Besides sending the cook out, he had barricaded the house, and apparently he had an accomplice who helped him in his adventure. A strange man had called at the house the same evening stating that he had come for the butler's washing.

The butler also took some valuable jewelry from a room upstairs. The total amount of the money in the bags was somewhere about £14 or £15, but the robber made a bad "miss" from his point of view in leaving the chateleine which fell on the floor, as that contained the largest sum of all—over £9.

Scotland yard detectives have the matter in hand.

PAINTING WITH EARTH.

Where the Different Colors Are Derived From.

The cochineal insects furnish a great many fine colors. Among them are the gorgeous carmine, the crimson, scarlet, and purple lakes. The cuttlefish gives the sepia. It is the inky fluid

THE EXPLOSION AT LENS

TALES OF HORRIBLE SUFFERING BEFORE HELP CAME.

An English Correspondent Tells of the Many Sad Scenes he Witnessed.

There has been a far more exquisite pathos in this revisiting than there was in the first scenes of the disaster which I beheld three weeks ago, writes a correspondent of the London Telegraph at Lens, France. It was morning, and death brought us everywhere thrilling spectacles. Death, which grew grimmer and more sinister as the days drew on, and the actual material horror of it all increased. Now the wonderful pathos of those thirteen lives recovered almost from the dead touches much more than the ghastly sights seen before. Wives and mothers, faint and vacant-minded from crying for the departed, wrung one's heart. But now to see them fondling the loved ones come back from that hell below is a spectacle which cuts one's feelings to the quick as with a knife. I defy anybody to leave that infirmary dry-eyed. I held out for some minutes till a stout, homely woman's eyes caught mine. She was standing by the bedside of her boy, whose eyes were nearly starting out of their bony sockets in his gaunt face. She looked back at him, then to me again. The mother's love in her eyes was the most exquisite sight I have ever seen. She said nothing, she merely looked; but her eyes were telling me: "My boy has come back to me." Her eyes wanted to tell it to every one. She could not keep her love to herself. I went up to her with tears in my eyes and grasped her hand. Then she said rarely: "His brother died in his arms, monsieur." Yes, he died in his arms, and so her look was fixed on the boy again with unutterable fondness. She was devouring him with her eyes. He, poor fellow, could hardly speak, but he murmured, "He died in my arms," and tried weakly to open his arms, remembering how as he had carried his brother, stumbling with him blindly along the galleries, he had felt the boy grow stiff and cold. He had only felt, he could not see him die. Think what the tragedy of that moment must have been. The boy's name is Castel and he lies in the infirmary in the bed next to that of the leader of the party, Neny.

On entering the humble, whitewashed room, with its ten iron camp bedsteads, where the men and boys, nearly all looking like ghosts, lie. I first shook hands with the wonderful Neny in the cot next the door. He did not move one to tears, but he moved one to meek and wondering admiration. Not one man in a thousand is his equal. He lay, his brawny, hairy chest bare, his bearded face the picture of manly strength, and he told us eagerly, but quite collectedly, about those twenty nights and days, which were nights, too, down there. In those ceaseless blind wanderings did he never despair?

"Oh, yes! I did at the last. I took my knife and sharpened it." Here the man passed an imaginary knife backward and forward over the bedclothes. "I meant to cut my throat. That must have been the last day before we were found. If we had not been found I should have done it. There would have been nothing else to do."

Neny certainly would have done it. He is the man who does everything he says. Some of the party which he led state that he bullied them and cuffed them. I believe it and understand it. He had to do it, and there were terrible scenes in that inferno. "I had sometimes to drag them along. I had to bully those who were giving up." Neny has brains, of course, as well as courage, and is undoubtedly a leader of men in his own world. Few crosses of

to the shelter of the square. Then the onlookers, of whom the writer was one, witnessed a most awe-inspiring spectacle. On either flank a force advanced in triple line of columns abreast (these formed the horns) and after sweeping grandly past us at a distance of 700 yards or so, wheeled into line and swept rapidly inward till their extreme points met. Then from the royal kraal of Umti marched out the Umctyu regiment with their shields of white,

AND THEN THE BATTLE JOINED.

The upshot was a splendid British victory. In less than an hour the military organization of the People of the Heavens was being whipped along the Mahlabatini Plains by the "long assegais" of the Seventeenth Lancers, and the vicious bullets of the Mounted Volunteers. It is doubtful whether the warriors of to-day, unused to fighting for a generation past, could ever make so grand a stand in the open as did their forbears; but in close and broken country, armed only with their assegais, they could give even a strong British force some unpleasant memories to take. One thing should be added: the Zulu is not naturally cruel. His mutilation of slain enemies is no token of dishonor, but is done as a safeguard for himself, since he is persuaded that should the victim's body swell and burst, he will himself die miserably in like fashion.

And for the name he has given to his guns, Umbimbai, it is most likely only an onomatopoeia used to express the booming of the guns, though there is also a tradition that it is a reminiscence of the busy answer given a worried overseer when first Zulus helped to land some cannon upon Durban wharf. When asked what they were called, he said "Oh, hee-and-hee, hee-and-hee," and the name has survived as the Zulu has it to this day.

WAR MAKES TIN SOLDIERS.

The Industry Has prospered for 123 Years.

Much care is expended in the manufacture of leaden or tin soldiers. The fabrication of these toys is mainly performed at Nuremberg, and dates from the military enthusiasm aroused by Frederick the Great in Germany and throughout Europe by his surprising exploits in the Seven Years' War.

The best artists are hired to furnish models for the soldiers, and they are scrupulously careful to conform to the military costumes of the period and country to which the figures are supposed to belong. The shapes designed are engraved upon moulds of slate or brass, into which the melted tin or lead is poured through a small orifice.

When moulded the soldiers have to be painted, and this is done by women at their own homes, who receive no more wages than \$1 a week.

Care is taken to select gaudy colors. The coloring is also entrusted to women. If made of tin, the soldiers are packed in wooden boxes, all of which come from Sonneberg, in Thuringia. The extreme cheapness of these boxes indicates the low wages of the workmen, nearly all of whom, it has been observed, die of consumption. When the toys are made of solid lead, they are packed in cardboard boxes with glass tops.

This toy-soldiery industry has prospered for 120 years, though the demand falls off in periods of prolonged peace, to revive again when war is in the air.

A man's popularity with women is often similar to a cat's popularity with mice.

Father: "My son, did you buy the matches for me?" Son: "Yes." Father: "Were they good ones?" Son: "Oh, yes; I tried every one."

Aunt Abby: "A pedler was tryin' to sell me a new clock to-day—said he'd guarantee it wouldn't lose time." Uncle Josh: "What did you say?" Aunt Abby: "I told him he was losin' time tryin' to sell it to me."

auxiliary yacht, with a big spread of canvas to help her engines to

A POOR TWELVE KNOTS.

She was broken up in 1868, but in 1853 was superseded by the late Queen's Victoria and Albert, to which Queen Victoria was almost fanatically attached.

Here again was a huge binnacle wheel yacht, quaintly honeycombed with cabins, staterooms, loudoirs, and the like to accommodate the extensive family and aged retainers of the old Queen. For when Queen Victoria went to sea she usually took her entire family with her, so that the big craft became a kind of floating nursery.

The decorations were extremely old fashioned, the walls of chintz being covered with long lines of pink flowers on a white background—exactly the pattern one comes across to-day in remote English farm-houses off the beaten track of the railroad, far from modern innovations.

Yet on no account would the late Queen permit alterations, either structural or decorative, and to the last the old V. and A., as it was called, remained exactly as it was in the days of the Prince Consort.

During the last few years of Queen Victoria's life her grown up family and their relatives were constantly complaining of the inconvenient accommodation on the royal yacht; and at length the Queen reluctantly consented to the building of the present vessel. Nevertheless, Queen Victoria never so much as went on board, for all her affections were centred on the old fashioned yacht—which, by the way, was finally broken up in the Portsmouth dockyard last year.

HIDDEN STIMULANTS.

Children Become Intoxicated by Vegetables.

"The best way to prevent alcoholism is to keep the digestion in sound condition," said Dr. Harry Campbell, who opened a discussion on the alcoholic craving in London recently.

Dr. Campbell made one startling statement. Stimulants, he said, are contained in many kinds of food, and it is possible for a man to be intoxicated by a meal of meat. Not only is meat a strong stimulant, but he has seen children semi-intoxicated after a meal entirely composed of vegetables.

Dr. Campbell said that the craving for stimulants is a craving inherited from the ancestors of the human race and that the stimulant substances normally present in the blood—which cause the craving—exercise a beneficial influence or function.

From earliest times, continued Dr. Campbell, man has been accustomed to stimulants of one kind or another.

Primitive man found his in the chase by avoiding or seeking for his enemies, and in warfare. Civilized man in a healthy state finds stimulant in the struggle for existence, theatre-goings, race meetings, gambling, or even holism. When work was unnecessary and amusements pallid man had to invent some false excitement.

A stimulant might be defined as something which rendered available for use or released pent-up energy, and it was when the blood was defective, or surcharged with depressants, that the desire was felt for a glass of wine or other stimulant.

Therefore, alcoholism could be combated only by keeping healthy.

"Some mean sneak ran off with my umbrella to-day." "With your umbrella?" "Well, with the umbrella I've been carrying all the week."

The Bride: "I discharged the cook this afternoon." The Hubby: "Have any difficulty about it?" The Bride: "Not a bit, except that she wouldn't go."

Teacher: "James, can you tell me what is meant by a cubic yard?" James: "I don't know exactly, but I suppose it's a yard that the children of Cuba play in."

the gorgeous marine, the crimson, scarlet, and purple lakes. The cuttlefish gives the sepia. It is the inky fluid which the fish discharges in order to render the water opaque when attacked.

Indian yellow comes from the camel. Ivory chips produce ivory black and bone black. The exquisite Prussian blue is made by fusing horses' hoofs and other refuse animal matter with impure potassium carbonate. This color was discovered accidentally.

Various lakes are derived from roots, barks, and gums. Blue-black comes from the charcoal of the vine stalk. Lampblack is soot from certain resinous substances. Turkey red is made from the madder plant, which grows in Hindostan.

The yellow sap of a tree in Siam produces gamboge; the natives catch the sap in coconut shells. Raw sienna is the natural earth from the neighborhood of Sienna, Italy. Raw umber is also an earth found near Umbria, and burnt.

India-ink is made from burnt camphor. The Chinese are the only manufacturers of the ink. Mastic is made from the gum of the mastic tree, which grows in the Grecian Archipelago.

Bister is the soot of wood ashes. Chinese white is zinc, scarlet is iodine of mercury, and native vermilion is from quicksilver ore.

PENSIONS FOR MINERS.

High Pay, But Deadly Work in the Quicksilver Mines.

The chief quicksilver mines in Europe are at the Spanish town Almaden, which is an Arabic word, meaning "the mine of quicksilver." These mines were formerly worked by the Iberians, and after them by the ancient Romans. Between 1645 and 1843 the Spanish Government employed galley slaves in them, an occupation that soon ended in death. The fumes of the mercury produce constant salivation, and the system becomes permeated with the metal.

At first the victim is seized with tremblings, and then the teeth drop out; pains in the bones follow, and then death. The annual yield of mercury is a million and a half pounds, to procure which 4,000 men are engaged in this unhealthy employment.

After Almaden, so far as yield of quicksilver is concerned, comes Idria, an Austrian town, twenty-eight miles from Trieste. These mines also were once worked by criminals, who, owing to the terrible qualities of the mineral, expired after about two years' service.

There are now nearly 500 miners engaged in the work at Idria. They are induced to enter the mines by high pay. A pension is allowed when they are disabled, and provision is made for their widows and children.

RUSSIA'S GUARDED SECRET.

One of the secret processes which has for ages openly defied the world of science is the iron trade of Russia. The secret of making Russian sheet iron is owned by the Government, and when a workman enters the service he bids a last farewell to his family and friends, and, whether he lives or dies, all trace of him is forever lost. There have been several desperate attempts made to steal or betray the secret, but in every instance it has resulted in the death of the would-be traitor. In one case a letter attached to a kite, which was allowed to escape, was picked up by some peasants, and, despite their protestations that they were unable to read, they were at once put to death by the guards to whom they delivered the letter. It was afterward decreed that the guards themselves should pass the remainder of their lives within the works, and to this day the secret remains as hidden as the philosopher's stone.

A schoolboy got up to read a composition on "The Tree." He got as far as "This subject has many branches," when the teacher said:—"Stop! you have not made your bough yet." "If you interrupt me again," said the boy, "I'll leave." "You give me any more impu-

only those who were giving up. Nenny has brains, of course, as well as courage, and is undoubtedly a leader of men in his own world. Few crosses of the Legion of Honor have been as well deserved as that which the Minister of Public Works has pinned to his shirt this afternoon as he lay in bed. How did he live with the twelve others in the hell down there? How could they keep alive? I asked.

"We ate oats," said Nenny. "I ate about so much," and he put his hands out, shaping a round about the size of a melon. That, with a few carrots and some pieces of rotten horseflesh, kept those thirteen men alive.

"Not thirteen; we were twenty," put in Nenny. "Seven of the party have gone I don't know where. They disappeared somewhere. Oats, carrots and rotten horse were what we ate."

LONDON'S NEW PLAGUE.

Sir Alexander Binnie Says It Will Starve the World.

Replying to the toast of his health at a house dinner of the Municipal and County Club, at London, England, Sir Alexander Binnie made some very significant remarks about London's water supply.

Sir Alexander said he still adhered to his scheme of London obtaining a water supply from Wales, at a cost of £20,000,000.

The future destinies of the water supply of London had been placed in the hands of a body which had recently proposed a bill in Parliament on the ground that the supply derived from the old East London Company was a polluted source.

They were seconded in that opinion by no less a body than the Conservators of the River Lea themselves, who said that it was dangerous for the people of East London to continue to drink water.

It might not be in his lifetime, but as sure as they are gathered round that board there would come a time when, as in times past, there would arise among the teeming millions of London an epidemic that would startle the world.

Chemists might tell them that the water was pure, but, as Sir George Buchanan informed the commission, it was a well-known fact that populations might go on drinking a polluted source of water for a long time.

Ultimately, however, from causes which could not be detected, it took upon itself certain qualities, and the people died by the thousand.

He was confident that London would have to look for its increased supply to an area where there was an ample rainfall of something like forty-eight or fifty inches.

For a comparatively small expenditure London could have a supply incapable of contamination. A water supply was the very essence of municipal life.

NOT GRACE.

His name was Darling, and his nose was a large and florid affair. So prominent was it that it had earned him the sobriquet "Trunky" from the lads in the school under his control.

Just recently he had occasion to severely punish Tommy Brawler. On reaching home, the angelic Tommy poured into the maternal ear the tale of Mr. Trunky's cruelty. And forthwith Mrs. Brawler, eager for the fray, visited the school and asked for Mr. Trunky, which was the only name she had ever heard applied to the master by her son. The teacher who had opened the door to her, although surprised at the use of the nickname, did not correct her, but sent for Mr. Darling.

The latter received the irate mother's "dressing down" meekly, but on being repeatedly called Trunky at length remonstrated.

"Trunky is not my name, madame," he said. "Please call me Darling!" "How dare you, sir! I'll send my husband round to you!" shrieked Mrs. Brawler, as she went into hysterics.

SENT DANCING HUSSARS

GERMAN EMPEROR DID NOT FORGET HIS PROMISE.

The Kaiser Acts as Master of Ceremonies for the Entire Town of Crefeld.

The German Emperor has fulfilled his long-standing promise to provide the ladies of Crefeld with dancing partners.

The Kaiser is nothing if not versatile, after having filled many roles during his noteworthy reign, he now comes out as a kind of amateur M. C. for an entire town.

His experiment at Crefeld, while it charmed every spinster there when first announced three years ago, to all appearances alienated the rival ladies of Dusseldorf, and created quite a breeze in the German Parliament.

The amusing episode opened in 1903, when the Kaiser paid a visit to Crefeld for the purpose of opening the new museum. Crefeld was not then a garrison town.

In order to do honor to the Kaiser, 20 of the tallest and prettiest girls in the town were selected on the eve of his visit to act as maids of honor, for as there were no soldiers, how could a military guard be provided?

THE HAPPY MAIDS

selected, having donned pretty white dresses of muslin, white cloth, and lace, were lined up on the steps of the museum, where they were left while the Kaiser was being entertained with official speeches of welcome inside the building.

"After the speeches," wrote an observer of the scene, "the Kaiser asked peremptorily why they were not brought into the reception room; so the maidens were sent for, and came in blushing. The Emperor then turned to the prettiest and asked, 'Do you have good dancing with the officers here in winter?' The fair damsel was at a loss for an answer, but one of the quicker-witted, standing by, answered well. 'We have no officers in Crefeld to dance with.' 'Really! And which do you prefer, cavalry or infantry?' said his Majesty. 'Cavalry, of course,' responded the girl. Then up spoke the Emperor, 'I will order a regiment of Hussars here, and see that you dance well with the officers.'"

In fulfillment of his word, the Kaiser ordered a regiment to proceed from Dusseldorf to Crefeld, estimates were obtained for the building of barracks, and brief accounts of the episode were telegraphed all over Europe.

The business side of the affair came up for review in the German Parliament in 1903, when during the deliberations of the Budget Committee of the Reichstag the Minister of War, in order to persuade the members of the committee to grant the appropriation of a certain amount of money forming the share of the Government towards erecting

THE BARRACKS IN CREFELD.

produced the photograph of the young ladies.

The members of the committee must have been fully satisfied that the beauty of the Crefeld maidens deserved the proposed recognition, and reported so to the Reichstag.

In open session, however, an antagonist in the person of Herr Kirsch, the representative of the town of Dusseldorf, arose to fight the cause of the comely girls of his own native town.

The parents of marriageable girls in Dusseldorf, it was reported at the time, held indignation meetings, urging their representative in the Reichstag to do his utmost to prevent the transfer of the regiment. Herr Kirsch, acting on the request of his constituents, made a strong attack on the Government. He said, among other things, that he hoped

FROM BONNIE SCOTLAND

NOTES OF INTEREST FROM HER BANKS AND BRAES.

What is Going on in the Highlands and Lowlands of Auld Scotia.

About two hundred members have joined the golf club, which is now being formed in Elgin.

Berwick Town Council have purchased Spittal Hall estate for £8,000 in connection with a new water supply for Spittal.

The seed and root show, which was revived some time ago in Caithness, has not proved a success, and it has been resolved to give it up.

A familiar figure to Galashiels people has been removed by the death Mr. Robert Murray, Bristol Cottage. He had reached the age of 89 years.

Mr. R. D. Thomson, an Edinburgh gentleman, who is in his 90th year, learned to play golf when he was 80. He still does two rounds of the links twice a week.

The Glasgow magistrates recommend the corporation to adopt by-laws limiting the time when ice-cream shops may be kept open to the hours between 7 a.m. and 10 p.m.

Mr. Dewar, M.P., has been asked by the Town Council of Fort William to present a petition by the Council to Parliament in favor of the re-opening of the observatories at Ben Nevis.

Mr. James Mutch, wholesale merchant, Elgin, was buried in the Elgin cemetery with Masonic honors, the funeral being attended by all the leading families in the town and district.

Dumfries and Maxwelltown Town Councils have agreed to join in the erection of a joint hospital for the treatment of infectious disease, and a site has been found at Castledykes for the building.

Mr. Andrew Lees, who for over 30 years was employed in Messrs. Wm. Roberts Co's mill, Galashiels, has been presented by a few friends with an albert and seal on the occasion of his departure for Canada.

Mr. James Henderson the doyen of the legal profession in Kilmarnock, died at his residence in Prestwick. He was in his 84th year. A native of Perth, the deceased came to Kilmarnock nearly 60 years ago.

The widow of Captain Maxwell, Terregles, near Dalbeattie, has gifted a sum of £1,250 for the erection of a hall in the parish of Kirkcubright, to be called the Maxwell Memorial Hall, in memory of Captain Maxwell, who died in 1899.

The Royal Mail turbine steamer Viper, built to the order of Messrs. G. and J. Burns for their Ardrossan and Belfast daylight service, was launched recently by the Fairfield Shipbuilding and Engineering Company, Govan.

The Braemar Royal Highland Society has acquired from the Duke of Fife, of excellent conditions, a piece of ground to the south-west of the village of Braemar as a permanent site for the annual gathering as well as a public recreation ground for the benefit of the village. The grounds cover 12½ acres.

It has been intimated that Dr. Mackay, of Elgin, is about to retire from practice owing to failing eyesight. The doctor will resign his public appointments, which include the medical officership of Elgin (landward)—which he had held for 47 years—and of Dallas, etc. He is the oldest public official in Elgin.

Mr. William Storey, who may well be termed the prince of Border anglers, has died at Lougholm. He was in his 85th year, and had fished continuously since his ninth year. He has fished the Border rivers and streams for three-quarters of a century, and many and varied have been the baskets obtained by the veteran. He celebrated his golden wedding last year.

EFFECTS OF GREAT COLD

HOW IT ACTS AWAY OUT IN DAWSON, YUKON TERRITORY.

Some Strange Manifestations When Temperature Is 60 Degrees Below Zero.

"Look out, or you will drop that chisel!"

"Before the sentence was finished the tool had slipped from the hand of my assistant and, striking upon some bar iron, flew into pieces as if it had been glass instead of steel." This reads like a bit out of "Alice in Wonderland," but it is sober fact, we are told by Chester W. Tennant of Dawson, Yukon Territory.

"I am writing this on January 25; for two weeks we have had a 'cold spell.' Temperature has ranged from 44 degrees below zero (the warmest) down to 68 degrees below. Some of the outlying Yukon police stations report 80 degrees below. These cold waves alternate with warmer periods of 10 degrees below."

"Strange manifestations appear as a result of the extreme cold; one is the way a fire burns in the stove. It roars and crackles like a great forge, and wood in the stove seems to dissolve in the flames like a chunk of ice; the wood is gone and we wonder where the heat went."

"At 60 degrees below every stovepipe throws out a great white cloud of smoke and vapor, resembling a steamboat in its whiteness, and this cloud streams away for fifty to 100 feet, mingling with the other white-grey mist or haze that remains permanent in the atmosphere of the town like a great fog, when it is 40 degrees or more below zero."

THIS WHITE-GRAY FOG

is not fog as you know it, but is frozen fog, and every man, woman, child, animal and even the fire that burns is throwing out moisture into the air which is immediately turned into a cloud of frozen vapor, which floats away and remains visibly suspended in the air. Very slowly this settles to earth, and in the morning about the steps and any protected place one can see a very fine film of flourlike dust deposited, which is composed of frozen vapor."

Exposed ears, hands and nose, Mr. Tennant tells us, freeze at this temperature in going the distance of about one block unless well protected. The breath roars like a mild jet of steam, while a dipper of boiling water thrown out into the air emits a peculiar whistling hiss as its drops circle through the frosty atmosphere. To quote again:

"Prospectors, in attempting to boil a dish of rice or beans upon a camp fire unprotected from the weather, find that the side of the dish which is in the fire will boil while the part of the dish exposed to the weather has frozen. To remedy this, the dish is set completely into the fire. Edged tools subjected to this temperature become as hard and brittle as glass and will break as readily under strain. I have seen a pop safety valve blowing off steam when the weather was below 60 degrees, with icicles which had formed by the condensation while it was blowing off hanging from

THE OUTER RIM OF THE VALVE.

The icicles were not melted by the rushing steam, but remained there for many days, through blow-offs, as I passed this station every day and watched the operation. All vegetables, potatoes, apples, fruit, eggs, etc., can be allowed to freeze until they become like bullets. To make ready for use, place them in cold water half a day before using, and the frost will slowly withdraw without injury to the article. To attempt to thaw them out by more rapid process by fire or hot water spoils them for use."

Mr. Tennant tells some remarkable

Sunlight Soap

is a perfect cleaner and will not injure anything.

Best for all household purposes, Sunlight Soap's superiority is most conspicuous in the washing of clothes.

Common soaps destroy the painted or varnished surfaces of woodwork and take the color out of clothes.

Even the daintiest linen or lace, or the most delicate colors may be safely washed with Sunlight Soap in the Sunlight way (follow directions).

Equally good with hard or soft water.

Your money refunded by the dealer from whom you buy Sunlight Soap if you find any cause for complaint.

Lever Brothers Limited, Toronto

VAST DIAMOND FACTORY

GEMS FALL ON OUR EARTH FROM THE SKIES.

The Only Place Where Perfect Stones Are Produced — Startling Statement.

The only perfect diamonds which are to be found on this globe are those which fall from the sky in meteorites; all dia-

held indignation meetings, urging their representative in the Reichstag to do his utmost to prevent the transfer of the regiment. Herr Kirsch, acting on the request of his constituents, made a strong attack on the Government. He said, among other things, that he hoped the representatives of the people would show themselves stronger to the temptation of beauty than the Government had done. He also handed round a photograph.

The "Dancing Hussars," who have now gone to Crefeld, are superb waltzers.

ANIMALS FEAR DEATH.

Seem to Dread Separation From Human Beings.

Animals realize intuitively when death is near. Most animals—excepting pet animals, who are assured of what one might call a Christian burial in the back yard—have prompt extinction and have no flowers to look forward to. For haven't they often come across the bones of their once loved mates slowly whitening under the blue of heaven?

Savage beasts actually "prepare" for death with a fine composure unshadowed by any possibility of subsequent "will contests." So-called domestic animals, while not showing the fear characteristic of their masters, become strangely clinging and dependent and seem to dread separation from the human beings to whom they are attached.

It is natural for most wild animals to die in combat with an enemy, and while the combat lasts there is hope of escape.

When a number of elephants are shipped a strong structure is erected on deck and there they are stabled, chained by the feet. In an emergency they could easily walk away with their chains and the deck flooring, throwing the stable aside if it offered any impediment to their progress, as was shown in the case of the sinking ship *Agra* some years since. The *Agra* was swinging at anchor off Ceylon preparatory to her journey to America, when she sprung a leak and quickly sank. The elephants set up a call, but there was no despair in the noise that followed. It was the businesslike sound of crashing timber, and before the *Agra* had reached bottom a herd of elephants were swimming to Ceylon.

M. Jules Gerard, a great French student of animals, tells of a lion which, having fallen into a great ditch that had been dug for him, resigned himself after several ineffectual efforts to escape. He heard the cries of delight of the men who saw him trapped. He understood that he was lost—that he was about to die an ignominious and defenceless death.

But it was his way to receive the injuries that were to come to him without sound of protest. After taking a dozen bullets without moving he lifted his fine head with a majestic movement to cast a look of scorn on the Arabs who were aiming at him their final shots. Then he lay down resigned to death.

TEETH IN THE ARMY.

Experiment of Allowing Soldiers 815 for New Set a Failure.

During 1905, according to a report issued, 35,351 recruits joined the regular British army and 29,941 entered the militia—in both cases a decrease in numbers upon the previous year.

In the case of recruits with defective teeth, the chief reason for rejection, the report states that the experiment of allowing £3 on enlistment for artificial teeth has not proved a success. It was found that many recruits, in spite of agreeing to the conditions imposed, did not fulfill them, and also that in other cases the amount was inadequate.

During the past year the actual medical rejections per thousand amounted to 145.84. Education is favorably reported on, 70 recruits per 1,000 being well educated, and 916 per 1,000 being able to read and write.

since his ninth year. He has fished the Border rivers and streams for three-quarters of a century, and many and varied have been the baskets obtained by the veteran. He celebrated his golden wedding last year.

Gourock is at last to have its town hall and municipal buildings. After exhaustive inquiry, a site in Shore Street, near the Commercial Hotel, has been secured for the purpose. As, however, of the leases have two years to run, some time will probably elapse before the existing buildings can be demolished, and the foundations of the new edifice laid.

SEA DOGS IN METROPOLIS

THEY WERE AMAZED AT THE SIGHTS OF LONDON.

The Newfoundland Naval Reservists' Crowded Day of Delight.

London again entertained naval visitors the other day—this time almost unawares, for little had been heard of the coming of 120 naval reservists from Newfoundland, and there was no demonstration at arrival, although when seen on the streets their greeting was most cordial.

To the majority of the men the tour of the capital was an amazing, breathless experience. All their lives have been spent in the distant island.

When they got out of the train at London bridge and made their way to the Tower on brakes, they were speechless with wonder. The teeming life of the river, the Tower bridge, the motor-omnibuses filled them with admiration.

The party had only time for a brief tour of the Tower, for they were due at the Colonial Office at 12.30. In Cornhill one of the brakes broke down through the snapping of an axle, and one of the sailors fell out, sustaining only a few bruises, however.

VISIT THE ABBEY.

At the Colonial Office they were reviewed in the quadrangle by Lord Tweedmouth, who walked up and down the lines, followed by Lord Elgin and various officials of the Colonial Department. Mr. Winston Churchill was also present, but scarcely vouchsafed the Newfoundland sea-dogs a glance. Lord Tweedmouth gave them a warm greeting.

They were driven to the Popular cafe, where with Lieut. C. T. Trye, representing the Admiralty, and Commander Crutchley, of the Navy League, they had lunch.

In the afternoon they visited Westminster Abbey and Westminster Hall, and at their own request were taken to the Zoological Gardens, where their interest and delight at the sight of the sight of the animals were boundless.

The men returned to the Popular cafe at 6.30 for dinner.

Then they went to the Alhambra and their enjoyment can be imagined when it is remembered that to the majority this was a first experience of a theatre or music hall.

STILL ROOM FOR TALENT.

The glory of the present age is its wealth of scientific discoverers and inventors. The scientists of to-day have plumbed the depths of space and mapped out the star-strewn fields of immensity. They have traced the story of earth and her myriad children in the rocks, wherever it was written by the hand of Nature herself, and neither the infinitely great nor the infinitely little has escaped the vigilance of their scrutiny. But the genius has yet to be born who can state and explain the laws which govern the gyrations of a collar-stud, dropped by an angry man at the dressing table, and found a week later by his wife among the rubbish under the grate.

place when in cold water than a day before using, and the frost will slowly withdraw without injury to the article. To attempt to thaw them out by more rapid process by fire or hot water spoils them for use."

Mr. Tennant tells some remarkable tales of thawing out a frozen foot, ear or hand by immersing the member in coal oil for some time—often several hours. He says:

"This is absolutely a safe remedy, and one thus escapes the surgeon's knife, as no bad results follow. This is not hearsay, as a man was saved a few years ago at our office by the night watchman, who found him in the snow (45 degrees below zero) and both hands frozen to the wrists. He was taken into the office and treated as above for about five hours, when all the frost was drawn out without so much as losing a finger tip. The physicians were amazed, as they thought amputation would have to be resorted to. His hands were as white and hard as marble, and when placed in the oil they snapped and crackled as the oil began to act upon the ice crystals. This remedy should be remembered by all residents of cold climates, as

IT WOULD SAVE MANY A LIMB.

The temperature of the oil should be about the same of that of the living room (about 60 degrees above zero). Great caution must be exercised during extreme cold weather so as not to frost the lungs, which one will quickly do if he hustles about at ordinary pace. Quick and fatal pneumonia can be contracted in a few minutes. Many a fine team of horses has been lost in this way.

"One has to be careful about touching things with unprotected hands. It is dangerous to take hold of a door knob when it is 60 degrees below zero or thereabouts with the uncovered hand, unless you are careful to release your hand instantly, for if you do it will freeze your inner palm in five seconds, be very painful thereafter, and the result is the same as from touching a red hot stove.

"Canned goods undergo frightful contraction during extreme cold, and suck in air; in summer with a temperature of 90 degrees, the reverse condition occurs, causing leakage and loss."

A SMART DODGE.

A gentleman dressed in a loose coat entered a ladies' outfitting establishment at a time when the proprietor was alone in the shop. The gentleman asked to be shown some ladies' ready-made cloaks, as he wished to give his wife a little surprise. After a careful inspection, he fixed upon one, and asked the shopkeeper, "Have you not a young lady at hand to put on the cloak to see how it looks?"

The proprietor regretted that none of the ladies of the establishment were in at that moment.

"Well, perhaps you wouldn't object to putting it on yourself?"

The shopkeeper slipped on the coat, buttoned it, and turned around in all directions.

"Magnificent!" exclaimed the purchaser, with seeming ecstasy, but at the same moment he made a grab at the bowl of money in the till and emptied it into his pocket, and bolted out of the shop. The horrified proprietor rushed after him into the street. But the passers-by, seeing his strange costume, dragged him back to the shop, in the belief that the poor fellow had gone mad; and before he could explain matters the rogue had disappeared.

Miss Screecher: "When I'm asked to sing I don't say, 'No, I can't sing,' but I just sit down at the piano and—"
Miss Cautique: "And let the company find it out for themselves."

Gosling: "Halloa, old man, how are you? I haven't seen much of you lately." Maddox: "You have seen more of me than I have of you." Gosling: "How do you make that out?" Maddox: "Well, I'm much bigger than you, aren't I?"

Are Produced — Startling Statement.

The only perfect diamonds which are to be found on this globe are those which fall from the sky in meteorites; all diamonds which are mined in the diamond fields of the world are only fragments of gems.

That is a startling statement, but a still more startling one is that all the diamonds to be found on our plane have fallen on our earth from the skies and have not, as most of us thought, been produced here like coal and other mineral products.

Yet this is the latest scientific assertion with regard to the world's stock of this precious stone. The whole stock of the Kimberley mines, with their unknown resources, and all the gems of this character to be found in any part of our planet—all have fallen from space at some time or other.

Somewhere in the illimitable distance that surrounds us, there is a vast diamond factory—the only place where perfect gems are produced, and from this factory we have received a large supply, and are still occasionally receiving an odd consignment! What reasons are there for believing this?

The first piece of evidence is that the whole of the rock in which the Kimberley gems are found is similar to no thing else on earth. It has been given a distinguishing name (Kimberlite), and it corresponds exactly with the matter of which meteorites are composed.

In plain language, the whole of that vast mass of rock fell on the earth from the skies at some late period of the world's formation. This is rather staggering, but it must be remembered that there is a mountain in Arizona which is acknowledged by all scientists to be a meteorite mountain. And diamonds are being found at that spot.

Diamonds are found particularly in superficial layers of the earth's crust; that is another proof of their celestial origin. Further, the diamond crystals are formed like no others that are of earthly origin; this is regarded as a strong proof that they fell from above.

It is curious that our diamonds are not perfect, and that some of them, when first brought from Kimberley mines and exposed to the air, explode and crack into several pieces. Now, the stones which come down in meteorites also explode when they are taken from the protecting mass which covers them completely. This is due to the peculiar conditions which prevail where the stones are produced, and these conditions cannot prevail on the earth, as the oxygen prevents them.

AT THE SOUTH POLE.

In order to make a diamond it is necessary that the constituents should be very hot and then cooled quite suddenly; nothing else will account for the peculiar shape of the crystals and the general formation of the gem. The earth did not cool suddenly, and so the gems could not have been produced on this planet.

In every spot where diamonds are found, the ground is of a nature which exactly resembles the matter of meteorites, and is different from other layers at the earth's surface. The best places to find them should be in the lands towards the South Pole.

The nearer the South Pole, the more chance of discovering diamonds, and the probability is that, if man ever reaches that end of the earth and discovers that it is not a sea of ice, but a plain of solid land covered with snow, then he will also find that is the richest diamond mine in the world.

This curious fact of diamonds coming to us from the sky opens up an equally strange field of speculation. Suppose there were to be a small shower of meteorites containing these gems. If it has happened before, as scientists contend, why shouldn't it happen again?

"Papa," said little Johnny, "fruit falls from a tree when it is ripe, doesn't it?" "Yes, my son," replied the long-suffering parent. "Apples and pears and plums fall off, don't they?" "Yes, yes, of course," "Well, papa, was your hair ripe?" Five minutes later he was reposing in bed to stay there for the day.

We Trust Doctors

If you are suffering from impure blood, thin blood, debility, nervousness, exhaustion, you should begin at once with Ayer's Sarsaparilla, the Sarsaparilla you have known all your life. Your doctor knows it, too. Ask him about it.

Unless there is daily action of the bowels, poisonous products are absorbed, causing headache, biliousness, nausea, dyspepsia, and thus preventing the Sarsaparilla from doing its best work. Ayer's Pills are liver pills. Act gently, all vegetable.

There has been a flutter among the Ontario Judges, and also among the people, who take a general interest in judicial affairs, the cause being the reported increase of \$500 in judicial salaries. The circle of interest will be assented when it is known that it applies only to Judges in New Ontario. For the increase they are to relinquish urrogate and other fees they now receive. This is a small move in the change from the once offensive fee system, so small as to be almost imperceptible. It will also mean a slight increase in the remuneration of men who are

THE INDEMNITY QUESTION.

In answer to the following question—"Do you favor the increased indemnity of \$1000, voted to your member and Senator at the last session of Parliament without discussion, or reference to the electors." The following replies were received from the citizens of Napanee by The Montreal Star.

DENIS DALY—"No decidedly not. On the contrary, I advocate, with all my soul the policy that would drag a thief to justice, wherever he may be found, whether in or out of parliament and also everyone who, directly or indirectly, participates in his plunder. 'Come cast in thy lot among us; let us all have one purse; we shall fill our houses with spoil,' seems to be the actuating principle of our present representatives. It is not ability (of that we have an abundance) but common honesty we want. Trusting your efforts to introduce a little of this commodity into the conduct of our public affairs will be successful."

J. FRANKOCHALMERS—"Replying to your enquiry I strongly object to the manner in which the indemnity that should be paid that is a debatable question. It appears to me to be too large an amount for the time required, and the opinion of the electors should have been asked at the general election so lately held. Regarding the extra salary granted by the government to the leader of a party of members it looks unlawful. If a party leader should have more on account of his position and extra work, that party should pay him the extra and leave him and his party in an independent position to criticize the Government when occasion demands. As to pensions to ministers: this if continued, and no doubt it will be extended, will, in time, cause rebellion."

JOHN PALMATIER, Erinville, "No I do not favor the increase of indemnity."

JOHN R. SILLS, Sillsville, "I think \$1,500 a year is sufficient for our member."

E. B. HARRISON, Adolphustown, "I think Mr. Wilson (Conservative), has just sold himself for the thousand dollars and I am not in favor of him getting it. I think it should come to a vote of the people." Note—Mr. Wilson has moved for a reconsideration of the matter.—Ed. Star.

THOMAS B. LUND, Napanee,—"I cannot express myself too strongly against the iniquitous measure, and am heartily glad that you have set your face against it."

WHAT OTHER PAPERS SAY.

Moncton (N. B.) Transcript.

It is noticed that the Tory patriots like the Hon. George E. Foster, who condemn the Government for increasing the public expenditure pocketed their pensions as ex-Cabinet Ministers without a blush!

Hamilton Times.

The Nurses' Combine bill has been dropped. Mr. Crawford, its promoter, withdrew it because amendments were introduced to tone down its monopoly provisions. So perish all combine legislation!

Woodstock Sentinel-Review.

As the Khan picturesquely remarks "the fronts of our houses are mostly Queen Anne; behind they are mostly Mary Anne." It is perhaps natural that it should be so, and yet unfortunate for human health and happiness depend more on the Mary Anne department than on the Queen Anne. It is the filthy back yards, lanes and alleyways that keep the doctors busy.

THE CHAMPAGNE MAKER.

Why His Face Is Always Decorated With Scars.

The Frenchman's face was hacked and notched.

"Have you been a duelist?" one asked.

"No, no," the man replied. "I have been a champagne maker." He touched his face. "These honorable nicks," he said, "are champagne scars."

"Champagne scars," he went on, "decorate the visages of all the workers in the underground champagne mills of Rheims. They are caused by the bursting of the bottles. About one bottle of champagne in every ten bursts."

"There are miles and miles of champagne caves in Rheims, caves cut in the solid limestone rock, where, in a constant temperature of 45 degrees, millions of bottles of wine refine and ripen."

"The workers down there smell nothing but champagne all day long, champagne escaping from burst bottles, and as the turners move along the racks—each turns 35,000 bottles daily—they are continually saluted with explosions. Bang! And the glass splinters fly, and a little fountain of champagne perfumes the damp air."

"Day after day each bottle must be turned, turned fifty times altogether, till the sediment in it has all mounted up and concentrated itself around the cork. Then the corkers remove the corks, let the sediment thicken wine in the neck of the bottle blow off and

Albert College Belleville, ONT.

Business School founded 1877. Five complete courses. Many graduates occupying important places as book-keepers and shorthand reporters.

\$37.00 pays board, room and tuition, electric light, use of gymnasium and baths, all but books laundry, etc., for 10 weeks—longer time at same rate. Special reduction to ministers, or to two or more entering at same time from same place. A specialist in book-keeping, who is also an expert penman, and a specialist in shorthand in constant attendance. The teachers in the literary department also assist in the work. The high character of the College is a guarantee of thoroughness. New Commercial Hall one of the finest in Ontario.

bent at the knee the claws have to contract—can't open till the leg is straightened out again.

ceive. This is a small move in the change from the once offensive fee system, so small as to be almost imperceptible. It will also mean a slight increase in the remuneration of men who are evidently deserving of the recognition.

It has been stated at the insurance investigation that intense rivalry is the besetting evil among insurance companies, and that it leads to injurious and questionable practices in the struggle for business. It may be that a closer scrutiny of the underlying economic evil would discover a still deeper cause in the excessive profits allowed by the tables on which rates are determined. All commercial experience goes to show that wherefrom any cause profits are excessive there is a costly and wasteful struggle for business. A typical example was supplied by the bicycle business a few years ago, when the price was maintained unreasonably higher than the cost of manufacture. There was a wasteful competition among manufacturers, and it was by no means unusual for them to spend more than the cost of manufacture in pushing sales. It cost more to sell a bicycle than to make it, and the price obtained warranted and stimulated the wasteful method. The same struggle is seen where the profits from any line of business are made inordinately large by a protective tariff. It becomes a struggle for business at any price. The profits tempt many into the favored lines, and promote and encourage wasteful methods of securing patronage. Every sale means such a large profit that an excessive expenditure in forcing or encouraging it is commercially justified.

A Long Life.

To prolong life one should take plenty of sleep and remember to sleep lying on the right side, indulge in a morning bath in tepid water, take daily exercise in the open air, keep the window of the sleeping room open all night, take frequent and short holidays, and be over-ambitious and hold one's temper.

HIS WIFE'S LUNGS BOTH AFFECTED

But the Great Consumptive Preventative brought health and happiness to his home

"Our doctor said there was no cure for my wife as both her lungs were affected," says Mr. L. H. Walter, of Pearl Street, Brockville, Ont. "It was a sad disappointment to us both, just starting out in life, only married a short time. But before she had finished the first bottle of Psychine the pain in her lungs quickly went away, and after taking six bottles Mrs. Walter was a new creature and perfectly well again."

That is just one of the many families into which Psychine has brought hope, health and happiness. It is a living proof that Psychine cures Consumption. But don't wait for Consumption. Cure your LaGrippe, your Cough, your Bronchitis, your Catarrh, or your Pneumonia with the remedy that never fails—

PSYCHINE

(Pronounced Si-keene)

DR. T. A. SLOCUM, Limited, Toronto.

One of the notable features of present-day progress in Mexico is the heavy investment of Canadian capital in this country. The Canadian colony here is not a numerous one but its members make up in enterprise what they lack in numbers. They are a most welcome addition to the growing foreign population here, for they bring good sense, industry and alert minds. It is certainly most remarkable that a country with some 6,000,000 people should be rich enough to finance great undertakings in Cuba, Rio de Janeiro, and the City of Mexico. It is, however, well known that the Canadians are per capita, the greatest buyers of foreign products and wares in the world. Their trade is immense in comparison with their numbers. This, we must explain, is due to their intelligent exploitation of those natural elements of wealth.

Innifail (Alberta) Province:—Before the opening of the House the members sit about in picturesque attitudes smoking and chatting with easy grace. Over all waves an assortment of flags. With the appearance of the macebearer decorum reigns. Pipes and cigars vanish, the speaker and his clerk appear. The macebearer bows low and retires. Prayers are said, and the orders of the day, which lie before each member, are quickly recited, and so to work. The four Ministers sit together on one side, and all around them cluster their trusty followers. The work progresses, and as a rule is not brightened by brilliant debates for scathing repartees. For the most part there is a stolidity of an agricultural meeting. Once or twice the dullness may be broken, but for the most part heavy torpor reigns. When the Premier thinks fit he moves an adjournment, the speaker and the mace retire, obliging pages supply the members and the press with really quite excellent cigars, and the members disperse throughout the city.

Napoleon's Ink Wiper.

Napoleon was a hero to his valet, Constant, though he sadly marred the servant's effort to dress him neatly. Said the valet:

His breeches were always of white cashmere. But two hours after leaving his chamber it often happened that they were all spotted with ink, thanks to his habit of wiping his pen on them and shaking ink all around him by striking his pen against the table. However, as he dressed in the morning for the whole day, he did not change his toilet on that account, but remained in this state until night. The whole inside of his boots was lined with white fustian. Whenever one of his legs itched, he rubbed it with the heel of the boot or shoe with which the other leg was shod, thus heightening the effect of the spilled ink.

An Aggravated Case.

Lord Justice Clerk Eskgrove, in sentencing certain housebreakers, began by explaining the various crimes of which they had been convicted—assault, robbery and hamesucken, of which last he gave them the etymology. He then reminded them that they had attacked the house and robbed it, and so worked gradually up to the climax, "All this you did, and, God preserve us, joost when they were settin' down to their dinner!"—Law Notes.

Bad Arguments.

The historic incident of a young Tory heir to a dukedom being pelted with rotten eggs while making a political speech is, "Ah," he remarked, wiping the mess from his face, "I have always said that the arguments of my opponents were unsound."

till the sediment in it has all mounted up and concentrated itself around the cork. Then the corks are removed, the corks, let the sediment thicken wine in the neck of the bottle blow off and skillfully replace the cork again.

"The corks and turners' work is dangerous. These men are nearly all scarred like me."

WAYS OF PENGUINS.

These Birds Lay Out Home Sites and Build Cities.

Penguins mostly spend their lives on the water, but when, during the breeding season, they are obliged to seek the shore they establish cities, many acres often being laid out in squares, composed of what might be called streets, running at right angles. The birds not only lay out their city after picking up all the loose stones till the whole place is as smooth as a board floor, but they take possession in couples, each pair selecting a home site, not to build a nest, but merely to secure a particular spot on the bare ground.

The hen lays one egg, and only one, and during the time of incubation the male bird brings her food from the sea or sits on the egg awhile himself if she wants to go out and take a swim. The lady penguins grow so fat and sleek under the good care of their faithful mates that they are eagerly hunted at the breeding season.

The old birds are tough and fishy, but the tender young matrons are in great demand, both for their oil and flesh. Even the eggs have an oily and fishy flavor and taste as hens' eggs might if cooked in paraffin. The penguin has wings, like other birds, but they are altogether too short to fly with, though they assist him somewhat in waddling over the ground.

Nature's Perch Clamp.

"Chickens and other birds roosting on a perch no bigger than a lead pencil never fall off. Do you know why?" said a farmer.

"The tendon of a roosting bird's leg is so constructed that when the leg is

FOR BOTH

One disease of thinness in children is scrofula; in adults, consumption. Both have poor blood; both need more fat. These diseases thrive on leanness. Fat is the best means of overcoming them; cod liver oil makes the best and healthiest fat and

SCOTT'S EMULSION

is the easiest and most effective form of cod liver oil. Here's a natural order of things that shows why Scott's Emulsion is of so much value in all cases of scrofula and consumption. More fat, more weight, more nourishment, that's why.

50c. and \$1.00 " " " " " " All druggists

bent at the knee the claws have to contract—can't open till the leg is straightened out again.

"Thus a chicken gets on its perch, bends its knee to be comfortable and with that bending locks itself, as with a key, to the wood. It can't fall off. Put a chicken on your finger and then make it sit down. Its claws will clamp your finger tight and be unable to let go until the bird stands up again. Nature, very kindly, has so constructed roosting birds that the act of settling down clamps them to their perch."

Shelley's Heart.

A well known and very prominent English family are the possessors of a remarkable relic in the shape of a human heart preserved in a jar of alcohol. It appears that Shelley, the poet, feared that there was a chance of being buried alive. To guard against any such a contingency he left directions that his heart should be removed immediately after death. The queer relic may still be seen by any one who visits Bascombe manor, Bournemouth, England.

Force of Perseverance.

There are two ways of attaining an important end—force and perseverance. Force falls to the lot only of the privileged few, but austere and sustained perseverance can be practiced by the most insignificant. Its silent power grows irresistible with time.

The Nautilus.

The idea of airtight compartments in ships was suggested by the peculiar construction of the nautilus. The shell of this animal has forty or fifty compartments, into which air or water may be admitted, to allow the occupant to sink or float, as it pleases.

Dr. Pierce's Favorite Prescription

Is a powerful, invigorating tonic, imparting health and strength in particular to the organs distinctly feminine. The local, womanly health is so intimately related to the general health that when diseases of the delicate womanly organs are cured the whole body gains in health and strength. For weak and sickly women who are "worn-out," "run-down" or debilitated, especially for women who work in store, office or schoolroom, who sit at the typewriter or sewing machine, or bear heavy household burdens, and for nursing mothers, Dr. Pierce's Favorite Prescription has proven a priceless benefit because of its health-restoring and strength-giving powers.

As a soothing and strengthening nerve. "Favorite Prescription" is unequalled and is invaluable in allaying and subduing nervous excitability, irritability, nervous exhaustion, nervous prostration, neuralgia, hysteria, spasms, chorea, or St. Vitus's dance, and other distressing nervous symptoms commonly attendant upon functional and organic disease of the womanly organs. It induces refreshing sleep and relieves mental anxiety and despondency.

Cures obstinate cases. "Favorite Prescription" is a positive cure for the most complicated and obstinate cases of "female weakness," painful periods, irregularities, prolapsus or falling of the pelvic organs, weak back, bearing-down sensations, chronic congestion, inflammation and ulceration.

Dr. Pierce's medicines are made from harmless but efficient medical roots found growing in our American forests. The Indians knew of the marvelous curative value of some of these roots and imparted that knowledge to some of the friendlier whites, and gradually some of the more progressive physicians came to test and use them, and ever since they have grown in favor by reason of their superior curative virtues and their safe and harmless qualities.

Your druggist sells the "FAVORITE PRESCRIPTION" and also that famous alterative, blood purifier and stomach tonic, the "GOLDEN MEDICAL DISCOVERY." Write to Dr. Pierce about your case. He is an experienced physician and will treat your case as confidential and without charge for correspondence. Address him at the Invalids' Hotel and Surgical Institute, Buffalo, N. Y., of which he is chief consulting physician.

STAGECOACHING DAYS.

An Old World Era With a Decided Flavor of Romance.

The old coaching days, as far as convenience for travel was concerned, were the dawn of the great days of our present rapid means of communication. The seventy years or so in which mail coaches waxed and flourished and finally died out before the incursion of railways and steam engines have a decided flavor of romance attached to them, and no doubt the coming and going of stagecoaches lent a certain amount of color and interest and life to the country places and towns through which ran the great main coaching roads. The Bath road, the Dover road, the York road were highways of communication along which rolled the heavy private coaches and chariots of the country magnates, and the stagecoaches with their steaming horses passed the various stopping places with the regularity of clock-work.

These stagecoaches, with their complement of coachmen and guards, afforded endless subjects of interest and illustration to the artist and the literary men of the day. Imagine Charles Dickens without stagecoaches and denuded of all his vivid descriptions of the scenes such as those in the yard of the White Hart inn, High street, Borough, in "Pickwick," or of the mail coach on the Dover road in "A Tale of Two Cities." It is difficult for the present generation to realize the fatigue and the wintry cold of such long journeys, when frozen feet were enveloped in a little straw, and a "shawl" folded round the neck was thought to be a fit protection against the keen night air.—London Standard.

THE PRIVATE WON.

Rebuked His Superior Officer and Escaped Court Martial.

Charles Bradlaugh when in the British army was orderly room clerk, and a newly arrived officer once entered the room where he was sitting at work and addressed to him some discourteous order. Private Bradlaugh took no notice. The order was repeated with an oath. Still no movement. Then it came again, with some foul words added. The young soldier rose, drew himself to his full height and, walking up to the officer, bade him leave the room or he would throw him out. He went accordingly, but in a few moments the grounding of muskets was heard outside, the door opened and the colonel walked in, accompanied by the officer.

It was clear that the private soldier had committed an act for which he might be court martialed, and as he said once, "I felt myself in a tight place." The officer made his accusation, and Private Bradlaugh was bidden to explain. He asked that the officer should state the exact words in which he had addressed him, and the other, who had, after all, a touch of honor in him, gave the offensive sentence word for word. Then Private Bradlaugh said, addressing the colonel, that the officer's memory must surely be at fault in the whole matter, as he could not have used language so unbecoming to an officer and a gentleman. The colonel turned to the officer with the dry remark: "I think Private Bradlaugh is right. There must be some mistake." And he left the room.

DESPERATE HEROISM.

An Incident of the Indian Fighting Days in Illinois.

The desperate intrepidity and war-like heroism of the early settlers of Illinois are illustrated by an incident narrated in "Historic Illinois." The early days were a time of hardship, danger and death. Every forest covert, every tuft of prairie grass, might hide some skulking red enemy. Among the early frontiersmen was a Captain Whiteside, whose name became a terror among the Kickapoos.

A party of fourteen white men led by Whiteside made an attack upon an encampment of Indians of greatly superior force. Only one Indian escaped. During the heat of the skirmish Captain Whiteside was severely wounded, he thought mortally, having received a shot in the side.

As he fell he called to his sons to keep on fighting and not to yield an inch of ground or permit the savages to touch his body. Uel Whiteside, who had also been shot in the arm, so that he could no longer use his rifle, hastily examined his father's wound, discovering that the bullet had glanced along the ribs and lodged against the spine.

With that daring and disregard for pain so often characteristic of border men he immediately whipped out his knife, gashed the skin, extracted the ball and held it up, crying:

"You're not dead yet, father!"

The old man leaped to his feet, renewed the fight and bore his full part to the end. Many such instances of heroism distinguished the men who in those days of peril were called upon to defend the frontiers of Illinois.

EASILY SCARED.

An Adventure With a Rhinoceros In East Africa.

Of a curious encounter with a rhinoceros an African traveler writes in the Globe Trotter, published in Nairobi, British East Africa: "I was peacefully grazing on a choice patch of green stuff and apparently meant to do the well bred thing and allow us to pass by; so, with my heart in my mouth, nothing in my pockets and an empty magazine rifle in my hand, I attempted a slide for a more secure position. But I was immediately foiled of this object by a suspicious movement on the part of the enemy. A swish of the tail, a suggestive upflitting of the snout and a sniff of the atmosphere, and the delicate and fairylike creature bore down ponderously upon my two native bearers and myself.

"My knees promptly refused to work. I could not move a muscle, and so with all the British pluck and courage of which we have read so much I calmly resigned myself. By this time the hideous beastly had advanced to within ten yards of its prey, when, to my surprise, the two boys accompanying me hastily dismantled themselves of all baggage, and, with all muscles stretched, ready for a sprint, they stood their ground and, without moving an inch, began to whistle for all they were worth.

"Quickly noting the satisfactory result of the maneuver, I blew my whistle hastily and with good will. The shrill notes struck strangely on the untutored ear of the rhino, for he promptly turned tail and fled."

A Short Cut.

"There goes a man," observed a steamship agent as he directed attention to a surly looking individual who had just engaged passage for Europe, "whose efforts are devoted to constructing short cuts in business methods and in conducting all time con-

Suppose you do like the tea you are using. How do you know it is the best tea you can get for the money?

MANY were satisfied with the tea they were using before they tried Red Rose Tea.

When they tried Red Rose Tea they found it had that "rich fruity flavor," found it was strong—that it requires less to make a cup of good tea than the brand of Ceylon alone they had been using.

Now, why not be sure you are getting the best tea to be had.

You cannot be sure till you try Red Rose Tea.

Red Rose Tea

is good Tea

BLOOD POISON

On account of its terrible effects, blood disease is called the king of all diseases. It may be either hereditary or contracted; so while it may not be a crime to have the disease, it is a crime to permit it to remain in the system. It may manifest itself in the form of Scrofula, Eczema, rheumatic pains, stiff or swollen joints, itching of the skin, eruptions or blotches, ulcers in the mouth or on the tongue, sore throat, falling out of hair, disordered stomach, and a general depression of the system. If you have any of these symptoms don't neglect yourself. You have no time to lose. Beware of "hold forth" treatment—beware of mineral poisons—beware of Quacks and Fakirs. **OUR NEW METHOD TREATMENT** is guaranteed to cure this disease, never to return. Bank Bonds will protect you. Our treatment is not injurious in any way, but reaches the very root of the disease and eliminates all poison from the system. The symptoms of disease gradually disappear. The blood becomes pure and enriched, the whole system is cleansed and purified, and the patient feels prepared anew for the duties and the pleasures of life. **CURES GUARANTEED OR NO PAY. 25 Years in Detroit. 250,000 Cured.**

INSURANCE COMPANIES LOOK ASKANCE

AT A MAN IF HE CANNOT ANSWER THE QUESTION, "HAVE YOU EVER HAD RHEUMATISM?" WITH A GOOD HONEST "NO!"

So you see how it bars happiness and comfort if you neglect the means to prevent and cure—the great

South American Rheumatic Cure

is the effective means, and while lack of provision for your "loved ones" from such a cause may be counted secondary to a life of suffering to oneself, it is one of the many sides in the study of health that we should take in dead earnest. Every disease has its symptoms—every ailment that flesh is heir to has its note of warning, and it's for us to heed or suffer the consequences; and who does not know the signs by experience or observation?—fever, chills, sweating, shooting pains, numbness, aching muscles, stiffened and swelled joints.

The great South American Rheumatic Cure gives ease from the first dose and it gently and effectually eradicates the trouble from the system. It gets at the root of the evil and it gets there quickly—most stubborn cases cured in one to three days. Influential physicians prescribe it as the best and surest cure they know of.

JUDGING DOGS.

The Rules by Which the Different Points Are Valued.

The average man is greatly puzzled to find one dog awarded a first prize and another, which to him appears to be quite as fine a specimen, awarded no prize at all. A man who knows the relative values of the different points in all breeds of dogs is a veritable walking encyclopedia.

Generally speaking, the best dog is one which comes nearest the standard of requirements for its own particular breed, about 25 per cent of the points being usually awarded for fine head proportions, an equal number for legs and feet, a similar number for body and color and the rest for symmetry.

In the Dalmatian, for instance, thirty points are given for color and markings, while head, eyes and ears have only fifteen; the bulldog, on the other hand, has forty-five for head and ears, while coat and color amount to but five points; the collie has twenty-five for coat, color being immaterial, and twenty-five for head and ears.

The St. Bernard has forty for head and ears and five each for coat and color. The Pomeranian has but fifteen for head and ears, forty-five points going for coat, color and tail, with fifteen for appearance. It may be set down as governing in all breeds of dogs that whatever is the typical feature of that breed is the feature upon which stress is laid in the allotment of points.

The Ant's Cow.

The aphid, one of the most widely distributed species of insects known to the entomologists, is sometimes referred to as the "ant's cow." The aphid actually gives milk, although the creature itself is so small that it is estimated to weigh but the one one-thousandth of a grain. Out of the back of the aphid project two hollow tubes. These connect with ducts in the body, which secrete a sweet liquid. When the tubes are touched the liquid exudes in small drops. The ants know this, and they make a regular business of tickling the tubes of the little aphids to make her "give down her milk." The ant is very fond of this saccharine food and will "milk" a hundred aphids in the course of an hour.

Why He Resigned.

The French Baron Rothschild once had in his service a valet named Alphonse, first class, but an acknowledged "red." This valet obtained permission once a week to attend the meetings of his Socialist lodge. Suddenly the baron noticed that Alphonse no longer desired this off night and, inquiring into the cause, was informed that the valet's late Socialist colleagues had worked out a calculation that if all the wealth of France were divided equally per capita each individual would be the possessor of 2,000 francs. "Monsieur," said Alphonse, with dignity, "I resigned. I have 5,000 francs!"—Argonaut.

Henpecked Husbands.

Henpecked husbands are found even in India. A writer says: "To live as I have done in a Hindoo house, especially when the real house mistress is a masterful and deeply religious widow, who is grandmother to the babies and mother to their parents, is no longer to wonder at the absolute terror with which men speak of the 'stri achchar.' For the men of India are, poor souls, the most henpecked in the world."

CASTORIA.

Bears the Signature of *Chas. H. Plummer* The Kind You Have Always Bought

had just engaged passage for Europe, "whose efforts are devoted to constructing short cuts in business methods and in eliminating all time-consuming men and their propositions from his busy existence. He is a man of very few words. Some years ago this gentleman crossed the ocean and had a very unpleasant trip. One morning a sympathetic passenger offered him a lemon, expressing a sincere wish that it would give relief. The pale traveler seized the lemon, hurled it violently into the ocean and growled: "This is a quicker way than the other."

An Odd Moorish Custom.

As a people the Moors are already well inclined to anything that gilds life. A correspondent says: "Nothing delights them more as a means of agreeably spending an hour or two than squatting on their heels in the streets or on some door stoop, gazing at the passersby, exchanging compliments with their acquaintances. Native 'swells' consequently promenade with a piece of felt under their arms, on which to sit when they wish."

His Statement.

Dr. Price-Price (diplomatically)—I don't know whether I sent you a statement of what—or—you owe me. Mr. Knok—Neither do I. Dr. Price-Price—Oh, you didn't get it then? I suppose I didn't send you a statement. Mr. Knok—Yes; you did. But it looked more like a statement of what you think I possess.

Too Much Heart.

"And you rejected him?"
"I did."
"He has the reputation of being a large hearted man."
"That's the trouble with him. He is too large hearted. He can love half a dozen women at the same time."

Domestic Finance.

Mrs. Knicker—Can you get money from your husband? Mrs. Bocker—No. By the time I've paid the cook for a good dinner before I ask him I'm just even.

Music is the prophecy of what life is to be, the rainbow of promise translated out of seeing into hearing.—Mrs. L. M. Child.

Removed the Growth.

DOUGLAS & CO., NAPANEE, ONT.

DEAR SIRS,—During year 1890-91 I was troubled with a large lump growing on the right side of my neck near the ear. Had consulted several physicians and used everything I could hear of, all to no use. Was told to use

Douglas' Egyptian Liniment.

I did, and before I had used half a twenty-five cent bottle was permanently cured. Since then I have used it for everything where outward application is required; am yet to learn of anything in reason that I cannot cure with it. No man has any idea of its value until he has used it; would not be without it under any circumstance

[Respectfully yours,

NATHANIEL W. REID.

Enterprise P. O.

FROST LOCKS

Make a Fence of Strength

The heaviest, strongest wires made can't make a strong fence unless the locks are as strong as the wires. A fence, like a chain, is only as strong as its weakest spot.

The New Frost Lock and Frost Wedge Lock are the most unyielding parts of a Frost Fence. They make the whole fence as strong as the strongest wire.

We guarantee to repair—free of charge—any Frost Fence that goes wrong

We are able to compete with any general store in the province

We pay Highest Price for all Farm Produce.

S. BOND & CO., ODESSA.

One of Three Things Always Cause RHEUMATISM

Do you know the system rids itself of waste matter through bowels and kidneys? Yes, but by the skin as well.

As a matter of fact, the skin rids the system of more urea than the kidneys do.

If the skin, or bowels, or kidneys are unhealthy—they won't throw off enough urea. This urea is changed into uric acid—carried by the blood to joints and nerves—causing Rheumatism.

One never inherits Rheumatism. One does inherit weak kidneys, irregular bowels and bad skin action.

Fruit-a-tives

OR "FRUIT LIVER TABLETS"

will positively cure Rheumatism because they increase the eliminating action of skin, kidneys and bowels—and make these three organs so vigorous and healthy that there can be no urea or waste retained in the system to poison the blood and irritate the nerves.

FRUIT-A-TIVES are fruit juices, combined with tonics—the whole forming the most effective cure for Rheumatism.

50c. a box or 6 boxes for \$2.50. Sent on receipt of price if your druggist does not handle them.

FRUIT-A-TIVES LIMITED • OTTAWA.

Stranger—How long since you made an arrest, constable? Constable Hii Melder—Quite a considerable spell. I'm goin' a leetle slow 'bout haulin' 'em in jest now. We hain't got no place to put 'em 'ceptin' Cy Tedder's chicken coop, an' Cy's got a settin' hen on.

The Fact of It.

"It's love that makes the world go round," said the old fashioned sentimentalist.

"No," answered Miss Cayenne; "it merely makes some people so dizzy that they think the world is goin' round."

The dawn of the future is announced to such as can read its signs, and we give ourselves wholly to it.—Mazzini.

A Scotch Text.

Auchtermuchty is the happy town which every Scot, proud of his unpronounceable tongue, uses as a shibboleth to test the linguistic skill of the southern. If you cannot say "Auchtermuchty" you are still an uneducated barbarian. The meaning of the word happens to be as monstrous as its sound. "The high ground of the wild sow" is not a name one would choose for a garden city. People, however, are found to flock to it as a summer resort, and as it has a lover's pool, the town has probably attractions more real than its name. In the early part of last century Auchtermuchty went bankrupt and was deprived of all its property except the jail and one or two other assets of an equally necessary character. It is now rich, peaceful and radical.

A SABBATHARIAN.

Result of a Doctor's Compact With an Insane Patient.

Dr. A. did not believe in forcible restraint for the insane. Therefore, as head of an insane asylum where personal influence was made to take the place of bolts and bars and shackles, he was kept a busy man. One patient in particular was a young boy continually complained of at headquarters because he refused to wear his clothing, preferring to tear it into rags.

Dr. A. remonstrated in vain, then thought out a plan of diplomacy, with which he approached his patient.

"John," said he, "I find I am in need of a boy and thought you might like to take the position. I want to engage a boy not to tear clothes. Do you think you could do that work?"

"Yes, I could," said John.

"Very well. What wages will you ask?"

"Twopence a day."

The bargain was closed on the spot. John's destroyed clothing having cost the asylum pounds where his wages were pennies. From Monday to Saturday John was a model laborer, receiving at the end of each day his wage with the other workmen about the asylum. Sunday came, and with it John's mania. He had not a whole rag on his back when Dr. A. was called upon to speak to him.

"How did this happen, John?" he asked. "Weren't you engaged to work for me? You have broken your contract."

"I have not, sir," asserted John, with warmth. "Didn't I work for you all the week? Today's Sunday, and I'll be hanged if I work for any man on Sunday."

CAVE OF THE WINDS.

The Vision Carved In Stone Under the Hills of Dakota.

The great wind cave has the form of an eight story house, each story, or stratum, containing a distinct formation of its own and each containing chambers of a size and magnificence of decoration such as have never been found in any subterranean cavern of the world.

It is a dream, a nightmare, a vision, carved in solid stone under the green hills of Dakota, stone as white as the milk the hired man used to give us to drink in the dawn of a happy June morning, stone as red as the heart of the first bloodroot that you dug in the spring when the world was all spring to you, and stone that is blue with a blue that all the painters who have ever painted Venice have tried to get for generations and have failed.

Frozen fountains are there, white with the leaping foam of untold ages; sculptured cats and horses and great monsters to be dreamed about o' nights and feared in dark corners in the daytime, organs built by the hands of giant gnomes for a Titan to play wild hymns of praise upon, a kitchen for the cooking of weird dishes never thought of up here in the sunshine, all manner and all kinds of rooms, ninety miles of them, down there under the hoofs of the gallant little range horses who pound the grass into hay the year round, up there in South Dakota.—Exchange.

THE PLANET URANUS.

Oddities a Voyage to This Gigantic World Would Disclose.

If Uranus, which is a star of about the sixth magnitude, were a planet like those little ones called asteroids, which are being discovered by the dozen every year, it could not have much claim upon popular attention, but Uranus is really a gigantic world, more than sixty times as large as ours. Its vast distance, about 1,700,000,000 miles from the earth, is what causes it to look so small. Uranus has four moons, which revolve backward in their orbits—that is to say, they revolve from east to west around Uranus, while Uranus goes, like all the other planets, from west to east around the sun. It is believed that Uranus rotates backward on its axis also. Moreover, the axis of that great, strange globe lies in such a direction that in the course of its year, which is equal to eighty-four of our years, the sun shines almost perpendicularly first upon one pole and then upon the other. Measured by our time standard, there are forty years of constant daylight, followed by forty years of unbroken night, around the poles of Uranus. And the sun rises in the west and sets in the east there. But the sun looks very small when viewed from Uranus—only one four-hundredth as large as it appears to us. Still it sheds upon that planet 1,500 times as much light as the full moon sends to the earth, so that daylight upon Uranus, while faint compared with the blaze of a terrestrial noonday, is nevertheless a very respectable kind of illumination.

CAKE AN OLD INSTITUTION.

The Ancients Made and Ate It, but It Was a Simple Affair.

The ancients made cake, but it was not the rich, highly seasoned and flavored confection which we indulge in nowadays. They had plain cakes made with flour and water, some of them without a suspicion of sweet or flavor. Some of them were not unlike our plainest crackers and were often eaten as we eat bread.

Wedding cake was an institution among them, as with us, but the cake was a plain one and was broken above the head of the bride as she went to her new home. This was a special feature of Roman marriages 2,000 years ago. The breaking of the cake was part of a solemn ceremony. All of the cakes of ancient history are plain and simple. It is only as we come down to more modern times that we hear of spices and fruits and all of the rich and luxurious ingredients in which present day cakemakers delight. In Queen Elizabeth's time spice cakes and buns were eaten at weddings. From these the fashion and fancy grew for all sorts of elaborate and deliciously unwholesome combinations until there seems to be a perpetual struggle for something new and more unusual to stir into the cake of the period.

Measuring Medicine.

Use a medicine glass with the amount of each spoonful and drop marked upon it. Teaspoonfuls and tablespoonfuls are always mentioned, but as these vary in size it is not safe to rely upon them. Drops, too, cannot be properly measured without a glass. Keep the medicine glass perfectly clean. It should be washed out after each dose, in readiness for the next time. It is desirable that if the patient is to have medicine with a strong smell, oils, etc., to keep a glass specially for them, letting it soak in hot water for half an hour after use to re-

AN ECHO.

How to Measure the Distance From Which It Is Reflected.

There is scarcely anything in nature that exerts the fascination over every one alike than does an echo, and common as it may become there is always a feeling of mystery about it that holds us as with a charm. Of course we all know that it is merely the reflection of a sound from some object, as the side of a house or a rock or a hill, but often we cannot tell how far away the object is that causes it. Here is a way to tell every time:

Holding a watch in your hand, shout a single syllable, as "Ho!" or "Ha!" and count the number of seconds from the time you shout till the sound comes back to you. Now, sound travels at the rate of 1,125 feet a second, so the number of seconds that elapse multiplied by 1,125 will give the distance in feet traveled by the voice in going to the object and back to you again, and one-half of that number will be the number of feet away that object is. Of course the object may be only a few hundred feet away, in which case the sound will come back in less than a second, but you may determine the distance, nevertheless, by calling a single syllable—"Ha!"—and calling it again as you hear the echo, not before or after it, but just with it.

With a little practice you can do this. Repeat the call ten or twelve times, counting the seconds between the first call and the last echo. Suppose, for example, that the time is seven seconds and that you called the syllable ten times. Then each echo took seven-tenths of a second, and the distance, found in the same way as before, is about 394 feet.—Exchange.

WATCHING THE BUILDERS.

Fire Insurance Folks Keep an Eye on Construction Methods.

A builder speaking of the watchfulness of fire insurance companies in New York city in the erection of buildings in that city says:

"Insurance companies in placing policies upon so called fireproof buildings do not accept the word of the builders and contractors, nor rest content with the evidence submitted by the city building department. Their own experts make an examination. Such an examination is made not at the behest of politicians or in the interest of a group of men, but by technical experts whose reports must be exact, detailed and exhaustive in the interests of shrewd business men. The insurance underwriters have their own corps of expert engineers and fireproof agents in the field all of the time. When a large building is in course of construction in New York these experts of the underwriters watch every stage of the development. They have no power to stop work on the building as city building inspectors have when the building laws are not complied with, but they possess another sort of check which is fully as effectual. The builders, contractors or owners, or all three, are notified that further insurance policies will not be made on the building until certain remedies are made."

Earrings.

Earrings have always been among the most favorite ornaments of nearly all the nations of the world, certainly with those which are called civilized. Indeed among the Persians, Babylonians and Carthaginians they were worn by men as well as women. They were always worn by Greek women from Hera in the "Iliad" down to the Venus de Medici, whose ears were pierced for

ALPINE ROOT DIGGERS.

Their Work of Danger High Up in the Mountains.

Throughout the whole chain of the Alps there are men who make it their business to search for and root up the gentian, arnica, puffballs and other Alpine flowers.

High up in the mountains the root grubber, generally an old man, builds a little hut. He chambers precipices to the edges, where the blue flowers grow; or, if he cannot ascend, he lets himself down to their place of refuge by a rope fastened to a pine above.

He wanders to a long distance from his hut and does not always trouble to return to it at night, finding shelter under a rock. Next morning he spreads all the roots he has collected on a rock, where they may dry.

He collects herbs as well as roots, and the resin from the pine besides. When the summer is over and there are signs of snow, the root grubber collects all together in his little hut and finally transports the whole of his six months' collection to the valley.

The arnica and some other roots used in medicine are readily disposed of. From the gentian is made the favorite gentian brandy, which is considered the very elixir of life by the mountain folk. In other days, when gentians grew in great numbers, the root digger was able to realize a good income from his perilous occupation, but it is otherwise now.

THE TIMOROUS KUBUS.

They Live in Sumatra and Are the Shiest People Alive.

There is a very singular race of people in Sumatra, the Kubus, who are too timorous and shy to mix with the other races of the island and dwell in the recesses of the forests. They are looked on as inferiors by the Malays and thought to be little better than beasts. Such is their shyness that they will never willingly face a stranger.

Their trade with the Malays is consequently carried on in a strange manner. The trader announces his arrival by beating a gong, and he then retires. The Kubus approach, put their forest treasures on the ground, beat a gong and retreat. The trader returns and lays his commodities down in quantities sufficient, as he thinks, for the purchase of the goods on sale. Then he retires, and the Kubus reappear and consider the bargain.

And so, after more withdrawals and approaches and gong beatings, the respective parties come to an understanding and carry off independently their bargains. The Kubus in their wild state do not bury their dead. They live on snakes, grubs, fruits and the flesh of any deer or pigs they can slay. They are skillful spearmen and throw stones with marvelous accuracy.—Pall Mall Gazette.

Meals in Schools.

In Paris the city government gives every school child one full meal a day. This does not tend to pauperize the children or to lessen the responsibility of the parents, for all those who can afford to pay for the meal are expected to do so. On the other hand, no jealousy or contempt can be felt by the richer children for their starved comrades, for all are supplied with the same metal token, which has to be given up in exchange for the meal. The "cantine scolaire," as this municipal soup kitchen is called, is not confined to Paris. In the provinces the "soupe scolaire," its equivalent, has sent up the school attendance by leaps and bounds. Here, however, instead of paying for their midday meal all those

COLLIN'S BAY

The farmers are very busy at their Spring work. Some have finished. Several families have moved into the village recently.

The houses will soon all be taken. The new cottages going up will greatly beautify the village.

Miss Maude Howard, Glenvale, spent Sunday at A Howard's.

Miss McKay has returned from Amherst Island, where she was visiting her sister, Mrs. R. Henderson.

Mrs. Meachen still continues very low.

Mrs. (Dr.) Rankin and children, of Brooklyn, N.Y., spent last week at Mr. D. Rankin's.

Mr. Fred. Thompson, G. F. R., has been moved to Whithy Junction, and Fred Baker, Ernestown, has taken his place here.

House-cleaning is all the rage.

MOSCOW.

Mr. Wagar and family have moved into the house lately occupied by J. O'Neil.

We regret to have chronicled another sudden death which occurred here last week. George Botts died on Thursday after a week's suffering of appendicitis. He leaves a widow and small child, who have the sympathy of the entire community.

At the re-election of officers for the Sunday school, Mrs. Alfred Martin was chosen superintendent with Ernest Amey, assistant.

Fred Johnston lost a valuable horse this week. Its death was caused by breaking through the stable floor in the night and injured itself in an attempt to get up.

A number from here attended quarterly service at Yarker on Sunday morning.

Alfred Martin is making tile for the county drains.

Arbor day was duly observed in our school on Friday. The yard was cleaned and cleared of some dead trees, and new ones were planted.

A. M. Bell, of Queen's, spent Sunday the guest of his parents.

NEWBURGH.

Thursday, May 3rd, was a sad day in the annals of this parish when Henry Ford Finkle, aged 14 years and 4 months, was laid to rest, the only son of Mr. and Mrs. Hilton Finkle. The deepest sympathy was felt by the entire community. The dignified and comforting service of the Church of England was held in St. John's church where the body resting in a chaste casket filled with beautiful cut flowers was brought. The surpliced choir with the Rev. Rural Dean Dibb and the Rector met the remains at door of the church and conducted it up to the chancel where it was gently and carefully placed in position by Frank Ryan, Vrooman Bradshaw, Percy Patterson and A. Wilson, the Pall bearers school friends of dear Ford. The Hymns selected were 178, 499, 438, A & M. The Rector read the Burial office and Rural Dean Dibb, the lesson, and preached a most comforting and touching sermon from the text "Weep Not." At the conclusion of the solemn service, the surpliced choir marched slowly out of the church and took their place ahead of the hearse to the grave, then followed the mourners in carriages, then the entire staff of pupils of the school's and lastly friends and acquaintances from Napanee, Yarker and Camden East. At the cemetery the choir circled round the grave of their little comrade and assisted by many present, sang three hymns, 184, 277, 193 a. & m., whilst the last rites were taking place most feelingly. Ford was a manly, bright boy, good mannered and a general favorite. The doctors, nurses and all who came in contact with him during his short but fatal illness, were drawn to the boy. He will be much missed in the church where he was Banner boy in the choir and assisted in every way possible.

SEVERE CANADIAN WINTERS DEPRIVED OF THEIR DANGER.

Colds and Their After-Effects Conquered By the Use of Pe-ru-na.

*"I Had
Catarrh of
the Lungs
and
Peruna
Promptly
Cured me."*

--Alfred Rochon.

Hon. Alfred Rochon, President Canadian Foresters, 76 Fleurie street, Quebec, Canada, writes:

"I am pleased to add my testimonial to the many I see to the efficacy of Peruna. I suffered for some time with chronic catarrh of the lungs and really thought that I was not to get any relief, as I had used so many remedies and my condition remained about the same.

"Finally I decided on Peruna and that was a lucky day for me, for it proved to be the remedy which cured me. My lungs are perfectly sound now and I have not had the slightest trouble with them since, and at the slightest indication of a cold now I take a few doses and it will always ward off any bad effects."

Catarrh of the lungs is, ordinarily, known as consumption. In these cases the catarrh has usually found its way into the lungs by the gradual extension of the disease from the throat through the bronchial tubes. Consumption is the natural termination of all cases of neglected chronic catarrh. Every one who is afflicted with chronic catarrh is liable to be attacked with consumption at any time. In the first stages of the disease Peruna is a sure cure.

**NEGLECTED
COLDS PROVE
DISASTROUS.**

A slight cough, which, without a vestige of doubt, would soon disappear with the use of Peruna, becomes chronic bronchitis, which requires a persistent use of Peruna for some time. There are a great many cases of consumption every year due directly to a cold.

Peruna is for sale by all first class drug stores at \$1 per bottle.

Send to The Peruna Medicine Company, Columbus, O., for Dr. Hartman's free book, entitled, "Chronic Catarrh."

**A COUGH
IS NATURE'S
WARNING.**

UMBRELLAS.

The Various Processes Which Enter Into Their Making.

The ribs and stems of an umbrella are generally made in factories having a specialty of these items and are sent thence to the real manufacturer. Here first the man whose work it is to assemble the parts inserts a bit of wire into the small holes at the end of the ribs, draws them together about the main rod and puts on the ferrule.

In cutting the cloth seventy-five thicknesses or thereabouts are arranged upon a splitting table, at which skilled operators work. In another room are a number of girls who operate hemming machines. A thousand yards of hemmed goods is but a day's work for one of these girls. The machines at which they work are geared to a high speed. After hemming, the cloth is cut into

Vapo-Resolene

Established 1879.

Whooping Cough, Croup, Bronchitis, Cough, Grip, Asthma, Diphtheria

Cresolene is a boon to Asthmatics

Cresolene is a long established and standard remedy for all the above ailments. It cures because the air rendered by it is instantly carried over the diseased surface, and the result is that a with every breath, giving relief and constant treatment. Those of a consumptive tendency, or who suffer from chronic bronchitis, find the greatest relief from coughs or inflamed conditions of the throat.

Vapo-Resolene is a M. D. prescription and is prepared by the M. D. of Paris. A Vapo-Resolene bottle of 1/2 pint is sold for 1/2 dollar. It is sold for 1/4 dollar in 1/4 pint bottles. It is sold for 1/8 dollar in 1/8 pint bottles.

apricot kernels is canceled, is not continued to Paris. In the provinces the "soupe scolaire," its equivalent, has sent up the school attendance by leaps and bounds. Here, however, instead of paying for their midday meal all those who can possibly do so are encouraged to bring to school their handful of vegetables and the like, and the contributions are all put into the common soup.

Madrid's Throne Room.

The throne room of the royal palace at Madrid is one of the most magnificent in the world. Decorated in red and gold, it contains rich crystal chandeliers, colossal looking glasses of the finest quality, marble tables and priceless porphyry. The ceiling is painted by Tiepolo with the "Majesty of Spain," in illustration of the virtue of the kings and the manliness of the people, who are represented in the different costumes of the provinces. Here the sovereigns of Spain receive on grand occasions when alive and when dead are laid out in state.

Knew Her Ways.

Mr. Gayboy—What did my wife say when you told her I wouldn't be able to come home tonight until a late hour? Messenger—She didn't say anything. Mr. Gayboy—Then you must have gone to the wrong house!

HOSPITALS CROWDED

MAJORITY OF PATIENTS WOMEN

Mrs. Pinkham's Advice Saves Many From this Sad and Costly Experience.

It is a sad but true fact that every year brings an increase in the number of operations performed upon women in our hospitals. More than three-fourths of the patients lying on those snow-white beds are women

and girls who are awaiting or recovering from operations made necessary by neglect.

Every one of these patients had plenty of warning in that bearing down feeling, pain at the left or right of the abdomen, nervous exhaustion, pain in the small of the back, pelvic catarrh, dizziness, flatulency, displacements or irregularities. All of these symptoms are indications of an unhealthy condition of the female organs, and if not heeded the trouble may make headway until the penalty has to be paid by a dangerous operation, and a lifetime of impaired usefulness at best, while in many cases the results are fatal.

The following letter should bring hope to suffering women. Mrs. Robert Glenn, of 434 Marie St., Ottawa, Ont., writes:

Dear Mrs. Pinkham:

"Lydia E. Pinkham's Vegetable Compound is so well and widely known that it does not need my recommendation, but I am pleased to add it to the many which you have in its favor. I suffered untold agonies from serious female troubles for nearly three years, and the doctors told me that I must undergo an operation, but as I was unwilling to do this, I tried your Vegetable Compound and I am only too pleased that I did so, for it restored me to perfect health, saving me the pain of an operation and the immense bills attending the same. Pray accept my hearty thanks and best wishes."

Just as surely as Mrs. Glenn was cured of the troubles enumerated in her letter, just so surely will Lydia E. Pinkham's Vegetable Compound cure other women who suffer from female troubles, inflammation, kidney troubles, nervous excitability and nervous prostration.

Mrs. Pinkham invites all women who are ill to write her for free advice. She is a daughter-in-law of Lydia E. Pinkham and for twenty-five years has been advising sick women free of charge. Address, Lynn, Mass.

doctors, nurses and all who came in contact with him during his short but fatal illness; were drawn to the boy. He will be much missed in the church where he was Banner boy in the choir and assisted in every way possible. Beautiful wreaths were sent by the Superintendent, Teachers and Sunday School pupils of St. John's church, the Rector of the parish, the Staff and Pupils of the High School and the Employees of Carriage Works.

The church was tastefully draped in white by Mrs. Wm. Sutton and Mrs. T. T. Shorey. Beautiful potted plants were most kindly placed in the Sanctuary. The vacant chair occupied by Ford draped in white, spoke volumes.

Mr. and Mrs. Finkle have the heartfelt sympathy of the whole neighborhood with them in their great sorrow. May Ford rest in peace, and light perpetual shine upon him."

STATE OF OHIO, CITY OF TOLEDO, ss.
LUCA COUNTY.

Frank J. Cheney makes oath that he is senior partner of the firm of F. J. Cheney & Co., doing business in the City of Toledo, County and State aforesaid, and that said firm will pay the sum of ONE HUNDRED DOLLARS for each and every case of Catarrh that cannot be cured by the use of Hall's Catarrh Cure.

Sworn to before me and subscribed in my presence, this 6th day of December, A. D. 1892.
(SEAL) A. W. GLEASON,
NOTARY PUBLIC

Hall's Catarrh Cure is taken internally, and acts directly on the blood and mucous surfaces of the system. Send for testimonials free.

Take Hall's Family Pills for Constipation

Two Laymen Have Been Popes.

The canon law does not prescribe that the pope must be a cardinal or even a cleric. Nevertheless since the election of Urban VI. in 1378 the successful candidates have belonged to the members of the sacred college, although as late as 1758 a noncardinal was voted for several times. At least two laymen—John XIX. (1024) and Adrian V. (1276)—have occupied the papal throne, and there is today nothing to prevent laymen from being created cardinals, although they are not entitled to vote in the conclave unless they can produce a special permit from the late pope.

Beef and Brawn.

It is said of Kean, the actor, that he ate mutton before playing the part of lover, beef before playing that of murderer and pork before assuming the character of a tyrant. That may be merely a story or a fact, but it is a well known truth that beef will enable more exhausting muscular work to be done than will mutton, so there may be something in the "roast beef of old England." In the eighteenth century this was one of the English "gods."

His Motive.

Critic—I have seen many a red cow on green grass, but this is the first time I ever saw a green cow on red grass. Is it an impressionistic departure? Irish Painter—Not at all; it's a patriotic impulse—I wanted to keep the green above the red.—Exchange.

Quite the Contrary.

"I understand that drinking is one of your husband's failings."

"You have been misinformed," said the wife severely; "it is his most pronounced success."

The Cost of It.

Dolly—Nell says that her engagement ring cost \$100. Polly—Perhaps she meant that she spent as much as that entertaining the young man before she got it.

Wm. D. Mitchell

number of girls who operate hemming machines. A thousand yards of hemmed goods is but a day's work for one of these girls. The machines at which they work are geared to a high speed.

After hemming, the cloth is cut into triangular pieces with a knife, as before, but with a pattern laid upon the cloth. The next operation is the sewing of the triangular pieces together by machinery.

The covers and the frames are now ready to be brought together. In all there are twenty-one places where the cover is to be attached to the frame in the average umbrella.

The handle is next glued on, and the umbrella is ready for pressing and inspection. By far the greater number of umbrellas today are equipped with wooden handles. A large variety of materials may be used, however, such as horn, china, bone, agate, pearl, ivory, silver and gold. Gold and silver, quite naturally, enter into the construction of the more expensive grades of umbrellas, some of which, in price, have been known to bring as high as \$150 or \$200. A wooden handle may likewise be expensive, depending upon the quality of the wood used. Ebony, petrified wood, fir, oak and elder are as well known to the umbrella men, who manufacture 15,000,000 umbrellas a year.

The umbrella has been developing rapidly during the last few years.

We pick up even a cheap one nowadays, press a button and the top spreads itself like an eagle ready for its flight. We are going away, and an ordinary umbrella is too long to put in our grip. We find among our assortment of umbrellas and parasols one which is meant for just such an emergency and which in a most accommodating manner folds up to suit the size of our traveling bag. Other new ones lock with a key. Some spread their shade over eight or nine feet of territory, and manufacturers aver that these are but a few of the improvements which we may expect.

By electricity or sent by mail on receipt of price.

THE APOSTLES' TEACHING.

An Irish Farmer Is Causing a Stir in Somerset.

Exciting scenes have marked the appearance of an itinerant preacher in South Brewham, a struggling village in Somerset, near Bruton, England, whose work has caused resentment among some of the rougher spirits of the village. The climax was reached when, as some of his converts were leaving the meeting place, they were pelted with eggs, stones, and other missiles. Several ladies were hurt, and one man was rendered unconscious. The preacher was also injured, and had to be conveyed home.

The preacher, Gill by name, has related some interesting details regarding himself. He was at one time a prosperous farmer in County Meath, Ireland, but coming under the influence of a Scottish preacher, decided to distribute all his worldly possessions among the poor and devote himself to religious work.

He is now entirely without money, and at South Brewham is living in a cottage which has been placed at his disposal free of charge. He makes no collections at his meetings, and relies for sustenance on the voluntary gifts of those who have come under his influence. His meetings are being held at the village inn, where the landlord has given him a welcome.

Mr. Gill states that he is not attached to any denomination, and has no extreme views, believing that the country should get back to the primitive teaching of the first apostles. The preacher has been asked to prosecute his assailants, but he refuses to do so.

The superiority of Mother Graves'

ELEPHANTS DELIGHT IN DRESS.

Costly and Magnificent Trappings Are Placed on Them.

Elephants are passionately fond of finery, and delight to see themselves decked out with gorgeous trappings. The native princes of India are very particular in choosing their state elephants, and will give fabulous sums for an animal that exactly meets the somewhat fanciful standards they have erected. For these they have made cloths of silk so heavily embroidered with gold that two men are hardly able to lift them.

An amusing instance of elephant pride is narrated. The elephant which usually led the state procession of a Rajah being ill, the magnificent trappings were placed on one which had up to that time occupied only a subordinate place.

The animal delighted with its finery, showed its glee by so many little squeaks and kicks of pleasure that general attention was attracted to it.

Not long after another state procession was formed, and the previous wearer of the gold cloths being restored to health, took his accustomed place and trappings, when the now degraded beast, imagining, perhaps, that he was being defrauded of his promotion, was, with great difficulty, restrained from attacking the leader of the parade.

PALE, LISTLESS GIRLS.

Can Only Obtain Health Through New, Rich Pure Blood Made by Dr. Williams' Pink Pills.

Growing girls—girls in their teens—must have rich, pure blood. Healthy womanhood depends upon the vital change from girlhood to maturity. Every woman should most carefully watch her daughter's health at this critical period. If a girl at this period has headaches, if she is pale, thin and languid, it shows that her slender blood supply is being overtaxed. She will always be ailing and may slip into a hopeless decline or consumption if her blood is not built up at once with Dr. Williams' Pink Pills. The rich, red blood which these pills make bring health and strength to every organ, and make dull, listless, languid girls, bright, rosy-cheeked, active and strong. Miss Maggie Donahue, Erinsville, Ont., says: "Before I began the use of Dr. Williams' Pink Pills I was badly run down, and it seemed as though my blood had turned to water. I was very pale, suffered from headaches and palpitation of the heart, and often I would pass sleepless nights. I found nothing to help me until I began the use of Dr. Williams' Pink Pills, and these have fully restored me and I can truthfully say I never enjoyed better health than I am now doing."

When Dr. Williams' Pink Pills replace bad blood with good blood they strike straight at the root of all common ailments like anaemia, decline, indigestion, kidney and liver troubles, skin eruptions, erysipelas, neuralgia, St. Vitus dance, paralysis, rheumatism, and the special ailments of growing girls and women. Be sure you get the genuine pills, with the full name

KAI WANG;

A TALE OF SOUTHERN CHINA.

CHAPTER IV.

Lord Rackett was eager to hear the particulars, and Avis soon gave a hasty sketch of the tragedy, as well as the bold exploit that led up to it.

"By Jove! Who but Dr. Jack would ever have dared enter that holy of holies, and force an audience upon the Emperor? It fairly takes my breath away in admiration of his exploit. I doubt if there lives another foreigner who has ever penetrated the defenses of the mysterious Forbidden City."

Larry made an inarticulate sound, and again beat himself proudly upon the chest.

"Ah! yes, you were with him, but then you are more mandarin than foreigner, Larry, my boy. What is the matter with the little bantam?" he continued, aside, to Avis; "you spoke of his having been badly injured in the melee. I trust his voice is not gone; that would be a calamity we could ill afford," he added, smiling.

Then Avis for the first time remembered Larry's vow with regard to remaining dumb until she gave him the privilege to speak, and hastened to remove the embargo.

"It is fortunate you saved the papers, Larry, as they may be of immense value to poor Jack's wife. I take it you want advice concerning their disposition, and the security this office of the Crown may afford."

Then Lord Rackett proceeded in a thoroughly business-like way to carry out just what the consul would have done had he been present.

And Avis had the assurance that the precious papers were safe under the British flag, where all the machinations of the rival Russian syndicate, or even the scheming of the Chinese party, headed by the Dowager Empress, would be unable to break the seal that bound them.

This finished, to even doubting Larry's satisfaction, Lord Rackett returned to the desperate adventure within the sacred walls of Peking, and begged the little man to describe it for him.

Here flattery got in its fine work again, for Larry could not resist the temptation to once more indulge in a flight of oratory after his unusual enforced abstinence.

So he told it all.

The Englishman's eyes flashed at mention of the battle royal, and his hand opened and shut with the eagerness a soldier experiences when hearing of lost opportunities for gaining glory.

"You could not have selected a more unfortunate time for the venture," he declared; "for some months—in fact, ever since the Dowager Empress resolved to again take up the reins of government in China—there have been mysterious goings on, and it is daily a mooted question among us foreigners down here in Canton as to whether the Emperor is still alive, or some userper sits in his place. Chinese politics are equal to a Chinese puzzle, and few understand them at all. Little the people care who rules. Go back a few hundred miles and interview the masses—you will be surprised to learn that not more than one man in fifty knows there has been a war with Japan, and even that benighted individual labors under the impression that China wiped the Russian devil, as they call even the

under the impression that you hold the papers, it wouldn't surprise me if he organized a scheme to secure possession of them. Once they are in this safe, it would mean war for China and the bombardment of her ports by British ironclads if they should be tampered with. If I can serve you, Mrs. Evans, call upon me. No task will be too difficult to prove how thoroughly I am regret for the wretched past. Meanwhile, I shall perhaps be able to protect you in a measure. So, good-by. Larry, away with your last tinge of suspicion and put full trust in me."

CHAPTER V.

Somehow Avis felt better after this interview with the Canton consular agent; she knew he represented the whole armed power of Great Britain in the Eastern seas, and that there could be no stronger arm raised up in her behalf; even the onward rush of the White Czar's legions was stayed by the mailed hand England raised when she said, "This far may you come, but no further."

Perhaps she might, if given her choice in the matter, have preferred a stranger, but something within her heart seemed to whisper that Lord Rackett was as sincere as a man could be in his desire to make amends for the wretched past, and that under such circumstances it might prove an exceedingly good thing their running across one who had so deep an interest in their fortunes.

At any rate Larry mentally thanked Heaven those papers were safe at last.

The possession of them had given him the nightmare for weeks, and he would have been ashamed to have confessed how many times he woke up under the strong impression that some Chinese thief—than whom there is no more adroit rascal under the sun—was in his frail bamboo apartment intent upon purloining the documents, and how on each occasion he had, pistol in hand, crawled around in the dark, bent upon executing summary justice upon the wretch when found—which never happened, of course.

Their stay in the British consulate had been so prolonged that it was now growing dusk.

Still the faithful coolies waited, and the man who drew the jinrickshaw stood near by; they obeyed orders to the letter; and having been told to wait, they would have been found there when the smiling face of Phoebus arose again in the east, if not relieved before.

Larry had mapped out his immediate plan.

His first duty was to see his cousin safely to some caravansary, where she could be made comfortable, and come in contact with the families of foreigners whom business chained to Canton.

Then he meant to return to the habitation of the illustrious Kai Wang, in order to arrange his affairs and prepare for departure.

True, it would undoubtedly add to his perils to appear once more in his true colors, but he believed the time had arrived to throw aside the mask and remain at the side of Dr. Jack's widow.

The little man scorned danger, being possessed of valor far in excess of his size, and snapped his fingers at the powers that be, which might be set down as the emissaries of the woman behind

...the country should get back to the primitive teaching of the first apostles. The preacher has been asked to prosecute his assailants, but he refuses to do so.

The superiority of Mother Graves' Worm Exterminator is shown by its good effects on the children. Purchase a bottle and give it a trial.

DESIGNING.

"There are very few women architects."

"No wonder. Women do not relish being called 'designing creatures.'"

Salt Rheum Cured Quick. — Dr. Agnew's Ointment cures Salt Rheum and all itching or burning skin diseases in a day. One application gives almost instant relief. For itching, Blind, or Bleeding Piles it stands without a peer. Cures in three to six nights. 35 cents. —151

SHE FOOLED HIM.

Her Mamma — "Florence, I am almost positive that he kissed you behind the door last night."

She — "Yes, but that wasn't the worst of it. It was also behind the ear."

Cholera and all summer complaints are so quick in their action that the cold hand of death is upon the victims before they are aware that danger is near. If attacked do not delay in getting the proper medicine. Try a dose of Dr. J. D. Kellogg's Dysentery Cordial, and you will get immediate relief. It acts with wonderful rapidity and never fails to effect a cure.

AN X ADDED.

Jonesmith — "My wife was such a pensive creature before I married, but she appears to have gotten over it now." Brownright — "I see. You mean she's expensive now."

"My Woman, is it the Kidneys?" — Investigation in half the disorders peculiar to women would prove faulty kidneys the seat of the trouble. If you're troubled with that tired, dragging feeling, have an almost constant heaviness, maybe sharp pains in the head, put South American Kidney Cure to the test. You'll find it the long sought friend, and it never fails. —150

Bridegroom (on honeymoon) — "I haven't the slightest objection to your giving all your time to the dog, my own, but I wish you had made it quite clear, when you suggested bringing it, whether it was you and I who were going on our honeymoon and were bringing the dog, or whether it was you and the dog who were bringing me."

EQUATOR ON A TEAR.

They were holding mid-year examinations in one of the public schools. The subject was geography. One of the questions asked was "What is the equator?"

"The equator," read the answer of a nine-year-old boy, "is a menagerie lion running around the centre of the earth."

It's easy to plan political reform while seated on an empty dry-goods box.

Knowledge of one's ignorance is the master key to wisdom.

After finding something good, get busy and look for something better.

...stomach ailments like anaemia, decline, indigestion, kidney and liver troubles, skin eruptions, erysipelas, neuralgia, St. Vitus dance, paralysis, rheumatism, and the special ailments of growing girls and women. Be sure you get the genuine pills with the full name, "Dr. Williams' Pink Pills for Pale People," printed on the wrapper around each box. Sold by medicine dealers or sent by mail at 50 cents a box or six boxes for \$2.50 by writing The Dr. Williams' Medicine Co., Brockville, Ont.

PETS OF BRITISH SOLDIERS.

One Regiment Had Emu and Kangaroo, Another a Snake.

No less than thirty regiments in the British army have pet animals attached.

The dogs of the "Fighting Fifth" and "Jack," the retriever, of the Twelfth Lancers, march with their companies when on active service, and have taken part in more than one battle. The drum horse of the Seventh Hussars—presented by the late Queen Victoria—marches proudly at the head of the men, with white tail and main flowing.

"Billy," the goat of the Welsh Fusiliers, is better known, and is a very showy soldier indeed, as he struts along in all the glory of scarlet coat, with white facings, and the badge and crest of the regiment on his forehead. The Queen's Own Hussars has also a goat.

A deer is the pet of the Seaforth Highlanders. "Antony," a little donkey, attached himself to the Twenty-sixth Battery while in India and became an established favorite, marching, eating and drinking with the men. A pet bear was the mascot of the Gloucester regiment, but becoming ill tempered had to be shot.

The Lancers of New South Wales have an emu and a kangaroo. "Peter," the goose, became the pet of the Grenadiers while in Canada. The lame bird limped up to a sentry on night and held up a hurt foot for his inspection. He attended to the wound, and the bird thereafter refused to leave the camp, so the soldiers adopted it.

When the Devonshire regiment was in India, a snake was for many months adopted as a pet, and, though poisonous, it never attempted to hurt any member of the company. When the men returned to England this uncanny pet was left behind.

STURDY BABIES.

In every home where Baby's Own Tablets are used you will find rosy, sturdy, good-natured babies because these Tablets cleanse the stomach and bowels, aid digestion, and thus bring perfect health. Ask any mother who has used the Tablets and she will tell you there is no other medicine so good. Mrs. James Hall, Beach Hill, N. S., says: "My baby was troubled with indigestion, was cross and peevish and rapidly losing flesh. I got Baby's Own Tablets and less than a box cured him and he has ever since enjoyed good health and is growing splendidly." Mothers should remember that this medicine is absolutely safe and can be given to the weakest, tenderest baby, or to the sturdy well-grown boy or girl with equally good effect. Sold by all medicine dealers or by mail at 25 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

AFTER THE SERVICE.

The Minister—"That was a rather long sermon I preached this morning, my dear. Do you think it met with the approval of the congregation?"

His Wife—"I suppose so, Abner. I noticed they were all nodding."

SOME WOMEN'S WAY.

Agent — I'm sure you'd be charmed with the house if you took it. Why don't you and your wife discuss the question?

Henpeck—My dear sir, my wife never discusses things with me. She always disputes.

There is no graduating from the school of experience.

...hundred miles and interview the masses — you will be surprised to learn that not more than one man in fifty knows there has been a war with Japan, and even that benighted individual labors under the impression that China wiped the 'foreign devils,' as they call even the Japs, off the face of the earth."

"I am sorry to hear you say the Forbidden City is guarded to an unusual extent, as it makes my task the more difficult," said Avis, slowly.

Milord looked at her curiously. "Pardon me, I don't quite understand. With the papers safe beyond all chance of seizure, your work is certainly done. What else have you in mind?"

"I must see the spot where Jack fell, and assure my wretched heart of the awful truth. Nothing less will suffice."

"But, my dear lady—that would take you inside the Sacred City, where no woman of your race ever yet penetrated!" he gasped.

"Then it is time some one did. At least such a fact does not daunt me."

"Good heavens! This is dreadful—you will no doubt meet with the same sad fate that befell your brave husband. These Black Flags and the Emperor's bodyguard are sworn to show no mercy toward those whom a fatal curiosity tempts to cross the barrier surrounding the palace island."

"While I do not allow myself to believe such a fate is in store, its contemplation cannot alarm me."

Such resolution astonished the consular agent.

"By Jove! I no longer wonder at the stupendous failure I made in my stupid attempt to win what belonged to Dr. Jack. You surely have imbued his fearless spirit. While I am forced to admire, still my judgment condemns your scheme as sheer madness, and I sincerely hope you will abandon it," he said, warmly.

At the same time he knew she would not—such natures are not easily discouraged, and the influence brought to bear in order to change her plans would have to be more powerful than he could muster just then.

So they fell into a natural conversation regarding matters connected with the case.

Lord Rackett knew Kai Wang well, and had been in the weird shop of the idol-maker of late, although Larry was not aware of the fact.

The Englishman even confessed that he had taken a shy at fortune in the shape of investing some of his spare money in shares of a grand projected enterprise which he had now every reason to believe was the very one Dr. Jack had carried to a successful end, though at such a fearful cost.

Somehow this seemed to be a bond connecting his fortunes with those of the others, and Larry's scruples were rapidly taking flight.

After all, now that Plympton had come to his senses and gained dominion over his baser passions, he was considerable of a man. Larry concluded, shrewdly: there was a bluff manner about him that somehow impressed one with his rugged honesty, and having settled this matter to his own satisfaction, the little man resolved to take things as they came; surely no great harm could befall Avis while such a wide-awake watchdog as himself hovered about.

"Beware of Peloskey—when the Russian Bear begins to suspect he has been outgeneraled through Anglo-American pluck and business sagacity, there will be a hot time in the old town. You know he is hand-in-glove with the old Empress," was the solemn warning Plympton gave.

"Yes; we had good reason to know it, by Jove," said Larry, immediately, and then went on to narrate an exciting episode that had happened to himself and Dr. Jack, while prospecting the region in dispute, whereby they came very near being overwhelmed by an organized attack, presumably from bandits and lawless thugs, but the sound of heavy Russian oaths after a hot fusillade had told them the real animus of the assault, besides producing a pleasing impression that their lead had winged the rival schemer.

"Doubtless he suspects something of the truth, and as he may be laboring

...to show us the mask and remain at the side of Dr. Jack's widow.

The little man scorned danger, being possessed of valor far in excess of his size, and snapped his fingers at the powers that be, which might be set down as the emissaries of the woman behind the throne, together with the powerful influence of the Russian "promoter."

So he saw Avis comfortably housed, and then entered his vehicle for the return ride. Lucky for him the shadows had taken possession of the native quarter, so that he was compelled to hire a couple of linkboys to run ahead of the jinrickshaw in order to light the way and do his pretended rank justice; had it been broad daylight some sharp eyes might have discovered that the automatic little mandarin sported a pair of small side whiskers, the blond hue of which was hardly in keeping with what is considered good taste in a Chinese grenadier.

Fortune seems to extend a sheltering wing over some of its proteges, and Larry had on more than one occasion found reason to believe he was favored above the common run of men.

It was a peculiar as well as ridiculous sensation, this being whisked along through the throngs of pig-tailed Celestials, and preceded by those two runners bearing flambeaux; but the effect was heightened in Larry's mind by the ever-present fact that he was sailing under false colors, and that these fellows who got out of the way of his lordship, and bowed so humbly as he passed, would have taken a fit could they have suspected the amazing truth.

Kai Wang was evidently glad to again shelter such an illustrious personage under his humble roof.

Larry, who prided himself on being a reader of human nature, and who had spent much of his spare time while recovering from his wounds in studying the idol-maker, jumped at once to the conclusion that it was more than anxiety concerning his absence that caused Kai Wang to greet him so effusively.

Something unusual had occurred while he had been gone; yes, Kai Wang, who had nerves of steel, and had faced many a crisis with the proverbial coolness of an iceberg, was actually showing signs of excitement.

Perhaps the coming of Avis had something to do with this change—the advent of her charming personality in the game, and the prospect of possible harm befalling Dr. Jack's widow, even as it had the valiant representative of the

Get SCOTT'S Emulsion

When you go to a drug store and ask for Scott's Emulsion you know what you want; the man knows you ought to have it. Don't be surprised, though, if you are offered something else. Wines, cordials, extracts, etc., of cod liver oil are plentiful but don't imagine you are getting cod liver oil when you take them. Every year for thirty years we've been increasing the sales of Scott's Emulsion. Why? Because it has always been better than any substitute for it.

Send for free sample

SCOTT & BOWNE, Chemists
Toronto, Ont.
50c. and \$1.00. All druggists

great syndicate—this would account in a measure for the trembling hand and troubled look with which Kai Wang met his guest—but there was more.

And Larry, who made it a rule never to allow any mystery to get the better of him, immediately concentrated the whole force of his powerful intellect upon the question.

The establishment of Kai Wang was in close juxtaposition to a pagoda or temple that reared its pinnacle aloft after the fashion of Chinese mosques in general.

Doubtless it was very convenient for the priests to run in at the back door and replace any frail god that had suffered the fate of all idols made by human hands; besides, on extraordinary occasions they could borrow the more weighty deities Wang had in stock, and thus make a showing far beyond rival temples.

It sometimes pays to live in close juxtaposition with one whose abilities run in the line of supplying the crying needs of an idol worshipping community.

During his convalescence Larry had made a study of these things, as viewed from behind the curtains of Kai Wang's chambers, and as the windows were always open he had the weird singing service of the priests, and scented the peculiar smoke of burning joss sticks, not unlike the sweet odor of tuberose, until he had grown to like it.

Even now he could hear the strident voice of the black-robed disciple of Confucius as he harangued the almond-eyed Celestials who prostrated themselves before the great joss of the temple; and this, with the penetrating odor of incense that floated in through the back window, seemed combination enough to give the situation all the romantic interest one could expect or desire.

So inspired by this and the curiosity that in common with all Eve's children he inherited through woman, Larry proceeded to exert his powers upon the heathen, and discover why Kai Wang's face had such an unusually lengthy look, while a furtive gleam appeared in his slanting eyes.

(To be continued).

AN EX-MAYOR GIVES UNSTINTED PRAISE

"DODD'S KIDNEY PILLS ARE THE VERY BEST MEDICINE I EVER USED FOR KIDNEY TROUBLE."

Mr. Robert Sheppard, Ex-Mayor of Gananoque, Ont., Testifies to the Merits of Dodd's Kidney Pills.

Gananoque, Ont., April 30.—(Special.)—"I suffered off and on for over four years from kidney trouble," writes Mr. Sheppard, of this place, "and though I tried many remedies and was under a doctor a long while I got no better. I had Bright's Disease slightly, Lumbago, pains in my loins and at times all over my body. My skin was dry, hard and burning, I could not sleep, the least exertion made me perspire fearfully and my blood was so bad I broke out in boils all over the neck and back. I was in this state when I started taking Dodd's Kidney Pills and in an incredibly short space of time the boils disappeared, I recovered my health and now I am quite cured."

SUBTERRANEAN WORLDS.

The Great South Dakota Cave is the largest cavern in the world. It is situated in the region of the Black Hills, and exceeds even the Mammoth Cave in Kentucky. It is fifty-two miles long and contains 1,500 rooms, many of which are over 200 feet high, and are crossed with stalactites and stalagmites.

AUSTRALIAN DROUTH.

In parts of Australia where the average yearly rainfall is not more than ten inches a square mile of land will support only eight or nine sheep. In the Argentine republic, South America, the same area, with thirty-four inches of rain, supports 2,560 sheep.

This is a ticklish job, as the fly remarked while it was walking over the old man's bald head.

Miserable Folks could trace both state of mind and body to some one or other form of stomach disorder. Dr. Von Stan's Pineapple Tablet is a "vest pocket" remedy that nature provides and that medical science has proved a wonder in preventing and curing stomach ailments. If you've a symptom of distress in your stomach test the Pineapple cure. 35 cents.—152

Kitty — "So you have been to Paris? You must have had a nice time there; you understand the language so perfectly, you know." Bessie — "Well, the fact is, though you'd hardly believe it, they speak such queer French there that it's quite impossible to converse with them with any degree of intelligence."

Corns cause intolerable pain. Holloway's Corn Cure removes the trouble. Try it, and see what amount of pain is saved.

Teacher — "What is the conscience?" Little James — "It's something that makes you sorry when you gets found out."

MARK THIS DISTINCTION: A purely local disease of the skin, like barber's itch, is cured by Weaver's Cerate alone. But where the blood is loaded with impurity, such as Salt Rheum, Weaver's Syrup also should be used.

Fair Girl — "My father made his fortune when he was a young man. Would you like to know how he did it?" Gallant Youth — "Not particularly; but I would like to know if he has still got it."

A Clear Healthy Skin — Eruptions of the skin and the blotches which blemish beauty are the result of impure blood caused by unhealthy action of the liver and kidneys. In correcting this unhealthy action and restoring the organs to their normal condition, Par-melee's Vegetable Pills will at the same time cleanse the blood, and the blotches and eruptions will disappear without leaving any trace.

"I have discovered a great labor-saving device." "I always said you were a genius. What is it?" "I am going to marry Miss Bullion, the heiress."

Sunlight Soap is better than other soaps, but is best when used in the Sunlight way. Buy Sunlight Soap and follow directions.

If a man only had nine lives like a cat, he could insure them all and collect on one occasionally when he got hard up.

Man and Wife in Distress. — Rev. Dr. Bochrer, of Buffalo, says: "My wife and I were both troubled with distressing Catarrh, but we have enjoyed freedom from this aggravating malady since the day we first used Dr. Agnew's Catarrhal Powder. Its action was instantaneous, giving the most grateful relief within ten minutes after first application." 50 cents.—153

It sometimes happens that the man who considers his wife one in a thousand imagines her mother is the other nine hundred and ninety-nine.

WHAT DO PEOPLE NEED who are run down, anemic, pale, listless? "Ferrovin," the best tonic. It builds, makes strong, it gives new life. There are many tonics but only one "Ferrovin."

Traveller — "Why do you allow that waiter to remain constantly so close to that young married couple? It evidently annoys them." Restaurateur —

largest cavern in the world. It is situated in the region of the Black Hills, and exceeds even the Mammoth Cave in Kentucky. It is fifty-two miles long and contains 1,500 rooms, many of which are over 200 feet high, and are massed with stalactites and stalagmites of great size. There are streams, waterfalls, and thirty-seven lakes in this vast subterranean world, which is 6,000 feet above the sea-level and 400 feet deep.

A REVELATION IN TEA.

The Tea trade of the world has undergone a remarkable change in the past few years. Twenty years ago practically all the Tea of the world was supplied by China and Japan. About this time there appeared an insect in Ceylon which attacked the coffee tree and in a very short time the entire coffee plantation was destroyed.

Some enterprising Scotch planters commenced the planting of tea and the first shipment made to the London market brought the most extraordinary prices, they developing a quality in the cup far superior to anything ever known in tea previously. These Ceylon teas rapidly made a foothold in England until to-day the exports to that country amount to one hundred and twenty-five millions pounds annually.

The "SALADA" Tea Co., commenced their introduction in Canada and the United States packing teas in air-tight, sealed lead packets, and both their black and green teas have made wonderful progress; American tea drinkers finding this tea superior to anything they ever tasted in either the black or the green teas of China and Japan. The utter absence of coloring matter in their green teas says much for their healthfulness and their delicious flavor speaks for itself.

A WOLF WAS HE.

"I heard that you called me a beast, Miss Tobasco."

"Well, I guess I did."

"What kind of a beast, may I ask?"

"A wolf, I fancy. You're so hard to keep from the door, Mr. Borehman."

It Retains the Old and Makes New Friends. —Time was when Dr. Thomas' Electric Oil had but a small field of distribution, but now its territory is widespread. Those who first recognized its curative qualities still value it as a specific, and while it retains its old friends it is ever making new. It is certain that whoever once uses it will not be without it.

INSTEAD OF A CROWN.

Do You Know How the Sheet of Foolscap was Named?

Everyone who has to do with paper recognizes foolscap as a sheet thirteen by sixteen inches. This is used as a standard size all over, officially and commercially. The paper derived its name in a curious manner.

After the execution of Charles I., Cromwell and his staff, in organizing the Commonwealth, made all possible efforts to remove everything which had anything to do with the old monarchy. The paper in official use up to that time had, as a watermark, the king's crown; and, when Cromwell was asked what he should put in the place of this crown, to show his overwhelming dislike to everything concerning royalty, he directed a fool's cap to be put in the place of the crown.

This was done, and, when Charles II. ascended the throne of England, it was at first forgotten to replace the cap by something else, and then, too late, the king was afraid to do anything to recall things dangerous to touch, and so it was neglected, and the fool's cap may be seen as a watermark on nearly all official papers.

IN THE GAME.

Mamma—"Ethel, what do you mean by shouting in that disgraceful fashion? Look how quiet Willie is!"

Ethel—"Of course, he's quiet; that's our game. He's papa coming home late, and I'm you."

There are many tonics but only one "Frerovim."

Traveller — "Why do you allow that waiter to remain constantly so close to that young married couple? It evidently annoys them." Restaurateur — "Oh, because they keep ordering things so as to get him out of hearing."

Be There a Will Wisdom Points the Way. — The sick man pines for relief, but he dislikes sending for the doctor, which means bottles of drugs never consumed. He has not the resolution to load his stomach with compounds which smell villainously and taste worse. But if he have the will to deal himself with his ailment, wisdom will direct his attention to Parnelle's Vegetable Pills, which, as a specific for indigestion and disorders of the digestive organs, have no equal.

Magistrate — "You were begging in the public streets, and you had over \$10 in your pocket." Prisoner — "Yes, sir; I may not be as industrious as some, y'r honor, but I'm no spendthrift."

THE WORST KIND

After Piles have existed for a long time and passed through different stages, the suffering is intense—pain, aching, throbbing, tumors form, filled to bursting with black blood.

Symptoms indicating other troubles may appear to a thoroughly Pile-sick person.

This is when Dr. Leonhardt's Hem-Roid, the only absolute Pile cure, brings the results that has made its fame.

It will cure the most stubborn case in existence and a bonded guarantee to that effect goes with each package.

Hem-Roid is to be had for \$1.00 at the drug store, or from The Wilson-Fyle Company, Limited, Niagara Falls, Ont.

WHAT A PAPAL BULL IS.

An Order From His Holiness to be Publicly Declared.

A Papal bull is published by the Pope. It may be an edict, a decree, or a rescript, which contains an order or a decision to be publicly declared.

It is only indirectly that the word "bull" is applied to the document itself. It belongs properly to the seal, without which the paper would not be recognized. This seal is rarely of gold or of wax. It was originally of lead, and is still commonly of that material. Lead was used for seals in the time of the ancient Romans, and is still used for that purpose in Italy.

The Italian name of this bit of lead is *bolle*. It was in Latin *bolle*. Both the material and the form dropped out of sight.

The Roman bulla was a circular disc or a case like a watch or a circular buckle. It was worn by boys of noble families, attached to a chain which was

For 33 Years

Shiloh

as a cure for Coughs, Colds, and all diseases of the lungs and air passages. Those who have used Shiloh would not be without it. Those who have never used it should know that every bottle is sold with a positive guarantee that, if it doesn't cure you, the dealer will refund what you paid for it. Shiloh

Has Cured

thousands of the most obstinate cases of Coughs, Colds and Lung troubles. Let it cure you.

"Last winter I coughed for three months and thought I was going into Consumption. I took all sorts of medicines, but nothing did me any good until I used Shiloh's Consumption Cure. Four bottles cured me. This winter I had a very bad cold, was not able to speak, my lungs were sore and I was in danger. Six bottles of Shiloh made me well again. I have given it to several people, and every one of them have been cured.—D. Joseph, St. Hyacinthe, Que." 602

SHILOH

25c. with guarantee at all druggists.

A Cleveland costs say \$60, and lasts easily 10 years. Cost per year \$6.00

A cheaply made bicycle costs say \$30, and lasts 2 years. Cost per year \$15.00.

Not much of a sum in arithmetic to figure out which is the better investment, is it?

And if you ride a Cleveland, you have a beautiful and easy running bicycle during all that time with no expense except for new tires.

What of your friend who rides the so-called cheap wheel, and whose investment amounts to two and one-half times as much as yours per year?

It pays to pay for quality, for quality is something that is remembered long after the price is forgotten.

Cleveland Bicycles in both Cushion Frame and Rigid Frame Models are made and guaranteed by the

FACTORIES STARTING UP

Work Resumed in San Francisco's Big Ship Yards.

A despatch from San Francisco says: Conditions of life are gradually becoming more normal in this city, and the work of clearing up the wreck in preparation for rebuilding in the downtown section of the city is going on more rapidly. Business is being resumed by certain tradesmen of every description throughout the destroyed section of the city. The commission firms located along the water front are doing a thriving business.

MUST USE CANDLES.

Mayor Schmidt has announced that all the time restrictions as to the lighting of dwellings has been removed with the suggestion that candles be used until electricity can be resumed. Petroleum for lighting purposes is especially prohibited until the water supply is fully restored.

The united railroads have already in operation seven lines of street cars, and now cover nearly all sections of the unburned district. The work of inspecting chimneys is proceeding rapidly. The inspectors are all architects or builders and are donating their services for the benefit of householders. Every chimney in the city will be thoroughly inspected before any permits are issued to make fires indoors.

FACTORIES STARTING UP.

Many of the largest factories left unharmed are starting up work with all rapidity possible under the circumstances. At the Union Iron works, 2,300 men are now employed and the management expects within a fortnight to have the full complement of 4,000 at work. No damage was done to the three new warships being built at these works for the Government, the cruisers California and Milwaukee, and the battleship South Dakota. The steamer City of Puebla, which was sunk in the bay, has been raised and is being repaired. Workmen are also engaged fixing the steamer Columbia, which was turned on her side.

PLANS FOR REBUILDING.

At a conference held on Tuesday night at Gen. Greely's headquarters, plans for rebuilding the City of San Francisco with Government aid was discussed. There were present besides Gen. Greely, James D. Phelan, Dr. Edward Devine, Mayor Schmitz, and Secretary Victor Metcalf, of the Department of Commerce and Labor. It was thought Secretary Metcalf might be able to carry back to Washington a comprehensive idea of the needs of this city, and the ideas of some of her leading men that the discussion was held. No definite request was made, nor was any plan of action fully outlined.

PRAYERS OF HARDENED MEN.

Locked in separate cells in the city prison, 100 prisoners, whose crimes range from plain drunkenness to brutal murder, knelt in prayer when the earthquake of April 18 shook the Hall of Justice from basement to tower top. Sin-hardened men and women appealed to God to spare them. Their prayers for deliverance came only after it became apparent that the attendants could do nothing for them. The earthquake had so twisted and warped the cell locks that not a door could be opened for nearly an hour.

"I never want to witness such sights again," said Prison Matron Ryan of the Central Station Prison, who was on duty when the tremble came. "There were something like 80 men and 22 women in the cells on the morning of the earthquake. In our department there were abandoned creatures charged with all manner of crimes, many of whom I deemed hopelessly lost. They cried and shrieked for mercy when the

The steamer Manitou brought in the body of one of three victims of the first disaster on the lakes this season. The body is that of Edward Fletcher, engineer on the tug Clipper, which sank off the Bustard Islands early Monday morning with the loss of the lives of three out of the crew of four: Capt. McIntosh, French River, Edward Fletcher, Cutler, engineer; Robert Johnston, Midland, fireman.

On Sunday morning she cleared from Midland in command of Capt. Peter McIntosh, of French River, to go into commission for her new owners. Edward Fletcher, of Cutler, was acting as engineer, and Robert Johnson, of Midland, as fireman, with Alberi Beatty, Midland, as cook. Between Byng Inlet and French River early Monday morning the boat began to leak so badly that an attempt was made to beach her, which was unsuccessful, and the crew attempted to save themselves in a small yawl, which, however, was not in a condition to hold them, and capsized. They managed to reach the sunken tug, the deck-house of which was not far below the water, and by climbing on it saved themselves for a time. A fishing boat was sighted, but could not be attracted by their signals of distress.

About 7 o'clock Monday evening Beatty started out on a raft made of a pall rack and a broken door, and made his way to a small island, one of the Bustards, where he remained till he was rescued about thirty hours later in a semi-delirious condition, from hunger and exposure, by a fisherman named William Hazzard. A search for the others proved fruitless, and Beatty was taken to the Bustard station of the Dominion Fish Company, where he was given every possible care.

RUSHING TROOPS TO EGYPT.

Turkey's Claims Cause Great Britain to Take Action.

A despatch from London says: The British Government has chartered the Leyland Line steamer Cestrian to convey troops to Egypt. She will be handed over to the authorities as soon as she arrives at Liverpool from Boston, which port she left on April 25.

Members of the House of Commons are anxious for information regarding the probable course of events in the Anglo-Turkish dispute on the subject of the Tabah boundary, but they obtained little satisfaction from the Foreign Secretary at question time on Tuesday. In reply to an interpellation he said that the Turkish claims on the Sinai Peninsula extended far beyond Tabah, so that a joint delimitation of the whole frontier was necessary. The British Government, therefore, had demanded a delimitation and the withdrawal of Turkish troops from Tabah pending a general settlement. The Porte hitherto had declined to agree to this, but was again being urged to agree to the British view.

He added that the report of the commander of the British cruiser Minerva, sent to investigate the alleged removal of the frontier pillars, had not yet been received, but the Grand Vicer had informed the British Ambassador at Constantinople, Sir Nicholas O'Connor, that a Turkish commission would be despatched to enquire into the matter, and that if the pillars had been displaced they would replace and repair them.

BOMB THROWN AT GOVERNOR.

His Foot Blown Off and Severe Wound to the Head.

LEADING MARKETS

BREADSTUFFS.

Toronto, May 8.—Flour — Ontario—Steady; 90 per cent. patents sell at \$3.10, buyers' bags, outside, for export. Manitoba — \$4.30 to \$4.50 for first patents, and \$3.90 to \$4 for seconds.

ONTARIO LEGISLATURE

WHAT THE LEGISLATURE AT TORONTO IS DOING.

THE "SOO" GUARANTEE.

Hon. Col. Matheson submitted a statement respecting the "Soo" guarantee. The statement was as follows:—

"In regard to the loan commonly known as the Sault Guarantee Loan for \$2,000,000, falling due on the first of May, the Canadian Improvement Company, whose certificates were guaranteed by the province, found that they were unable to have the province relieved of the whole guarantee. After negotiations, it was agreed that the province should release one-half of the collateral securities, being a portion of the bonds, income bonds and stock of the Lake Superior Corporation, and the Canadian Improvement Company procured a loan for \$1,050,000 without the guarantee of the province.

"As it was found that the further sum of \$1,000,000 required could not be obtained without the guarantee of the province, the Government, under the authority of the Act passed during the present session, guaranteed certificates for \$1,000,000, payable with interest at the rate of 5 per cent. per annum in six months from the 1st of May, in renewal of one-half of the former certificates, and on these the Canadian Improvement Company obtained a loan of \$1,000,000, the whole of this \$2,000,000 principal money, and \$50,000 interest, was paid into the Morton Trust Company on the 1st of May instant.

"The Government's present liability is on renewal certificates of the Canadian Improvement Company for \$1,000,000 payable with interest at 5 per cent. per annum on 1st November next at the office of the Morton Trust Company, and for this guarantee the Morton Trust Company hold as security for the province 'the pledged securities,' being all the stock and bonds of the Algoma Central and Manitoulin Railways, and the mortgage on the vessels of the company, and also one-half of the 'collateral securities' formerly held, being \$1,209,000 bonds of the Lake Superior Corporation out of \$10,000,000, \$153,000 income bonds out of a total of \$3,000,000, and \$2,682,000 of the stock of the said corporations out of a total of \$40,000,000.

"The Government had arranged that in case of necessity they should be able to pay in the whole \$2,000,000 on 1st of May so that there should be no dishonor of the provincial guarantee."

RECOVERING SUBSIDY LANDS.

The Legislature's ratification will be asked for the bargain between the Government and the Grand Trunk Pacific Railway Company whereby the latter will hand over to the province 525,000 acres of its subsidy land in the Rainy River District, and be relieved of its obligation to bring in settlers. A bill with that intent, entitled, "An Act respecting the Aid Heretofore Granted to the Grand Trunk Pacific Railway," was introduced by Hon. Dr. Reaume, seconded by Hon. Mr. Monteith.

TO INVITE THE KING.

Mr. McDougall moved—that this Legislature notices with pleasure that the House of Commons and the Senate of Canada have by resolution prayed that his Majesty King Edward VII. and Queen Alexandra graciously extend to this portion of his Majesty's Empire the honor of a personal visit.

That we most enthusiastically endorse the action of the Canadian Parliament in this behalf, and most earnestly hope that his gracious Majesty may afford to the people of Canada the opportunity they have so long desired of offering to him personally the cordial assurances of their unwavering loyalty and deep devotion.

That we therefore express the wish that his Majesty may be pleased to accept the invitation extended to him by the Parliament, and concurred in by all the people of Canada.

VOTERS MUST BE CANADIANS

...the morning of the earthquake. In our department there were abandoned creatures charged with all manner of crimes, many of whom I deemed hopelessly lost. They cried and shrieked for mercy when the shock came, and pleaded pitifully for release. Not one cell could be opened, and when I advised my charges of this fact they knelt on the hard cement floor and offered up a fervent prayer in unison.

"In the department of the male prisoners the conditions were the same, and many of the men attempted to destroy their lives by battering their heads against the steel bars when they realized there was no chance for immediate release. They, too, prayed when the attendants in charge managed to get them calm enough, and when it was all over it was a meek and humble hundred that we moved to the branch county jail."

CLEANING AWAY DEBRIS.

Curtailment of the relief list, together with the decision of the police to arrest as vagrants all able men without visible means of support who refuse to work, to-day added to the number of men engaged in cleaning away debris from the recent earthquake and fire.

There is not yet an adequate flow of water for us in case of fire. Cooking is still carried on in the streets. All of the banks resumed business to-day in temporary quarters and reported that at each place the deposits exceeded the withdrawals. Five hundred retailers are now operating in new quarters.

City Engineer Woodward on Thursday submitted a comprehensive plan for the rebuilding of the city. It includes the broadening and the extension of many streets, the purpose being to insure better protection against the spread of fire.

ASYLUM IS RUINED.

A despatch from Saint Jose, Cal., says: Architect Hudson, of Los Angeles, who has inspected the Asylum buildings, at Agnew's, declares that all the buildings had been irreparably ruined. In his report to the Governor, Mr. Hudson will recommend the speedy erection of cottages to accommodate the patients until modern structures, not as highly as merited, and which will be effected by other fire nor earthquake, can be erected by the State.

ADD EFFECTS OF EARTHQUAKE.

A despatch from Stockton, Cal., says: It has been discovered that in the vicinity of Woodbridge, the Mokelumne River has fallen twelve feet, the bed of the river having dropped from the effects of the recent earthquake shock. As the waterway has overflowed frequently, farmers along the stream are highly pleased with the change, since it can carry far more water than hitherto and not endanger their lands.

Another incident of the earthquake is the drying up of the Tracy Lake in the north-western part of San Joaquin County.

GREAT DESTITUTION.

A despatch from Washington says: The question of caring for the destitute in San Francisco is causing the officials there great anxiety, as shown by the following telegram from General Greely, dated Friday, and received at the War Department:—

"The number of destitute being fed enormous, aggregating by to-day as just reported 19,637 in San Francisco. Apparently conservative estimates placed destitute refugees at 40,000 in Oakland and Berkeley. How these terrible conditions are to be met is a subject of most earnest consideration between Devine, finance committee and myself. While exertions of army to reduce aid to smallest possible limit had effected important changes, yet solution of situation without enormous suffering appears impossible. While daily hoping for great decreases in number of destitute, am not confident. Ear-reaching extent of this disaster cannot be appreciated without personal observation."

CAPTAIN AND TWO MEN DROWNED.

The Tug Clipper Sprang a Leak in Georgian Bay.

A despatch from Owen Sound Says:

them.

BOMB THROWN AT GOVERNOR.

His Foot Blown Off and Severe Wound in the Head.

A despatch from St. Petersburg says: While Vice-Admiral Doubasoff, Governor of Moscow, was returning on Sunday afternoon to his residence from a church service in commemoration of the Czarina's nameday, a young man threw a bomb at him. The missile exploded and blew off one of the Governor's feet and severely wounded him in the head. It is feared that the latter wound will prove fatal. The man who threw the bomb was killed, as were also the Governor's adjutant, Col. Kokonetzoff, a policeman, who was standing outside the church, and a boy. The assassin was dressed in the uniform of a naval officer.

The news of the attempted assassination is keenly discussed by the members of the Duma, who are now gathering in the capital. It is the impression among several of them that the Terrorist party, which was abnormally quiet throughout the elections, is determined to do its utmost to prevent the pacific transition which the dismissal of Count Witte and Minister of the Interior Durnovo foreshadows as a possibility of the Czar announcing liberal concessions to the existing Duma. It is known, moreover, that several members of the secret police who are Nihilists are members of the Terrorist wing of the revolutionary party. They had an opportunity for facilitating to-day's attempt.

ZULUS ATTACK BRITISH.

Charged the Troops Almost to Their Rifle Muzzles.

A Durban, Natal, despatch says: A force of Zulus attacked Col. Mansel's column near Celewayo's grave on Sunday, but they were repulsed with a loss of about sixty killed and wounded. The blacks are estimated to have numbered nearly 1,500. They were apparently advancing in their traditional crescent formation, intending to envelop Col. Mansel. About 200 of them attacked prematurely, charging Col. Mansel's advance guard almost to their rifle muzzles. The charge completely failed, despite the fact that it was made with characteristic Zulu bravery. The colonial force had three men wounded. Col. Mansel in his report says that the steadiness of the Durban Light Infantry at a critical stage of the attack prevented the whites from sustaining very serious casualties. The native police attached to the mounted rifles behaved courageously. Col. Mansel captured a quantity of cattle, and burned several kraals.

MURDER ON THE PRAIRIE.

Body of an Unknown Man Found Near Morris, Man.

A Morris, Man., despatch says: The body of an unknown man was found in a ravine near here on Sunday with the head smashed and every indication of foul play. There is little clue to the identity of the body found, but probably the deceased was one of two foreigners who worked in a thrashing gang near the Lowe farm last fall, who left with their wages and disappeared. A straw hat nearby showed that the body had lain there since last season. When found the remains had been partially devoured by wolves. An effort had been made to cover up the crime by firing the prairie, as evidenced by blisters on the corpse, which showed that the fire had passed over it either before or immediately after death. The last fire in that vicinity was late in October last year. One jaw had been broken and other injuries inflicted. About forty yards from where the corpse lay a club was found with clots of blood and hair upon it, and evidently deceased had received his death blow there and attempted afterwards to crawl away.

There will be a November session of Parliament.

25, alive, \$7.50 for selects.

BUFFALO MARKET.

Buffalo, May 8. — Flour — Firm. Wheat — Nominal; one car No. 2 red sold at 89½¢. Corn — Stronger; No. 2 yellow, 55½¢; No. 2 corn, 54½¢. Oats — Stronger; No. 2 white, 37¢; No. 2 mixed, 35½¢. Barley — Store lots quoted 47 to 52¢. Rye — Quiet; No. 2 in store quoted 65¢, carloads.

NEW YORK WHEAT MARKETS.

New York, May 8 — Spot barley steady; No. 2 red, 91¢ nominal elevator; No. 2 red, 93¢ f.o.b. affoot; No. 1 northern Duluth, 89¢ f.o.b. affoot; No. 1 northern Manitoba, 88½¢ f.o.b. affoot.

LIVE STOCK MARKET.

Toronto, May 8.—A fairly heavy run of cattle was offering at the Western Market this morning.

Export Cattle — About the best cattle on the market sold at \$5.10 per cwt. Choice are quoted at \$4.90 to \$5.15, medium to good at \$4.50 to \$4.75, bulls at \$3.50 to \$4, and cows at \$2.75 to \$4.25.

Butcher Cattle — Picked lots, \$4.75 to \$5, good to choice, \$4.40 to \$4.65; fair to good, \$3.75 to \$4; common, \$2.50 to \$3, cows, \$3 to \$4; bulls, \$3 to \$4; canners, \$1.50 to \$2.

Stockers and Feeders — Short-keep feeders are quoted at \$4.75 to \$4.85, heavy feeders at \$4.40 to \$4.90, medium at \$2.50 to \$3.50, bulls at \$2 to \$2.75, good stockers run at \$3.75 to \$4, light at \$3.25 to \$3.70, rough common at \$2 to \$2.75, and bulls at \$1.75 to \$2.50.

Milk Cows — Quotations are unchanged at a range of \$30 to \$60 each. Calves — Quoted unchanged at 3c to 6c per lb.

Sheep and Lambs — They are quoted at \$4.75 to \$5.50 for ewes and \$3.50 to \$4 for bucks. Grainfed lambs are lower at \$6.75 to \$7.25, and spring lambs steady at \$3 to \$6.

Hogs — Quotations at this market are unchanged at \$7.15 per cwt, for selects and \$6.90 for lights and fats, fed and watered.

POLICEMAN ARRESTED.

Charged with Breaking Into a Companions Trunk.

A Toronto despatch says: The police at the Court Street Station had in their custody on Friday night one of their number, Police Constable John Boyd (297), who is held on the charge of stealing \$20 belonging to his comrade, Policeman R. J. Jeffers (102). The two constables roomed at 228 Wilton Avenue, and, it is alleged, that while Jeffers was out on duty on Friday Boyd broke open a trunk and abstracted the cash. Boyd was suspected by the landlady, because he was seen in the room, and claimed to be shining his shoes. Inspector Gregory and Detective N. Guthrie pursued the investigation and, questioning him, they learned that he had in his room eleven five-dollar bills and \$1.33 on him. Searching him the officers found a ten and a five dollar bill of the Ontario Bank issue in the constable's watch pocket. Pending a report to Chief Grasett, Inspector Gregory suspended Boyd, who was afterwards arrested on the order of the Chief Constable. Boyd has been a member of the force since September of last year. He is 24 years old.

BOOM IN MONTREAL.

Present Year Will be Record in Building Operations.

A Montreal despatch says This year promises fair to be a record for building operations in Montreal. Since the first of January building permits have been issued for 635 new buildings, the value of which is estimated at \$1,457,711, while alterations have been made to the tune of \$184,719 cash expenditure. The total now reaches \$1,542,430. The month of April constitutes a record for the building department since its inception, permits for new buildings having been issued for an expenditure of \$871,940.

vation.

That we therefore express the wish that his Majesty may be pleased to accept the invitation extended to him by the Parliament, and concurred in by all the people of Canada.

VOTERS MUST BE CANADIANS.

The Legal Committee reported Mr. McGarry's amendments to the municipal Act, the Ontario Election Act, and the Manhood Suffrage Registration Act, by adding to the form of oath prescribed to be taken before registration the words, "That you are not a citizen or subject of any foreign country." The committee was unanimously in favor of the amendment, which is to prevent persons who have become citizens of the United States returning to this country simply for the purpose of voting.

The committee also regarded favorably Mr. MacKay's amendment to libel law to make fair newspaper reports of public meetings, and the publication of authorized Government documents privileged.

BILLS ADVANCED A STAGE.

Hon. Mr. Monteith's bill to amend the Act to prevent fraud in the manufacture of cheese and butter, and Hon. Dr. Reaume's bill respecting the recent agreement with the Grand Trunk Pacific were read a second time. Hon. Mr. Fox's measure to amend the Devolution of Estates Act, Hon. Mr. Cockrane's bill respecting the Ontario and Minnesota Power Company, and Mr. McKay's bill to amend the Act respecting actions for libel and slander passed the committee stage. Mr. Bradburn's measure respecting the City of Peterborough, and Mr. Fraser's amendment to the Act to prevent the waste of natural gas and to provide for the plugging of abandoned wells, were read a third time.

MILITARY RAILWAY.

Permission was given the Pembroke Southern Railway Company to extend its line to Petawa, in order to connect with the new camping ground established by the Dominion Government.

TREE CULTURE.

Mr. Downey's bill to provide for the exemption of woodland lots passed the committee, though the Premier objected to some of its features.

BUTTER AND CHEESE.

Mr. Monteith's Act to prevent fraud in the manufacture of butter and cheese was not opposed in any quarter, but a number of the members thought that one inspector was hardly sufficient for the duties he was required to undertake.

GET READY FOR 'QUAKE.

Says Man Who Made Forecast of Blizzards in 1888.

A special to the New York Tribune from Middletown, N. Y., says:—An earthquake that will shake the underpinning of all New Zealand is predicted between the 22nd and 24th of this month by Uncle Horace Johnson, the Middle Haddam weather prophet. The shocks are to be accompanied by severe lightning and high winds, according to the seer, and the electrical discharges will be so great that Mr. Johnson urges the farmers not to tether cows in the open fields on those dates. He warns everybody to make for the cellar door when the first noise comes, for the earthquake shocks are likely to be severe enough to topple over some of the church steeples and high chimneys. Uncle Horace gained considerable note by forecasting the blizzard of 1888.

VICTIMS OF DYNAMITE.

Four Men Killed in New Brunswick by Premature Explosion.

A despatch from St. John, N. B., says: Word was received here on Wednesday of the killing of four men on the Aroostook River, near the Maine border, by a dynamite explosion. Preparatory to beginning log-driving operations four men were employed in blowing out ice in a piece of dead water. While thawing dynamite for this purpose a quantity of it exploded, blowing the workmen to pieces. Three of the dead men were New Brunswickers and one from Maine. Two leave families.

Mr. W. J. Moffatt, manager of the Simcoe Canning Company, died suddenly at Hamilton, on Friday, after a brief illness from pneumonia.

Trouble is expected between the C.P.R. and the longshoremen at Quebec. The company want to reduce wages to the Montreal standard.

The Dominion revenue amounts for the ten months ended April 30th to \$63,808,359, which is \$6,677,848 more than for the same period a year ago.

A census of the three prairie provinces will be taken as to both population and agriculture as they stand on Sunday, 24th June.

H. F. Matthews has been appointed assistant superintendent of the C.P.R. stationer and printer.

DOMINION PARLIAMENT

NOTES AND PROCEEDINGS OF THE OTTAWA HOUSE.

YUKON TERRITORY.

Mr. Oliver introduced a bill providing a mining code for the Yukon Territory which, he explained, was brought down in response to the request of the Yukon Council, and at the express wish of the people of the Yukon, who desired to have existing regulations in regard to placer mining crystallized into statutory law, with, of course, some amendments to meet the changed conditions. The bill, he added, was practically drafted by the Yukon Council.

THE CRIMINAL CODE.

Mr. Fitzpatrick introduced a bill to amend the criminal code, which extends provisions for taking evidence in foreign countries by commission in cases where persons are under indictment to cases disposed of by summary procedure.

PRIVATE BILLS PASS.

The Railway Committee reported a number of private bills, among which were the following:

To enable the Canada Atlantic Railway Company to acquire the capital stock and bonds stock of the Pembroke Southern Railway and guarantee the bonds of the line to the amount of \$150,000.

To extend for five years the time within which the Mather Bridge & Power Company may obtain the consent of the United States to bridge the Niagara River between Fort Erie and Buffalo.

To sanction the construction of several additions to the Kettle River Valley Railway Company's system in Southern British Columbia.

To extend the time for the completion of the Schomberg and Aurora Railway which is owned by Mackenzie and Mann; also to authorize the construction of the extension to Nottawasaga Bay and Bowmanville.

To incorporate the Vancouver, Fraser Valley, and Southern Railway Company.

To enable the Pueblo Light and Power Company to engage in railway building, etc.

RAILWAYS AND TELEPHONES.

Several amendments were made to Mr. Emmerson's bill to amend the railway act, the chief of which gives power to the Railway Commission to compel railways in cities, towns or villages to connect their lines for the purpose of transferring engines and cars from one railway to another. A special committee will deal with the clauses bringing telephone tolls under the supervision and control of the Railway Commission. Tributes to the late Hon. Peter White were paid by Sir Wilfrid Laurier and Mr. R. L. Borden.

CATTLE IMPORTS.

At the sitting of the Agricultural Committee Dr. Rutherford said that unless greater precautions were taken to enforce the existing regulations it might be necessary to shut out American cattle.

Mr. A. L. MacLaren asked Dr. Rutherford what was being done regarding the extermination of glanders, which had spread in certain parts of western Ontario. He also asked the Minister of Agriculture what was being done along the line of warning the farmers and others with regard to purchasing horses which frequently came into Eastern Canada and the States. Mr. MacLaren contended that it was a very serious matter when farmers bought bronchos and other horses coming from sections where glanders were and put them in with their own horses on the farms; they certainly would be more cautious if they knew of the great danger they ran by buying such horses. He recommended that the practice of allowing them to come in be either stopped altogether or that the Government should take steps to advise the public

M. WITTE HAS RESIGNED

Goremykin Is Now the Premier of Russia.

The London Times' correspondent at St. Petersburg cables as follows:—Count Witte's resignation has been official since 10 o'clock on Wednesday morning. Delay in the announcement was due to the hope of a compromise. I am now in position to explain the motive of the Premier's departure. Count Witte insisted on immediate promulgation of the new immutable organic laws, the object of which was to leave him a free hand under the shelter of the autocracy and deprive the Duma of any initiative in matters concerning the future government of the country. The outburst of indignation consequent upon the revelation of this scheme showed the utter absurdity and danger of such an attempt to reconcile the old and new regimes, but the Emperor had no need of arguments to convince him and he declared the project unseemly, unwise and dangerous. "My wish," said he, "is that the Government be conducted in orderly fashion and that the country may have peace. These new laws would only stir up a conflict and compromise me before my people. We must wait till the Duma has begun its work and then see what changes are necessary." There is little doubt regarding the Emperor's sincere desire to abandon bureaucratic methods and invite the cordial, healthy co-operation of his subjects in the noble task of governing this great country. The logical course in such circumstances would seem to lie in the formation of a Cabinet recruited from the popular elements. There is considerable talk of such a Ministry.

THE NEW PRIME MINISTER.

A despatch from St. Petersburg says: The official announcement that Premier Witte's resignation had been accepted, coupled with the statement that former Minister of the Interior Goremykin would succeed him, was made on Wednesday. M. Goremykin's elevation to the Premiership created amazement. He is not only regarded as a reactionist, but the general opinion is that he is not equal to the task of facing the coming crisis.

AN UNRELENTING ENEMY.

M. Goremykin, the new Premier, was exposed by Witte in 1899, and since then has been the retiring Premier's unrelenting enemy. At that time the former Minister of the Interior made a report to the Emperor to the effect that the stories of famine and suffering which were said to exist in certain provinces were untrue. Witte—then Minister of Finance—thereupon produced documents to prove that the conditions in the interior were as they had been represented. When the Emperor confronted M. Goremykin with this he is

said to have fallen on his knees, to have wept and begged forgiveness. The Minister was so overcome that the Emperor himself brought him a glass of water. Later M. Goremykin took part in the Von Plehve cabal which drove Witte from the Ministry of Finance in 1903.

MAN OF INSIGNIFICANT PARTS.

M. Goremykin is reported to be a mediocre man of insignificant appearance, as well as capacity. He wears side whiskers, and looks like an English butler. While for some time past he has been called a Liberal, it was only in contrast with such men as Von Plehve and M. Siplaguine, the late Interior Minister.

The new Premier comes from a noble but not prominent family of Novgorod Province, where his estates are situated. They are noted especially for the excellence of their cows and their dairy products, which are sent to St. Petersburg. In fact M. Goremykin practically supplies the capital with milk.

AFTER WITTE COMES DELUGE.

The St. Petersburg correspondent of the London Daily Telegraph again predicts that serious trouble will follow the retirement of Premier Witte. He says the autocracy is resolved to make another determined stand for existence, cost what it may, and in preparation for possible consequence eight more quick-firing guns have been sent to Moscow, bringing the total there to 32. The conviction is universal that the Douma has been invited to a Barmecide feast. Instead of a dessert there will be ructions. No conciliation is conceivable, no compromise is possible between the Crown and the nation. A conflict is certain, unavoidable, imminent. Even Count Witte could not now avert it.

The correspondent asserts that Count Witte only retained nominal power to secure the new loan. Neither France, England, Austria, nor England would have subscribed to enable Russia to wage civil war. They loaned their money for a reorganization of the empire, but the court camarilla resolved to employ it for their own interests, breaking the promise Count Witte was authorized to make. The Government of Russia, the correspondent declares, is now being carried on by secret influences, the centre of which is Gen. Trepoff, whose authority has continually gained since he quitted St. Petersburg for Tsarkoe-Selo.

Diplomatic circles are profoundly impressed by the disclosure of the Government's policy. The appointment of Goremykin as Count Witte's successor is regarded as the most fatal event since the war.

MINERS WILL NOT STRIKE.

The Convention Accepts Proposal of the Operators.

A Scranton, Penn., despatch says: Peace has come from the convention of delegates assembled here representing the three anthracite districts of the United Mine Workers of America. When the convention reassembled on Saturday morning John Mitchell read the report of the sub-committee of the Scale Committee, which recommended that the men return to work under the provisions of the Strike Commission, provided that there be no discrimination against the men who obeyed the suspension order, and that the union men have their jobs back. Mr. Mitchell followed this with an address, in which he set forth his reasons for favoring the recommendation, and told the men that

WESTERN CROP MOSTLY IN.

The Canadian Northern Railway's Report of Seeding Operations.

A Winnipeg despatch says: The Canadian Northern seeding report for the week indicates that in the older districts the work is finished, and from 75 to 90 per cent. is completed in the north-western part, and in the newer districts. Rain has fallen, doing much good, and in Battleford district there was a fall of snow, which was also of benefit. At Gladstone 50 per cent. is above ground. About 9,000 acres are seeded in Kam-sack, and there are 3,000 acres yet to be seeded. At St. Jean 5,000 acres are under crop, while 20,000 will be seeded around Emerson, Lowe Farm, Acland, Dunrea and Minto. No rain has fallen around Neepawa. The growth in the majority of districts is very rapid.

for the same period a year ago.

A census of the three prairie provinces will be taken as to both population and agriculture as they stand on Sunday, 24th June.

H. F. Matthews has been appointed assistant superintendent of the C.P.R. sleeping, parlor and dining car service, with headquarters at Montreal.

Mr. Arthur Piers is credited with the statement that the C.P.R. have ordered two more steamers of the Empress type in Great Britain, and will give a weekly fast service across the Atlantic.

GREAT BRITAIN.

The sailors of the British fleet under Prince Louis, which visited New York last fall, have sent a silver loving cup to the sailors of the United States squadron.

UNITED STATES.

The longshoremen's strike is resulting in great loss to United States shipping.

The new United States battleship Rhode Island stranded in Chesapeake Bay on Saturday.

No more free lunches, said Judge McClure, of Selinsgrove, Penn., when 32 liquor licenses were granted on condition that no free lunches be served. He said the bar is too big an attraction as it is, without the lunch counters.

G. W. Bell, of Bay City, Texas, accidentally shot and killed himself while sleeping. Reaching under his pillow in his sleep he pulled the trigger of his revolver. The shot went through the pillow and entered his temple.

Miss Helen Priest, of Mason, Mich., while talking to another teacher, said with a laugh, that she was not going to worry over other teachers' troubles, she continued to laugh, finally becoming hysterical. Doctors were called but could do nothing for her and she died.

GAS AT FORT FRANCES.

Workmen Boring for a Sewer Strike a Pocket.

A Fort Frances despatch says: Considerable excitement has been caused here by the discovery of natural gas. While boring to test the soil preparatory to putting in a sewer on Mowat and Scott streets, workmen bored to the depth of thirteen feet, and, noticing a smell of gas, a match was applied, and it burned with a clear flame for some time. There is no doubt that gas and lignite coal can be found in great quantities underlying the town site, as specimens of coal have been found in several places. It is quite probable that the Town Council will at once make a systematic search for gas, and if it should be found in quantities it will add another feature to the development of Fort Frances as an industrial centre.

TRACK LAYING ON G. T. P.

The First Rails Put Down at Portage la Prairie, Man.

A despatch from Portage la Prairie, Man., says: The first steel of the Grand Trunk Pacific was laid here on Tuesday, without ceremony or ostentation. The first sod on the new Transcontinental, it will be remembered, was turned at Portage last summer. The company have opened up yards on the western limits of the town. Grading was undertaken last month, and this will be the centre of the distribution of supplies. It is the intention to lay out yards here on a large scale. Steel was put down in the yards, and quite a mileage of sidings will be put in.

SMUGGLING BY WOMEN.

Sixty-eight Ladies Were Searched at Brockville.

A Brockville despatch says: Thursday afternoon Mrs. Kate Northway of Windsor, a customs inspector, met the arrival of the steamer Riverside from Ogdensburg, N.Y., and invited 68 ladies to her private apartments, all of whom were thoroughly searched and many articles confiscated. One lady had a number of small dishes in her stockings and clothing.

them with their own horses on the farms; they certainly would be more cautious if they knew of the great danger they ran by buying such horses. He recommended that the practice of allowing them to come in be either stopped altogether or that the Government should take steps to advise the public to be careful as to purchasing horses coming from a foreign country.

ZULUS MURDERED OFFICIAL.

The British Magistrate at Mahlabitini Killed.

A despatch from Pietermaritzburg, Natal, says: An outrage which may have serious consequences has occurred in Zululand. Mr. Steinbank, the British magistrate at Mahlabitini, Zululand, has been killed by Zulus while collecting taxes near that place. Mr. Steinbank and party, including Mrs. Steinbank, the magistrate's wife, a lady companion and some mounted police, were caught in an ambush by hostile natives, who fired a volley at them. The magistrate and one of the policemen were fatally wounded. Mr. Steinbank and the two ladies managed to reach Mahlabitini, where the magistrate died of his wounds.

Mahlabitini lies to the westward of the forests where Bambata, the insurgent chief, formerly the regent of the Greytown district, Natal, who has been in arms against the local authorities for a month past, has been hiding, and it is asserted here that there seems to be no doubt that he has succeeded in inducing another tribe of Zulus to join the revolt.

SANITATION A PASSION.

The Ladies in Prussian Saxony Given Fair Warning.

A despatch from Nordhausen, Prussian, Saxony, says: The Town Council of Nordhausen has issued an ordinance prohibiting women from allowing the trains of their dresses to drag in the streets, as a "measure for the protection of health and for the prevention of tainting the air with dust." The penalty for infraction of this ordinance is a fine of \$7.50. The police department of Nordhausen had previously forbidden women to allow their dress trains to sweep the sidewalks of the Friedrich Wilhelm platz and the adjacent streets. The Council now extends the regulation to the entire city. The passion for sanitation sweeping over Germany is likely to result in similar ordinances being enforced by other countries.

BRIDE SAW HUSBAND KILLED

She Was Bidding Him Good-bye in the Round-house.

A despatch from Edmonton, Alta., says: A horrible accident happened Saturday, in which Engineer J. J. Woolsey, Canadian Northern Railway, lost his life in the presence of his young wife, to whom he had been married a few months. He went to the round-house and mounted the cab, where his wife waited to bid him good-bye. His hand was on the throttle lever, when suddenly the cab was filled with live steam; the injector had burst. The engineer jumped from the engine to escape, but the motion threw the throttle open, but the locomotive sprang clear of the building, throwing the man to the ground, the wheels passing over his neck. He was picked up a few minutes later with his head completely severed from his body. The young wife, distraught, was taken from the scene.

NO SUPPORT FROM GERMANY.

Turkey Need Not Expect It in Quarrel With Britain.

A despatch from London says: The Standard on Thursday morning said it understands that Count Wolff-Metternich, the German Ambassador, has informed the British Government that Turkey cannot rely on German support in the event of a quarrel with Great Britain.

provisions of the Strike Commission, provided that there be no discrimination against the men who obeyed the suspension order, and that the union men follow their jobs back. Mr. Mitchell followed this with an address, in which he set forth his reasons for favoring the recommendation, and told the men that he preferred the award of the Strike Commission to the restricted and partial arbitration offered by the operators.

RUSSIA PLAYING DEEP GAME.

No More News of the Demobilization of the Army.

A despatch from St. Petersburg says: Further intimations that Russia is playing a deep game in the Far East is given in a circular sent by the censorship to all newspapers and periodicals forbidding the publication of any news with regard to the demobilization of the army and movements of troops in Manchuria and the reorganization of the military establishments in Siberia and the Far East. It is generally supposed the circular was incited by the publication of the news of the halt in withdrawing the Russian army from Manchuria, and the despatch of the Novitski expedition to Mongolia, which, though supposed to be general staff secrets, were published even in official papers, and are liable to seriously embarrass Minister Pokotiloff's negotiations at Peking.

KING EDWARD AT PARIS.

Dined at the Palace of the Elysee With President Fallieres.

A despatch from Paris says: King Edward dined at the Palace of the Elysee on Thursday with President Fallieres. The President toasted the King, saying: "Your Majesty's frequent visits are a precious pledge of the cordiality of the relations between France and England. Both are happy to sincerely act together for civilization and peace."

King Edward expressed the pleasure his visits to France had afforded him, adding:—"I am sure the entente cordiale will do more than anything else to safeguard peace."

BOMB KILLS THE OWNER.

Exploded in Forest of Vincennes—Another Russian Injured.

A Paris despatch says: A bomb explosion occurred in the forest of Vincennes at 2 o'clock on Thursday afternoon, killing a Russian named Strie and dangerously wounding a companion named Boussnoff. The men were proceeding through the woods, each carrying a bomb with the evident purpose of hiding them for future use. While so doing the bomb which Strie carried exploded, killing him instantly. Boussnoff was struck by fragments of the bomb and fearfully lacerated. The remaining bomb has not yet been examined owing to the danger in handling it.

NO GARRISON NOW.

Britain May Return Wei-Hai-Wei to China.

A Shanghai despatch says: The Chinese regiment at Wei-Hai-Wei, which was organized by the British Government and was officered by British has been disbanded, and its commanding officer, Major H. Bower, left for England on April 28. Great Britain has no garrison there now. It is reported that it will return the port to China.

TEN KILLED IN WRECK.

Two Passenger Trains Collide Head-on on Pennsylvania Railroad.

A despatch from Harrisburg, Pa., says: Two passenger trains collided head-on in Cutoff, near Williamsburg, on the Pennsylvania Railroad, at 10.45 o'clock this evening. It is reported ten people are killed and many injured. Many physicians from Huntington have been sent to the scene of the wreck.

About 9,000 acres are seeded in Rainsack, and there are 3,000 acres yet to be seeded. At St. Jean 5,600 acres are under crop, while 20,000 will be seeded around Emerson, Lowe Farm, Acland, Dunrea and Minlo. No rain has fallen around Neepawa. The growth in the majority of districts is very rapid.

A BUFFALO TRAGEDY.

Woman Was Shot Down on a Leading Thoroughfare.

A Buffalo, N. Y., despatch says: John Koryernski of Altoona, Pa., enamored with Mrs. Francis Skrocka of the same city, and who repulsed his advances, shot and killed her on the street at Broadway and Sweet avenue on Wednesday afternoon, and then shot himself through the heart. Both died instantly. Mrs. Skrocka, with her husband and two children, left Altoona two weeks ago to avoid the attentions of the murderer, who followed her to this city. Wednesday afternoon he met her on Broadway, when the tragedy occurred.

JAPAN SCARED BY QUAKE.

Shock Felt From Tokio to the Island of Formosa.

A Tokio despatch says: A strong four-minute earthquake was felt at 8 o'clock on Saturday morning at Osaka, and caused a general panic. No damage was done, owing to the fact that the motion was gradual. The oscillations were felt from Tokio to the Island of Formosa.

HON. PETER WHITE DEAD.

Close of an Active Business and Political Life.

A Pembroke despatch says: Hon. Peter White, M.P., of Pembroke, Speaker of the House of Commons from 1891 to 1896, died at Clifton Springs, N. Y., on Thursday morning.

EXPLOSION IN SWEDEN.

Nitro-glycerine Factory Blown Up and Four Killed.

A Stockholm, Sweden, despatch says: Every building of the dynamite factory near Vinterviken belonging to the Nitro-Glycerine Company was destroyed on Wednesday by an explosion, the cause of which is not known. Four men were killed.

FARM NOTES.

Horses will rest much better during the night if cleaned up well during the evening.

In building up the fertility of the soil, there is nothing so beneficial as bran manure. Eighty to ninety per cent. of the nutrition of food is returned to the soil in manure.

A correspondent writes:—I have tried all the different kinds of grass that I could find, singly and combined, with many of the different kinds together, and have finally adopted timothy and red top, as I have found that they work best together and will produce about 1½ tons more to the acre.

In planting early potatoes some days may be gained by cutting the seed and spreading it in a warm room until it callouses and the buds begin to start, and to avoid danger of freezing the seed should be crowded down into the bottom of the furrow by stepping on it, and covered with two inches of partly rotted manure before the earth is put on. Planted in this way the mercury may fall to ten degrees for a single night without injuring them.

Success in growing the calf, whether raised by hand or nursed by the dam, depends very much on the care it receives during the winter and spring. It must be well cared for during the first winter, or no matter how well bred or how well it may be fed as a yearling or finished for market, it will not reach its full possibilities. It is the mistakes of the first winter that are serious in handling any kind of young stock.

THE BEST FLOUR. DAFOE'S NONESUCH DAFOE'S MANITOBA PATENT

By numerous tests by the best Bakers the above mentioned grades have been proven to be the best Flours in the market. When buying Flour, ask for Dafoe's, and patronize your home mill, thereby producing Bran and Shorts that you can purchase cheaper than the product of the Western mills, which has to be transported thousands of miles at great expense, and usually, when it reaches you, of inferior quality.

The grocer complains if the farmer or the mechanic sends to Toronto or to outside points for an article he can get at the home store just as good, but he does not hesitate to buy Flour from mills hundreds of miles away, and sell you an inferior Flour for more money than you can purchase the home product for, every bag of which is guaranteed.

CHOICE CORN MEAL and BUCK-WHEAT FLOUR always on hand.

FEED GRINDING a specialty, with the best feed mills known to the trade.

A full stock of the best ANTHRACITE COAL. Also in the market for the purchase of all kinds of Grain.

Ask for prices at the big Mill before purchasing your Flour, Feed or Coal.

The Salvation Army Emigration.

Blank application forms for farmers who wish to apply to The Salvation Army for farm help may be had at this office.

Beautifying the Park.

The Horticultural Society should be commended for their public spirit in placing over one hundred dollars worth of ornamental trees and shrubs in the Harvey Warner park. The trees and shrubs were planted last week and if well taken care of should make the park a beautiful place indeed. A number of seats have been ordered for the park and will be placed in it as soon as they arrive. The Napanee Band gave their first band concert in the park on Friday evening last and rendered an excellent programme.

One gallon of Prism Brand Paint will cover 360 sq. ft., two coats. Every can guaranteed.
The Medical Hall.—Fred L. Hooper, sole agent for Napanee.

Wedding at Desmond.

A pretty wedding took place at the residence of Mr. and Mrs. Joshua Switzer, at Desmond, on Wednesday, May 2nd, when their daughter Miss Mabel Switzer was married to Mr. Clarence Milligan, of Newburgh. The house was tastefully decorated and the happy couple were made man and wife by the Rev. C. E. S. Radcliffe, B.C.I., rector of St. Luke's church, Camden East. After the wedding ceremony was ended a large company of friends and relatives partook of a splendid wedding breakfast, when appropriate speeches were made testifying to the esteem in which the bride and bridegroom are held by the community, also the hospitality and kindness of Mr. and Mrs. Switzer. The presents were numerous and showed the respect in which the bride was held in the neighborhood. We wish them all success in their journey through life. The bride was handsomely gowned and looked very smart. Mr. Geo. Lee acted as best man whilst Miss G. Lee assisted the bride.

Gold in Addington.

Oso, Ont., May 10—A quartz reef has been discovered on the farm of David Todd, three miles from the Oso railway station. The reef is three feet six inches in width, and assaying one ounce of gold per ton. Developing work is to be carried on in a rapid manner and it is expected that success will attend this discovery. A. Harris, mining engineer, with a staff of miners are busy on the discovery.

Geo-Stinson.

The marriage of Mr. Archie Gee, Clareview, and Miss Eloreance Ann Stinson of Tamworth took place at six o'clock Wednesday morning, May 2, at Christ Church, Tamworth. Miss Maggie Stinson, sister of the bride, acted as bridesmaid while Mr. John Gee, brother of the groom, did the duties of best man. Rev. J. W. Jones was the officiating clergyman. None but the contracting parties were present. The bride was handsomely attired in white silk with white chiffon hat trimmed with foliage. Her going-away gown was of light green mohair cloth. The bridesmaid was similarly attired. Amid showers of rice and best wishes they were accompanied to the station by a host of friends where they took the early train for Kingston to spend their honeymoon with friends.

Funnell-Sills.

A very pretty wedding took place on Wednesday evening, May 9th, at the home of Mr. and Mrs. E. R. Sills, Richmond, when their daughter, Carrie Grace, became the bride of Mr. W. J. Funnell, of Oshawa, son of Mr. and Mrs. William Funnell, of Morven. The bride who was given away by her father, was gowned in white, and wore the orthodox veil of tulle and orange blossoms. She was supported by Mrs. Clarke, of Napanee, as Matron of Honor. The flower girls being little Miss Davis and Miss Sills, who looked perfectly sweet. Mr. Garfield Sills, brother of the bride, supported the groom. The ceremony was performed by the Rev. J. R. Reel, of Napanee. The spacious home of Mr. Sills was beautifully decorated with evergreens, flags, bunting and flowers, and the ninety guests present all seemed to enter into the spirit of the occasion. After the ceremony an elaborate supper was served. One interesting feature being, that all the delicious cake were made by the bride. The popularity of the bride was evidenced by the numerous useful and costly presents. The groom's present being a beautiful gold watch and chain. Among the presents most appreciated was one from Rev. Mr. Wickett, Mr. Funnell's former pastor. Among the guests from town we noticed Mr. and Mrs. Irvine Parks, Mr. and Mrs. Casfield Shorey, Dr. and Mrs. Wagar, Mr. and Mrs. W. T. Gibbard, Mrs. Chablico, Mr. and Mrs. A. E. Paul, Dr. Vrooman, Mr. and Mrs. M. S. Madole, Mr. and Mrs. M. C. Bogart, Mrs. Rev. Reel. The happy couple took the midnight train for Toronto and other western points and will make their future home at Oshawa. With their many other friends we wish them bon voyage.

Belleville, May 5. — John Lucas,
charged with stealing grain and flour
from G. T. R. bonded cars at the
station here, was this morning found
guilty in the Police Court. Sentence
was deferred for a week at the request
of the prisoners' lawyer.

Peter McQuade, minus part of one
leg, residence any place in Canada,
was arrested on Thursday morning as
a vagrant, by Chief of Police Graham,
and will have an appearance before
Magistrate Rankin to-day. When
searched he had over seven hundred
dollars on him, and was begging for
more.

It is again rumored in railway circles
that the Canadian Northern Railway
are making overtures for the purchase
of the Grand Trunk belt line around
the city and the Bay of Quinte Railway.
The rumor states that the Central
Ontario line, on which the Canadian
Northern now have an option, will also
be purchased.

The cheese board met yesterday
afternoon for the first this season.
The following officers were elected:
E. Long, president; J. C. Fraser, vice-
president; E. H. Phippen, secretary,
and A. Alexander, treasurer; auditors,
A. Alexander and J. C. Fraser. At
the board 144 white and 721 colored
cheese boarded. McGrath bought 89
white and 23 colored at 10½c.; Thomp-
son, 55 white at 10½c 10½c offered for
balance; no sales. The board will meet
every Friday afternoon.

MADOLE & WILSON.

Alleviating Circumstance.

It distressed Miss Willing to find
how much the little girls in her Sun-
day school class thought about dress
and outward adorning. She never lost
an opportunity to tell them how slight
was the importance of such things.

"The reason I didn't come last Sun-
day was because my coat wasn't fin-
ished," said small Mary Potter one
day when questioned as to her non-
appearance the week before. "My old
one had spots on it that wouldn't come
off and a place where the buttons had
torn through."

"But, Mary, dear," said the teacher
gently, "you know it's not the outside
that really matters."

"Yes'm, I know," said little Mary,
"but, Miss Willing, mother had ripped
the lining out, so there wasn't any in-
side to look at!"—Youth's Companion.

The Strenuous Life of Old.

This is said to be a "strenuous" age.
Doctors or people who dabble in the
doctor's art talk about the "pace" we
all live now, the stress and storm of
life in England in the twentieth cen-
tury, and so forth. But are we all so
tremendously strenuous? Are we
greater in will or work than English-
men were in the Elizabethan age or
than they were, say—we take date at
random—in 1806? English literature
and history do not show convincingly
that this is so.—London Saturday Re-
view.

Memorial Window.

Brockville, May 4, 1906.

Editor Express:

Dear Sir,—I shall be grateful if you
can find space for the following letter:

At the suggestion of the bishop of
the diocese, it is proposed to place in
St. George's Cathedral, Kingston, a
memorial to the late Archdeacon T.
Bedford-Jones. There is nothing
there to commemorate his forty years
connection with the diocese as priest,
precentor, canon, archdeacon and fre-
quently commissary. Few clergy had
more to do with laying the foundations
of church life and work in the whole
diocese of Ontario from its inception
in 1802, and many have thought that
there should be an outward sign of this
in the cathedral of the diocese.

It is proposed to place a window in
the east apsis, the cost of which will
be \$150, part of which has already been
promised. Any friends who would like
to contribute towards this object are
now invited to do so, and may send
their subscription either to me or to
Mr. C. E. Baynes-Reid at the Molson's
Bank, Brockville.

Appended is the letter of commen-
dation from His Lordship the Bishop.

I remain, yours, etc.,

Herbert S. McDonald.

Bishop's Court, Kingston, May 2.

I very heartily commend the proposal
to erect a memorial in the cathedral.
Kingston, to the late Archdeacon
Bedford-Jones, who for so many years
held such prominent and responsible
offices in the diocese, and to whom the
undivided diocese was so greatly in-
debted. I feel very strongly that there
should be a memorial in the cathedral
as diocesan expression of appreciation of
his life and work.

BOYLE & SON.

THE SCILLY ISLANDS.

They Have but Three Seasons—Spring, Summer and Autumn.

The climate of the Scilly Islands is the most equable in Great Britain. It ranges on an average from 40 degrees to 60 degrees. On the coldest day it is warm and on the hottest it is cool. There are only three seasons in Scilly of four months each—spring, summer and autumn. When the autumn ends spring commences. There is no great height in the islands. The highest land in Bryher is only 133 feet above sea level, although the telegraph tower built on St. Mary's reaches a height of 158 feet, but the rock scenery of the entire group of these islands is remarkable. There are rocks fantastic, jagged, peaked, toothed, serrated; rocks resembling living creatures and others suggestive of primeval vastness and uncouthness; some grandly castleated, others

Like a great lion's cheek teeth.

Those on the peninsula of Penninis, especially if they are seen in mist, Menawar (pronounced man-of-war), the Maiden Bower, Mincarlo, Shipman's Head, the Haycocks at Annet and many others are strikingly grand. The curious resemblance to primeval animal forms has given rise to many of the names of these rocks and certainly many are

Like a great sea beast, crawled forth to sun itself,

while there are "elephants' tusks," "monks' cowls," "pipers' holes," "giants' castles," "pulpit rocks," etc.—London Spectator.

Miserable Deception

PRACTISED BY
Certain Makers of Adulterated
and Worthless Package Dyes.

Notwithstanding the unanimous verdict of the world's most eminent color chemists, that it is impossible to color animal (wool and silk) fibres, and vegetable (cotton and linen) fibres with the same dye, we find speculators who are jealous of the world-wide success of the DIAMOND DYES putting up and offering for sale worthless package dyes which they represent will color any material with one dye. This cruel deception has caused serious losses to many a home in Canada.

The DIAMOND DYES, the world's great leaders, give to the ladies special dyes for wool and silk, and special dyes for cotton and linen and all mixed goods, guaranteeing perfect color results.

The ladies will insure and protect their interests if they avoid all merchants who sell the crude and worthless package dyes recently put on the market. In every case ask for the DIAMOND DYES, and see that each packet bears the words "DIAMOND PACKAGE DYES." Please send your name and address to WELLS & RICHARDSON CO., LIMITED, MONTREAL, P. Q., and you will receive free of cost New Instruction Book for Home Dyeing, Card of Dyed Samples, and story in verse entitled, "The Longjohn's Trip to the Klondike."

SUMMER TIME NECESSITIES

Now is, or should be the time to make the necessary preparations for the summer time wearing apparel. Our Mr. Madill having returned from a flying visit to Montreal, and having secured an excellent variety of the most predominating materials, etc., which will be placed on Special Sale from time to time. In order to allow the buying public to realize more readily our strength and powerful buying facilities. We advise with EMPHASIS the necessity of reading Madill's adds and consider the savings you save, by shopping at this the most popular store.

Thursday 24th May, (Victoria Day) this
Store will be Closed.

SATURDAY SPECIAL.

A hand-bag special of real merit, just a little different from all other Yohisi, a Japanese import, not leather but a composition consisting of hemp and rice and lesser quantities of collodion, logwood and lacquer. So dexterously combined as to defy the exact proportions used, being the first of its kind in Canada. YOHISI will be a leader. As an introduction this special item for Saturday will reveal wonders, in the (Bag) world. See our Special Window Display of Yohisi Bags, and be on hand Saturday morning at 10 a.m. 49c. EACH the regular price is 75c, in colors of Brown and Black. Introduction price.....

See Our Holiday Display Window.

The Corset Department.

A Department of great importance to the well dressed lady of to-day. Stop, think for a moment the necessity of a good and perfect fitting Corset. Think for a moment the necessity of coming to this store for the greatest selection. Space will not permit details regarding our Corset Stock, but we may say that the most particular can be suited from our select and well assorted stocks.

THE PLAZA BARBER SHOP
A. WILLIS.

The well-known farm of Wm. A. Warner about a mile from Trenton was sold last week to James Valteau of Brighton township for \$12,000. It contains 53 acres, about 30 of which is in orchard and 4 in vineyard and has good buildings.

It is said that the new steamer now running on the Deseronto route, the Jessie Bain, makes the distance between Deseronto and Picton, including stops at the various docks, in one hour and ten minutes. This is considerably better time than that made by the Deseronto before she went to the bone yard.

E. LOYST has a carload of good potatoes, Royal Household flour, all other grades. Bran, Shorts, Cream Equivalent, Flax Seed, Oil Cake, Rock Salt, barrel and sacks fine and coarse, Groceries. Highest price paid for eggs and hides. One price to all.

Mallorytown, May 14—Gaunt and pretty well exhausted, Challabran, the escaped lunatic-murderer, quietly accepted arrest at the hands of County Constable Wilbur Mallory on the main road between Mallorytown and Kingston, early Monday evening. At midnight he was taken back to the penitentiary by Detective Foster. He still wore prison trousers. Other garments he had on had been stolen, he also told the officers a location in the bush where they might recover a fur coat which he had taken from the home of Capt. Carnegie at Rockwood. A silver spoon with the Carnegie initials was found on him.

Deseronto, May 12—During the fierce electrical storm which passed over this section of the country to-night, the English church, situated on the Mohawk reserve, about one mile west of Deseronto, was completely demolished. The lightning struck the north-west corner of the structure, igniting the frame-work, and unfortunately a heavy wind from the west fanned the flames the entire length of the building. Relief was sent out from Deseronto, but as there was no water within reach they could offer no resistance to the flames. A stained glass window presented by Dr. Oronhyatekha was entirely destroyed, but nearly all the fixtures were removed. This church was a very old one and has a very interesting history. The congregation

DA—FRIDAY, MAY 18th 1906

THE LATE D. W. ALLISON.

Universal regret was expressed in town on Tuesday afternoon, when it was learned that Mr. David W. Allison had passed away at his home in Adolphustown. Deceased had been in failing health for the past few months and his death was not unexpected. A couple of years ago he was severely injured at Picton races, and since that time had never enjoyed his usual robust health. D. W. Allison was a grandson of Benjamin Allison, the first of the Allison family to settle in Canada, and his late residence now stands but a short distance from the spot where the pioneers first landed.

Deceased has for many years been a prominent figure in the life and times of the Township of Adolphustown and in fact the whole County of Lennox. In a number of political contests in Lennox he was the Liberal standard bearer and was elected to the Dominion Parliament in 1883 and again in 1891 and by his death Liberalism loses one of its most staunch supporters in this county. In 1781 he was elected warden of Lennox and Addington county and made an excellent presiding officer, assisting materially in the important work of consolidating the county debt.

Socially he was held in the highest esteem. He was a member of the Masonic craft, having received the highest degrees obtainable in this country.

He married Amelia Elizabeth Embury, a member of one of the oldest families in the township. His hospitality was unbounded, and his home the centre of social life in that community. Mr. Allison was a member of the Methodist church, and one of its liberal supporters.

Deceased was born and bred in Adolphustown and with the exception of a few years spent in Michigan his whole life was spent in this county.

Some time after leaving school the late Mr. Allison entered commercial pursuits, and how successful his exertions were is best learned by looking at the position which he held in the industrial life of the country. By his keen business tact he amassed a fortune which he employed by promoting the prosperity of the community in various active pursuits. Every enterprise which promised to be of public advantage received his encouragement and support. He was extensively engaged in the manufacture of lumber and salt in the Saginaw Valley, Mich., and held important interests in mineral lands. In addition to such enterprises Mr. Allison engaged in farming upon

TOWN COUNCIL.

Council Chamber,
Napanee, May 14th, 1906.

A special session of the Council was held Monday evening. Mayor Lowry presiding. Councillors present—Meng Graham, Kinnerly, Normile.

At eight o'clock the members of the School Board made their appearance, it being the regular meeting night of the board, and the council vacated, and finished the remainder of their business in the police court office.

COMMUNICATIONS.

A communication was read from R. S. Kelsch, Montreal, in which he suggested that the rate for electricity be 15 cents per kilowatt, instead of 10c. per kilowatt, and that a discount of 33 per cent be allowed on all bills paid when due. Fyled for future reference.

A communication was read from Allis-Chalmers-Bullock Co., Montreal, asking payment of one-third of their account, as per contract for electrical goods supplied for electric light system. The total amount of their account is \$5480.00. Laid on table.

A price list for electrical supplies from C. W. Bongard Co. was ordered fyled for future reference.

A communication was read from the Robb Engineering Co., Amherst, N. S. in which they advised the council as to where they might secure the services of an efficient engineer for electric light system. Laid on the table until the next meeting of council.

In reference to the purchase of a hose wagon for use of fire brigade, the Canadian Fire Engine Co., of London, Ont. quoted prices as follows: \$350 for wagon which would carry 1000 feet of hose and up to date in every particular or \$300 for wagon without fixtures for carrying Babcock chemical engines; for a single set of harness from \$45 to \$50. Laid on table.

The Hugh Cameron Co., Toronto, quoted \$425 as the price for an up-to-date hose waggon. Laid on table.

The tenders of R. Light and Rathbun Co., for plank, etc., was referred to the Street Committee to report at next meeting of council.

The Fire, Water and Light Committee reported as follows: account of Chas. Anderson correct; the account of the Gas. Co. correct; coal used to heat town hall during winter of 1904-1905, eleven tons. Coal used during winter months of 1905-1906, fifteen tons, a difference of four tons; recommended that the extra coal burned last winter be charged to Eastern Methodist church; as to amount of gas consumed in town hall would suggest waiting awhile so that committee could make better comparison. Report adopted.

The Poor and Sanitary committee reported recommending that no action be taken in reference to removal of John Wickham, to Kingston. Adopted.

Councillors Normile and Meng moved a motion in reference to surplus water running over sidewalks from gangways along Dundas street. The question was left in the hands of the town solicitor, and if it can be legally attended to, the property owners responsible will be asked to take such steps as will do away with this undesirable nuisance. The motion carried.

large received his encouragement and support. He was extensively engaged in the manufacture of lumber and salt in the Saginaw Valley, Mich., and held important interests in mineral lands. In addition to such enterprises Mr. Allison engaged in farming upon an extensive scale, and was some years ago the largest land owner in the county of Lennox and Addington.

Besides his wife, four children are left, viz: Dr. David Allison, Williams-town, N. Y.; May L. Allison, Oshawa; John B. Allison, Custom's Collector at Napanee, and Raymond J. Allison, at home. The remaining brothers are: Cyrus Allison, Parma; Joseph Allison, Adolphustown. John and Henry died some years ago. The sisters are: Mrs. Guasulas, and Mrs. Mallory, Adolphustown; and Mrs. W. Briden, Kingston.

The funeral took place yesterday and the remains were placed in the splendid Mausoleum which deceased erected years ago on the bay shore. It is solid cut stone, which is nearly as indestructible, either by time or the elements, as it is possible to make, and there the remains of himself and family will be placed when their career here is ended.

The following gentlemen from Napanee attended the funeral: Jas. Daly, D. H. Preston, F. Burrows, T. B. Geyman, J. L. Boyes, T. Symington, M. S. Madole, C. M. Warner, and Dr. Leonard.

For Marking Linen.
WALLACE'S RED CROSS DRUG STORE sells and indelible ink for marking Linen that makes a jet black mark, is easy to use and does not wash out. Price is 25c.

AMHERST ISLAND.
Saturday night's electrical storm did considerable damage to the frame dwelling of Henry Filson, Amherst Island. The lightning played down the chimney, to the first floor. By a queer freak several spots in the front room carpet were burned; plaster was knocked off the walls; part of the foundation of the house knocked out and the roof around the chimney burned. Mr. and Mrs. Filson, sitting in the dining-room, received a severe shock.

The great curative powers of this remarkable remedy is attracting much attention and everywhere it has been introduced it is winning its way among the people. It is a powerful, penetrating oil which we believe has a larger percentage of cures of rheumatism to its credit than any other remedy ever offered for this dread disease. It acts directly on the bone—the lodging place of rheumatism—dispels the poisonous acid from the joints to be carried out the system in the natural way and by its splendid work has proved that the surest and quickest method of getting relief from the torturing pains of rheumatism, as well as the common sense way, is by a direct attack on the affected part. For the small ills of life it is invaluable.

Mr. W. H. Thomas of Lombardy writes as follows:—I was subject to stiff neck. Suffered for years and have been as long as two weeks at a time unable to turn my head without turning my whole body. I doctored and got relief only to have the trouble return again. In August last I had a severe attack and I tried Tuck's Rheumatism Bone Oil having been reading in the papers about how good it was for rheumatism &c. Three applications completely cured me and I have had no return of the trouble since. I recommend Tuck's Bone Oil to everyone.

W. H. Thomas, Lombardy, Ont.
For rheumatism, lame back, neuralgia, sprains, coughs, colds, quinsy or bronchitis, in short for any and all kinds of inflammation there is nothing to equal Tuck's Bone Oil. A bottle should be on the shelf in every home. For sale by all medicine dealers at 50c a bottle or sent prepaid by the Tuck Bone Oil Co., Limited, Smith's Falls, Ontario.

gangs along Dundas street. The question was left in the hands of the town solicitor, and if it can be legally attended to, the property owners responsible will be asked to take such steps as will do away with this undesirable nuisance. The motion carried.

Mr. F. Ruttan, tax collector appeared before the council in reference to some errors in the collector's roll. Referred to Court of Revision to adjust.

The question of securing the services of a competent engineer for the electric light works was left over until the next session of council.

The account of the Allis-Chalmers Bullock Co. was referred to the Finance Committee.

Moved by Com. Meng, seconded by Com. Kimmerly, that the Clerk write the G. S. W. Tel. Co. stating that the council was willing to pay \$20 per year for use of some of their poles on Dundas street (about 42) for electric light purposes, but were not willing to assume any debt contracted by any other company agreed.

The account of Madole & Wilson was referred to the Finance Committee to report at next meeting of council.

Council adjourned.

YOU MUST VOTE OR BE DISQUALIFIED.

Ottawa, May 15.—The Committee on Election Laws having at previous meetings heard representatives from Manitoba and other persons interested in the conduct of elections, this morning commenced the actual work of revising the existing laws with a view to securing cleaner elections.

The clauses as adopted by the committee for recommendation to the house are as follows: **COMPULSORY VOTING.**

- (1) Any person who does not vote at an election at which he is qualified to vote shall be disqualified from voting at any similar election for a term of six years.
- (2) No person shall, however be so disqualified if he has been prevented from voting by illness or by any other good or sufficient reason, and any such person may obtain from a Judge of any court of record, upon satisfying such Judge upon oath or affirmation that he had a good and sufficient reason for not voting, a certificate of franchise annulling the disqualification which certificate may be in the form K. A.
- (3) Any person who, while disqualified under the provisions of this section, votes or attempts to vote in any election shall be liable to a fine of not less than fifty dollars and costs, and not more than one hundred dollars and costs; or in default of payment of such fine and costs, to imprisonment for any term not exceeding three months, and not less than one month, with or without hard labor.

Sections 9 and 113 of Dominion elections act 1900 are hereby repealed, and the following is substituted for section 113:

The hiring or paying for, or promising to pay for, any horse, team, carriage, cab, or other vehicle, or for any boat, steamboat or other vessel, by any candidate or agent, or other person on his behalf, to convey any voter or voters to or from the polls, or to or from the neighborhood thereof at any election, or the payment by any candidate or his agent, or other person on his behalf of travelling or other expenses of any voter in going to or returning from any election, are unlawful acts. (2) Every candidate or other person so offending shall forfeit the sum of one hundred dollars to any person who sues therefor. (3) Every person demanding or receiving from any candidate or his agent, or other person in his behalf, payment for the use of any horse, team, carriage, cab or other vehicle, or for any boat, steamboat, or other vessel, for conveying voters aforesaid, shall forfeit the sum of one hundred dollars to any person who sues therefor.

SENTENCE SERMONS.

Only weariness can sweeten rest.
To revenge a wrong is to repeat it.
Where no love is lost no life is found.
Souls are not cemented by soft saw-

der.

You never find truth by losing the temper.

Straight lacing will not cure crooked living.

Delight is never found in flight from duty.

Fruits of faith come from roots in character.

There are no riches where the heart can find no rest.

He seals himself to-night who sins against the light.

Only through personal character comes permanent civilization.

He cannot control the output of his life who does not guard its inlets.

A man is often best known for the things he thinks he keeps to himself.

There is no virtue in the good turn that you hope to turn into a good trade.

An imperfect deed of right is better than the most complete analysis of it.

It takes the gold a long time to learn not to pray to be delivered from the fire.

The best life is that which immediately and implicitly obeys the best it knows.

Tapering off a bad habit is often only the whittling of the kindling for a new start.

Some men think they are flying to glory when they are only fleeing from the chores.

The man who lets greed block up the windows of his soul always talks about this as a dark old world.

You cannot measure your fidelity to your friend by the facility with which you find fault with him.

It is worth while to remember that it is a good deal easier to learn a thing than it is to forget it.

You may buy a million with your manhood; but you cannot redeem it with many millions, when once it is sold.

There is only one man on earth who thinks that a holy tone is a heavenly tune and that is the man who is making the noise.

.... AN AMUSING STORY.

How a Bishop Took Advantage of King's Promise.

Winchester Cathedral, which, according to an official statement, is in peril of becoming a ruin, was the scene of a serious collapse quite early in its history. On October 7, 1107, the centre tower fell, and the monkish chroniclers attributed the collapse to the fact that the building of the cathedral, twenty years previously, on the site of the Saxon Cathedral. The King granted the Bishop as much wood from the Forest of Hempage as he could cut in four days and nights. The Bishop gathered together a small army of men and cut down the whole forest!

CRIPPLING SCIATICA.

A Sure and Certain Way to Cure This Terrible Torture.

There is just one sure, scientific cure for sciatica, rheumatism, lumbago, neuralgia, headaches — you must drive the pain from your blood and nerves with Dr. Williams' Pink Pills. Liniments never cure nerve and blood diseases. Dr. Williams' Pink Pills strike right straight at the cause because they actually make new blood. Through the blood they conquer the painful poison, soothe the nerves, loosen the muscles and banish every ache and pain. Mr. Thos. J. Etsell, Walkerton, Ont., says: "When I began using Dr. Williams' Pink Pills I had been off work for three months. The cords of my right leg were all drawn up and I could only limp along with the aid of a stick. The pain I suffered was terrible. Only those who have been afflicted with sciatica can understand the misery I was in both day and night. I took six boxes of Dr. Williams' Pink Pills before they helped me, but after that every day saw an improvement, and by the time I had used fifteen boxes, every vestige of the pain had disappeared. I have no hesitation in pronouncing Dr. Williams' Pink Pills the best medicine in the world for sciatica."

Every dose of Dr. Williams' Pink Pills makes rich, pure, health-giving blood. That is why they cure headaches and backaches, indigestion, kidney and liver troubles, anamia, heart palpitation, and the ills that afflict women only. But be sure you get the genuine pills with the full name, "Dr. Williams' Pink Pills for Pale People," on the wrapper around each box. Imitations are worthless—often dangerous. All medicine dealers sell these pills or you can get them by mail at 50 cents a box or six boxes for \$2.50 by writing The Dr. Williams' Medicine Co., Brockville, Ont.

IN MERRY OLD ENGLAND

NEWS BY MAIL ABOUT JOHN BULL
AND HIS PEOPLE.

KAI WANG;

A TALE OF SOUTHERN
CHINA.

CHAPTER VI.

That remarkable man, Kai Wang, who cunningly devised the wonderfully ugly images before which half of the Chinese swarming millions daily prostrated themselves, had long since mastered the English tongue—indeed, save for an occasional lapse into the flowery style of his people, he used better grammar than many whose lives had been spent within the confines of old London.

In fact, the Oriental pagan had been around the world, connected with the English and American embassies, and discovered a thousand facts connected with his country's backward position in the race of nations.

Perhaps he had also learned that poor old China would never amount to a row of pins until her people began to recognize the truth, and think less of their gods and their dead ancestors, occupying their minds more with the present and future conditions.

Some people may even be so uncharitable as to question the genuine nature of Kai Wang's desire to lead his people in better ways, but it must be remembered that the Mongolian race does almost everything from the opposite standpoint taken by Christian nations, and, seen through Chinese spectacles, Kai Wang's procedure was the most rational in the world; he believed that by making his idols more and more hideous he could by degrees smother the desire for worship. Larry had argued in vain—Larry, who, recognizing the perverse nature of John Chinaman, believed the Celestials adored ugliness even as other nations worshiped beauty, and that by the time the genius of his friend produced a masterpiece of hideous deformity, before which all other monsters must hide their diminished heads in shame, the Chinese empire would rise up as a man and plunge deeper into their idolatry because of it.

And Larry had long since concluded that a native of the Flowery Kingdom was about as tough a specimen of the genus homo, when it came to argument, as could be found.

He now turned the search-light of his intellect upon the elucidation of the new problem, and in his most diplomatic manner besought Kai Wang to relieve the suspense by which he was well-nigh overwhelmed.

Thus adjured, the master mechanic of the idol manufactory broke the mysterious silence that had brooded over him since Larry's homecoming, and proceeded to pour out a tale that might have made a Munchausen blush for envy.

Larry knew how to sift the sand for shining particles of precious gold, even as might an experienced Balleret miner, and by thus reducing to plain English the magnificent court language which the accomplished Kai Wang dispensed by the yard, the result might be summed up briefly as follows:

Kai Wang had a visitor during his absence.

This in itself was not so strange, for there was seldom an hour of the day that the front office of the god-maker was not occupied by some representative of a Chinese trading company desirous of holding a monopoly of a certain brand of brass or china deity in favorite use among the communities of their section—indeed, many a time since

avenue of escape, and then he launched forth.

Kai Wang actually showed signs of emotion when repeating the wonderful story of how the present Emperor, having outlived his usefulness in the eyes of the potent power behind the throne, might some day in the near future be secretly deposed or disposed of—it mattered very little which—and a new Pharaoh be placed upon the throne who would not know Joseph—otherwise Kai Wang. A wise man usually gets in out of the wet, and it behooved the rich maker of premium gods to forswear his allegiance to the fortunes of Li Hung Chang, now on the downward grade, and form a new alliance with these in the confidence of that remarkable woman whose word was really law in the vast provinces of the empire.

Startling as this announcement might seem, it was, as wise Kai Wang well knew, but the forerunner of the supreme demand up to which the astute Russian led by graduated stages.

When he believed the proper time had arrived to spring his mine, he did so with a considerable display of fireworks.

He informed the merchant that suspicion had been aroused concerning his loyalty—that it was even said he had been in league with those who were arrayed against their real sovereign, the Empress, and concerned in an attempt that had been made some time in the last moon to smuggle the prisoner Emperor away, so that he could head an insurrection against the authorities. Kai Wang's experience as an aide to the great English fighter, General Chinese Gordon, during the famous Tai-Ping rebellion, had made him an authority in such weighty matters.

Finally, it was also suspected that he had been harboring one of the base conspirators, a dangerous foreign fanatic, who would set all China by the ears if allowed his own sweet will, and whom the authorities desired to suppress, smother, cause to disappear.

Then came the demand—would Kai Wang prove his loyalty to the Queen Dowager by delivering up the body of this pernicious mischief maker, together with what seditious documents he might perchance have upon his person, so that the seeds of rebellion might not be scattered broadcast and bring about serious disasters?

About this time it may be assumed there was a smile that was childlike and bland upon the disguised features of the little wearer of the yellow jacket.

Larry could appreciate a joke, and he felt greatly flattered at the discovery that he was an object of so much solicitude to this high and mighty representative of the Great Bear. The recollection of the precious papers that reposed so snugly within the consulate safe gave him still more solid satisfaction; they might do with him as they pleased, physically; but his work could not be disturbed; he felt very much as did Bismarck when his enemies at home began to disturb him, even to hostile threats. "They may hang Bismarck, but I am content if the rope will only bind united Germany closer to the Prussian throne," he boldly declared, to the admiration of a patriot-loving people.

Kai Wang refused to commit himself—the yawning trap was too evident, and he was ready to meet the emer-

with many millions, when once it is sold.

There is only one man on earth who thinks that a holy tone is a heavenly tune and that is the man who is making the noise.

Some men never find anything they can stick to until they get in the slough of despond.

AN AID TO MOTHERS.

Baby's Own Tablets is the very best medicine in the world for curing the minor ailments of babies and young children. It is the best because it is absolutely harmless. It is the best because it never fails to effect a cure. A few doses relieves and cures constipation, indigestion, colic, diarrhoea and simple fevers. It breaks up colds—thus preventing croup—expels worms and brings teething without tears. Not one particle of opiate or poisonous soothing stuff is in this medicine. Mrs. Hugh B. Denton, Scotchtown, N.B., says: "I have used Baby's Own Tablets and have always found them a satisfactory medicine." You can get the Tablets from any medicine dealer or by mail at 25 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

TRAINING FOR DUELS.

Frenchmen Practice on Each Other With Hollow Bullets.

Parisians have been enabled by the invention of a hollow bullet to "train" for duels under the realistic condition of shooting at and being shot by, a living instead of practicing at an inanimate target, which does not fire back.

Dr. Deidiers is the inventor, and he has opened a club called, "La Societe l'Assaut au Pistolet." Forty of the best "shoots" in Paris fired in pairs at one another one morning last week in the Jardin de Paris.

Of 272 shots fired, 202 hits were recorded. Commandant Ferrus and Mr. Winans each made full scores, and in the final round shot each other over the heart. While all wore goggles and some padded blouses and gloves, Mr. Winans shot in his buttoned frock coat. The bullet is harmless, and can be used several times, but the blow on the ball of the thumb of one of the contestants required surgical treatment.

The training is of unique value for a real duel. Men who never missed a "dead" target were quite disconcerted by the raising of their opponent's arm to fire.

WIFE ATE DOG'S MEAT.

A remarkable charge was made against a husband the other day at the Marlborough (London) Police Court. His wife was granted a separation order. Mrs. Bryant, wife of a draughtsman, living at Ranelagh road, Leytonstone, said her husband had kept her so short of money that on one occasion she actually had to eat dogs' food. On several occasions she declared he had concealed himself in the dark and then jumped out upon her to frighten her, besides which he had tried to strangle her, had kicked her, and smacked her, and had set a dog upon her.

Occurrences in the Land That Reigns Supreme in the Commercial World.

It is understood that a fleet of American warships will visit Portsmouth this summer.

Mr. Keir-Hardie recently entertained the Labor party and others to dinner in the House of Commons.

The Socialists have been utterly routed at the Edmonton District Council election by the Moderates.

Clubs have been formed at Tilbury and North Woolwich exclusively for the use of Japanese sailors.

The King has consented to open the new Building of the Hearts of Oak Benefit Society on Saturday, May 26.

Fifty thousand tons of coal, believed to be for the use of London gasworks, will shortly be shipped to London from Rotterdam.

As the result of swallowing a half penny about a month ago, Beresford Drake, a little boy of eight, died in the Bristol Infirmary.

Rotherham Borough Council declined by twenty votes to nine to reinstate Miss Turner, the pupil teacher who refused to take off her engagement ring.

A tradesman named Whitehouse was fined for obstruction at Rowley. When he was served with a summons he exhibited it in his shop window for four days, causing further obstruction.

At West Mersea a Roman watch-tower which was discovered some time ago is being broken up and the massive bricks of which it is comprised are being used for borders for gardens and even for the metalling garden paths.

Postage on letters from this country to the Bechuanaland and Rhodesia has been reduced to 1d. the half ounce, but at present no reduction will be made for letters travelling in the opposite direction.

Among the articles left in train on the S. E. and C. Railway, which are now being sold by auction, are seven leopard skins, a bow and arrows, a portable pulpit, a bootmaker's platform, and several bottles of champagne.

To get rid of the plague of rats which still continues at the Elton Union Workhouse, the wife of a bishop has suggested that the master should procure a mongoose, an animal which had effectually cleared the bishop's palace of a similar plague.

Having received from a lady a claim for the loss of a goose "by drowning," Tavistock Rural District Council have appointed a committee to inquire into the circumstances.

As compared with the 15s. formerly earned daily by each horse drawn omnibus between Nottingham and Sneinton, the corporation's new motor-omnibuses earn about £8 10 s. each.

Some 7,000 men from eleven of the collieries in the Aberdare district gave notice on Saturday to terminate their contracts at the end of this month, and it is feared that a strike will result.

JUMPS TO HER DEATH.

School Girl Prefers Suicide to the Disgrace of Expulsion.

A mysterious tragedy has occurred in a training college for women teachers at Versailles, France. A girl named Emilie had been for over two years one of the best pupils in the college, and was as popular with the professors as with her fellow-students.

But about a fortnight ago a change was noticed in the attitude of the principal and the professors towards her, and finally the head mistress informed her that she was expelled. Crying bitterly, the girl rushed upstairs to her room, opened the dormitory window and jumped out, being killed instantly upon the pavement of the courtyard.

Burial has been forbidden by the authorities until an enquiry has been made.

was not occupied by some representative of a Chinese trading company desirous of holding a monopoly of a certain brand of brass or china deity in favorite use among the communities of their section—indeed, many a time since Larry's secret advent under that hospitable roof a clash had occurred between rival claimants, and once it had even been necessary to call in the imperial police to quell the disturbance, which threatened to wreck the stock in trade of Kai Wang, and have the offenders haled before the yamen, or court of justice.

Fancy this thing in the presence of such an assemblage of gods as the most famous joss house in all China could not boast; evidently there are times when reverence is due the graven image, and others when the great joss only represents so much money invested in more or less precious metal.

This visitor who dropped in upon Kai Wang was no ordinary individual; he came not to spend his hoarded taels for a monstrosity that was warranted to scare all lesser devils from out his domicile, if properly propitiated.

When Kai Wang first mentioned the fact that his caller was a Russian, Larry's ears became more than ever alert, and his nostrils dilated much after the manner of the thoroughbred war-horse as it scents the well remembered odor of battle smoke.

Just then, after his recent experience in the Forbidden City of Peking, a Russian acted upon Larry as the sight of a head is said to influence the valiant Irishmen who visit Donnybrook Fair; he had an overpowering desire to hit hard.

Instinctively he knew who this Russian was, and thought he could suspect the motive of his visit.

Thank fortune he turned up just an hour too late, since the valuable documents, signed and sealed by the wretched Emperor in due fashion, were being snugly deposited in the safe of the British consul's office at that identical time.

So much for the sleuthhounds of Peking.

It had taken them as long to track Larry to the house of Kai Wang in Canton as Avis consumed in her journey from London through the Suez Canal, around India and the Straits of Malacca, up the China Sea. In this respect they bear some resemblance to some of our own wonderful detectives who consume so much time in pursuing an ignis fatuus, and quibbling over minor points that concern only their standing in the case, that the criminal reaches the uttermost parts of the earth ere they discover that he is a badly-wanted individual.

The diplomatic representative from the land of the Neva knew what manner of reputation Kai Wang had among his fellows as a shrewd, up-to-date man of the times, and instead of brusquely demanding whether it was true that the other sheltered a wounded foreign devil, he beat around the bush, approaching the subject half a dozen times much as a lightweight boxer might dance up to his antagonist and then drop back again without an exchange of blows; because the coveted opportunity was hardly ripe.

By degrees the Russian became confidential, and sought to sound Kai Wang as though desirous of ascertaining just where his sympathies lay in the diplomatic battle that was on between the party of the Dowager Empress and that represented by Li Hung Chang and the puppet Emperor.

But Kai Wang refused the bait, knowing full well where Count Petroskey's sympathies lay, since the Empress favored the Russians, while the progressive party, led by the grand old viceroy, lately home from his triumphal tour of the world, was dead set upon cultivating more intimate relations with the Anglo-Saxon race.

Baffled after a long period of fencing, the representative of the Czar finally found himself compelled to grow bolder.

He hedged himself in with rare cunning, so that these was always an

Russian throne, he boldly declared, to the admiration of a patriot-loving people.

Kai Wang refused to commit himself—the yawning trap was too evident, and he was ready to meet the emergency; indeed, long ago he had discounted this very climax.

He solemnly declared his enemies had prevaricated; some rival house desired to injure his great and ever-growing trade in the favorite forty-five cash family gods which, thanks to him, had been placed at such a low figure that it was now possible for each and every household to have one or a dozen of these beauties in every room.

His actions were ever open and above-board to all men—he had of late been honored by the presence under his roof of a powerful, though slightly eccentric mandarin from one of the provinces about Kwangsi, who was more deeply concerned with regard to the purchase of a cargo of household gods which he could retail at a profit to the villages in his jurisdiction, than in any change of dynasty; indeed, it was quite immaterial in his section who reigned, since one ruler cost them in tithes and taxes just as much as another, and they had never been fully recognized since the "long-haired" rebels overran the southern country.

The Russian being unable to accomplish his purpose either by cajolery or threat, finally retreated in disgust, but Kai Wang never for a moment suspected that in so doing he gave up the quest.

Russians are not built that way—they seem to possess some of the persistent qualities that mark the pursuit day and night of the gaunt, gray wolf of the Siberian steppes, once upon the trail of game.

The leader of Cossacks was sure to be heard from again, nor would he leave the habitation of Kai Wang unwatched.

"You have returned—the news is communicated speedily to His Excellency. Perhaps this night there will come to my humble abode a swarm of miserable vermin who live by the knife but what need have I to fear when my watch dog never sleeps—the electric current which charges every window and door so that no man dares seek an entrance twice. But as for you, my illustrious brother, perhaps it is ever time you sought the protection your flag will throw about you."

Which was a gentle way of intimating that Kai Wang doubted his ability to hold out longer against the combined forces of the opposition, and would be relieved if Larry were able to take his future into his own hands.

"Yes," declared the sapient and shrewd little mandarin; "I shall have to skip by the light of the moon; but remember, oh wise and sagacious Kai Wang, I go, not because this Russian blunderer inspires me with such a thing as fear, since I have only contempt for his lack of sense; but my promise is given to stand by Dr. Jack's widow and even, if necessary, to aid and abet her in the mad design of entering where angels fear to tread—the inner sanctuary of the walled city of Peking—so that she may weep over the spot where those devils of Black Flag wound up the earthly career of the noblest Roman of them all, prince of good fellows and bravest of the brave.

Larry was improving—a little more study of Oriental methods and he could give odds to the most seductive flatterer whose lips had ever come in contact with the Blarney stone.

Whatever the purveyor to the worshipping demands of a credulous public thought of this bold avowal, he made no sign, nor did Larry doubt that when the time for action came, bold Kai Wang, Gordon's old aide, would be found as willing to dare all in the service of Dr. Jack's widow as he had been to accomplish great things for the hero himself.

Larry had not studied him these weeks for naught. Though disdainful to show any haste in the matter of decamping, the little dude was quite ready to make a change in his Chinese address.

He had heard such amazing stories of these adroit Celestial thieves and thugs, who could steal a sheet from under a man without arousing the sleeper, that he believed he would rest easier if surrounded by people of his own race.

The disguise was removed, and Larry was as happy as a schoolboy at being again free to stir his thoughts by sundry affectionate forays in the direction of his ears; nobody would ever suspect what agonies he had suffered at being deprived of this privilege, and also the chance to suck the head of his cane.

He had made a small package of his belongings, and was ready to accept Kai Wang's guidance, for the merchant had solemnly promised to spirit him away without the knowledge of those spies who might be about, when the silence of the night was suddenly broken by a chorus of shrill cries in front of the repository of idols, and the clamor was of such a nature that it was easy to believe an angry mob had taken possession of the narrow street.

(To be continued).

WOMEN WHO SUFFER SHOULD READ THIS

SHE WAS CURED OF FEMALE TROUBLES BY DODD'S KIDNEY PILLS.

They Made a New Woman of Her and She Blesses the Day She First Heard of Them.

Newmarket, Ont., May 7.—(Special).—The case reported below is another of the many thousands of instances of Dodd's Kidney Pills coming to the rescue of weak, suffering women. Mrs. M. Doner, of this place, says:—

"For more than three years I suffered from weakness and female trouble brought on through my kidneys failing to act properly. I was bothered with a pain in the small of my back, headaches, dizzy spells, heart flutterings, depression, loss of sleep, poor appetite and a terrible dragging sensation as if a weight was fastened round my loins. I tried doctors and took all kinds of medicines, but nothing seemed to do me any good. Then a neighbor told me of Dodd's Kidney Pills and advised me to try them. I did so and after taking six boxes I am entirely cured."

IVORY SALES IN LONDON

TUSKS BY THE ACRE AT BIG STEAMSHIP DOCKS.

One Piece that Weighed Over 200 Pounds—Climate Affects the Goods.

One of the sights of London is the great ivory floor at the London docks, where, previous to and during the periodical sales, ivory may be seen literally by the acre, for the tusks are laid out in lots on the floor of one of the great warehouses for inspection by intending purchasers. For weeks previous to the actual sale the special staff of the ivory department has been busy preparing the various consignments and arranging them according to the sizes and quality and classing them into the various grades, each of which have some particular use for which it is especially adapted.

There is practically no waste in the manufacturing of articles from ivory. The smallest chip is not thrown away, but carefully preserved to be utilized for some purpose. Even the shavings from the turning down of a billiard ball

the exact weight marked upon it. Extra large tusks are exceptional, for in the majority of instances in which a tusk grows to an exceptionally large size the other belonging to the same animal is found to be deformed or have been injured or broken off, thus encouraging an abnormal growth.

The record single tusk, sold some years ago, turned the scale at the enormous weight of 204 pounds. The idea that innumerable elephants are shot to supply the market with ivory is incorrect, as the majority is what is known as dead ivory; that is, tusks of animals that have died from natural causes in the bush, many of them perhaps centuries ago. Climatic and other influences cause the color of the ivory to vary from pure white to dark brown. The latter, however, is only a surface discoloration that can be removed by scraping. Climate, however, affects the substance to a very great degree, rendering some hard and brittle, and in other cases increasing the liability to crack and split. Some of the ivory that arrives from the northern part of Central Africa is exposed to the sun throughout its long journey on camels across the desert, and has to be bound up in rawhide to protect it and prevent it from splitting. Trifling as a defect in the surface may appear to the uninitiated, it may reveal to the expert the presence of disease within, or may enormously reduce the value of the tusk by rendering it unsuitable for some particular class of work.

BLINDED BY WAVY TREES.

Hundreds Employed in English Factory Have Odd Grievance.

Two hundred and thirty people, employed at a lace factory at Long Eaton, near Nottingham, England, have a remarkable grievance.

Opposite to the factory is a cemetery, in which there are several ornamental trees, and the workpeople complain that they are losing their eyesight owing to the "blinking" light caused when the branches of the trees wave in the wind. One old man declares that he is nearly blind, and it is impossible for him to see to do his work on a windy day.

The grievance is not a new one. In 1898 it was raised, and a poll of the ratepayers was taken on the question whether the trees should be cut down. The vote was in favor of the trees being allowed to remain.

Two years ago the subject was revived, but nothing was done to remedy the grievance, and now the Urban District Council has again been approached with the view of having the trees felled.

Some of the councillors say that if blinds were fitted to the factory the waving of the trees would be harmless to the workpeople.

HOW PRIESTS LIVE IN SIBERIA.

The best paid clergy in Siberia get about \$600 a year, while the poorer clergy have often to beg for their bread. They have much to do. There is always a service between four and five in the morning. There are two other services in the day. There must be a service on the birth of a child and at the death of anyone in the parish. All new buildings, schoolhouses, bridges, and boats must be blessed; children beginning at a school term are blessed, and in time of pestilence or peril there must be continuous prayer. All priests must fast 226 days in the year, and monastic priests are never to eat meat. A priest cannot indulge in theatre-going, drinking, card-playing, or dancing.

Some persons have periodical attacks of Canadian cholera, dysentery or diarrhoea, and have to use great precautions to avoid the disease. Change of water, cooking, and green fruit, is sure to bring on the attacks. To such persons we would recommend Dr. J. D. Kellogg's Dysentery Cordial as being the best medicine in the market for all summer complaints. If a few drops were taken in water when the symptoms are no-

Wedding Invitations

If you are going to require Wedding Stationery of any kind consult us about this important matter. Our long experience in producing work of the highest class for the most discriminating patrons has brought us to the point where we are regarded as authorities. The correct style in stationery, as dictated by fashion, is always on hand at "The Bookshop," and our engraving is above criticism.

It is worth while finding out what extremely high-grade Wedding Stationery we turn out at desirable prices.

In asking for prices please state probable quantity.

particular use for which it is especially adapted.

There is practically no waste in the manufacturing of articles from ivory. The smallest chip is not thrown away, but carefully preserved to be utilized for some purpose. Even the shavings from the turning down of a billiard ball have a market value for use in inlaid work. Consequently the lots in an ivory sale by no means consist of tusks and sections of tusks alone, but include the residue from

MANY PREVIOUS SALES.

Buyers purchase the particular class that they require for their own individual industry and subsequently return what in most other material would be waste to be resold to manufacturers of a different class of goods.

Though there is "no waste," oddly enough the most important consideration, from a buyers' point of view, is "how much waste" will a certain lot produce in the course of transforming it into his own particular line? Thus, a lot that would be dear to one would be a gift to another, and vice versa. The most valuable class of ivory is that suitable for making billiard balls. To conform to the requirements the tusk must be perfectly sound and solid, without the slightest suspicion of a crack or flaw, and moreover, they must measure only a trifle more than the regulation size billiard ball or they will cut to waste, from the manufacturers' point of view. On the arrival of a consignment of unworked elephant ivory from abroad the first preparation for the sale floor consists of a thorough cleaning of the interior or hollow part of the tusk. This is done by means of wads attached to long sticks. The exact length of the hollow is thereby revealed, and in addition cracks and flaws that cannot be observed on the exterior are at times disclosed. Soundness is the one thing that sways every class of buyer; flaws mean waste; waste means resale at a lower figure per pound.

The increasing scarcity, combined with the increased demand for articles manufactured or adorned with ivory, has had the inevitable effect of increasing the price of the raw material. To take

BILLIARD-BALL IVORY,

for instance, in 1870 the price was \$250 per hundred-weight, whereas in 1905 the same class of ivory was sold for \$835. In bulk ivory averages about \$10,000 per ton. Each lot is carefully weighed and

FOR BOTH

One disease of thinness in children is scrofula; in adults, consumption. Both have poor blood; both need more fat. These diseases thrive on leanness. Fat is the best means of overcoming them; cod liver oil makes the best and healthiest fat and

SCOTT'S EMULSION

is the easiest and most effective form of cod liver oil. Here's a natural order of things that shows why Scott's Emulsion is of so much value in all cases of scrofula and consumption. More fat, more weight, more nourishment, that's why.

articles, and have to use great precautions to avoid the disease. Change of water, cooking, and green fruit, is sure to bring on the attacks. To such persons we would recommend Dr. J. D. Kellogg's Dysentery Cordial as being the best medicine in the market for all summer complaints. If a few drops were taken in water when the symptoms are noticed no further trouble will be experienced.

Wife: "Never mind if you have failed, dear. I have \$1,000 saved up from the pin-money that you have given me from time to time." Husband (joyfully): "You make me feel easier. What a help!" Wife: "Help! I should say so. Why, on this money I can keep up my wardrobe for a year or two to come."

In Heart Disease It Works Like Magic—For years my greatest enemy was organic Heart Disease. From uneasiness and palpitation it developed into abnormal action, thumping, fluttering and choking sensations. Dr. Agnew's Cure for the Heart gave instant relief, and the bad symptoms have entirely disappeared. It is a wonder-worker.—Rev. L. S. Dana, Pittsburg, Pa.—153

Lady Caller: "Is Mrs. Newcome at home?" Irish Maid-servant: "Wait a minute, mum, till I get a look at you. If you've a big nose and a scar near the right eye, she isn't."

Sunlight Soap is better than other soaps, but is best when used in the Sunlight way. Buy Sunlight Soap and follow directions.

Minnie: "What frauds these beggars are! I met a blind man who said, 'Please give me a penny, beautiful lady.'" Mamie: "Yes, he said that to make you think he really was blind."

The Kinks and Twists in Rheumatics Rugged Road.—For 4 years the wife of a well-known Toronto physician was on crutches from Rheumatism Scourge, and not until she began using South American Rheumatic Cure could she get a minute's permanent relief from pain. Four bottles cured her. Write for confirmation if you're sceptical.—154

Wife (wearily): "Woman's work is never done." Husband (struggling with a buttonless shirt collar): "That's just what I thought."

TONS OF IRON consumed each year in medicine. In "Ferrovin," the best tonic, it is so cleverly manipulated that the weak and sickly get all possible nourishment and benefit from it.

When a girl deliberately lets a young man see her with her hair in curl papers it is time for him to transfer his affections.

Parents buy Mother Graves' Worm Extirminator because they know it is a safe medicine for the children and an effectual expeller of worms.

Lady: "Are you not ashamed to be begging on the streets?" Beggar: "Well, yes. I'd sooner do it in the pulpit or at a church bazaar, but fate is against me."

Stumbling Wrecks!—Undone and overdone! Discouraged and desolate! Emaciated nerve wrecks! Not one of you is too deep down in the mire of disease but the story of such a potent remedy as South American Nerve can reach you and lift you back to good health. It's nature's trusted lieutenant, gentle, but firm and unflinching. It never fails.—156

Haven't you noticed that the man who tells you how you can make a fortune in a short time is seldom able to show a bank balance of more than three figures?

Do Not Delay.—When, through debilitated digestive organs, poison finds its way into the blood, the prime consideration is to get the poison out as rapidly and as thoroughly as possible. Delay may mean disaster. Parmelee's Vegetable Pills will be found a most valuable and effective medicine to assail the intruder with. They never fail. They go at once to the seat of the trouble and work a permanent cure.

AN IDEAL NECESSARY.

It is the perpetual effort to attain the ideal that enlarges the whole life. The moment the ambition begins to wane, or tends to become sordid or selfish, the individual begins to shrivel.

LAZY OLD SORES, painful and disgusting, will not linger long after treatment with Weaver's Cerate has been begun. Also, cleanse the blood with Weaver's Syrup.

Willie: "It's always in damp places where mushrooms grow, isn't it, papa?" Papa: "Yes, my boy." "Is that the reason they look like umbrellas, papa?"

Where can I get some of Holloway's Corn Cure? I was entirely cured of my corns by this remedy and I wish some more of it for my friends. So writes Mr. J. W. Brown, Chicago.

Wise: "Haven't you got a job yet?" Potter: "No; I'm still waiting for something to turn up." Wise: "Huh! Your sleeves are what you need to turn up."

The Great Serpent of All Diseases.—Kidney disease may well be called the "boa constrictor" disease, unsuspecting and unrelenting, it gets the victim in its coils and gradually tightens till life is crushed out, but the great South American Kidney Cure treatment has proved its power over the monster, and no matter how firmly enmeshed, it will release, heal and cure.—158

denance and I'll take the sap out of you. Do you understand?" said the teacher. "I twig," said the boy, and then the regular order of business proceeded.

Prevent Disorder.—At first symptoms of internal disorder, Parmelee's Vegetable Pills should be resorted to immediately. Two or three of these salutary pellets, taken before going to bed, followed by doses of one or two pills for two or three nights in succession will serve as a preventive of attacks of dyspepsia and all the discomforts which follow in the train of that fell disorder. The means are simple when the way is known.

WISDOM'S WHISPERS.

Humility often exists more strongly in the imagination than in reality.

Building castles in the air requires little in the way of capital investment. Make the best use of what you have and thus prepare for what may possibly come afterward.

Continual fault finding creates dissatisfaction without bringing any satisfactory result.

Politeness is a quality which produces a stamp that is as distinct as it is pleasant.

The wrongdoer foolishly hugs the delusion that forgiveness will follow discovery.

Beauty has a convincing way of making its influence felt without much effort, but it is not always lasting.

Having your own way is sometimes a victory that is useless as well as barren.

Some people ask questions which call for a great scholar's knowledge to answer.

Hold the head high in the midst of adversity, so that others may not adversely criticize.

POLICE COURT AT A TAVERN.

The only place in the country where the police court business is conducted at a public house is at Blofield, Norfolk, England. This has been going on for 100 years, and the brewers have made no charge to the authorities for the use of the room. A new court house is now ready for occupation, and the magistrates are leaving their old quarters with a feeling of regret.

CHAPTER XXIII.

The cottage Leroy occupied was about to be taken again by its proprietor. The middle of September approached, and

46-YEAR-OLD BABY.

The death has just occurred at Westbury Workhouse, Wiltshire, England, of a forty-six-year old baby. The child was born in Westbury, and at the age of twelve months its further development, both physically and mentally, was arrested. Throughout its life it was attired in baby's frock clothes, and continued to act and play, and had to be fed and taken care of, precisely as an infant.

Church bells are necessary to remind some people that they have religion.

Housekeeper: "Do you love children?" Applicant: "It all depends on the wages, ma'am!"

Merchant: "Your former employer tells me you were the quickest clerk in the place." Applicant for situation (doubtfully): "Yes sir?" Merchant: "He says you could put the books into the safe, lock up, and start for home in just a trifle over a minute and twenty seconds."

A Wide Sphere of Usefulness.—The consumption of Dr. Thomas' Electric Oil has grown to great proportions. Notwithstanding the fact that it has now been on the market for over thirty-one years, its prosperity is as great as ever, and the demand for it in that period has very greatly increased. It is beneficial in all countries, and wherever introduced fresh supplies are constantly asked for.

Mrs. Hilly: "Is Mrs. Swagger at home?" Servant: "No, ma'am; she went out to call on you." Mrs. Hilly: "How very fortunate for us both."

MRS. HUNTER'S STORY

Says she and her Husband Agree Perfectly. Both Quite Well Again.

Mrs. I. Hunter, of 111 Raglan Road, Kingston, Ont., has written for publication a statement of her case as follows:

"I have suffered with kidney and liver trouble and chronic constipation for some time. I was subject to dizziness, bilious headache, nervousness, drowsiness, pains in the back and side, and a tired, weary feeling nearly all the time."

"I tried almost every remedy, was treated by doctors and druggists with little or no benefit."

"Finally, a friend advised me to try Dr. Leonard's Anti-Pill, and the results have been truly wonderful."

"My husband has used Anti-Pill for rheumatism and was benefited greatly. We agree that Anti-Pill is a most wonderful medicine and heartily recommend it."

This is a very strong recommendation. Anti-Pill is undoubtedly the greatest of family remedies. All druggists, or the Wilson-Pyle Co., Limited, Niagara Falls, Ont.

NEW ERA FOR RUSSIA

The Czar's Speech at the Opening of Parliament.

A despatch from St. Petersburg says: The inauguration of Russia's National Assembly on Thursday passed off well in two widely contrasting scenes. In the white marble hall of St. George in the Winter Palace the elect of the people listened in the dignity of silence, amid a dazzling display of military and official grandeur, to the Czar's brief speech accepting them henceforth as part of Russia's body politic. Then they proceeded to their own chamber in the Taurida Palace, where they re-affirmed, with enthusiastic cheers, their determination, as expressed by Prof. Mouromtzeff, in returning thanks for his election to the Presidency of the House, "to support their work for the wellbeing of the people on two bases, namely, respect for the prerogative of the Constitution, and the necessity for completing the rights of the Duma."

Although the Czar passed six hours in the capital of Thursday, it cannot be said that he went among his people. He disembarked from his yacht at the palace steps and so re-embarked on his homeward journey to Peterhof. Thus he never set foot outside the front gate of the palace, where there was a magnificent display of cavalry, the finest guards regiments parading in the brilliant sunshine, which was all the crowds outside the barriers got for waiting.

The pageant within the Hall of St. George, where the Czar addressed the new delegates, was completely dominated by the presence of the peasant members of the Duma. The gathering of brilliant uniforms was greater than at any time since the coronation of Nicholas II. Assembled in the centre of the picture were the highest clergy of the Orthodox Church, in gorgeous gold canonicals and mitres studded with diamonds, while beside them stood the crimson-robed members of the Imperial choir.

PEASANTS NOT AFFECTED.

But all this display did not affect the emotions of the 150 peasants who were ranged along the hall on the left of the throne. Some of them crossed themselves regularly during the lengthy prayers which preceded the speech from the throne, but none of them joined the vigorous and long-sustained applause by the courtiers on the right of the throne, and few joined in the deep obeisances made to the Czar when he returned through the hall to his apartments.

His Majesty, although visibly nervous,

spoke with a steady voice, which was well heard. He seemed to be thoroughly relieved when the ceremony was over.

From quite early morning the streets were scenes of great animation. Houses were decorated with flags, church bells rang, and Te Deums were sung throughout the city. The morning newspapers published special articles joyfully welcoming the new era.

THE CZAR'S SPEECH.

Standing in front of the throne, the Czar read his message to the Duma. It was as follows:

The supreme Providence which gave me the care of our Fatherland moved me to call to my assistance in legislative work elected representatives of the people. In the expectation of a brilliant future for Russia, I greet in your persons the best men from the empire, whom I ordered my beloved subjects to choose from among themselves.

A difficult work lies before you. I trust that love for your Fatherland and your earnest desire to serve it will inspire and unite you.

I should keep inviolate the institutions which I have granted, with the firm assurance that you will devote all your strength to the service of your country, and especially to the needs of the peasantry, which are so close to my heart, and to the education of the people and their economical welfare, remembering that to the dignity and prosperity of the State, not only freedom, but order founded upon justice, are necessary.

I desire from my heart to see my people happy, and hand down to my son an empire secure, well organized, and enlightened.

May God bless the work that lies before me in unity with the council of the empire and the Imperial Duma. May this day be the day of the moral revival of Russia, and the day for the renewal of its highest forces.

Approach with solemnity the labors for which I call you, and be worthy of the responsibilities put upon you by the Emperor and people. May God assist us.

NO ENTHUSIASM.

The reading lasted but three minutes. No reply was made to the Emperor's address. When he had concluded the assemblage dispersed, the members of the Duma making no sign of approval or disapproval of what they had listened to.

session, the closing speech from the throne was probably one of the longest on record. It was as follows:

"Mr. Speaker and Gentlemen of the Legislative Assembly.

"In relieving you from labors of an unusually important and arduous nature I have to thank you for the close attention you have given to your public duties, as well as for the beneficial legislation that has been enacted. The work undertaken and accomplished is of such extent, variety, and value as to make the session now closing without a parallel in the history of this Province in that respect.

"It is with much gratification I observe that the Legislature has joined with the Parliament of Canada in extending an invitation to their Majesties the King and Queen to visit this country and I need hardly remark that the people as a whole enthusiastically second the efforts of their representative bodies in extending this invitation.

"We have been favored since the opening of the session by a visit from his Royal Highness Prince Arthur of Connaught, who, as a nephew of our Grac-

and growing mining development of Ontario is calculated to effect a useful and opportune purpose in simplifying the law, facilitating the work of the prospector and encouraging the investment of capital. An important feature of the mining policy is the decision of my Government to operate for the benefit of the people of Ontario the rich mineral deposits which have been discovered in what is known as the Gillies limit. The expressions of general approval by which this announcement was met showed in an unmistakable way the minds of the people on the subject.

"By providing that the veterans' land grants may be commuted by a money payment, a serious obstacle to the settlement of the uncultivated parts of the Province has been removed. I am glad to learn also that another impediment to settlement has been disposed of by the surrender of 525,000 acres of land, or about twenty-two townships, granted by this Legislature as a subsidy to the Grand Trunk Pacific Railway.

THE POWER QUESTION.

"The two valuable reports on the question of electrical power, submitted by the Hydro-Electric Commission for your consideration, have resulted in a measure which is designed to secure cheap power to all parts of the Province of Ontario, and this without injury to the rights of bond-holders and others who have invested money in the development of electrical energy. It is impossible to overestimate the great advantages that will accrue to all kinds of industries and the development that will ensue from the general application of electric power at reasonable rates. On all hands it is agreed that it means to the Province of Ontario an industrial revolution. It is satisfactory to know that in a session in which so much important work has been undertaken, you have been able to deal carefully and wisely with this most important question.

"With pleasure I observe the healthy state of the public finances, which show a substantial surplus for the past year. In this connection the floating of the new loan on very favorable terms might be mentioned as indicating the undoubted credit of the Province. The liquidation of half of the sum borrowed by the industries at Saul Ste. Marie on the guarantee of the Province, and the extension of part of the guarantee for the further period, point to the eventual removal of this obligation.

"I have to thank you for the liberal appropriation you have made for the public service, which will be expended with a proper regard to economy and efficiency.

"In dismissing you from your duties, I desire again to thank you for the great public service you have rendered and to join with you in expressing the hope that the blessing of Almighty God will continue to rest upon our country and our people."

Hon. Dr. Pyne, in the absence of the Provincial Secretary, then declared the House prorogued, and the distinguished gathering dispersed.

BANDITS CAUGHT.

Arrest of Men Supposed to Have Robbed C. P. R. Train.

A despatch from Vancouver says: Advice was received on Monday night from Kamloops to the effect that three men answering closely the description of the robbers were arrested near Quichenawnicola Lake on Monday by Mounted Police, after a desperate resistance, in the course of which one robber was shot in the leg.

Mail Clerk McQuarrie on Monday saw men arrested at Vernon, and found that Christie, one in custody there, while like one of the robbers, was not the leader, as supposed. He failed to recognize the other two.

Christie was caught in the mountains at Outlet Trail, leading from Campbell Meadows, which the robbers entered from the Kamloops side. Jas. Moir and W. Wilson also arrested at Vernon, are

THE WORLD'S MARKETS

REPORTS FROM THE LEADING TRADE CENTRES.

Prices of Cattle, Grain, Cheese and Other Dairy Produce at Home and Abroad.

Toronto, May 15. — Flour — Ontario wheat patents are quoted at \$3.10 bid in buyers' sacks outside for export. Manitoba first patents are quoted at \$4.40 to \$4.50, Toronto, and strong bakers' at \$4 to \$4.10, Toronto. Bran is nominal at \$17 to \$17.50 outside in bulk.

Decisions—Barrels

ONTARIO LEGISLATURE

WHAT THE LEGISLATURE AT TORONTO IS DOING.

ONTARIO INVITES THE KING.

Hearty concurrence has been expressed by the Provincial Legislature in the various invitations extended by the Parliament of Canada, Provincial Assemblies, and municipalities to their Majesties the King and Queen to visit Canada. A resolution to this effect will be forwarded by the Lieutenant-Governor to his Excellency the Governor-General for transmission to the Colonial Secretary's office in London.

SUPPLEMENTARY ESTIMATES.

The supplementary estimates were presented and proved to be an addition of \$662,850.46 to the main estimates of \$5,625,543, the total estimated Provincial expenditure thus being \$6,288,393.46, while the expenditure for 1905 was \$5,

of \$202,553.50 to the main estimates of \$5,625,543, the total estimated Provincial expenditure thus being \$6,288,393.46, while the expenditure for 1905 was \$5,396,016. The items for civil government accounted for \$6,648; legislation, \$10,250; justice, \$45,786; education, \$149,790; public institutions, \$3,379; hospitals and charities, \$55,789; agriculture, \$14,150; colonization, \$2,100 (of which \$3,000 is for the Salvation Army); public buildings, including \$100,000 for additional normal schools, \$151,353; public works, \$21,750; colonization roads, \$30,600; repairs, charges on Crown lands and refunds, \$69,319, and miscellaneous, \$101,035, including automobile law enforcement, \$3,000; game protection, \$4,000; expenses entertainment of Prince Arthur, \$1,035.19; gratuities, \$10,000; William Sherring, Hamilton, victor of 25-mile Marathon race at Athens, Greece, \$500; town of Berlin, towards expenses of experimental sewage farm, \$1,000; grant to British Medical Association (expenses), \$5,000; to cover error in total, main estimates, \$3,100; wolf bounty, \$2,000; Hydro-Electric Commission, \$10,000; Railway and Municipal Board expenses, \$8,000; visit of English, Irish and Scotch Bowling Association, \$400; towards payment commutation volunteer veterans' land grants, \$50,000. The Medical faculty of Queen's College for the promotion of medical education gets \$50,000, and the special grant for public and separate schools in counties is \$60,000. For revision of statutes an item of \$30,000 appears. Alexandra School, for new cottage and alterations, gets \$20,000. Ottawa Central Fair Association, for dairy purposes, is granted \$4,000, and the Ontario Agricultural College gets \$4,000 for a glass house for insects, physics and botany. Cobalt will be civilized with a \$1,000 lock-up, and the expenses of preliminary operations in the Gillies timber limit, including surveying, purchase of machinery, etc., are provided for to the amount of \$25,000.

CASH AID TO RAILWAYS.

Premier Whitney made an announcement of the Government's policy with reference to grants to railways. It had been decided, he said, to grant \$3,000 per mile, for 25 miles, or \$75,000 in all to the Bruce Mines & Algoma Railway, commencing thirteen miles north of Bruce Mines. This was done to enable the opening up of the copper mines in the Bruce Mines district. A grant of \$5,000 a mile was to be made to the Canada Central Railway Company, or any company which would do the work, for a railway from Little Current to a point thirteen miles from Sudbury, where it will connect with a line already laid, a distance of fifty-three miles. At \$5,000 per mile the latter means a grant of \$265,000, and the two grants would therefore total \$340,000.

PRESIDENT LOUDON RESIGNS.

The Premier announced that he had received a letter some time ago from President Loudon of the University of Toronto, in which that gentleman said he had decided to resign. Both the Premier and the Hon. Mr. Ross spoke warmly of President Loudon's work for the university.

BILLS PASSED.

The power bill was read a third time and passed without discussion and without a vote. The university bill, the mines act, the county Councils act, and the education act were among many other measures read a third time. An amendment to the city of Toronto's bill giving the city power to sell feed in the cattle market was defeated in committee.

LEGISLATURE CLOSED.

Prorogation of the second session of the Eleventh Legislature of the Province of Ontario took place this morning. The hour set was eleven o'clock, and promptly at three minutes past his Honor the Lieutenant-Governor entered, supported by the Premier. Only a few members were in their seats and probably one hundred people in the galleries. The whole ceremony did not take more than twenty minutes. As a very large amount of important legislation has been put through during the

session, we have been favored since the opening of the session by a visit from his Royal Highness Prince Arthur of Connaught, who, as a nephew of our Gracious King, has been received with every evidence of loyalty and devotion to the Crown by the people of Ontario, and who, in his individual capacity, made a very favorable impression on all who had the pleasure of coming in contact with him.

MEASURES APPROVED.

"Among the measures that it is my privilege to sanction, I am glad to notice there are several which have in view the interests of agriculture, the basic industry of this Province. The provision by which the grants to Agricultural Societies will be paid in accordance with the work actually done for agriculture is calculated to have a helpful effect. The enactment of a law providing for the appointment of dairy inspectors should prove of advantage to the butter and cheese industry. The measure for the protection of bees should likewise be satisfactory to the farmers of Ontario. I notice also that you have taken steps to bring to the Agricultural College the assistance of its graduates by providing that they will be represented on the Advisory Board.

"By the repeal of the County Councils' Act and the re-establishment, with some modification, of the system which formerly prevailed, more equitable and satisfactory conditions have been brought about whereby the continuity of our municipal institutions is restored.

"The bills providing for the establishment of a Railway and Municipal Board, and the bill respecting steam electric and street railways are timely and comprehensive measures. The proper regulation and steam and electric railways, the limitation of franchises, the control of rates and the enforcement of agreements, cannot fail to be in the public interest and to meet with general approval. I join with you in the confident hope that the operation of these enactments will tend to beneficial results.

MORE REVENUE.

"The bill regarding the taxation of railways, whereby the former tax is doubled, will assist the Province materially in carrying on its charitable institutions and at the same time yield revenue to the municipalities.

"By the enactment of the bill amending the Liquor License law more effective restrictions have been placed around the liquor traffic. It is gratifying to know that the Province and the municipalities share equally in the increased revenue that this measure will yield. The clauses of the bill tending towards the permanence and efficiency of local option have met with very general approval from moderate men.

"In regard to the very important subject of education, two measures have been enacted. The bill respecting the Department of Education provides for the appointment of a superintendent of education and also for the establishment of an advisory board which will be representative of the matured opinion of the educationists of Ontario. The other bill affecting education, viz., the Public School Act, brings about a reform of a deep-seated character by securing to the public the services of teachers of higher qualifications and by securing to the teachers more adequate remuneration.

CONTROL OF UNIVERSITY.

"I notice with pleasure, the fruition of the efforts of my Ministers to effect the reorganization of the University of Toronto and its establishment on a satisfactory and permanent financial basis. By the able report of the University Commission laid before the House during the present session, a plan was suggested which has in the main commended itself to your judgment. The reorganization of the University under the control of governors appointed by my Ministers, who are directly responsible to this Legislature, and the providing for the financial interests of the great institution, are advance steps of the very first importance in regard to education.

"The measure regarding the great

at Outlet Trail, leading from Campbell Meadows, which the robbers entered from the Kamloops side. Jas. Moir and W. Wilson also arrested at Vernon, are not thought to have taken part in the robbery, but are believed to be confederates of the desperadoes.

Bloodhounds from Oregon, which lately did excellent service in running down outlaws, arrived at Kamloops on Saturday night and are now on the trail. The detachment of Mounted Police from Calgary, under the command of Commissioner Perry, was sent out to Campbell Creek immediately on arrival.

ESCAPED CONVICT CAUGHT.

Trailed Through Leeds County and Finally Arrested

A despatch from Brockville says: Chahabran, the life convict, who escaped on Monday night of last week from the Kingston Penitentiary, was recaptured on Monday afternoon at 5 o'clock about nine miles west of Brockville. The prisoner, in leaving the penal institution, headed eastward, and the first trace of him was obtained the following Wednesday, when it was learned he had taken dinner the day before with Manley Cross, the lighthouse keeper, four miles east of Gananoque. From that on he worked down this way along the river front, closely followed by Detective Foster, of the Dominion Police Force, who traced his movements closely. Several times it seemed as if Foster had him corralled, but each time he managed to get away. Foster was aided in the search by the whole countryside, the woods being scoured by day and the bridges and leading cross-roads watched by night.

A STRANGE DISEASE.

Ten Members of Guelph Family Dead Since October.

A despatch from Guelph says: Crown Attorney Peterson commenced an investigation on Monday in connection with recent deaths in a family named Foster, who reside on the town line. Every member of the family has been down with what the medical men pronounced pneumonia of a severe type. Three of them, the father, son, and a sister of Mr. Foster's, died within a few days of one another, the latter expiring on Sunday. Two other members of the family died a few months ago, and, altogether, there have been ten deaths among connections since October. Monday morning a double funeral of John Foster, jr., son, and Mrs. Healey, sister, took place. It is thought there may have been something in well water which the family had been drinking or other conditions which would render them so highly susceptible to this disease.

PARDONED, THEN EXPIRED.

Convict Was Being Moved From Kingston Penitentiary to Hospital.

A despatch from Kingston says: A pathetic occurrence was the death, in an ambulance on Friday afternoon of a pardoned convict, who was being removed from the prison to Hotel Dieu. William Ross, aged 48, of Port Hope, was serving a second term of five years. He was affected with heart disease, and a pardon reached here on Friday. He was hurried out of the penal institution, but before he had gone many yards from the prison gate, on his way to the hospital, death came, and his sufferings were over.

RATES WILL ADVANCE.

Chicago Fire Insurance Companies So Decide.

A despatch from Chicago says: The Tribune of Wednesday says:—Fire insurance rates in Chicago, on all less desirable risks, will be advanced 25 per cent. or more to reimburse companies that have suffered loss in the San Francisco fire.

prices steady; Manitoba hogs, \$18.50 to \$19; shorts, \$20.50 to \$21 per ton Ontario bran, in bags, \$19.50 to \$20 shorts, \$20.50 to \$21; milled moultie \$28 to \$29 per ton. Provisions—Barrels heavy Canada short cut pork, \$22.50 light short cut, \$21.50; barrels, clear-fa backs, \$22.50; compound lard, 7½ to 7¾c; Canadian pure lard, 11½ to 12¾c kettle-rendered, 12½ to 13¾c; hams 13½ to 15c; breakfast bacon, 16 to 17c Windsor bacon, 15 to 15½c; fresh killed abattoir dressed hogs, \$10.25; alive, \$7.75 per 100 lbs. Eggs—New laid, 15½ to 16c per dozen. Butter—Choice creamery 18½ to 18¾c. Cheese—Colored, 10½ to 11c; white, 11 to 11¾c.

UNITED STATES MARKETS.

Duluth, May 15.—Wheat—No. 1 Northern, 81c; No. 2 Northern, 79c; May 80½c; July, 80½c; Sept., 78½c.

Minneapolis, May 15.—Wheat—May 87c; July, 79c; Sept., 77½c; No. 1 hard, 81½c; No. 1 Northern, 80½c; No. 2 Northern, 79½c. Flour—First patents \$4.10 to \$4.20; second patents, \$3.90 to \$4; first clears, \$3.50 to \$3.60; second clears, \$2.45 to \$2.55. Bran in bulk \$15.25 to \$15.50.

Milwaukee, May 15.—Wheat—No. 1 Northern, 83 to 84c; No. 2 Northern, 81 to 82c; July, 79½c asked. Rye—No. 1, 61½ to 62½c. Barley—Sample, 40 to 54c. Corn—Cash, No. 3, 47½ to 48c; July, 45½c bid.

LIVE STOCK MARKET.

Toronto, May 15.—Another fairly heavy run of stock was offering at the Western Cattle Market to-day.

Export Cattle.—Choice, \$4.90 to \$5.10, medium to good, \$4.50 to \$4.75; bulls \$3.50 to \$4; cows, \$2.75 to \$4.25.

Butcher Cattle.—Picked lots, \$4.60 to \$4.80; good to choice, \$4.40 to \$4.60; fair to good, \$3.75 to \$4; common, \$2.50 to \$3; cows, \$3 to \$4; bulls, \$3.25 to \$4; canners, \$1.50 to \$2.

Stockers and Feeders.—Short-keep feeders, \$4.75 to \$4.85; heavy feeders, \$4.40 to \$4.90; medium, \$2.50 to \$3.50; bulls, \$2 to \$2.75; good stockers run at \$3.75 to \$4, light at \$3.25 to \$3.70; rough common, \$2 to \$2.75, and bulls, \$1.75 to \$2.50.

Milch cows — \$30 to \$60 each. Calves — 3½ to 6c per lb.

Sheep and Lambs.—Export ewes are quoted at \$5 to \$5.25; bucks, \$4 to \$4.50; culls, \$3.50 to \$4; grain-fed yearling lambs are unchanged at \$6.75 to \$7.25, and barnyards at \$4.50 to \$5.50, and spring lambs are steady at \$3 to \$5 each.

Hogs — \$7 per cwt. for select and \$6.75 for lights and fats, fed and watered.

SHOCKS IN BRITISH ISLES.

Earthquakes Reported, but No Great Damage is Done.

A despatch from London says: At the time of the 'Frisco disaster certain seismographists expressed the opinion that the earthquake would, in due course, make its appearance on this side and that Edinburgh, which stands in the danger zone, practically being built upon extinct volcanoes, would be visited. The earthquake has been here. From Devon, Cornwall, from the Channel Islands, and from some parts of Scotland, but not from Edinburgh, have come reports of how the earth had been quaking on different days in the past week, but the earthquake has dealt gently with this country, and, beyond a slight rattling of crockery and glassware, and as it is reported, the displacing of some balls on the putting green of the golf courses, the earthquake passed off, leaving Great Britain as it was and where it was.

CANADA'S INVITATION TO KING.

Strathcona, Senator Scott and Sir John Carling Likely to Present It.

A London despatch says: The Tribune understands that Canada's invitation to the King will be presented personally by a commission, consisting of Lord Strathcona, Senator Scott, and Sir John Carling, the latter two having welcomed the King as Prince of Wales in 1860.

TURKISH SULTAN DYING.

It Is Very Doubtful If He Will Live Many Months.

A despatch from Constantinople to the Manchester, England, Guardian affirms in explicit terms that, despite official denials, the gravest apprehensions are felt as to the health of the Sultan. The correspondent says that the Sultan almost every day has fits of fever, during which his temperature rises to over 102 degrees. When the attacks, which are very short, are over, he is completely prostrated, his temperature suddenly falling below 97. He passes nearly the whole of every day in his harem, and his advisers scarcely dare speak to him about affairs of State. He pays no attention to the remonstrances of his physician, and refuses to take the remedies that are prescribed for him. Ibrahim Pasha, the Sultan's chief adviser, dare not reveal to his Majesty the true state of his health. It is doubtful whether he will live more than five or six months.

CONTRADICT PROF. MAVOR.

Saskatchewan Legislature Discuss His Report.

A despatch from Regina says: Prof. Mavor's famous report on the resources of the west was discussed in the Legislature on Friday, and a resolution passed declaring it to be misleading and damaging, and endorsing the condemnation it had previously received from western official sources. The discussion developed the fact that while Prof. Mavor had argued Canada could produce only 165,000,000 bushels of wheat, there are in Saskatchewan alone 73,000,000 acres of excellent land, which on the average of the last eight years could produce a billion bushels. If only a quarter is cultivated enough can be grown to feed Great Britain and supply home consumption. It was stated that Prof. Mavor had not endeavored to gather information, and did not know what he was talking about.

FAREWELL TO CANADA.

Prince Arthur Sailed From Montreal on Thursday Morning.

A Montreal despatch says: At day-break on Thursday morning the Allan Royal Mail steamer Virginian, flying the Royal Standard, sailed from this port with Prince Arthur of Connaught, who has completed a visit of over six weeks in Canada, during which he has traveled seven thousand miles and visited every province of the Dominion. The last day of the Prince's stay in Canada was occupied with a round of visits. During the early part of the day he visited a number of the local institutions, including the Bank of Montreal. Later he was entertained at Luncheon at the Hunt Club by Sir Montagu Allan, and in the afternoon he formally opened the Horse Show in the presence of a large gathering of spectators. After dining at Sir Montagu Allan's, he paid another visit to the Horse Show in the evening and later was escorted to the Virginian. The Prince expressed the utmost gratification at his reception, and his thanks to the Canadian people for the warm welcome he had met in every portion of the Dominion.

WITHIN THREE-MILE LIMIT.

Two United States Vessels Seized off Nova Scotia Coast.

A despatch from North Sydney, C.B., says: Two American fishing schooners the Raymah, Capt. Hogan, owned by the Atlantic Maritime Company, of Boston, and the Parthia, Capt. Sessler, owned by Sylvanus Smith, Gloucester, were seized on Tuesday afternoon off Cape North by the Government cruiser Canada and the Customs protective cruiser Gladiator. They were brought to this port on Wednesday morning. The captains are charged with fishing within the three-mile limit. They are being detained here pending instructions from

Premier Rutherford, of Alberta, delivered the first provincial budget on Wednesday. The total appropriations amount to \$1,968,081, of which half a million is for bridges and trails. The premier estimates a surplus of a quarter of a million at the end of the fiscal year.

GREAT BRITAIN.

British imports increased during April

GREAT ZULU RISING.

Sanguinary Fighting is Expected Immediately.

A Durban despatch says: Serious news was received from the commander of the colonial forces on Friday morning. A Zulu impi (war expedition) several thousand strong is marching to join the rebels under Chief Bambaata. The colonial troops are hurrying forward to intercept the Zulus and prevent their junction with the rebel forces. Sanguinary fighting is expected immediately.

The Government has no knowledge of the reported annihilation of a detachment of mounted police by Zulus near Helpmakaar, and believes the report to be groundless.

Chief Kula, who is suspected of disaffection and was recently arrested, was placed in jail at Pietermaritzburg on Friday. It is presumed that it was the arrest of this chief which led to the rising of his followers. Natives captured by the colonial forces report that witch doctors are sacrificing children in order to render the rebels immune from British bullets. Before a battle they kill a girl and concoct "medicine" from her body with which they anoint the warriors.

GREAT FIRE IN PARIS.

More Than \$2,000,000 Damage Already Occasioned.

A despatch from Paris says: One of the most destructive fires that has ever occurred in Paris broke out in the Leather Market Friday night, and has not yet been extinguished. The firemen have been working unceasingly. No lives have been lost, but many poor families dwelling under the market have been forced to abandon their homes. Eleven hide and leather merchants had their warehouses and offices in the market. The value of their destroyed property is 10,000,000 francs. At 1 o'clock on Sunday morning the roof of the market fell. The fire then became more intense, reaching the oil and petroleum cellars.

LEFT SECURITIES IN CHURCH.

Free Baptist Treasurer Loses Suit Case With \$12,000.

A Lynn, Mass., despatch says: A suit case containing \$12,000 worth of bonds, stocks and other securities, many of which are said to be negotiable, was stolen on Thursday night from the High Street Free Baptist Church, where the Massachusetts Association of Free Baptist Churches have been holding its annual convention. The suit case belonged to Rev. W. T. Twort of Lawrence, the Treasurer of the organization, and the securities are the property of the association. Rev. Mr. Twort left the case in an ante-room while he went to supper. When he returned the suit case had disappeared and a raincoat belonging to Mr. Twort and containing about \$20 in cash was also missing. The police were notified at once, but up to midnight the thief had not been apprehended.

BURNED TO DEATH.

Stableman Perishes in a Fire Near Ottawa.

An Ottawa despatch says: Fire on Friday night destroyed the stables of the Balmoral Hotel at Gatineau Point, near here. Stevens Robertson, the stableman, was burned to death. He was sleeping in the hayloft, and, being in an intoxicated condition, had probably started the fire in attempting to light his pipe.

WAR ON CIGARETTES.

Peterborough Imposes \$200 License Fee on Dealers.

A Peterborough despatch says: At a meeting of the City Council on Tuesday night a by-law was passed imposing a license of two hundred dollars on all retail dealers in cigarettes, other than hotels and liquor shops. The hotel men have agreed, it was stated, not to handle

DOMINION PARLIAMENT

NOTES AND PROCEEDINGS OF THE OTTAWA HOUSE.

THE INDEMNITY BILL.

Mr. W. F. Maclean's proposal to abolish increased indemnity to members of Parliament was brought up. The discussion was participated in by many members on both sides of the House, including Sir Wilfrid Laurier and Mr. Borden. The consensus of opinion was that the public criticism of the indemnity was unjustifiable. Sir Wilfrid Laurier, however, spoke of the necessity for either amending or removing the measure giving a pension to Ministers. Only ex-Ministers who were in need of the pension were entitled to the pension. Mr. Borden argued strongly in favor of the indemnity of \$2,500 for members of Parliament. He reviewed the increasing length of the sessions and the demands made on the members' time, showing that if a member's time and work for so long a session were not worth \$2,500 it was not worth a cent, and he should not be re-elected. The bill was finally voted down. The vote was 167 to 9.

LORD'S DAY MEASURE.

The Special Committee of Parliament on the Government's Sunday observance legislation received reports from the transportation interests and representatives of the Lord's Day Alliance, showing that these parties found it impossible to reach any common understanding as to the provisions that the law should contain. The railway representatives reported that "the alliance were not prepared to make any practical suggestions, that it was no use prolonging the conference, as no tangible results could be obtained."

Rev. J. G. Shearer, on behalf of the alliance, submitted a report, which offered some further concessions to the transportation interests. These amendments were as follows:

"1. Allowing all trains and vessels in transit when the Lord's Day begins to proceed to their destination.

"2. Loading and unloading merchandise at intermediate points from passenger boats or trains.

"3. Keeping track and yards free from snow, ice and any other work required for the safety of the traffic.

"4. Loading and unloading of ocean vessels when otherwise they would be unduly delayed beyond their sailing date, or in imminent danger of losing one trip by closing of navigation.

"5. Work of yard crews, handling freight during limited hours. The work of canal employes during limited hours might also be conceded. In view of some necessary Sunday work, it was suggested that provision be made for holiday on another day of the week for the transportation employes who had to work on Sunday, and that double pay be allowed for Sunday work."

BRANCH LINES.

The Grand Trunk Pacific Branch Lines Company announced that they were willing to have an agreement as to these branches binding it not to divert trade from Canadian to American channels. They have also dropped the applications for proposed branches to Halifax, St. John, and Calgary, to the southern boundary of Manitoba, and from Fort William to Toronto. This bill stands till a later meeting of the committee, in order that the members might become fully acquainted with the measure in its new form.

MUST BE AMENDED.

The plans filed by Messrs. Mackenzie and Mann for the construction of their proposed line between Georgian Bay and Montreal were discussed before the Minister of Railways. Mr. Drinkwater, of the C.P.R., wanted fuller information about the western end of the proposed line and the western section was held over accordingly. The entrance to Ottawa, planned to be made through one of the finest parks and showing 13 level crossings, was laid over. The Minister

ada and the Customs protective cruiser Gladiator. They were brought to this port on Wednesday morning. The captains are charged with fishing within the three-mile limit. They are being detained here pending instructions from the Dominion Government.

TOOK VESSEL FROM UNDER FORTS.

The German Ambassador's Prompt Reply to Turkey.

A despatch from Constantinople says: The arbitrary detention of a German sailing ship, the Odysseus, by the Turkish authorities recently threatened friction between Turkey and another European power, but the energetic action of the German Ambassador quickly solved the difficulty. The Odysseus was discharging her cargo at Chibuklu when she was boarded by the authorities and removed to Kavak, where she was anchored beneath the batteries, the Turks falsely claiming that the vessel had explosives on board. The Ambassador protested urgently, but unavailingly, whereupon he took a few sailors from the German guardship here, the Loreley, boarded the Odysseus, hoisted the diplomatic flag, and took the ship under the guns of Kavak to her dock at Chibuklu, where a watch was kept over her while she completed the discharge of her cargo. On returning to the Embassy the Ambassador found a State Council awaiting him with apologies and explanations.

SUICIDE'S BODY FOUND.

Saskatchewan Man Disappeared From Home Last Fall.

A despatch from Strassburg, Sask., says: On Monday, while W. Schroeder was hunting for his cattle, he came across a man's body on a bluff about three miles south of the town. Upon investigation he found it to be that of Adolph Schmidt, who disappeared from his home in October last. Mr. Schroeder reported the matter to Coroner Hotham and an inquest was held on Tuesday. After hearing the evidence the jury brought in the verdict that deceased came to his death by hanging himself while temporarily insane.

CUT OUT BOY'S TONGUE.

He Was Dared to Touch One of the Frost Pipes.

A despatch from Millville, New Jersey, says: Albert Travis, while playing at the Millville ice plant on Thursday, was dared by a boy companion to touch one of the frost pipes with his tongue. "I never take a dare," he said, and touched the white pipe with his tongue. In a moment he was writhing in pain. His companions laughed, thinking he was playing a joke. One of the engineers, hearing the cry, found the boy on his knees almost unconscious. Young Travis' tongue was terribly swollen and frozen fast to the pipe. All efforts to release him were futile and his father was summoned. Learning there was only one way to save his son, he spoke to the engineer, and turned away while the man opened a sharp blade of his pocket knife and cut off the lad's tongue. Before Dr. Chas. B. Neal could arrive the boy had almost bled to death. It is now thought his dare will cost his life.

STRANGLED TO DEATH.

A Young Russian Jew Caught in an Elevator.

A St. John, N.B., despatch says: His neck pinned between the edges of the elevator and the floor, a young Russian Jew strangled to death within the course of a very few minutes in a Dock Street clothing establishment a little after 6 o'clock on Tuesday evening. Nobody saw the fatality, which occurred in the clothing manufacturing house of David Ashkins, No. 36 Dock Street. The dead youth, so far as could be learned, had no relations in the city. He was known by no other name than that of Himan or Hyman, and arrived about three weeks ago from Warsaw, Poland.

million is for bridges and trails. The premier estimates a surplus of a quarter of a million at the end of the fiscal year.

GREAT BRITAIN.

British imports increased during April \$18,857,000; exports, \$14,469,000.

Trials of the C.P.R. steamer Empress of Ireland will take place in a fortnight. Hamar Greenwood, M.P., will preside at the Colonial Society's London dinner, May 24.

UNITED STATES.

James E. Burke, a blacksmith, will probably be the Democratic candidate for Governor of Vermont.

J. L. Yarnall, aged 80, murdered his wife, aged 72, then killed himself on Friday at Philadelphia.

In a rear-end collision on Friday on the Norfolk & Western Railroad four men were killed.

The celebrated Ferris wheel was destroyed by dynamite at St. Louis, on Saturday.

A million dollar fund has been started to rebuild the Methodist churches in San Francisco.

Besides stopping the sale of soda water, cigars, ice cream, etc., on Sunday, Mayor Reed of Portsmouth, Virginia, will not allow railway clerks to work on that day.

Jacob Luckstone, chief clerk of the registry department at the New York general postoffice, attempted suicide here, after being questioned about the loss of \$2,000 from the mails.

Elizabeth Gates, 114 years, the oldest person in Georgia, died at Brunswick on Tuesday. She had been married three times and leaves four children, 23 grandchildren, and 19 great-grandchildren.

The brokerage firm of Harrison, Snyder & Co., of Philadelphia, announced that defalcation amounting to at least \$100,000 had been committed by Edwin S. Greenfield, a confidential clerk. The firm have filed a petition in bankruptcy.

Twenty-one students of Butler College, of Indianapolis, Ind., were suspended on Tuesday. They went to the home of Prof. R. B. Moore, threw several buckets of water on him and hurled a brick through the window. The students objected to certain new rules laid down by the professor.

William Cox and his son-in-law, William Carney, of Smithfield, Ohio, quarrelled on Wednesday over the possession of two cats. As Carney was leaving the yard Cox seized a shotgun and shot him dead. He then turned the weapon on himself and fired the second load into his breast, dying almost instantly.

GENERAL.

A meeting of Russian members of Parliament was dispersed on the order of the St. Petersburg Chief of Police.

Germany has interested itself in valuable coal concessions on the Island of Laut. The probable object is to establish a naval base.

BUSH FIRES AT NELSON.

The Country East, West and South Is Overrun.

A despatch from Nelson, B. C., says: Bush fires are raging with unabated violence in every direction in this district, and the atmosphere is filled with dense smoke. Reports from the surrounding country, east, west and south, all show extensive fires in progress. Unless a heavy rain follows quickly the loss will be very great.

CHINA PAYS INDEMNITIES.

Missionaries Recompensed for Loss of Property.

A Hong Kong despatch says: The Viceroy of Canton has paid to the American Consul at Canton, Julius G. Lay, the sum of \$60,000 as indemnity for the mission buildings, the personal property of the missionaries and the claims of converts, as a result of the destruction of property during the rioting at Lienchow in October last. The money will be transferred to the Presbyterian Mission Settlement at Lienchow.

A Peterborough despatch says: At a meeting of the City Council on Tuesday night a by-law was passed imposing a license of two hundred dollars on all retail dealers in cigarettes, other than hotels and liquor shops. The hotel men have agreed, it was stated, not to handle cigarettes. The by-law goes into force on July 1st.

DOUBLE-TRACKING C. P. R.

Work on the Line Between Montreal and Smith's Falls Commenced.

A despatch from Kingston says: The Contract for double-tracking the C.P.R. between Montreal and Smith's Falls has been let, and the work has already commenced. Mr. Drinkwater, Winchester, roadmaster, will supervise the work, and Edward Myers, Smith's Falls, will act as roadmaster.

OIL AT MANITOU, MAN.

Sample Examined Reported to be First-class—Deeper Boring.

A Manitou, Manitoba, despatch says: Indications of oil on the farm of R. M. Lea, seven miles south of this town, so impressed the people that a sample was sent to a Toronto expert, who in his report stated that it was the highest quality of oil. A machine to go further down with the boring is expected in a few days. Lea's farm is a large one near the Pembina mountains, and on many adjoining farms there are indications of oil.

DRAGGED UNDER HARROW.

Mr. E. B. Parker Accidentally Killed Near Magnetawan.

A despatch from Magnetawan says: E. B. Parker, a highly respected farmer, and late bailiff of the Fifth Division Court of this district, was accidentally killed about noon on Thursday. Mr. Parker was harrowing a field near his residence, when his team ran away, dragging him along the ground, causing injuries from which he died. His daughter, witnessing the sad affair, rushed to her father's assistance, and succeeded in extricating him. After raising himself up and smiling he fell back and expired almost immediately.

CHARGE OF MURDER.

George McLean Arrested at Rat Creek, Alberta.

A despatch from Edmonton, Alta., says: A charge of murder has been preferred against Geo. W. McLean, companion of Mary Fortier, the young woman who was found dead near Rat Creek on Friday. McLean, who has been held in custody by the police since his release from the hospital, had his preliminary hearing before Magistrate Wade on Tuesday. The coroner's jury implicated McLean as a party to the young woman's death.

ZULU VICTORY.

Detachment of Natal Mounted Police Practically Wiped Out.

A Durban despatch says: An unconfirmed report is current to the effect that the rebellious Zulus have practically wiped out a detachment of the Natal Mounted Police near Helpmakaar.

CAR OF HORSES BURNED.

A Harrowing Mishap Near Treherne, Manitoba.

A Treherne, Man., despatch says: Mr. Teece, here with a car of horses from Omaha, sold a few and on Friday reshipped the balance to Strassburg, but about three miles west of here the car was discovered to be on fire. The car was cut out, and with the engine a race was made to Holland, but all that could be done was to place the car on a siding, where it burned to the trucks with horses valued at two thousand. The car next to the horses also had an end burned out, but it was saved by the trainmen.

of the C.P.R. wanted fuller information about the western end of the proposed line and the western section was held over accordingly. The entrance to Ottawa, planned to be made through one of the finest parks and showing 13 level crossings, was laid over. The Minister intimated, however, that it could not be approved. The section between Montreal and St. Andrew's and between Hawkesbury and Ottawa was approved. The section between Hawkesbury and St. Andrew's stands over in order that an arrangement may be made to keep north of the Carillon and Grenville road.

TUBERCULOSIS LIST.

Before the Parliamentary Committee on Agriculture Dr. Ruiterford, chief veterinary of the Agriculture Department, made a statement of considerable interest to dairy farmers. It had not been demonstrated, he said, that the tuberculosis and other tests were absolutely certain in their results. Therefore, he did not approve of making their application compulsory. In the meantime he was making experiments of his own on the subject, but for the present his advice to farmers was to give their animals plenty of fresh air. It had been shown that good ventilation was one of the best means of keeping herds free of disease.

DREDGING.

Mr. Bennett was informed by Mr. Fisher that the dredging at Port Arthur and Fort William, from 1902 to 1905, cost the following amounts: Port Arthur, 1902, \$19,042; 1903, \$25,964; 1904, \$40,336; 1905, \$52,841. Fort William: 1902, \$8,402; 1903, \$56,275; 1904, \$61,822; 1905, \$126,383. Tenders had been called for in 1902 and 1903, and also in 1905 and 1906. In other cases the work had been a continuation of work done under previous tenders.

THE ROSS RIFLES.

Col. Worthington was informed by Sir Frederick Borden that 16,500 Ross rifles had been manufactured by the Ross Rifle Company since its organization, of which 1,000 went to the North-West Police, 500 to the Department of Marine, 330 to the 3rd Regiment, R. C. A., 267 to rifle associations, 330 to the 6th Regiment, Canadian Artillery, and 2,000 to the permanent forces. The actual cost of the rifle to the department was \$25, the cost of the British army rifle was \$24, and the British weapon cost the Australian Department of Defence \$26.58. A few rifles had been rejected as unfit for service, but the number of these was steadily decreasing. None of them had been retained. During 1904 and 1905 10,500 rifles had been manufactured. No part of the rifle was manufactured in the United States.

TELEPHONE LINES.

Mr. Roche was informed by Sir Wilfrid Laurier that the Government had considered the memorial sent to the Governor-General-in-Council by the Province of Manitoba praying for an Act to expropriate the telephone lines in that province. No conclusion, however, had yet been reached in regard to the matter, as there was a serious doubt in regard to the jurisdiction of Parliament. The matter was under the consideration of the Department of Justice.

GERMAN TAX ON TRAVEL.

Reichstag Adopts New Graduated Stamp Duty on Railway Tickets.

A despatch from Berlin says: The Reichstag on Tuesday adopted a new sliding stamp duty on railway tickets, the lowest being one and a quarter cents; and the highest \$2. Tickets costing less than fifteen cents are not to be taxed.

GARRISON WITHDRAWN.

Sultan Ordered Troops to Evacuate Tabah.

A despatch from Constantinople says: The Turkish garrison at Tabah, whose presence there led the British Government to issue an ultimatum to the Porte, which expired at midnight on Sunday, has been withdrawn by order of the Sultan.

My Hair is Scraggly

Do you like it? Then why be contented with it? Have to be? Oh, no! Just put on Ayer's Hair Vigor and have long, thick hair; soft, even hair. But first of all, stop your hair from coming out. Save what you have. Ayer's Hair Vigor will not disappoint you. It feeds the hair-bulbs; makes weak hair strong.

WHAT OTHER PAPERS SAY

Kingston Whig.

The mail is lauding the Whitney government for the great things it has essayed in legislation. Any big ideas that were expanded during the recent session originated with the commission and at a cost of thousands of dollars.

Stratford Beacon.

The Whitney government's power scheme is like an electric light that blazed for awhile, then spluttered, and finally went out. It differs in no important detail from the Ross government's bill of 1903.

London Advertiser

The Whitney Government has tried to pose as a champion of the people, fighting the corporation dragon, but its mock heroics will deceive nobody, now that the performance is over. The Beck bill is a "sell" on the municipalities, which have been led to hope for a helping hand from the Government.

Toronto Star.

"I never knew there was so much vituperation in the English language until I heard Dowie talk for half an hour about the other denominations to four thousand of his deluded people in Chicago," said Rev. C. O. Johnston, in Wesley Methodist church.

The preacher gave Dowie credit for great executive ability, and a great faith in himself. He preached the doctrine of divine healing, but Mr Johnston thought that the words of encouragement Dowie spoke to his patients, and which the latter believed, did more to cure them than the remedies he prescribed. Now, when Dowie himself is ill and likely to die, said the preacher, he has given up his delusions and believes in doctors as he has one to attend him.

Atkinson Globe.

Once upon a time a man married a woman who had inherited \$500 from a grandfather. This was all she ever received, but the man never got credit for his efforts the rest of his life. He built a new store. "Did it with his wife's money," the neighbors said. The home was made over and enlarged. "His wife's money did it," was the only comment. The little measly \$500 she inherited was given the credit for everything he did during life, and when he died and his widow put up a monument with his life insurance, "Her money paid for that," was said again. But this is what her money really went for: During her engagement, she bought herself a \$350 piano and a \$150 diamond ring, and in a few weeks lost the ring. There was always some regret that she didn't lose the piano.

Bobcaygeon Independent.

The god of the continent is the almighty dollar. It seems as if nothing higher can be grasped. "What is there in it?" that is the all-absorbing question. Should a man do something for honor the popular cry instantly is, Great Scott, here is a man who has done something for nothing! Pay him for it, pour some dollars into his clothes. And if it should be timidly mentioned that the man has been more than amply rewarded with the honor, the chances are the suggestion will be met with derision. Honor! Rats! Ten acres of honor could be swapped for a ten-cent lunch. The highest, noblest and holiest aim known to this great continent is a filthy, stinking rag, called

CASTORIA

The Kind You Have Always Bought, and which has been in use for over 30 years, has borne the signature of *Chas. H. Fletcher* and has been made under his personal supervision since its infancy. Allow no one to deceive you in this. All Counterfeits, Imitations and "Just-as-good" are but Experiments that trifle with and endanger the health of Infants and Children—Experience against Experiment.

What is CASTORIA

Castoria is a harmless substitute for Castor Oil, Paregoric, Drops and Soothing Syrups. It is Pleasant. It contains neither Opium, Morphine nor other Narcotic substance. Its age is its guarantee. It destroys Worms and allays Feverishness. It cures Diarrhoea and Wind Colic. It relieves Teething Troubles, cures Constipation and Flatulency. It assimilates the Food, regulates the Stomach and Bowels, giving healthy and natural sleep. The Children's Panacea—The Mother's Friend.

THE CENTAUR COMPANY, 77 MURRAY STREET, NEW YORK CITY

Beau of Fort Sheridan.

Once a man who had the reputation of never having been beaten for the position of orderly came from another regiment. Private Haarscher and the newcomer, as luck would have it, were detailed for guard the same day. The whole garrison turned out to see which one the adjutant would pick for the coveted place. To all outward signs there was no difference in the neatness and soldierly appearance of the two men.

The officer spent about twenty minutes examining the rifles, belts, cartridge boxes and brasses of the two soldiers. There was absolutely nothing to choose between them in point of neatness of appearance. Finally, as a last resort, the adjutant unbuttoned the blouse of the new claimant for orderly honors. He found a somewhat faded but absolutely clean undershirt.

The officer passed to Haarscher and undid three buttons of his blouse. Haarscher had on a brand new suit of silk underwear that must have cost him a month's pay. It was the other man on that day who walked past post in the hot sun, while Haarscher did "rolling duty" in the shade in front of the commandant's quarters. He was a Frenchman through and through, and he was more proud of it than of anything else save the American citizenship which he had won by enlisting under the American flag.

A thief snatched the window of Birks & Son's Jewellers at Winnipeg and snatched a tray of diamond rings. In running away he dropped all but three rings valued at \$1,250.

CAUGHT COLD ON THE C.P.R.

A. E. Mumford tells how Psychine cured him after the Doctors gave him up

"It is twelve years since Psychine cured me of lingering consumption." The speaker was Mr. A. E. Mumford, six feet tall, and looking just what he is a husky healthy farmer. He works his own farm near Magnetawan, Ont.

"I caught my cold working as a fireman on the C.P.R.," he continued. "I had night sweats, chills and fever and frequently coughed up pieces of my lungs. I was sinking fast and the doctors said there was no hope for me. Two months' treatment of Psychine put me right on my feet and I have had no return of lung trouble since."

If Mr. Mumford had started to take Psychine when he first caught cold he would have saved himself a lot of anxiety and suffering. Psychine cures all lung troubles by killing the germs—the roots of the disease.

holiest aim known to this great continent is a filthy, stinking rag, called a dollar.

Ancaster Independent.

The smuggling craze along the border is just as bad with the women as the bargain hunting craze is with the woman in the big cities. If a woman was to smuggle all her life across the river, between Canada and the United States, she would not be a darned bit better off when she was seventy-five than if she had stayed at home and done her shopping quietly amongst the local merchants. And the woman who buys her goods at the nearest corner store is just as well off, and just as happy in life, as the fiend that is ripping, tearing and snorting from one bargain counter to another in the departmental stores. What these women want in their upper stories is about two ounces more of common sense.

Webster Beaten by a Woman.

In the somewhat famous case of Mrs. Bodgen's will, which was tried in the supreme court many years ago, Daniel Webster appeared as counsel for the appellant. Mrs. Greenough, wife of the Rev. William Greenough of West Newton, was a very self possessed witness. Notwithstanding Mr. Webster's repeated efforts to disconcert her she pursued the even tenor of her way until Webster, becoming quite fearful of the result, arose, apparently in great agitation, and, drawing out his large snuffbox, thrust his thumb and finger to the very bottom and, carrying a deep pinch to both nostrils, drew it up with gusto, and then, extracting from his pocket a very large handkerchief, he blew his nose with a report that rang distinct and loud through the crowded hall.

He then asked, "Mrs. Greenough, was Mrs. Bodgen a neat woman?"

"I cannot give you full information as to that, sir. She had one very dirty trick," replied the witness.

"What was that, ma'am?"

"She took snuff!"

Pathos In a Name.

A speaker at a Methodist conference told this story, which, he said, was related to him by Bishop Hartzell: "The bishop, while on a southern tour, met a dorky who was the father of sixteen children, the youngest of whom was scarcely out of arms, and on asking him what the youngster's name was received this reply, 'Judas Scariot, sah.' 'You don't mean to tell me that that is really his baptismal name, do you?' asked the bishop. 'Indeed, I do, sah. Ain't dat a Scriptural name?' 'Yes; but do you know who Judas Scariot was?' 'Course I does, sah; but doan de Scripture say it would have been better for Judas Scariot if he had never been borned?' 'Yes; but what has that to do with this poor little chap?' 'Dat's jest it, sah; dat's jest it. It would have been better for dis poor little chap if he had never been borned, and dat's why we calls him Judas Scariot.'"

His Finish Plain.

"Glad to meet you," said the polite cannibal chief to the new missionary. "I shall expect to see more of you tomorrow. We dine at high noon."

"Er—thanks, awfully. I shall be delighted—"

"Not at all. The pleasure will be all mine, I assure you."

Essay.

First Mail—Have you got an easy place to work? Second Ditto—I should say! It's no trouble to keep the house in order at all. I'm working for a bride and groom, and they never use anything but the cozy corner.

Woodcraft.

Woodcraft holds the key to nature's storehouse. A camper should know for himself how to outfit, how to select and make a camp, how to wield an ax and make proper fires, how to cook, wash, mend; how to travel without losing his course or what to do when he has lost it; how to trail, hunt, shoot, fish, dress game, manage boat or canoe and how to extemporize such makeshifts as may be needed in wilderness faring. And he should know these things as he does the way to his mouth. Then he is truly a woodsman, sure to do promptly the right thing at the right time, whatever befalls. Such a man has an honest pride in his own resourcefulness, a sense of reserve force, a doughty self reliance that is good to feel. His is the confidence of the lone sailorman who whistles as he puts his tiny bark out to sea.—Outdoors.

Wrongly Named Pests.

The origin of the so called San Jose scale is not certainly known, but it is reasonably sure that it was brought from China about 1870 on some plants imported by James Lick and placed on his property in the Santa Clara valley. By 1880 it had come to be recognized as a serious pest and in that year was found near San Jose and described by Professor Comstock, who named it *Aspidiotus perniciosus*. That name being too hard for most of us, the pest has become known the world over as the San Jose scale from the place where it was first found by Professor Comstock, very much to the disgust of the people of that city and vicinity, who do not suffer from it in any appreciable degree.

Everyday Miracles.

"Bullfinches fed on hemp seed turn quite black," said a naturalist. "Horses kept in coal mines for several years become covered with soft, thick fur like a mole. The mastiff of Tibet, who in the Tibetan highlands has a heavy coat of wool, loses his coat completely when he is brought down to the plains.

One Cold and Another

The season's first cold may be slight—may yield to early treatment, but the next cold will hang on longer; it will be more troublesome, too. Unnecessary to take chances on that second one. Scott's Emulsion is a preventive as well as a cure. Take

SCOTT'S EMULSION

when colds abound and you'll have no cold. Take it when the cold is contracted and it checks inflammation, heals the membranes of the throat and lungs and drives the cold out.

turns white in the winter, but if he is taken for the winter to a warm climate he does not turn white at all. Quite amazing altogether are the changes that with food and environment we can effect on all living creatures, even on man."

Village of Cripples.

The strangest village in the world is undoubtedly the little hamlet of Jatte, near Culoz, in France, not far from the Italian frontier, where dwell about 200 deformed men, women and children, who in Paris go by the name of "Culs-de-Jatte." They are deprived of the use of their legs and thighs and push themselves along in primitive wooden carts with wooden wheels, which they propel by means of a flatiron shaped block of wood in either hand.

Last of the Aristocrats.

"The old French aristocracy dies with me," cried the Princess de Valmont on her deathbed. She was a bitter old soul, who, born of a long line of uncontaminated ancestors and married to a noble of equally supreme strain, had, through her husband's death in financial difficulties, to marry her five children to "abominable persons" of high character, but with the blight of trade or industry in their blood. Her last years were made mournful to her by this pitiful descent, and just before her grandiose last utterance, looking with a bitter smile at her children and grandchildren in years round her deathbed, she broke silence in the following terrible reflection: "We have here," counting on her fingers, "representatives of carriage making, wholesale grocery, confectionery, coal mining and the stock exchanges, and all grafted on the old tree of the De Valmonts."

The Best Guaranty of Merit Is Open Publicity.

Every bottle of Dr. Pierce's world-famed medicines leaving the great laboratory at Buffalo, N. Y., has printed upon its wrapper all the ingredients entering into its composition. This fact alone places Dr. Pierce's Family Medicines in a class all by themselves. They cannot be classed with patent or secret medicines because they are neither. This is why so many unprejudiced physicians prescribe them and recommend them to their patients. They know what they are composed of, and that the ingredients are those endorsed by the most eminent medical authorities.

The further fact that neither Dr. Pierce's Golden Medical Discovery, the great stomach tonic, liver invigorator, heart regulator and blood purifier, nor his "Favorite Prescription" for weak, overworked, broken-down, nervous women, contains any alcohol, also entitles them to a place all by themselves.

Many years ago, Dr. Pierce discovered that chemically pure glycerine, of proper strength, is a better solvent and preservative of the medicinal principles residing in our indigenous, or native, medicinal plants than is alcohol; and, furthermore, that it possesses valuable medicinal properties of its own, being demulcent, nutritive, antiseptic, and a most efficient anafiment.

None of the above medicines contains alcohol, or any harmful, habit-forming drug, as will be seen from a glance at the formula printed on each bottle wrapper. They are safe to use and potent to cure.

Not only do physicians prescribe the above, non-secret medicines largely, but the most intelligent people employ them—people who would not think of using the ordinary patent, or secret medicines. Every ingredient entering into the composition of Dr. Pierce's medicines has the strongest kind of an endorsement from leading medical writers of the several schools of practice. No other medicines put up for like purposes has any such professional endorsement.

Dr. Pierce's Pleasant Pellets cure constipation. Constipation is the cause of many diseases. Cure the cause and you cure the disease. One "Pellet" is a gentle laxative and two a mild cathartic. Druggists sell them and nothing is "just as good." Easy to take as candy.

The Web of Venice.

In Venice one is as if caught in an immense network, or spider's web, which, as one walks in its midst, seems to tighten the closer about one. The streets narrow overhead, push outward with beams and stone balconies and many turning angles; seem to loosen their hold for a moment where a bridge crosses a narrow canal between high walls and over dark water and then tighten again in close lanes where the smells of the shops meet and fume about one's face. The lanes are busy with men in rough clothes and with women in shawls, bareheaded and with great soft bushes of hair, who come and go quietly, slipping past one another in these narrow spaces, where there is hardly room to pass, as the gondolas slip past one another in the narrow canals. The road is difficult to find, for a single wrong turning may lead one to the other end of Venice. This movement, the tangles of the way, the continual arresting of one's attention by some window, doorway or balcony put a strain upon one's eyes and begin after a time to tire and stupefy the brain. There is no more bewildering city, and as night comes on the bewilderment grows almost disquieting. —Arthur Symons in Scribner's.

Happiest People In Europe.

If it be in harmony with one's surroundings to work and to thrive a little and to rear children, to have liberty and security and be tolerant and self respecting constitute any measure of happiness, then the Swiss are by all odds the happiest people in Europe. Such, I think, is the judgment of all observers that have been much among them. You can test it by a simple reference. From every other nation in Europe there is emigration; from Switzerland little or none. At all times about 300,000 Swiss are in foreign countries learning languages or methods of combining travel with work, but they come home, always they come home. The typical Swiss never thinks of making permanent residence outside of Switzerland, or, if once thinking so, he changes his mind when he makes trial thereof.

A Few First Aid Hints.

The following first aid advice was given at a meeting of railway surgeons:

"Don't put your finger on an open wound; don't put a quid of tobacco on a wound, no matter how small it may be; don't use cobwebs or hornet's nest to stop bleeding; don't dose the patient with whisky, brandy, rum or gin; don't bind or cover a wound with a handkerchief or rag (if you cannot get a first aid packet use clean old muslin that has been dipped in boiling water for a few minutes); don't sit a patient up when he is very pale or weak; don't wash a wound, and don't remove blood clots."

These hints are meant for public instruction for those of the laity who may have occasion to extend first aid in case of accidents.

Professional Fees.

It is sometimes claimed that the surgeon or the physician is the only man who is paid for his mistakes, but that is clearly untrue. Lawyers receive fees for the cases that they lose, and other men are not "docked" whenever they fall short of complete success. The truth is that the idea of human compensation is based upon intelligent, honest effort and reputed skill. If all fees and salaries were contingent upon absolute perfection in the task undertaken they would have to be increased many times over, since absolute per-

Athletic Feats on the Moon.

Did you ever get to thinking that you would enjoy a sudden translation from the earth to the moon? If you have, did you ever figure on the wonderful feats of muscular strength with which you could astonish our luminary neighbors, providing gravitation would have no more effect accordingly there than here? Let us figure: The moon only weighs one-eightieth part as much as the earth. Gravitation must therefore be correspondingly less. If therefore a man weighed 140 pounds on this earth he would weigh but a fraction over twenty pounds according to the scales used on the moon. If, however, his muscles and frame remained the same as they were before being transferred to our silvery sister world he could "astonish the natives" with his astounding athletic and muscular feats. He would be able to shoulder an elephant of the regulation size and to yank a small mountain out by the roots. The buoyancy of his body would be so great that athletic feats would be easily accomplished. He could run a mile in something less than two seconds or could by a single bound leap over a wall twenty-four feet high without greater exertion than would be required here in clearing one only two feet in height.

Artist Ziem's Queer House.

Ziem, the artist, was a queer character. He lived in a house at the top of the Rue Lepic on Montmartre. His house was his castle in the literal sense of the word. It was difficult to obtain admission, for the painter had an upper window out of which he always looked when the bell rang and interrogated his would be visitors. He had a basket which he let down by a cord to receive packages or messages, and he slept in a wonderful swinging bed. His house was a veritable museum, illuminated Persian manuscripts being part of his collection. Some of these were worth thousands of francs, but it was impossible to persuade him to sell any of them. In place of a newel post on his stairway stood the prow of a gilded gondola, and, closely immured in his studio, he painted pictures of Venice and bade defiance to all who came to disturb his peace.

Virtues of the Old Sod.

On the very rare occasions that snakes have been found in Ireland explanation of the phenomena has always been forthcoming. One was brought in a bundle of shrubs, another in a packing case, and yet another—this time a dead one—was introduced by an English visitor. All have proved of alien extraction. Even science cannot disprove the Irish belief in St. Patrick as a pied piper. Here is an incident illustrative of this belief: A son of Erin emigrated to Australia and quickly made a fortune. He was happy except for one trial—snakes. "Oh, for an Australian St. Patrick!" he moaned. And then came an inspiration. He wired for a load of the soil of old Ireland. Only when he had strewn the precious mold around about his dwelling could he sleep in peace!—London Tribune.

Paint Brushes.

Everybody paints, whether he owns a house in the suburbs or rents a flat in the metropolis. And what troubles the mind most is the disposition of the brushes when the job is partly completed. Some folk leave them in the paint, some wash them in turpentine, some soak them in alcohol, some immerse them in linseed oil. An authority advises all amateur as well as professional painters to drop their brushes into a bucket or bottle of water and

Tea Flavor and Strength

THE greater body and richness of Indian tea when combined with the delicately flavored but thinner tea of Ceylon, produces that "rich fruity flavor" of Red Rose Tea—a tea that is strong and goes further—requires less to make a cup of equal strength than any brand of Ceylon tea alone.

Red Rose Tea combines the strength and richness of Indian tea and the delicacy and fragrance of Ceylon tea.

Red Rose Tea

is good Tea

YOUR BRAIN HOLDS THE NERVE STRINGS

AND IF DISEASE TAKES HOLD OF THE NERVES THE BRAIN LOSES CONTROL OF ALL THE FORCES THAT CONTRIBUTE TO HEALTH AND MENTAL AND PHYSICAL COLLAPSE ARE AS CERTAIN AS SUNSET

South American Nervine

begins at the beginning to prevent and eradicate disease—it acts on the nerves that control the vital organs of the body, gives strength to the whole nervous system, fills the blood with that richness and purity that is so essential to health—because, remember this, that when these nerves become weakened and exhausted it means indigestion, torpid liver, stagnant kidneys, the heart flutters and becomes irregular and weak, the lungs fail to have the nourishment and weaken, and the climax, naturally enough, is debility—and the next stage may be consumption. All such dire consequences may be saved by the wonderful potency of South American Nervine.

South American Nervine is greatest blood purifier of modern medicine. South American Nervine is woman's best friend in very deed.

You persist and it never fails.

SOUTH AMERICAN RHEUMATIC CURE cures in from one to three days.
SOUTH AMERICAN KIDNEY CURE for diabetes, Bright's disease and all bladder troubles.

absolute perfection in the task undertaken they would have to be increased many times over, since absolute perfection or complete success is very rare in any line of activity.

Decapitating Words.

A writer in the London Chronicle says: "Our language's trick of decapitating words, as in 'bus,' 'phone' and 'wig,' is not at all a modern failing. Take the common words 'spend' and 'sport.' Our very early ancestors had the verb 'spendan,' and yet 'spend' is really a disgusting abbreviation of the Latin 'dis-pendere,' to pay out. 'Sport' is another very old English word, yet it is really 'disport'—'dis-port,' to carry apart, which acquired the metaphorical sense of pleasure or amusement precisely as 'divert' and 'transport.'"

The Coughing Habit.

An irritating cough is not always due to having a cold. It is very often a habit acquired during the period of having one and afterward is more of a nervous, reflex action. When you find you are getting into the habit of continually coughing—a dry, short cough—try to check the inclination, and more often than not the local irritation in your throat will disappear and the cough with it.

A Gigantic Spanish Palace.

The "eighth wonder," as it is usually called, is the gigantic palace of the Escorial, which stands in the ancient kingdom of Toledo, Spain. It is confessedly the most wonderful edifice in the world, whether in dimensions or riches. It has 1,860 rooms, 6,200 windows and doors, 80 staircases, 73 fountains, 48 wine cellars, 8 organs and 51 bells. Its circumference is 2,800 feet, or almost exactly a half mile. It was dedicated to St. Lorenzo, the saint who is said to have been broiled on a grid-iron, and on that account its foundations were laid off in imitation of the shape of that kind of a piece of kitchen utensil.

Silhouette.

Silhouette was the name of a French minister who endeavored to raise the revenues by taxing the nobility. In consequence he became very unpopular, and, the fashion of profiles in black coming in about the same time, they were called in derision silhouettes, the nobility claiming that they had their portraits done in black because they were too poor to have a full picture taken.

He Remembered.

Mrs. Jones—Do you remember that night in June, Henry, when you first asked me to marry you? Mr. Jones—If you refer to that first, last, single, solitary and only occasion upon which I ever asked you to marry me, I do—and you never gave me another chance, either.

An Unhappy Medium.

Housekeeper—You're a big, healthy man. Why don't you go to work? Tramp—Lady, I'll tell yer me trouble. I'm an "unhappy medium." Housekeeper—What do you mean by that? Tramp—Well, yer see, I'm too heavy for light work an' too light for heavy work.

He Started It.

"Why are you going about with a lantern and a cynical smile?" asked the bystander. "Don't interrupt me," returned Diogenes. "I am the original investigating committee!"

CASTORIA.

The Kind You Have Always Bought
Bears the Signature of *Chas. H. Fletcher*

ity advises all amateur as well as professional painters to drop their brushes into a bucket or bottle of water and forget them. When needed again they will be as soft and pliant as when new. I have tried the trick and can recommend it.

The Houses of Parliament.

The fire, which destroyed the old houses of parliament broke out on Oct. 16, 1834. The present building, termed the palace of Westminster, was opened on Nov. 4, 1852. It stands on a bed of concrete twelve feet thick and covers an area of nine statute acres. It contains 1,100 apartments, 100 staircases and two miles of corridors and passages. The great Victoria tower at the southwest extremity is 316 feet in height.—London Standard.

Sharp and Well Set.

The mistress of the house was newly installed and looked it, but she had clearly defined ideas on industrial questions, and when the man who had called her to the door asked for a little something to eat she immediately looked toward the wood pile in the yard. "Well," she said, "if you will get that ax!" "Oh, I shan't need that," the man interrupted in a reassuring tone. "My teeth are all right."

Her Dearest Wish.

"Darling," he said, "now that we are married, what is your dearest wish?" She gazed into his eyes with a sweet, confiding look and said: "That you will try to have the jeweler take this engagement ring back so you can get me one with a diamond at least half as large again."

Inexperienced.

"Johnny, if you eat all six of these apples you won't have any appetite for your dinner." It is needless to state that it was Johnny's bachelor uncle who made the remark. No man with experience in grocery bills would have made such an error.

Friends.

Never judge a person by his relatives, but by his friends. One isn't responsible for his relatives. Be they good, bad or indifferent, they are thrust upon him, but friends are self chosen, and what they are so is the person.

Sold by **F. L. Hooper.**

Removed the Growth.

DOUGLAS & CO., NAPANEE, ONT.

DEAR SIRS,—During year 1890-91 I was troubled with a large lump growing on the right side of my neck near the ear. Had consulted several physicians and used everything I could hear of, all to no use. Was told to use

Douglas' Egyptian Liniment.

I did, and before I had used half a twenty-five cent bottle was permanently cured. Since then I have used it for everything where outward application is required; am yet to learn of anything in reason that I cannot cure with it. No man has any idea of its value until he has used it; would not be without it under any circumstance

Respectfully yours,

NATHANIEL W. REID.

An Absolute Cure For DYSPEPSIA

Dyspepsia, Indigestion, Belching of gas after eating, mean weakness.

By means of its muscles, the stomach should churn the food—changing solids into liquids—mixing in the gastric juice to start digestion.

If the stomach is weak—then food is not properly churned and mixed with enough gastric juice. Then you have indigestion and then dyspepsia.

Fruit-a-tives

OR "FRUIT LIVER TABLETS"

strengthen the stomach—just as juicy beef and eggs and milk strengthen the wasted frame of a patient getting over Typhoid.

FRUIT-A-TIVES contain the elements that give new—vigor new energy—to the muscles lining the stomach—stimulate the digestive glands and assure a copious flow of gastric juice for each meal.

More than that, FRUIT-A-TIVES correct the Constipation which usually attends stomach trouble—and by acting directly on kidneys and liver, put the whole system in healthy condition.

FRUIT-A-TIVES are a peculiar combination of fruit juices and tonics that are known all over Canada for their wonderful cures in all stomach, liver and kidney troubles.

50c. a box or 6 boxes for \$2.50.

if your druggist does not
handle them.

FRUIT-A-TIVES
LIMITED,
OTTAWA.

Before and After.

Mrs. Mann—Before we were married Charles used to bring me candy when he came to see me. Now I have to buy my candy myself or go without. Mrs. Grimes—That's just the way with the men. Mrs. Mann—But, then, I don't mind it. I buy better candy than he used to buy, and as it is his money, just the same as in the old days, the new arrangement is more expensive to him than the old one.

A Criterion of Age.

Birmingham—Your daughter is to marry a young man named Hill, I believe? Manchester—Yes. He belongs to one of the very oldest families in the country. Birmingham—I didn't know that he came from a particularly old family. Manchester—Oh, yes. You often hear people use the expression, "As old as the Hills."

Absentminded.

Smith—Brown is getting to be quite absentminded of late, isn't he? Griffin—Why, I haven't noticed it. Smith—Well, he is. The other day he happened to look in a mirror at home, and he asked his wife what she was doing with that fellow's picture in the house.

Not a Philanthropist.

A.—The man does a great deal for the poor, it is said. B.—Nonsense. He would not even give his daughter to me as my wife.

The universal and absolute law is that natural justice which cannot be written down, but which appeals to the hearts of all.—Victor Cousin.

Spoiled His Scheme.

Among the creditors of an insolvent firm was a New Yorker who had a balance of \$285 coming to him. This man wanted his money. He was a good talker and persuaded the firm to pay him off in case he could get the other creditors to grant an extension of time. So he called a meeting of the creditors and talked to them eloquently about the prospects of the firm getting on its feet again if it only had time. He seemed to have won out when a little old man in the back of the room rose and in a squeaky voice declared that he, for one, wanted his money and did not want to wait for it. "Don't you think it is rather selfish of you to interfere with this plan, in which all of the other creditors have agreed?" asked the first man. "We are willing to wait for the amount of our claims. Every one of us, including myself, believes that this firm should have plenty of time. How much is your claim, anyway?" In the same piping voice the little old man answered: "They owe me \$185,000. How much is your claim?"

The Tomb Spider.

The people of Italy believe in the existence of a wonderful creature which for the want of a better name is called the tomb spider. The entomologists know nothing of this queer beast and declare that it only exists in the fancy of the superstitious persons and those whose curiosity or business makes it necessary for them to explore old ruins, tombs, catacombs, etc. According to the popular account, the tomb spider is of a pure white color, has wings like those of a bat, a dozen horrid crooked legs and a body three or four times the size of that of the largest tropical American tarantula. The accounts of this queer insect and his out of the way places of abode are by no means common, and on that account the information concerning him which we will be able to give is very meager. Any Italian will tell you that such a creature exists, however, and that he is occasionally met with in old mines and caverns as well as in tombs and subterranean ruins.

Goldsmith's Showy Clothes.

Goldsmith was ludicrously fond of showy clothes. When he sought to take orders in Ireland he tried to dazzle his bishop by a pair of scarlet breeches. While studying medicine in Edinburgh he wore "rich sky blue satin," "fine sky blue shalloon" and silver hat lace. Before Johnson, Reynolds and Garrick he strutted about bragging of his bloom colored coat, and when his reputation had been made by his two principal poems he blazed forth in purple silk small clothes, a scarlet greatcoat and a physician's wig. He carried a gold headed cane, and a sword hung by his side, a weapon so disproportioned to his diminutive stature that a coxcomb who passed him in the strand called out to his companion to "look at that fly with a long pin stuck through it."

No Thoroughfare.

Characteristic of the readiness of the Celt is a reply noted in "Leaves From the Diary of Henry Greville."

"I cannot get over your nose," said a frank American woman to the Irish novelist, Colley Grattan, whose nose was flattened.

"No wonder you can't," he retorted, "for the bridge is broken."

SCHEMES OF THIEVES

TRICKS OF THOSE WHO OPERATE IN JEWELRY STORES.

The Way One Place Was Completely Cleaned Out—How Show Windows Are Broken—Getting a Safe That Was Bolted to the Flooring.

A number of jewelers were dining together and with the cigars the talk turned on jewelry thieves and their methods.

The first story was told of an individual who was seen lounging about the plate front window of a jewelry store. No particular attention was paid to the man at the time, but the clerks recalled the incident after the robbery. In this instance the man appeared a number of times in front of the store. One evening soon after dark there was a sudden crash, and a robber was actively engaged in scooping in jewels with a hooked stick. In thirty seconds he was done and away. Bystanders stood as if petrified until the man struck out at a run. Then the store people and the bystanders realized what had occurred and shouting "Thief!" started after the man.

The man dropped his bag. The pursuers stopped and seized the bag. They returned to the store with the bag in high glee, remarking incidentally that there was no need in chasing the thief because here were the goods. The proprietor of the store and all the clerks had followed, but, having farther to go than the crowd, were behind and were met by the people with the bag. Proudly the bag was opened. It contained a brick. The thief had dropped it to check the pursuit. Realizing the trick had succeeded, the crowd, headed by the salesmen and proprietor, went back to the store, only to discover that the window had been cleaned of stock and the counters were bare of a number of costly articles.

A policeman on duty said that after the proprietor and clerks of the store ran for the departing thief a neatly dressed gentleman, with all the airs of a member of the firm, gave directions to two other men, to get the stuff out of the windows and told him (the officer) that this was being done as a precaution against theft while the window was broken. In some first class stores there is a regular danger signal arranged, and the men are drilled each week. When the danger gong sounds one man takes his place at the door, another at the telephone to send word to the police, another with running qualities makes for the door in readiness to pursue, and so on.

Among other stories told were some relating to the tricks and devices of the jewelry thieves. The robber often works at night or sometimes during a crowd by cutting out a disk of glass near where some costly goods are shown. He may reach in and secure something and be off before detected if he is quick. Sometimes he has a long instrument hidden under his coat, so that he can reach in and pick up a watch. Often again he uses a simple stick with a slightly turned end, hooking into a ring.

The process of crushing in a plate front during the intervals of the patrol of the police, at the same time making no noise, is done by pasting cloth or heavy paper on the glass. A wood mallet is used, the hammer ends being securely bound up in a heavy woolen fabric stuffed with excelsior or kindred material. With this soft headed mallet it is possible to bang away noiselessly at the glass until the pane begins to crumble. Unless the plate is usually thick an opening can be made

When you plan your meals you never think of bread, yet you always have it, and if it is left off the table it is the first thing that is missed.

You can live without bread, but you can live without any other food with less hardship—think along these lines and the absolute necessity of bread comes home to you.

And because it is a necessity, its quality should be the best—quality in bread depends largely upon the flour.

Royal Household Flour

has convinced the women of Canada that it is the best for pastry as well as for bread.

Try Ogilvie's Royal Household. Your grocer recommends it, because it gives such good results.

with songs which became famous—"Old Kentucky Home," "Massa's In De Cold, Cold Ground," "Old Dog Tray," "Willie, We Have Missed You" and "Sweet Ellen Bayne." But the song that is best known in many lands is "The Swanee River," for which Christie's minstrels gave him at the beginning \$50. In addition he received royalties on its sale of over half a million copies and the honor of knowing that eminent singers like Jenny Lind sang it to applauding thousands.

His last song, a negro melody, "Old Black Joe," is still a favorite. A fourth of his 150 songs were in negro dialect, among which were "Nellie Bly," "Nell Was a Lady" and "Nancy Tile."

THE ELYSEE PALACE.

Checked Career of the White House of France.

The Elysee palace, situated in the Rue Faubourg Saint-Honore, is a cross between a country house and a hotel. It has had a checked career since its erection in 1718 and has harbored some queer characters. Louis V. presented it to Mme. de Pompadour. Who knows how many lettres de cachet went out of the gates to imprison those who lampooned her? Under Louis XVI. it was called the Elysee Bourbon. During the revolution it became national property, was put up for sale, found no purchaser and was turned into a government printing office. During the directory there were gay doings in the fine old rooms, and the merveilleuses and incroyables danced and gambled from sunset to sunrise. The rooms were let to a syndicate who made a large fortune out of the speculation. Since then the palace has been occupied by Murat, Napoleon I., Louis Bonaparte and Queen Hortense, Alexander I. of Russia and the Duc de Berri. After the revolution of 1830 it remained unoccupied until Louis Napoleon made it his residence while he was president of the republic. Nearly all the subsequent presidents of the present republic have added to it. The large glass awning seen from the Faubourg, called by the scoffers "the mon-

HAIR AND COLOR.

Red Is Much Nearer Allied to Black Than to Blond.

The color of the hair, says the Grand Magazine, is usually transmitted from parents to child. This is especially true when both parents have the same complexion. Instances, however, are not uncommon where children have hair black as ebony, while the hair of both parents is a burning red. Instead of disproving the theory that a child takes after its parents, so far as the color of the hair is concerned, this fact, it has now been ascertained, is all in favor of the doctrine. Red hair, in fact, is by its structure and composition much nearer to black hair than to blond.

Very often if the hair of a very dark complexioned person be examined attentively a few quite red hairs will be detected in the mass. On the other hand, it would be time wasted to seek for black hairs in the locks of a fair person. Similarly it is not infrequent to notice children whose hair, red at birth, becomes as they grow older quite dark. When, too, after some serious illness, the production of the coloring pigment of the hair falls off, black hair becomes not blond, but red. Fair hair, which to a casual eye appears to have much more affinity to red hair than to black, is, on the contrary, quite distinct.

Valued Religious Relics.

The collection of religious relics to be seen in the church of the Corsican village of Sisco is undoubtedly unique. The inhabitants of this pretty little place are exceedingly devout and very simple, which probably accounts for the possession of such a remarkable collection. A writer in L'Independence Belge gives the following list of the principal items: The horn used by Moses to call together the children of Israel while in the desert, a tuft of that red hair which was the pride of Esau and the despair of Jacob, a piece of the nail of the little toe of the left foot—the statement is very precise—of Enoch, the patriarch; the bib worn by the infant Jesus, the curb and crupper of the ass that took the holy family into Egypt and several relics of various saints.

An Explorer's Stratagem.

Sir Harry Johnston, the famous explorer, once escaped from a very tight corner in Africa by a queer stratagem. A score or two of murderous natives had surrounded his tent, into which, before rushing it, they sent an envoy. The envoy was told the smallpox was in the camp, and a wretched Albino was sent out as the awful example. In five minutes the scared tribesmen had vanished. As Sir Harry well knew, they feared the "white disease" more than all the inventions of Maxim.

His Works.

"A man is known by his works," declared the irrepressible reformer, who was addressing a large and enthusiastic audience.

"Yours must be a gas works!" shouted a rude, uncultured person who occupied a back seat.

Obligated to Move.

"What, you are not going to move again?" said Mr. Jones to his brother. "I thought you liked your little flat."

"So we did when we moved in, but my wife has gained ten pounds, and we need more room."

Good nature is the very air of a good mind, the sign of a large and generous soul and the peculiar soil in which virtue prospers.—Goodman.

RICHMOND MINUTES

The Council met at Selby. The members present were Z. A. Grooms, Reeve, and Councillors Fred Sxxsmith, Chas. Anderson, E. R. Sills, and Alf McCutcheon.

The Reeve presided. The minutes of the last meeting were read and confirmed.

Moved by Chas. Anderson and seconded by A. McCutcheon and resolved that the Reeve and Treasurer of the Corporation of the Township of Richmond, be and they are hereby authorized and empowered to execute on behalf of said Corporation, a discharge of the mortgage given by Robert Edgar McCaul to the said Corporation.

Moved by Chas. Anderson and seconded by A. McCutcheon, that the Reeve and Councillor Sills be a committee to investigate the terms upon which all moneys deposited in the bank, by the Township, can be obtained in the various Banks of Napanee and report to this Council at its June session.

Moved by Chas. Anderson, seconded by E. R. Sills, that Road Section, No. 77 be abolished and that T.V. Anderson be added to Road Section No. 29 and No. Wm. French be added to Road Section 69. Carried.

Moved by A. McCutcheon and seconded by E. R. Sills, that Frank Smith be appointed Pathmaster in place of David Brown in Road Section No. 9, and that the By-law be amended accordingly. Carried.

Moved by Chas. Anderson and seconded by E. R. Sills, that whereas the act respecting noxious weeds was amended in 1904 whereby the owners of lands adjacent to the highways of the municipality are required to cut the weeds to the centre of the said highways the ratepayers of the Township are hereby notified of the said Amendment Act of 1904, also that Robert Shetler is the Inspector for that part of the township south of the 5th concession line, and Jas. Windover, Inspector for the Township north of the 5th concession line. The By-law appointing the said Inspectors provides that the remuneration for services, under the Act shall be thirty cents per hour while on duty Sec. 5 and Sub-Section 2 and 3 of the Act respecting the destruction of noxious weeds upon notice of the Inspector shall pay the expenses incurred in the destruction of the said weeds. Carried.

Moved by A. McCutcheon and seconded by E. R. Sills, that the Collector's time be extended until the first Monday in June, and that he be required to continue the collection of unpaid taxes Carried.

Moved by Fred Sxxsmith and seconded by A. McCutcheon, that the following accounts be paid: R. Harrington work on Napanee and Sheffield Road at Brandon's bridge, \$27.20; Wm. Brandon 34 loads of stone \$3.40; H. Baker, blasting stone for road \$1.10 John Bruin, for coffin and burial expenses of Simon J. Sxxsmith, an indigent person \$28.00; E. T. Anderson for work on Napanee and Sheffield road in Selby. Carried.

The Council adjourned to meet on the first Monday in June, at the hour of 10 o'clock a. m. at which time the Court of Revision will be held.

A. WINTERS, Clerk.

COURT OF REVISION.

Notice is hereby given that the Court of Revision for the hearing and determining of appeals against the assessment of the Township of Sheffield for the year 1906, will be held in the Town Hall, Tamworth, on MONDAY, JUNE 4th, 1906, at 10 a. m. and all persons having business at the said Court will govern themselves accordingly.

JAS. AYLSWORTH, Clerk.

COURT OF REVISION TOWNSHIP

A PRETTY CANADIAN GIRL

Regained Health and Beauty by Use of Pe-ru-na.

Miss Louise Moore, 36 McGill St., Toronto, Can., writes:

"I wish to express my gratitude to you for giving to suffering humanity your wonderful medicine, Peruna. I was an invalid from catarrh of the liver. I was despondent, my skin was sallow, I had a bad taste in my mouth in the morning, my tongue was coated a dark brown and my breath was very bad at times. I was subject to sick headaches and vomiting. My bowels were irregular and I was wretched. I doctored for some time without becoming much better and finally, at the suggestion of friends I tried Peruna. The result was magical and within four months I was completely cured."—Miss Louise Moore.

THOUSANDS of women suffer from systemic catarrh. This is sure to produce such symptoms as cold feet and hands, sick headache, palpitation of the heart and heavy feelings in the stomach.

Then begins a series of experiments with medicine. They take medicine for sick headache. They take medicine for nervous prostration, for palpitation of the heart, for dyspepsia. None of these medicines do any good, because they do not reach the cause of the complaint.

Peruna at once mitigates all these symptoms by removing the cause.

Systemic catarrh is the trouble. Systemic catarrh pervades the whole system, deranges every organ, weakens every function. No permanent cure can be expected until the systemic catarrh is removed.

This is exactly what Peruna will do. Good health is the basis of beauty. Clean skin, clean mucous membranes, these are the true source of beauty and symmetry.

A Woman in Morocco.

All the life of a woman in Morocco is really passed behind the walls of its prison-like houses. She sees nothing, knows nothing, is wholly sunk in ignorance. She has no social life, no afternoon "at home." A writer says: "Most of the ladies' calls are roof to roof visitations, and very much they are at getting over the low partition walls, even dragging a ladder up and down with them if there are high ones to be crossed. The reason is that the roofs, or, rather, terraces, are especially reserved for women folk, and men are not even allowed to go up except to do repairs, when the neighboring houses are duly warned."

Strange Pledges.

London pawnbrokers are frequently asked to take strange things in pawn, such as a pair of gloves, a handkerchief,

Peruna cures catarrh wherever located. Female catarrh is the most beauty-destroying disease in existence. Peruna cures by removing the cause. Peruna strikes at the source of all these hateful disfigurements.

Never Looked So Well

As Since Taking Pe-ru-na.

Mrs. Mary A. Brown, 48 Wells Ave., Dorchester, Mass., writes:

"Every one that looks at me says, 'I never saw you look so well as you do now.' I then told them I have been taking your medicine. I thank you for the kind letters I have received from you. I will always praise Peruna and Maudslayi."—Mrs. Mary A. Brown.

Dr. S. B. Hartman, President of The Hartman Sanitarium, of Columbus, O., gives advice to women free during the summer months.

All correspondence held strict confidential.

WANTED—A reliable agent for Napanee and surrounding country. Good pay weekly, exclusive territory. Simple case, or outfit free. Our terms are the best in the business. We need a man of good character and ability during 1906 and we pay monthly over on account. The character and merit of our line of stock are of course, an added inducement to come, call, write, and send parcels. Each seller's stock is offered for the first time. Write now to THE PELHAM SUPPLY CO., Toronto, Ont.

SEASON OF 1906. UNTIL FURTHER NOTICE THE STR. REINDER

WILL RUN AS FOLLOWS: LEAVE Napanee at 10 a. m. for Napanee and all ways there. Leave Pelham at 10 a. m. for Napanee and all ways there. Leave Pelham at 10 a. m. for Napanee and all ways there. Leave Pelham at 10 a. m. for Napanee and all ways there. Leave Pelham at 10 a. m. for Napanee and all ways there.

THE WAY OF STRENGTH

It Is Part of Man's Highest Duty to Be Strong.

Quit you like men; be strong.—I. Cor. xvi., 13.

This is a call that wakes a response in every breast. Our common human instinct for progress, the cause of all our advancement, leads to the universal admiration of strength. Might does not make right, but might is the right of every man. Religion glorifies strength; it demands of every man that he shall be the best he may. It seeks to show him the way into the fullest, largest life.

Only the abnormals, the diseased, and the failures in life's workshop attempt to glorify weakness. Sickly souls may have imagined that piety found its most perfect expression in pain-racked, impotent bodies, in weak minds wandering through strange hallucinations. They have sought to glorify the Creator by debasing the creation. They have forgotten that old story of one who looked on all his works and delighted in their goodness.

But religion looks toward the man who shall be perfect in all his faculties, realizing all his possibilities and dwelling in a world where the will of infinite love is perfectly done. It sees in everything that makes man healthier and stronger the coming of that day and that Kingdom. It serves the Creator by seeking to bring all things in the creation to the perfection indicated in their design and presaged by their progress.

Then as man grows and comes into higher life he learns that there is a call for strength far superior to the physical. Many a giant is but a weakling in all that makes worth while strength. No man is strong

UNTIL HE IS STRONG WITHIN.

It is but a crude world where men are measured by their muscles. The race comes up from the level of the brutes, establishing superiority the one over another by tooth and claw, to the struggle of mind and brain.

Progress and the passion for strength lead men on to the acquisition of that which is higher still, the might to will the right, the power of making and following right moral choices. This is the need of which every truly growing man is most conscious. He despises neither brain nor brawn, but he knows that the great battles are fought not with the sword but with the will, that the great conquests come not by the strong arm nor even by the keen brain, but by the heart that loves truth, the mind that

determines aright, the will to do the best one knows.

Then the man asks, How shall I gain this strength of heart? And he finds the same general laws holding for the making of the full man here as in the lower realm. Soul strength is but the product of soul health. That inner, bracing atmosphere of honor, that glow of self-respect and fellow reverence, those lofty ideals and aspirations, that consciousness of royal dignity and rights; these are the things that make men quit themselves like men, the things that underlie strength.

Struggle, too, is one secret of strength. He who uses his muscle finds them, hardens them. He who flees temptation, who hides from those trying questions, those soul-searching crises of life misses the best that life can give. These make the gymnasias of the soul. It is easy to berate this as a wicked world; it might be a much worse one if it was only so good as to grow the vines of summer alone instead of some of the oaks of winter's struggles.

He who seeks strength will seek the strong. The soul finds itself in the atmosphere of greater souls, in touch with the things and thoughts that are infinite.

FOR SPIRITUAL STRENGTH

there must be touch constantly with spiritual being, the constant nearness in thought and desire to those unseen forces and that life which even the most unthinking must realize at times.

A man will find moral strength in the remembrance of his moral dignity. He will enter that saying which calls him the son of the Most High; he will seek to carry himself as worthy of the family name. If the Father of spirits is his father may he not bear the likeness of that father? May he not find full strength through the natural outliving, the realization constantly of the best that is born in him?

The great need of this world is not for folks who will try to carry themselves like angels, but for those who will quit themselves like men, who will find moral strength through human service. They never can be other than weak and purposeless, morally flabby in muscle, who think only of themselves, only of perfecting their own character. Much religion is like a stage gymnasium. True strength is found in natural work; many a man who goes out to do something for another comes back to find he has done much more for himself. He has found strength within.—Henry F. Cope.

THE S. S. LESSON

INTERNATIONAL LESSON,

MAY 20.

Lesson VIII. Death of John the Baptist. Golden Text: Eph. 5. 18.

LESSON WORD STUDIES.

Note.—The text of the Revised Version issued as a basis for these Word Studies.

Intervening Events.—Several events intervene between the last lesson and this one. Returning from the country of the Gerasenes, across the lake to Capernaum, Jesus was welcomed by a great multitude who had heard of his marvelous works. Shortly afterward he raised from the dead the daughter of Jairus, a ruler of the synagogue (Mark 5. 21-43).

23. Swore—Swore. Compare the oath of Ahasuerus to Queen Esther. Esther 5. 3.

24. And she went out, and said—Literally, and she, having gone out, said.

25. Straightway with haste—The daughter evidently partook of the mother's nature and tastes. The haste of the women was lest the king's ardor should cool, it being well known to them that the granting of the request they were about to make was entirely contrary to the king's own desire.

Platter—The word charger, used in the Authorized Version, has become entirely obsolete in this sense, though at one time it meant just what our word platter now means.

29. His disciples—The disciples of John, some of whom later became the disciples of Jesus.

MILLIONAIRES ARE FEW SQUANDERING OF MONEY

INTERESTING LIST IN THE INCOME TAX RETURNS.

Nineteen Pay Taxes on Incomes Over \$500,000—Where Bulk of Tax Comes From.

To the average novelist, especially the lady novelist, of the old three-volume order, dukes and earls come very cheaply; almost as cheaply, in fact, as to W. S. Gilbert, who sang of "Dukes at three a penny."

The average novelist, too, often attaches an income of \$50,000 a year to one or more of the titled personages figuring in his or her pages. Which says a great deal for the novelist's powers of imagination, as according to a Parliamentary return just issued there are only 19 persons in Great Britain (not Ireland) whose incomes are assessed at over \$50,000 a year. So that millionaires are not so very plentiful after all.

The total annual income of these very fortunate 19 people is \$1,968,442. In the same class are 113 firms with a gross assessed income of \$12,321,406, 794 public companies with an income of \$145,220,365, and 45 municipal corporations and other local authorities with a total income of \$7,544,887. So that there is no real reason for panic among the income-tax collectors.

Coming to those comparatively poor people with incomes of \$10,000 to \$50,000 the report says there are 219. They have an aggregate income of \$4,122,532. Then there are 433 unfortunate people who only earn anything between \$5,000 and \$10,000 annually, and their income only totals \$3,028,829.

PRIVATE INCOME EARNINGS.

Here is the complete list of private incomes assessed under "Schedule D"—

	Persons.
\$50,000 and over	19
\$10,000 to \$50,000	219
\$5,000 to \$10,000	433
\$4,000 to \$5,000	290
\$3,000 to \$4,000	551
\$2,000 to \$3,000	1,401
\$1,000 to \$2,000	6,044
\$900 to \$1,000	2,600
\$800 to \$900	2,041
\$700 to \$800	4,019
\$600 to \$700	4,778
\$500 to \$600	8,562
\$400 to \$500	17,302
\$300 to \$400	34,281
\$200 to \$300	96,659
\$100 to \$200	140,154
The total of the assessed incomes is \$123,592,622.	

The figures are striking. Most people, for instance, if asked how many other people earned incomes of £1,000 or more would certainly guess a good many more than 6,000.

PAYERS OF INCOME TAX.

Perhaps the most interesting list in the return is the following. It shows very clearly where the income tax for Great Britain comes from:—

Salary.	Persons.
Not exceeding £160, but not exempt	137,913
£160 to £200	68,717
£200 to £300	77,248
£300 to £400	29,635
£400 to £500	16,589
£500 to £600	7,857
£600 to £700	4,498
£700 to £800	3,610
£800 to £900	1,644
£900 to £1,000	3,139
£1,000 to £2,000	4,213
£2,000 to £3,000	537
£3,000 to £4,000	179
£4,000 to £5,000	113
£5,000 and over	90

Ireland has another grievance. No one is able to confess grudgingly to the income-tax collector that he possesses an income of £50,000 or over. But there are six happy people with assessed incomes from business of over £10,000, and three with incomes between £5,000 and £10,000.

MOST REMARKABLE CASES OF EXTRAVAGANCE ON RECORD.

Wealthy People Have Different Ways of Getting Rid of Their Money.

When people have more money than they know what to do with they sometimes develop a remarkable ingenuity in devising methods of squandering it, as in the case of the French marquis, who, according to the papers, has her bed strewn with rare and exquisite orchids at a cost of several thousand francs a week.

Even more remarkable is the story told of a wealthy Frenchman who dines twice a week at a famous Parisian restaurant. His appetite is of the poorest, but he always insists on having a tureen filled with a specially-prepared soup placed before him. Next comes a huge joint of meat, from which he cuts one tiny slice; then follow four quails or a large chicken, of which he eats one mouthful. His dessert consists of four grapes and a cup of coffee; while during his meal he just moistens his lips from a bottle of expensive claret and another of the finest champagne. At the conclusion of each meal, for which he pays 120fr., he hands 40fr. to the head waiter, 20fr. to the waiter who has attended to him, ten to the lady-cashier, and

FIVE TO THE PORTER.

Not long ago the son of an American millionaire gave a dinner to twenty-two friends in Paris. Each guest was driven to and from the hotel in a sumptuous carriage; while before him were placed a whole leg of mutton, a whole salmon, a fowl, a basket of peaches, and several bottles of wine. During desert a bag was passed round, from which each guest was invited to draw a souvenir, consisting of pearl studs, emerald links, and gold cigarette-cases encrusted with jewels. About the same time another youthful Croesus commissioned eight of the most famous artists in America to paint a fan which he wished to present to a lady, the ultimate cost of the fan being \$100,000.

A weird form of extravagance was that of a lady named Hillier, who recently buried her husband in a \$20,000 coffin. The casket was made of richly-carved mahogany with solid gold mountings—a single knob costing \$1,750—and lined with silk which is said to have cost \$1.08 an inch. Another coffin, which was recently made for a Chinese mandarin, was so lavishly decorated with gold and precious stones that its value was said to be \$65,000.

There are some men who are in a position to carry a small fortune on their heads. Mr. Manderson, of Nebraska, is the proud owner of

A HAT MADE OF "GREENBACKS"

of the value of \$20,000; this costly head-covering, we are told, weighs 20oz. and "looks exactly like the white hats worn by many gentlemen in summer-time." The late Chinese Minister at Washington used to wear a hat, valued at \$5,000, in front of which was a large opal set in diamonds; while another expensive hat made of spun glass, which took two years to make and is said to be worth \$5,000, is the property of Mr. Sherard.

The Nizam of Hyderabad has a set of false teeth for which he paid a Madras dentist \$3,500, and Mr. Dixie W. Thompson, a wealthy rancher of Santa Barbara, Cal., not long ago spent \$3,750 on a saddle, which is of the finest embossed leather, heavily and most elaborately mounted with silver. Mr. Henry G. Marshall lavished \$50,000 on a grand piano, exquisitely painted by Sir L. Alma-Tadema and studded with precious stones. Jan Van Beers has a piano, a miracle of painting, precious metals, and jewels, which cost him \$30,000; and Mr. Cornelius Vanderbilt

QUEER LOTS AT AUCTION.

one. One returning from the country of the Gerasenes, across the lake to Capernaum, Jesus was welcomed by a great multitude who had heard of his marvelous works. Shortly afterward he raised from the dead the daughter of Jairus, a ruler of the synagogue (Mark 5. 21-43), after the account of which we should doubtless insert into Luke's narrative the stories of the healing of the two blind men and of the dumb demoniac told in Matthew 9. 27-34. The rejection at Nazareth reported in Matt. 13. 54-58 and Mark 6. 1-6 was doubtless a second event similar to but not identical with the rejection at Nazareth recorded in Luke 4. 16-30, the former belonging apparently to the earlier part of his ministry. This second rejection at the hands of his own townsmen at Nazareth was followed by a preaching tour (the fourth, or rather the third continued) in Galilee (Mark 6. 6; Matt. 9. 35); and the sending of the twelve on their first independent mission tour (Mark 6. 7-13; Matt. 10. 1-34; Luke 9. 1-16). It was upon the return of the twelve from this tour that word was brought to Jesus by the disciples of John the Baptist of their master.

John the Baptist is called Elijah (Matt. 3. 2), the forerunner of Christ (Isa. 40. 3; Mal. 3. 1). "a burning and a shining light" (John 5. 35). He was a son of Zacharias and Elisabeth, of the priestly tribe (Luke 1. 5); preached and baptized in the wilderness (Matt. 3. 1, Luke 3. 2); baptized Jesus (Matt. 3. 13); reproved Herod Antipas (Matt. 14. 4; Mark 6. 18); was beheaded by Herod and buried by his disciples (Matt. 14. 10-12). Jesus calls him the greatest among those born of women (Matt. 11. 11; Luke 7. 28).

Verse 15. Herod Herod Antipas, the tetrarch of Galilee. His official residence was at Tiberias, on the southwestern shore of the lake.

15. Elijah—The prophet Malachi had foretold the return of Elijah: "Behold I will send you Elijah the prophet before the great and terrible day of Jehovah come (Mal. 4. 5)."

Others said—The fame of both Jesus and John the Baptist was widespread, the opinions concerning both were diverse.

A prophet, even as one of the prophets—A prophet, yet not an ordinary prophet, but one of the great and well-known ancient prophets.

16. John is risen—Even so wicked a man as Herod could not escape the compunctions of a guilty conscience, and it was natural for him, with this consciousness of guilt resting upon his mind, to behold in any and every pure and holy man and wonder of miracles the embodiment of this same John whom he had caused to be beheaded.

17. The remaining verses, 17-29, are really parenthetical to the main narrative of Mark. They are inserted to explain the allusions to Herod's fancy and fear mentioned in verses 14-16.

Bound him in prison—Probably in the dismal dungeon of the Castle Machærus, known also as the "Black Fortress," and situated on the eastern coast of the Dead Sea, one of the palaces of Herod.

Herodias, his brother Philip's wife—She was also the niece of both her husbands, being the daughter of Aristobolus, another of the sons of Herod the Great. As Gould has pointed out: "The marital relations of the Herodian family were a most extraordinary mixture, though belonging to the general license of the age. This is one of the places where the gospels bring us into contact with the Gentile world, the Herodians being Gentile in their extraction and spirit, though nominally Jews in their religion, and the note of that Gentile world was open vice and profligacy, while of the Jewish leaders it was hypocrisy."

21. A convenient day—An opportune moment for the carrying out of her purpose.

22. The daughter of Herodias herself came in and danced—An almost unprecedented thing for women of rank or even of respectability.

She pleased Herod—Better, it pleased Herod, that is, the dancing.

John, some of whom later became the disciples of Jesus.

QUEER LOTS AT AUCTION.

A Church, a Panorama and Gigantic Carpet Under Hammer.

There were three very strange auctioneers' sales in London recently—an incongruous mixture. They are relics of Earl's Court, bankrupt stock from Olympia, and a church. In each case the "lots" are far too big to handle, and will not really come "under the auctioneer's hammer." The bidders will have to bring their imagination into play.

The most interesting of the three sales is the one at Earl's Court. Pleasure seekers will no longer be able to embark on H. M. S. Python for a "voyage round the Mediterranean." The vast canvases, over a mile long which enabled Londoners, on the payment of a mere sixpence, to imagine themselves many hundred miles from Charing Cross, is to be sold.

The panorama cost over \$25,000 to paint. Letters concerning the panorama came from all over the country, and several bids came from America.

The miniature railway, too—the delight of countless thousands of children—is to change hands.

Distorting mirrors, too, are included in the sale, but it is not expected that there will be a big run on these for private houses. The sale, in fact, is quite a showman's sale, and Earl's Court is clearing out its old stock, amongst it being a model of the Roman Forum.

The most interesting lot to be sold at Olympia is the huge 5,000 square yard carpet which covered the arena. To give an idea of its immensity, the carpet is larger than the regulation football field, and when rolled up is loftier than a house.

The third queer sale is somewhat pathetic. St. Michael's Church, Burlington street, in which daily service has been held for 100 years, comes under the unimpassioned hammer of the auctioneer. There is expected to be a brisk bidding for this strange "lot."

SAFETY OF THE SUBMARINE.

Signal by Which Boat May Give Notice of Distress.

Special precautions are to be taken for the safety of the British submarine boats. Not only will there be with them at their manoeuvres a tender, equipped with powerful derrick and booms for lifting a disabled submarine to the surface, but it is proposed to furnish each submarine with a floating signal, arranged with a spool of light wire carried on the outside of the submarine shell and connected with the interior, so that in time of disaster the imprisoned persons may release the floating signal, which will appear on the surface of the water and indicate that the submarine is in distress. It has been pointed out by the experts that a submarine might really be unable to get to the surface, and that by the nature of the exercises no one would be aware of that fact until it was too late to render assistance. By the means of the floating signal, which, of course, could burn a light at night, in an emergency, a sign could be given from the bottom without observers being obliged to wait an extraordinary long time for the reappearance of the submarine. In addition to which advantage the floating signal would also indicate the location of the sunken boat. It might easily be arranged that in time of action a signal appearing on the surface might indicate that the submarine was out of service; that it appealed for rescue, which, of course, would be equivalent to a surrender. The scheme lessens the peril of service on the submarines, although there have not been lacking officers and men who are anxious to volunteer for that kind of duty.

One seldom meets a strong-minded thinker who is capable of whistling a popular tune correctly.

one is able to confess grudgingly to the income-tax collector that he possesses an income of £50,000 or over. But there are six happy people with assessed incomes from business of over £10,000, and three with incomes between £5,000 and £10,000.

SERVIA'S THRONE SHAKES

IF KING ABDICATES CROWN PRINCE WILL NOT SUCCEED HIM.

Great Britain Refuses to Discuss Diplomatic Matters With Servia.

Sir Gilbert Parker asked in the House of Commons the other day if England were ready to resume diplomatic relations with Servia, and if so, what would the conditions of such resumption be.

Sir Edward Grey replied that the question of the renewal of diplomatic relations with Servia cannot be discussed between the two Governments so long as the regicides hold official position. In the event of diplomatic relations being renewed, and these officials being withdrawn from their position, and this country agreeing to send a representative to Belgrade, it should be understood that the officers in question would not be reinstated.

REGICIDES OPPOSED.

Events are moving rapidly to a crisis in Belgrade, and serious politicians are discussing how long King Peter will be allowed to occupy the throne. He is now absolutely without personal influence in State politics, and wavers between his support of the men who murdered King Alexander and Queen Draga and his duty to remove them from the high offices in the army which they continue to hold.

If the King abdicates, it may be taken almost for granted that the Crown Prince will not succeed him. Prince Waldemar, of Denmark, is being mentioned as a suitable occupant of the throne.

At present the regicides have the upper hand, but the revolt against them in the press and throughout the army is growing stronger—a fact that they begin to realize.

They are indeed being driven to the most desperate methods by the violence of the press. Captain Novakovich, the editor of the Fatherland, and the editor of Justice, have received notices that

THEY WILL BE ASSASSINATED.

before the meeting of the Parliament, owing to their hostility to the regicide regime.

Some journalists have already been stabbed by "robbers," and others have been sent to prison or expelled from the country. I have received an anonymous note from a "well-wisher," suggesting that my personal safety might be consulted by a more favorable attitude towards the murderers of the late King and Queen, says a correspondent.

At the next meeting of Parliament the Cabinet will be obliged either to throw in its lot with the regicides and resort to government by force, or to withdraw and leave the issue to be decided by the country. Either alternative is fraught with danger for the dynasty.

TREES THAT DEFY FIRE.

The giant sequoias of California, which are thousands of years old, have been preserved to this day because of their enormously thick bark. From time to time, in the course of ages, vast forest fires have swept through the big-tree lands, destroying everything, yet only scorching for a couple of inches' depth or so the almost fireproof bark of these huge trees. The flames, having carbonized that much of the bark, could not penetrate farther, for the carbonized portion formed an absolutely fireproof covering for the remainder of the interior bark.

Henry G. Marshall lavished \$50,000 on a grand piano, exquisitely painted by Sir L. Alma-Tadema and studded with precious stones. Jan Van Beers has a piano, a miracle of painting, precious metals, and jewels, which cost him \$30,000; and Mr. Cornelius Vanderbilt paid \$17,500 for another gorgeous instrument.

IN HIS PALATIAL HOME

In Fifth Avenue, New York, Commodore Gerry has a beautiful staircase of purest marble, the value of which is estimated at \$100,000, each step costing its owner \$2,500; while Mr. S. S. Murchand, the American millionaire, spent nearly \$1,000,000 in the equipment of a single bed-room. The bedstead, of massive ebony, with elaborate ivory carvings, took over two years to make and cost \$190,000; \$64,000 was spent on the decoration of the walls; the wardrobe, washstand, dressing-table, and a few other fittings accounted for \$265,000; and the ivory chairs, inlaid with ebony and gold, represent another \$40,000.

One of the most remarkable cases of extravagance on record was the indulging by the Sultan of Turkey of a child's whim. One day the Sultan found his small son in tears because, though he had been promised to be made an admiral, he could not see his flag hoisted on a particular ship from his nursery windows. The Sultan promptly had the vessel brought up and moored in front of the Dolma-bagicheh, to the child's great delight. In order, however, to bring the vessel to the required position it was necessary to pull down a newly-constructed bridge, which at the Sultan's bidding was done at a cost of \$500,000.

"ALL ABOARD," SAYS FISHER.

The First Lord of the Admiralty the Cause of Gossip.

Sir John Fisher, the First Lord of the Admiralty, who, when in command of the North American station, was very well known in Canada, is now at work making the British fleet an even finer fighting machine than it has been in the past. He is a complete illustration of the old adage, "Once a sailor, always a sailor." He has been overheard to say that if the Admiralty were but a battleship and the Horse Guards parade the Mediterranean, he would feel very much more at home.

The first Sea Lord is striving to be as realistic as possible, and his room at the Admiralty, says The London Daily Express, is like nothing so much as the sea quarters of a flag officer.

It recently occurred to him that a direct entrance to this room, which is at the back of the Admiralty buildings, from the Park would be a convenience. This suggested the possibility of a genuine nautical touch. The stairway, erected by the first Sea Lord's own instructions, is a perfect reproduction of a warship's gangway ladder, of teak, with abundant brasswork.

An Admiralty official, in showing this flight of steps to an Express representative the other day, said, smilingly, that he wondered Sir John did not have a boatswain's mate to "pipe him over the side" in regular man-of-war style.

"Never was a man's heart more in his calling," he said. "At every possible opportunity Sir John is off to Portsmouth, or anywhere else within sight of the sea and ships."

"It was reported a short time ago that he intended to get all the Admiralty messengers rigged like bluejackets, but we have heard no more of this."

"To watch him mount that ladder you would make sure that he feels the heave of the ship under his feet. There is the poise of the deep-sea roll in his every movement. He is a genuine son of the sea, and everybody here loves him for it."

LOVE'S ALTRUISM.

"Do you think your daughter could live on my salary?" "Perhaps she could. But what would you do?"

YOUNG FOLKS

A BUSY DAY.

My papa has a little sign,
Printed in black and gray;
It's only just a single line:
"This Is My Busy Day!"

And sometimes when I creep to look,
He's writing with a pen;
Or quietly reading in a book—
He calls that busy then!

Why, when I'm busy I just race
Downstairs then, like as not,
I fly back to the other place
For something I forgot!

Then I slide down the banisters,
And from the porch I spring
(Perhaps I tumble in the burs)
Then go and take a swing.

And then I race Jack Smith to town,
Or climb the garden wall;
And though I'm sure to tumble down,
Nobody minds a fall.

But if I sat still in a chair,
It wouldn't be my way
To say with such important air:
"This Is My Busy Day!"

DICK'S PRACTICE TIME.

"Mamma, is it fifteen minutes yet?"
called Dick from the piano stool.
"No, dear. Don't talk, but practice,"
answered her from the other room.

"But, mamma, my shoe hurts my foot
and I can't think what I'm doing," said
Dick, appearing at the door with a very
forlorn look on his face. "I guess I'll
have to take the shoe off."

"Richard, you have lost five minutes
now. Go right back to the piano and
play your exercises. You will have
plenty of time to look after the shoe
after a while." Mamma's tone was firm,
so Dick gave a sigh and went back to
his task.

One! two! three! Bang! bang! bang!
Dick was getting down to work at last.
Just outside the window a boy shouted
and he had to run to see who it was.
"Hello, Charley," he called cheerfully.
"I'm pretty near done with my playing.
Wait a few minutes and I'll be out."

"Got to go to the grocery for my
mamma," said the boy. "Won't take
me very long."

"Richard!" said the warning voice
from the next room, and Dick sat heavily
down to hunt up the place in the ex-
ercise book once more.

When the clock struck three a very
smiling little boy appeared at the door
to say, "Now my time's gone. You
promised to read to me, mamma, from
Robinson Crusoe for half an hour after I
finished my playing."

"All right," said mamma, taking up
the book. "Where was I? Oh, yes,
where Crusoe finds his man Friday! I
believe I want a drink," and she put
down the book to go out to the dining-
room. Dick sat patiently waiting for
her and when she came it took a long
time to find the place once more.

After she had read a few lines she
saw a lady passing and said, "I must
speak to Mrs. Page a minute. Don't
lose the place." But when she got up
the book flew shut and it took Dick a
long time to find the picture of Friday
as he did not know the page.

"Let me see," said mamma when she
had read almost a page, "Isn't this the
afternoon for the boy to call for the
laundry?"

"No, he comes on Tuesday, and this
is Monday," said Dick. "Please do read
very fast, mamma, for I am anxious
to hear about Crusoe."

"I'll begin just as soon as I look after
that shoe that hurt your foot," said
mamma. "Which one—"

"It doesn't hurt a bit now mamma.
Honest it doesn't. Please read."

"Time is up," said mamma as the
clock struck the half hour. "I was only
to read twice as long as you practised."

Fashion Notes.

SEASONABLE FANCIES.

Pear slides in all sizes, the larger
ones for belt buckles and the smaller
for fastening ends of braid or decorat-
ing bow centres, will be a feature of
summer trimmings.

One of the new fabrics is a lovely
sheer silk and wool material, called
silk warp Lansdowne, that comes in
plain, checked and two-toned effects
in all the beautiful color combinations
of the season. For house, luncheon,
simple evening gowns and children's
frocks it is very desirable.

Colored footwear is largely to replace
the sombre black this spring and sum-
mer, not only for house and evening
wear, but for streets as well, although
the change is noted more particularly
in the dressier styles than in the street
shoes; although even the latter cloth
tops to match gowns are to be decidedly
smart.

Some long, loose evening coats in
process of making for summer wear
are decidedly novel. The material
used is a cotton crepon, which sounds
less expensive than it is, although such
coats cannot actually be called costly.
They are very much trimmed with em-
broidery and lace, cheap varieties, of
course, being tabooed.

The short "pony" coat announced
with such eclat late in the winter has
already fallen from grace as a highly
fashionable garment. It was taken
up with great fervor and so widespread
a welcome that it has already lost its
cachet among those who desire only
exclusive garments. Its place now is
for shopping and walking.

NEW BLUE SHADES.

This spring fashion decrees that all
shades of the tones known as Sevrès
blue and pervenche shall be worn, also
that pale shades of beige, lime green,
a lovely wine color called Bordeaux,
soft, deep shades of vieux rose, and
various shades of dim, pale, cigar
browns shall be considered chic. Among
these tones it is surely possible to find
several which will suit a woman of
any coloring.

ACCORDIAN PLAITS.

Accordion plaited skirts seem to be
a perennial fashion. They are shown
again this spring and particularly ef-
fective in the fine checked silk. A
novel and attractive combination ap-
pearing among the French models is a
plaited skirt of checked silk, worn with
a little eon jacket of heavier silk in
plain color. This was very charming
in a green check skirt and jacket of
dark green.

BOWS OF TURTLE.

Nothing could be more charming than
the revival of the crisp little bow of
white cambric or tulle under the chin.
This is a fresh, dainty mode of neck
dressing and looks particularly well
with the spring tailored suit. The ties,
when of cambric or lawn, are long
enough to go twice around the neck
and tie. They must, of course, be im-
maculately crisp and fresh or their
charm is lost. The dainty, ethereal
whisp of tulle, such as girls wore a year
or more ago, has again been adopted
by those who find it becoming.

WATERPROOF NOVELTY.

Malinette is a novelty of a season
that will undoubtedly prove a great fa-
vorite not only for hat trimming and neck
ruches, but also for evening gowns. It
is a water-proof maline, and is guaran-
teed not to be injured by either damp-
ness or rain. From tests of this dainty
diaphanous material, all that is claim-
ed for it seems to be true, and conse-
quently it is bound to have a tremend-
ous vogue, for all women know the sad
effect that fog or any kind of dampness
has on a tulle gown or a maline trim-
med hat.

TAFFETA DRESS.

A pretty little dress, fit for a girl or
a young woman, which could be copied
quite inexpensively, was made of pale
blush rose-pink taffeta, the full skirt

EUROPE'S RICHEST BABY

HE IS HEIR TO THE SECOND DUKE OF WESTMINSTER.

Edward George Hugh Grosvenor Will Have Three Splendid Homes and Huge Income.

Edward George Hugh Grosvenor is
the richest baby in Europe. He is heir
of the second Duke of Westminster and
was born on Nov. 16, 1904. The christ-
ening took place at Westminster and
was a splendid affair. The baby's robes
on this important occasion were made
of handspun Irish linen and rare point
lace. King Edward was his Godfather
and loaded him down with money and
rare silver, and many more things a
royal baby should have. But this was
only a small part of his gifts, which in-
cluded large sums of money, rare sil-
ver service, and such jewelry as could
be given to a baby. These were given
by indulgent grand-parents and royal
friends of the family.

Just now this third duke of Westmin-
ster is a healthy, happy baby with gold-
en hair and blue eyes. He is perfectly
unconscious of his great chests filled
with enough fine dresses and baby out-
fits to clothe a half-dozen infants, and
smiles quite as contentedly when his
English nurse forgets the gold beads
and baby pins set with diamonds and
other precious stones.

The money and the splendid dresses
and jewels that have been given him
are nothing if compared with what he
will enjoy some day. His father's year-
ly income is \$1,000,000, which will dou-
ble itself in thirty-five years and he
greatly increased by the time he gets
the fortune. He will have three splen-
did homes; two are country estates that
cover 30,000 acres, and 600 acres more
in London.

ANCESTRAL HOME LIKE A PALACE.

His home in London will be Grosven-
or house, as this has long been the an-
cestral home. It is one of the most
splendid houses in London and is won-
derfully spacious. On each gate is the
talbot, the figure of the family animal,
an almost extinct species of white
hound. Under the stone arch rests
the family motto, "Virtue, Not Ancestry."

The house within is in keeping with
the splendid exterior. The rooms are
all spacious, decorated handsomely, and
embellished with rare object d'art
brought from many parts of the world.
This house has a great ballroom, where
the King, Queen and the greatest lords
and ladies of England are entertained
frequently.

In the western wing of this mansion
is the finest private gallery in London.
The collection now includes specimens
by nearly all the great masters. Al-
though the gallery is noth thrown open
to the public, the duke often grants
strangers the privilege of seeing his
rare collection of paintings. The library
is quite as valuable as the gallery. It
is stocked with books splendidly bound
and rare editions.

Most interesting of all are the chil-
dren's apartments looking out on the
garden. These include two bedrooms
and a playroom adjoining. The bed-
rooms are furnished with small beds
draped in real lace and the walls are
hung with the works of great masters.
The dressers are covered with silver
toilet articles and the chests of drawers
are filled with hand-made clothes and
lace dresses.

HEIR TO IMMENSE ESTATES.

The duke's little sister is a few years
older than he and is more capable of
appreciating the splendor she enjoys.
Little Lady Ursula Mary Olivia Gros-
venor is a quaint little girl, and for four
years, until the stork brought to her
parents an heir and to her a baby bro-
ther, she ruled the house alone. She
is fond of him and does not feel that the
arrival of a boy and heir has dethroned
her from the queenship that was hers
as the first baby.

The third duke of Westminster's es-

HEALTH

TREATMENT OF APPENDICITIS.

A statistical study of cases of appen-
dicitis has been made by Dr. Chauvel,
the medical inspector of the new French
army. By far the most valuable infor-
mation brought out by this investiga-
tion is the result of medical treatment
for the disease. Although there is a
theory that there is no such thing as
medical treatment for appendicitis, it is
claimed that medical treatment cures 99
out of every 100.

In 1802 668 patients suffering from ap-
pendicitis were received in the military
hospitals of France. Out of this num-
ber 188 were treated according to the
surgical rule and 480 received purely
medical treatment. Of the number op-
erated upon 23 died, while out of the 480
not operated upon there were but three
deaths.

Dr. Chauvel also made investigations
to find out the cause of appendicitis.
He compared the figures furnished by
the French army in the metropolis and
those of the army in Algiers. In 1901
the Nineteenth Corps of the army in
France showed a record of one case to
every thousand, while the Nineteenth
Corps in Algiers had two less. The next
year these figures were larger, but the
difference was exactly the same.

Pushing his inquiries still further,
Dr. Chauvel found that the French army
in Algiers included both Europeans,
French and natives. In five years, out
of 14,000 men, there were among the
French and Europeans 137 cases of ap-
pendicitis, while in the same space of
time out of 17,000 natives, there were
but thirteen cases. This shows that the
disease is two times more frequent
among the French in France than the
French in Algeria, and is ten times less
frequent among the natives. The differ-
ence is too great to be accidental. Dr.
Chauvel thinks the reason is in the
alimentation.

The Arabs are a sober people who eat
little and are vegetarians. When they
eat meat it is cooked to shreds. So it
happens that among the Arabs leading
their ordinary life the disease is almost
unknown. It is seen more frequently
among the auxiliaries. It is because the
regime of the latter is no more the re-
gime of the Arab, but more like that of
the French trooper. But this does not
explain why the European transplanted
to the soil of Africa, where his regime
hardly differs from that of the metro-
polis, should likewise be immune from
the disease.

Other medical men have testified to
the rarity of appendicitis among people
who eat less meat than we. Dr. Sny-
der, who has been attached to the Per-
sian court for more than ten years, has
been called upon to treat only five cases
of this malady at Teheran, three of
which were Europeans and only two
Persians. He also attributes the rarity
of appendicular accidents to the mode of
alimentation of the Persians. At Te-
heran abstinence from pork is obliga-
tory and the meat of cattle is almost
unknown. Their meats are usually
chicken or mutton, and these are always
cooked to shreds.

ARTERIAL DEGENERATION.

In comparing the human body to a
machine, which must so often be done
to make its workings plain to those who
have not studied medicine, the arteries,
upon the good condition of which so
much depends, have sometimes been
likened to rubber tubing.

The arteries have to dilate and con-
tract as the blood pumps through them,
and in order to facilitate this they are
composed of very elastic material. It
is not difficult for any one to under-
stand that if they were simply hard and
rigid tubes the sort of force-pump ac-
tion the blood makes in flowing through
them would result in a constantly sus-

...mamma. "Which one—"
 "It doesn't hurt a bit now mamma. Honest it doesn't. Please read."
 "Time is up," said mamma as the clock struck the half hour. "I was only to read twice as long as you practised."
 "But you haven't read two pages," said the disappointed little boy. "You lost ever so many minutes of the half hour. I wonder—Are you doing this mamma, to show me that I lose time too?"

"What do you think about it?" asked he mother with a smile.
 "I'm going right back to play fifteen minutes and see what happens," said Dick. "I think I know what it will be."
 When the honest fifteen minutes were gone, mamma was waiting with a slice of bread and jam for Dick and the open book in her hand. Dick thinks the time goes over so much faster since he doesn't whine and ask questions and waste the moments, and I really believe he is right about the matter.

MUSICAL DEPUTIES.

Australian Diet Became an Orchestral Concert.

An extraordinary scene occurred at Innsbruck, Austria, at the sitting of the Tirol Provincial Diet. There was a debate on suffrage reform, and the Slovenian party, who feared that the Serbians would gain if the proposals were carried, determined to prevent the debate at all costs.

They armed themselves with musical and unmusical instruments, and on entering the Chamber played them with great enthusiasm. Some rang cowbells, one beat a great drum, two clashed cymbals, another worked a loud gramophone, others sounded motor-car horns, bicycle whistles, and used rattles, so that the party looked like an orchestra.

These instruments were played for our hours uninterruptedly to prevent their opponents speaking.

After the adjournment of the sitting or lunch the disturbance began again, the Mayor of Laibach acting as conductor. The friends of the demonstrators, including ladies in the gallery, joined and sang.

The President of the Chamber passed his time in reading newspapers. The liberals declare they intend to continue these tactics throughout the session.

SICK-ROOM CLOCK.

A Munich professor has invented a remarkable sick-room clock. When a button is pressed an electric lamp behind the dial throws the shadow of the hands and hands, magnified, upon the ceiling, so that an invalid can see it from his bed without craning his neck.

TAFFETA DRESS.

A pretty little dress, fit for a girl or a young woman, which could be copied quite inexpensively, was made of pale bluish rose-pink taffeta, the full skirt quite plain, the bodice swathed and finished off by a deep berthe of narrow Mechlin lace mounted in tiers of frills or, a foundation of net, and by a huge rose of pink chiffon, with leaves of silver and a fringe of pink and silver buds.

DANCING GOWNS.

Cotton bobinet is considered quite the thing for dancing gowns, and in truth makes up charmingly over china silk slips, at a very moderate cost. It will prove attractive for that very reason to students planning white gowns for wear at their graduating exercises. A few two-inch tucks on the skirt foot and a round full bodice, with girdle or sash of pretty ribbon, sum up the greater part of the outfit for the occasion.

STRIKING CREATION.

A striking gown exhibited in one of the shops just now is of silvery grey tulle, spangled with a decoration of wheat and poppies. The wheat ears are formed of silver sequins and the poppies of puffed grey silk, corded with chenille. This decoration runs down the entire front of the princess gown and across the bodice. The latter is cut low and edged across the top with two up-standing frills of silvery grey lace, which edge also finishes the brief little puffed sleeves.

NEW SILK JACKET.

Quaint and charming are the little jackets of silk, embroidered linen or lace so plentifully shown in the shops. Most of these are the shape of a bolero, either rounded or cut into deep points, with short, flaring sleeves. A striking example is of white silk, cut into deep points, like a diminutive kimono. The jacket is embroidered with pale green, yellow and brown silks, forming a border all around it. Lace medallions are inserted in the front, back and short wide sleeves of the jacket, and around each medallion is embroidered a circle of yellow and white daisies, with brown centres and green leaves. It is a most oriental, coquettish little affair.

FIRE ITS OWN EXTINGUISHER.

A curious outbreak of fire occurred late at night recently in the bar of the Clarence Gardens Hotel, Scarborough, England. The heat of the flames melted a leaden water-pipe, and the result was that when the water gushed out it completely extinguished the fire. It was not till some hours later that the manager, attracted by the smell of burnt wood, discovered the outbreak.

parents an heir and to her a baby brother, she ruled the house alone. She is fond of him and does not feel that the arrival of a boy and heir has dethroned her from the queenship that was hers as the first baby.

The third duke of Westminster's estates are as splendid as the city home. Both the duke and the duchess love country life and find their most congenial interests in their beautiful Cheshire home. The stables here are the finest in the country; the kennels, the home farm, and the dairy are a source of great delight to the owners of the estate and their guests.

They usually open the hunting season with a meet at the hall, and the duke and duchess are constantly out with the hounds. This baby's father is a hall fellow and next to his family he likes hunting. He feels much at home in the saddle and is an excellent rifleman. He and his friends enjoy some excellent pheasant, snipe, and wild duck shooting at Eaton, and "the hall" is a noted and pleasant centre for the sport. The season usually ends with a great ball, and the splendor of the entertainment naturally is in keeping with the magnificence of the state apartments.

HIS MOTHER'S ACCOMPLISHMENTS.

The duchess of Westminster is a splendid horsewoman and accompanies her husband on some of his wildest hunts. Above everything else the duchess is distinguished for her love of animals and is known to have a remarkable power over them. She is full of fun and amuses her children and herself by the hour teaching dogs tricks. She is teaching her little daughter to ride a Shetland pony, and will probably begin with the Loy as soon as he is large enough to hold on.

Gardening is another of her favorite occupations. As Miss Shelagh Cornwallis West she acquired a habit of spending long mornings with her mother among the flower beds at Ruthen Castle. She is doing the same with her children. When at Eton hall they pass much time in the gardens.

The duchess is an interesting, clever woman. She might be called distinguished appearing rather than handsome. She has dark brown hair and eyes. She is a slender figure and carries herself with great dignity. Though it is often necessary for her to give great balls and splendid entertainments she is happiest with her family. She loves to romp and play with her little daughter, and entertains her husband with her singing and playing.

FATHER PROUD OF BABY BOY.

The duke is also happy in his home, where he spends much time with his children and reading, and he is proudest of all of his baby boy.

If the third duke of Westminster inherits the virtues of his parents he will be a splendid type of English manhood. He will be tall and sturdy of muscle and possess energy and courage. He will be devoted to horses and the hunt, and will find his finer recreations among his pictures, books, music, and a love for nature. It is likely that the richest heir of Europe will not grow up to be a selfish man. His father has a sympathetic nature and devotes much time and money to charity. The duchess is simple in her tastes and is interested in many philanthropic movements. She is above all anxious to teach her children through example that money is not the all-in-all.

NATION OF BEEF EATERS.

The world's greatest animal food producer is the ox, including, of course, the female of his species. It is impossible to get at exact figures for the whole world, but it is generally believed to be about 15,000,000 tons a year, and of this more than half is beef. Great Britain eats between 40th. and 50th. of beef a year, out of a total of, perhaps, 120th. of various kinds of meat and poultry per head.

There is one thing in the homely girl's favor; she seldom acquires a reputation as a flirt.

and in order to facilitate this they are composed of very elastic material. It is not difficult for any one to understand that if they were simply hard and rigid tubes the sort of force-pump action the blood makes in flowing through them would result in a constantly sustained shock to the general system. The smaller arteries are made up largely of muscular tissue, and they are all the time contracting and relaxing, like the pupil of the eye. When they need an extra supply of blood they dilate to receive it.

This arterial mechanism is extremely delicate, and if any part gets out of order trouble will follow. One of the first signs by which it is discovered that the body is wearing out is that these marvelous elastic tubes begin to grow hard and stiff and lose their elasticity, so that the blood is sent to the different parts with increasing difficulty and in decreasing amounts.

This is what is meant by the saying that "a man is as old as his arteries"—his rubber tubing, through which the heart-pump must send the life-fluid of the blood, is growing hard and brittle, and may break down entirely.

There is no definite age at which a person's arteries give out, although it is properly a disease of old age. Some persons at thirty have arteries as much worn as others at seventy. This may mean that they started with an inferior grade of tubing, and poor arteries may run in families; but it is much more likely to mean that good arteries have been abused and worn out before their time. Gout is one of the diseases which always more or less affects the arteries, and overindulgence in alcohol is believed to be another frequent cause. Persons who eat a great deal and lead sedentary lives, and also persons who do very severe muscular work suffer from early arterial degeneration. Because both, although in different ways, give the arteries too much to do. Another potent factor in the production of arterial disease is worry.

A LEGION OF LOST BABIES.

Terrifying State of Affairs in the Great City of London.

The number of little children missing from London homes must be appalling. In the year 1904 the number of lost persons restored to home was 18,662, most of them being little children who had been kidnapped for begging purposes.

A sensational proof of the fact that thousands of children are lost in London was supplied recently. A three-year-old boy, well dressed, wearing a white fur coat, was found by a policeman, and taken to the workhouse, where he became ill and died of acute meningitis, due to an injury to the forehead as the result of a blow or fall.

A description was circulated, but the child was not claimed, and, after the inquest, the unknown little body was buried by the workhouse authorities.

Since the finding of the child was made public the City Road police station has been besieged by inquirers. Distracted parents, relatives, and friends have come to see the photograph taken after the death of the child, who was, they feared, their own missing boy. In fact, thousands of people have been there to see the photograph, but the child still is unknown.

The question arises, Where is this lost legion of children? That a thousand or even a hundred little ones can be spirited away from their homes and all of them lost absolutely is incomprehensible, and to parents a terrifying state of affairs.

INVOLVED.

"Skinner declares he's selling everything below cost. I wonder what he means by that?"

"I think he means below what they ought to cost his customers if his customers were to pay as much as he pretends the goods are worth."

"Doctor, I wish you'd prescribe for my complexion." "Certainly, madam," returned the doctor, and he wrote: "Let it alone."

Charles Baker

"I suppose your wife, like other women, always has the last word?"
 "Worse than that; she has all of them."

Sunlight Soap is better than other soaps, but is best when used in the Sunlight way.

\$5,000 reward will be paid to any person who proves that Sunlight Soap contains any injurious chemicals or any form of adulteration.

Equally good with hard or soft water.

Lever Brothers Limited, Toronto

RAILS TO HUDSON BAY

TERRITORY WILL BE ACCESSIBLE BY STEEL AND STEAM.

Hudson Strait is Navigable From 1st of July Until About the Middle of October.

I understand that the Dominion Government has granted charters to no less than eight different railroad companies to build lines to Hudson Bay, writes Frank G. Carpenter from Winnipeg to the Chicago Record-Herald. It is even said that James J. Hill of the Great Northern has such a concession in his inside pocket and that the various Canadian trunk lines are planning branches in that direction. In going northward over the Ontario Government's new railroad to Cobalt I was told by the engineers that they would soon reach Lake Abitibi, crossing the great clay belt, and that the road would be pushed on to James Bay. At Sault Ste Marie I fell in with the American syndicate which owns the Algoma Central charter, providing for a railroad from Sault Ste. Marie to Hudson Bay, and was told that the line had been graded for ninety miles and that over seventy-five miles were in operation.

Railroads have been surveyed from Winnipeg to Port Nelson and also from Fort Churchill, and there are some who believe that Canada will eventually have a trunk line running from Port Simpson, the western terminus of the Grand Trunk Pacific Railway to Fort Churchill, and that a great part of the grain will go over that route to Europe. The Canadian Pacific and the Canadian Northern are, it is said, considering the Hudson Bay route, and throughout the British Northwest it is regarded as one of the mighty probabilities of the future.

According to the last surveys of the Dominion government it has been shown that Hudson Strait is navigable from the 1st of July until about the middle of October, and the bay itself is said to be an open sea the year round. The idea is to build great storage elevators at Fort Churchill and to have a line of steamships moving in and out from there to Liverpool during the open season. If this can be done the saving will be enormous, and it will give the Canadian wheat great advantages over United States in the markets of Europe.

SHORT ROUTE BY HUDSON BAY.

Hudson Bay is so far north on the globe that the distance between it and Liverpool is remarkably short. It is only about 2,000 miles from Fort Churchill to Port Simpson, and, if a railroad should be built, the Hudson Bay route would be by far the shortest from Asia to Europe and very much shorter from parts of the United States to Europe than the routes now used. The distance from Winnipeg via Hudson Bay to Liverpool is 3,600 miles, whereas by Montreal it is 4,228 miles. From Duluth to Liverpool via Hudson Bay is 3,728 miles and the same point by way of New York is 4,200 miles. When this route is opened passengers from St. Paul and Minneapolis can go to Great Britain by traveling 4,100 miles and they will save a railroad journey of at least five or six hundred miles. The distance from Vancouver to Liverpool by Hudson Bay will be 1,300 miles shorter than it is now by the Canadian Pacific Railroad, and passengers from all parts of our great West will be able to go quicker and with a shorter rail journey by that way.

The great advantage of this new commercial highway will be in the transportation of grain and other freight. It will bring the wheat of the new Northwest a thousand miles nearer salt water. The United States produced last year something like 700,000,000 bushels of wheat. It is not extravagant to believe that the great grain belt of the British Northwest will produce as much at some time in the future. Its yield last year was about a hundred million bush-

be, and this is added to by the winds from the Atlantic, which blow in the icebergs off the shores of Greenland.

From the middle of October until June this strait is sure to be full of ice, at least it will not be safe to go through it at such times. Captain Wakeman, who was sent by the Dominion government here to investigate its navigation a few years ago, reported that the strait was blocked for about 250 miles from the 23rd of June to the 8th of July. The jam consisted of heavy ice sheets which had drifted one sheet on top of another and jammed up in such a way that a heavily laden vessel could not possibly have gone through it. The sheets were from three to thirty inches thick. Shortly after this time the ice broke and passed away, and the straits were open for the next three months. Captain Wakeman estimated that the open season would be three and a half or four months.

Dr. Bell of the Canadian geological survey says it is not safe to rely upon Hudson Strait being open later than the first week in October, and Captain Gordon, who commanded one of the exploring parties, says that vessels especially constructed for the purpose will have to be used and that they should not be more than 2,000 tons. They should be fortified against the ice and have small propellers well down in the water. It would take a vast number of such steamers to handle the Canadian wheat crop, and unless great whale-backs or the modern grain steamers can be used for the traffic it would hardly pay as a grain route.

FAST TRACTS UNEXPLORED.

There is no doubt, however, that some of these railroads will be completed. The Grand Trunk Pacific, which is now building, will run only 200 or 300 miles from James Bay, and the Ontario Government road will surely be pushed northward to open up the clay belt to settlers. The probability is that we shall have railroad connection with Hudson Bay within a couple of years or so and that a large part of the game for Toronto, New York and Chicago will come down over these roads. The country will then be filled with tourists and the Hudson Bay region may be a favorite summer resort for the North American continent. The woods are full of game. There are caribou by the thousand, plenty of moose, many kinds of deer and no end of wild birds. With steamers on the bay one will be able to take wonderful tours to the least explored parts of the world and a vast mineral region may be opened up. The country is as yet unexplored and unknown. From talks which I have had with Hudson Bay traders and explorers the land about the bay is rocky in places, and in others it is covered with muskeg and swamps. Near James Bay there are vast bogs of peat, some of which are twenty feet deep. This could be made into briquettes such as are used in Europe, and it may possibly form the fuel of the country.

As to hunting and fishing, these Hudson Bay railroads will open up the chief game resort of the world. The fur wealth is so great that the Eskimos bring in several hundred skins of musk-oxen every season in addition to bales of polar bear skins, caribou, wolves and foxes. Some of the finest furs of the world may be seen stacked up like hay on the shores of Hudson Bay, awaiting their transportation to the trading posts. In one locality about the bay the Eskimos trapped in one year more than a thousand white foxes, besides wolves, wolverines and other animals.

ESKIMOS IN THE WILDS.

At present most of the hunting is being done by Eskimos and Indians, who make it a life business. These Eskimos are much like our natives of Alaska. The men average about five feet three inches high and the women less than five feet. They have black eyes and hair, and their hair is straight and as coarse as horse hair. They have flat noses, high cheek bones, and eyes which are Chinese in shape. The teeth of the older women are worn almost to the gums from chewing sealskin, in order to make it soft and more easily

EDWARD IN AN EARTHQUAKE.

en Prince of Wales He Went Through a Shake in the Riviera.

ing Edward's experience of earthquakes, although of a restricted character, is sufficiently entertaining to be set on record. It may be remembered that about fifteen years ago there

was quite a severe earthquake along the French and Italian Riviera, which killed over a number of badly constructed buildings, knocked others out of commission and created a good deal of alarm. It came during the night time, very suddenly. Every room in the hotel where King Edward, then Prince of Wales, was staying groaned with its walls, shook with its floors and rattled with its furniture. All the dogs in it howled ether, and the noisy macaw in the nager's office screeched at the top of its voice. Then came a lull, as sudden as the disturbance, and the smothered sound of many a slipped foot and rustling dressing gowns were heard hurrying along the corridors and up the marble stairs. And the Prince? The first suggestion of danger his faithful querry, General Sir Stanley Leake, bounded out of bed, and, making his way across the smoking saloon, knocked at the door of the Prince's bedroom.

"What's the matter?" asked a drowsy ce.

"There's an earthquake! Come, sir!" he shouted reply.

"Then why don't you send it away?" was the royal answer.

"Outside? No, certainly not! I'm in bed. Go away!"

"The querry, his duty performed, folded the hurrying crowd out into the fresh air, under the deep blue sky and quiet stars. After an hour of this fearful scene alarm died away and every one had returned to the hotel to sleep, when

THE SECOND SHOCK CAME, vibrating them all out again into the fresh air.

STARVED WHILE OWNING £10,000.

The Strange Tale of Two Hermits at Bexley Heath, England.

William Ison and his brother James for thirty-three years lived a lonely, eccentric life at their residence in Lewinroad, Bexley Heath, England. William recently died of blood-poisoning at the age of seventy-nine years, and James, ten years his junior, soon followed from locomotor ataxy in the hospital of the union workhouse, Dartford. Their property, consisting of securities to the value of over £10,000 and cash £70, is in the keeping of Mr. Baynes, solicitor, Bexley Heath.

The house where the brothers dwelt has been visited by the local sanitary authorities, and its condition when they entered is described as the worst in the records of the district.

Receiving no answer to his repeated knocks, a neighbor entered the house and found the two old men slowly starving to death in an upstairs room which they used as a sleeping apartment. Disease in both cases had grown so bad that the men were unable to move or summon assistance. A half-consumed loaf, a tiny bit of butter in a crumpled paper, a tin of condensed milk—that was all the food in the house. There was no fuel, and the bed on which the men lay was a heap of filthy loose feathers on the floor in a corner.

BIRDS THE ONLY COMPANIONS.

The only other inmates of the horrible den were several little Indian song-birds in a cage. The neighbors say that one of these little prisoners used to be allowed out of the cage and was accustomed to go to the back window and sing most delightfully. On a mahogany sideboard in the front room, where the dust lay inches deep, were found several volumes of a work on ornithology.

It was while the sanitary staff were clearing away the rubbish accumulated in the house corners for more than a quarter of a century that securities inscribed with the name of Parr's Bank, Limited, were discovered. In the iron safe were found other securities on other financial institutions, four £10 crisp Bank of England notes, and £26 in sovereigns, mostly of 1902.

Mr. Baynes succeeded in discovering relatives of the two brothers in Kentish Town, and has communicated with

KING EDWARD IN AN EARTHQUAKE.

When Prince of Wales He Went Through a Shake in the Riviera.

King Edward's experience of earthquakes, although of a restricted character, is sufficiently entertaining to be placed on record. It may be remembered that about fifteen years ago there was quite a severe earthquake along the French and Italian Riviera, which bowled over a number of badly constructed buildings, knocked others out of plumb and created a good deal of alarm. It came during the night time, very suddenly. Every room in the hotel where King Edward, then Prince of Wales, was staying groaned with its walls, creaked with its floors and rattled with its furniture. All the dogs in it howled together, and the noisy macaw in the manager's office screeched at the top of his voice. Then came a lull, as sudden as the disturbance, and the smothered sound of many a slipped foot and soft, rustling dressing gowns were heard hurrying along the corridors and down the marble stairs. And the Prince? At the first suggestion of danger his faithful equerry, General Sir Stanley Clarke, bounded out of bed, and, making his way across the smoking saloon knocked at the door of the Prince's bedroom.

"What's the matter?" asked a drowsy voice.

"There's an earthquake! Come, sir!" was the shouted reply.

"Then why don't you send it away?" was the royal answer.

"Won't you come outside, sir?"

"Outside? No, certainly not! I'm in bed. Go away!"

The equerry, his duty performed, followed the hurrying crowd out into the open air, under the deep blue sky and tranquil stars. After an hour of this peaceful scene alarm died away and every one had returned to the hotel to dress, when

THE SECOND SHOCK CAME.

driving them all out again into the garden.

The equerry's thoughts again at once flew to the sleeping Prince. The heir apparent to the throne of Great Britain was, in a measure, in his special charge. How had he acquitted himself of his shrewd stewardship? A twinge of conscience made him feel uncomfortable as he sat out there in the still garden on an inverted watering pot, expecting

RAILS TO HUDSON BAY

TERRITORY WILL BE ACCESSIBLE BY STEEL AND STEAM.

Hudson Strait is Navigable From 1st of July Until About the Middle of October.

I understand that the Dominion Government has granted charters to no less than eight different railroad companies to build lines to Hudson Bay, writes Frank G. Carpenter from Winnipeg to the Chicago Record-Herald. It is even said that James J. Hill of the Great Northern has such a concession in his inside pocket and that the various Canadian trunk lines are planning branches in that direction. In going northward over the Ontario Government's new railroad to Cobalt I was told by the engineers that they would soon reach Lake Abitibi, crossing the great clay belt, and that the road would be pushed on to James Bay. At Sault Ste Marie I fell in with the American syndicate which owns the Algoma Central charter, providing for a railroad from Sault Ste. Marie to Hudson Bay, and was told that the line had been graded for ninety miles and that over seventy-five miles were in operation.

Railroads have been surveyed from Winnipeg to Port Nelson and also from Fort Churchill, and there are some who believe that Canada will eventually have a trunk line running from Port Simpson, the western terminus of the Grand Trunk Pacific Railway to Fort Churchill, and that a great part of the grain will go over that route to Europe. The Canadian Pacific and the Canadian Northern are, it is said, considering the Hudson Bay route, and throughout the British Northwest it is regarded as one of the mighty probabilities of the future.

According to the last surveys of the Dominion government it has been shown that Hudson Strait is navigable from the 1st of July until about the middle of October, and the bay itself is said to be an open sea the year round. The idea is to build great storage elevators at Fort Churchill and to have a line of steamships moving in and out from there to Liverpool during the open season. If this can be done the saving will be enormous, and it will give the Canadian wheat great advantages over United States in the markets of Europe.

SHORT ROUTE BY HUDSON BAY.

Hudson Bay is so far north on the globe that the distance between it and Liverpool is remarkably short. It is only about 2,000 miles from Fort Churchill to Port Simpson, and, if a railroad should be built, the Hudson Bay route would be by far the shortest from Asia to Europe and very much shorter from parts of the United States to Europe than the routes now used. The distance from Winnipeg via Hudson Bay to Liverpool is 3,600 miles, whereas by Montreal it is 4,228 miles. From Duluth to Liverpool via Hudson Bay is 3,728 miles and the same point by way of New York is 4,200 miles. When this route is opened passengers from St. Paul and Minneapolis can go to Great Britain by traveling 4,100 miles and they will save a railroad journey of at least five or six hundred miles. The distance from Vancouver to Liverpool by Hudson Bay will be 1,300 miles shorter than it is now by the Canadian Pacific Railroad, and passengers from all parts of our great West will be able to go quicker and with a shorter rail journey by that way.

The great advantage of this new commercial highway will be in the transportation of grain and other freight. It will bring the wheat of the new Northwest a thousand miles nearer salt water. The United States produced last year something like 700,000,000 bushels of wheat. It is not extravagant to believe that the great grain belt of the British Northwest will produce as much at some time in the future. Its yield last year was about a hundred million bush-

be, and this is added to by the winds from the Atlantic, which blow in the icebergs off the shores of Greenland.

From the middle of October until June this strait is sure to be full of ice, at least it will not be safe to go through it at such times. Captain Wakeman, who was sent by the Dominion government here to investigate its navigation a few years ago, reported that the strait was blocked for about 250 miles from the 23rd of June to the 8th of July. The jam consisted of heavy ice sheets which had drifted one sheet on top of another and jammed up in such a way that a heavily laden vessel could not possibly have gone through it. The sheets were from three to thirty inches thick. Shortly after this time the ice broke and passed away, and the straits were open for the next three months. Captain Wakeman estimated that the open season would be three and a half or four months.

Dr. Bell of the Canadian geological survey says it is not safe to rely upon Hudson Strait being open later than the first week in October, and Captain Gordon, who commanded one of the exploring parties, says that vessels especially constructed for the purpose will have to be used and that they should not be more than 2,000 tons. They should be fortified against the ice and have small propellers well down in the water. It would take a vast number of such steamers to handle the Canadian wheat crop, and unless great whale-backs or the modern grain steamers can be used for the traffic it would hardly pay as a grain route.

FAST TRACTS UNEXPLORED.

There is no doubt, however, that some of these railroads will be completed. The Grand Trunk Pacific, which is now building, will run only 200 or 300 miles from James Bay, and the Ontario Government road will surely be pushed northward to open up the clay belt to settlers. The probability is that we shall have railroad connection with Hudson Bay within a couple of years or so and that a large part of the game for Toronto, New York and Chicago will come down over these roads. The country will then be filled with tourists and the Hudson Bay region may be a favorite summer resort for the North American continent. The woods are full of game. There are caribou by the thousand, plenty of moose, many kinds of deer and no end of wild birds. With steamers on the bay one will be able to take wonderful tours to the least explored parts of the world and a vast mineral region may be opened up. The country is as yet unexplored and unknown. From talks which I have had with Hudson Bay traders and explorers the land about the bay is rocky in places, and in others it is covered with muskeg and swamps. Near James Bay there are vast bogs of peat, some of which are twenty feet deep. This could be made into briquettes such as are used in Europe, and it may possibly form the fuel of the country.

As to hunting and fishing, these Hudson Bay railroads will open up the chief game resort of the world. The fur wealth is so great that the Eskimos bring in several hundred skins of musk-oxen every season in addition to bales of polar bear skins, caribou, wolves and foxes. Some of the finest furs of the world may be seen stacked up like hay on the shores of Hudson Bay, awaiting their transportation to the trading posts. In one locality about the bay the Eskimos trapped in one year more than a thousand white foxes, besides wolves, wolverines and other animals.

ESKIMOS IN THE WILDS.

At present most of the hunting is being done by Eskimos and Indians, who make it a life business. These Eskimos are much like our natives of Alaska. The men average about five feet three inches high and the women less than five feet. They have black eyes and hair, and their hair is straight and as coarse as horse hair. They have flat noses, high cheek bones, and eyes which are Chinese in shape. The teeth of the older women are worn almost to the gums from chewing sealskin, in order to make it soft and more easily

How had he acquitted himself of his shrewd stewardship? A twinge of conscience made him feel uncomfortable as he sat out there in the still garden on an inverted watering pot, expecting the tall chimneys of the diplomat's house across the square to come toppling down over him. He had not aroused the Prince at the second shock. So he got up, returned to the hotel, and, passing through the public rooms—his Royal Highness was on the ground floor, in a sort of annex, that projected into a private flower planted court—reached the Prince's door and knocked. There was no response. He knocked again. Still no answer. A third, louder than before—loud enough, in fact, to arouse all the Seven Sleepers. But still no answering voice. And then the horrid truth, sudden as was the earthquake shock, flashed into the wretched eunuch's mind. Something was wrong. Had the Prince perished? In an instant he had flung the door open and dashed across the anteroom. The curtains at the door of the bed chamber were drawn close together. With a frenzied hand he seized them and drew them apart. As he did so something—but whether an aerolite, a thunderbolt or a falling beam he knew not—struck him full in the face. Strange lights danced before his eyes. His head swam, and in a momentary faintness he leaned against the door. But the next moment a voice fell on his ear, grave and reproachful:

"Look here, Clarke, I won't have any more of this, and if you don't shut up making that beastly row, and let me go. More wives would respect their husbands to sleep. I'll shy the other boot at you."

FASTEST AND BIGGEST.

Two new Cunarders, which are to be the fastest and biggest passenger boats in the world, are now in course of construction on the Tyne and the Clyde. A trip down the Tyne reveals in some slight degree the huge proportions of the new vessel, which is expected to do the journey between Queenstown and New York in four and a half days. The Tyne-built vessel is 790 feet in length, and the two masts will rise 210 feet above the keel, or within 24 feet of the top of the great dome of St. Paul's Cathedral. The four funnels will tower 154 feet above the keel, and their diameter will be huge enough to allow two ordinary locomotives to pass each other inside. Her accommodation will be sufficient for 500 first-class, 500 second-class, and 1,300 third-class passengers, with a crew of about 800.

SETTLED OUT OF COURT.

Mr. Russell Sage, the American millionaire, has a horror of lawsuits. A clerk of Mr. Sage's said the other day: "I sought out the chief one morning in his office.

"You remember, sir," I said, "my complaint against Mr. wife's uncle?"

"Yes," he answered.

"Well," said I, "the man is obdurate, and I think of bringing suit against him. What do you advise?"

"Mr. Sage was silent a moment, frowning thoughtfully. Then he said: 'Listen. When I was a clerk in Froy I had a case against a man that seemed quite as good as yours. I visited a prominent lawyer, and laid the whole matter before him in detail. When he was through he told me that he would be delighted to take the case—that it was a case that I couldn't lose.

"It can't lose," said I.

"It can't lose," he repeated.

"I rose, and took my hat. I thanked the lawyer, and told him that I wouldn't bring suit, after all. And then I explained that it was my opponent's side, and not my own, which I had laid before him."

An old hen was pecking at some stray carpet tacks in the back yard. "Now, what do you suppose that fool hen is eating those tacks for?" said Homer. "Perhaps," rejoined his better half, "she is going to lay a carpet."

crisp Bank of England notes, and £36 in sovereigns, mostly of 1902.

Mr. Baynes succeeded in discovering relatives of the two brothers in Kentish Town, and has communicated with them. The brothers came originally from London, and, although eccentric in their habits, dressed and behaved like gentlemen when they went out walking, as they frequently did until advancing infirmity prevented this. On a Sunday morning they would appear clad in frock coat, clean linen, neatly-polished boots, and silk hats, and carrying a small portmanteau, as if bound somewhere to spend the day. In the house they preserved profound quiet, no sound ever being heard to issue from the dwelling.

The house itself is a two-storey one of substantial appearance with a pleasant garden at the back. No woman had ever crossed its threshold since the two brothers entered into occupation thirty-three years ago, until a neighbor went in to dress the elder brother's leg. Once, a lady cousin, it was learned, called to see them, but she was refused admittance.

Both men indeed lived a life absolutely apart from human interests and affairs save that they took in regularly a daily newspaper, which was delivered.

One eccentricity of the brothers, a neighbor states, was that when they went out they would not walk together, but one on each side of the road.

GAINS FROM GUNS.

The yearly income of "Queen" Bertha Krupp, who inherited the famous ironworks at Essen, Germany, is steadily increasing, it having amounted in 1905 to about \$5,000,000. Miss Krupp manages her great properties with remarkable ability. Her business is expanding, and the number of those dependent on her for employment and subsistence is now fully 300,000. To protect the works she has a small army of 900 men, armed and under strict military discipline. She also has police and a secret service.

SOLDIERS' GRAVES.

The English Government does, to a certain extent, look after the graves of our soldiers who have perished in foreign wars. The sum of \$1,000 is paid yearly for the maintenance of the cemetery situated on Cathcart's Hill, in the Crimea; \$35 is voted for keeping the English graves in order at Suakin; \$25 is spent yearly for attending to the seamen's graves at Lissa. There is also a caretaker at Isandhlwana, whose wage amounts to \$10 per annum; while for looking after the Guards' tomb at Bayonne a solitary \$5 is spent.

NEW YORK AND ITS DOCTORS.

In New York there are several physicians receiving more than double the salary of the President of the United States. Six of them at least can truthfully confess to incomes of \$125,000 a year. That city also boasts ten physicians with incomes of \$50,000, and some fifty more who earn and pocket \$25,000. Treading their trail are upwards of 200 who garner \$12,500 annually, leaving about 2,000 doctors and surgeons who barely earn a livelihood, the average income of a metropolitan physician not exceeding \$2,000 a year.

SCHOOL FOR JUDGES.

They are evidently anxious to secure sound legal judgments in France. A school for judges has been opened in Paris. Make-believe trials are held by pupils of the Law School under the direction of distinguished attorneys. The whole procedure, from the issuing of a warrant for arrest to the pronouncing of judgment, is gone through. One pupil acts as judge, another as advocate for the defence, a third as prosecuting attorney, and so on. The mock trials are held in all earnestness, and no outsiders are allowed to attend.

wheat. It is not extravagant to believe that the great grain belt of the British Northwest will produce as much at some time in the future. Its yield last year was about a hundred million bushels, and not one-fiftieth of the land is under cultivation. If the wheat can be transported by way of Hudson Bay, it is said that the saving might be as much as 15 cents per bushel, and this on a hundred-million-bushel crop would mean a saving of \$15,000,000 per annum. Is it any wonder that the possibility of the route is seriously considered?

In addition to grain would be the enormous supplies which will be needed for the British Northwest. This country will eventually support about twenty million people, and they will be among the best customers on the globe. The port would also take away from and supply goods direct to the United States. It would be especially valuable in the shipping of live stock, as the climate is cool and the sea voyage short.

DELAY IN OPENING REGION.

There has in the past been a strong opposition to all schemes for the utilization of Hudson Bay. A great secrecy has been preserved about the bay, and strangers have been kept from exploring it. There have been two corporations especially interested in this matter; one was the Hudson Bay Company and the other the Canadian Pacific Railway. The Hudson Bay Company were anxious to keep matters quiet because they were getting a half million dollars' worth of furs out of this region, which they had monopolized for 200 years. The Canadian Pacific people knew that if wheat and other freight could be sent via Hudson Bay to England their long freight line across the continent would lack traffic. And, therefore, both were interested in keeping the conditions as they were.

As to the possibilities of navigation, these can only be tested by experiment. There is no doubt but that ships can go in and out of this great inland water way during a part of the year. The Hudson Bay Company sailing vessels have been doing so for 274 years. In that time they have had in operation 750 vessels, ranging in size from seventy tons to small boats, and so far they have lost only two.

The difficulty of navigating Hudson Bay lies not in the bay itself, but in Hudson Strait, which leads to it. Hudson Bay, as I am told, is never frozen. It is like a great ocean, and some short distance from the shore is open all the year round. It is an enormous body of water. It is 1,300 miles long and 1,600 miles wide, and its area is one-sixth as big as the whole United States. It has by far the largest drainage basin of all British America. Some of its waters come from the Rocky Mountains, some from Labrador and some from the Height of Land, on the other side of which the waters flow to the great lakes and the Gulf of Mexico. The basin includes about 3,000,000 square miles.

Hudson Bay has icebergs and ice floes, but its waters are deep, and it has some good harbors. One of the best harbors is Fort Churchill, and it has been picked out as the port for the probable railroads. It will be the best place to reach Winnipeg. A railroad could easily be built along the route and it is said that much of the land through which it would go is suitable for vegetable raising and small farms.

ICE MENACE TO BOATS.

The greatest dangers of the Hudson Bay route lie in Hudson Strait, which forms the entrance to Hudson Bay. It is five or six hundred miles long and about one hundred miles wide, opening out on the Atlantic a little below the end of Greenland. It is right in the track of the great icebergs and ice floes which come down through Baffin Bay and Davis Strait from the Arctic Ocean, and which are liable to be blown into Hudson Strait by the winds. Just as the shores of Ireland, England, and the northern part of the European continent are warmed by the Gulf Stream, so the regions here are cooled by the arctic waters, and these icebergs and seas of floating ice. They make Hudson Strait colder than it would otherwise

be. These people live in snow houses during the winter and in sealskin tents in the summer. They subsist largely on seal meat or whale blubber, and their fires are oil lamps. They have but few domestic animals except dogs, although it is said that here and there a moose has been harnessed up and made to work.

I hear much about the fisheries of Hudson Bay. Captain Hall, one of the Hudson Bay traders, tells me that the stories concerning their value are overdrawn, but the explorers sent by the government and the vast amount of whale oil and other products brought out by the fishermen lead one to suppose them about the most valuable on the continent. A large amount of the whaling has been done by Americans from Bedford, Mass. These men go through the strait and winter at Marble Island in Hudson Bay, near the west coast. They spend one season harpooning whales and buying furs and fish, taking their cargoes out the following year. Among the whales caught are the bowheads, which produce some of the finest whalebone known to the world. A full-grown whale will yield about 1,500 pounds of bone, and as the whalebone sells for \$14,000 a ton, a whale of that kind brings in bone worth about \$10,500. In addition to this the oil of the whale is valuable, so that a single whale may yield \$20,000. Our statistics show that our whale fisheries there have already realized in ten years \$1,371,000. There were fifty voyages the average voyage realizing more than \$27,000.

It is from Hudson Bay that the quills of England still come, and this region for generations furnished the most of the pens of Europe. Quills are still used in England government offices as well as in the houses of parliament, and it was with a Hudson Bay quill that King Edward signed his coronation oath. The gathering of the quills have been always done by the Hudson Bay Company, which has shipped as many as ten tons of wild goose feathers in a single year. Only three ounces of such feathers can be gotten from one bird, and it required 120,000 geese to furnish those quills. I had a bunch of the pens presented me, and it may interest you to know that I sign this letter with a feather from the wing of a goose which once ate rice on the shores of Hudson Bay.

POINT IN MILITARY ETIQUETTE.

It has always been a moot point in Austria as to how an officer ought to salute a brother-officer when he has a lady on his arm. This delicate point, however, has now been settled by the issue of an official army order. In future, if the lady is taking the arm of an officer, then he can, and must, give the salute with his left. But if, as a favorite custom is, the officer is taking the lady under the arm, he has to disengage himself and salute regularly with his right.

QUAINT HOUSE.

One of the best-known houses in Northamptonshire, England, was designed to represent the days, weeks, and quarters of the year. It has four wings facing the four quarters of the heavens to represent the four quarters of the year; 365 windows, one for each day; fifty-two chimneys, one for each week; and seven entrances to represent the seven days of the week.

MOUNTAINS AS A TOMB.

Martin Evans, a Tennessee millionaire, has bought Government Peak, in the Colorado Range, near Pueblo, and has named it the Evans mausoleum. He has decided to reserve it as the monumental burial-ground of his family.

SOME QUEER ACCIDENTS

EXTRAORDINARY OCCURRENCES IN REAL LIFE.

Strange Death of a Little Boy—Terrible End of a Bride of a Week.

Half the extraordinary predicaments in which a novelist places his hero or heroine, said a well-known writer recently, have been taken from real life, and many a romancer has thanked his stars for some chance accident reported in the Press which has given him the very idea he wanted for an exciting incident.

Here, for instance, is the story of a remarkable occurrence which compassed the death of a little three-year-old boy named Morris Murkowitz while he was playing on the banks of a canal. The father, mother, and child were seated on the pier near a string of canal boats, when the child began doing gymnastics on one of the hawsers which stretched from the boats to the piles. He was balancing his body on the rope when he slipped and fell just as the long swell which had been flooding the slip receded with a rush. The boats, of course, dropped down with the lowering water, bringing the hawser, on which the boy had been swinging, over his body and pinning him to the ground. He screamed once and his father and mother frantically endeavored to drag him away, but he was caught in an unyielding vice, and before the rope could be cut the little fellow was dead. When he was examined it was found that all his ribs were broken and he was

PRACTICALLY CUT IN TWO.

Here is another accident which would look well in a modern novel—a bride slain by the pin used to hold her bridal veil in position. The lady was a Mrs. Kate Carroll, and in fastening the soft folds of tulle in her hair on the morning of the wedding she ran the long brass pin which she was using into the palm of her hand. In the excitement of the wedding she gave no attention to the wound, until it began to fester. Then she treated it with some home remedies, but it rapidly became worse until the frightened husband called in a physician. It was then found that gangrene had set in, and she was removed to the hospital. A few days later lockjaw manifested itself, and though injections of anti-toxin were given she gradually sank and died a terrible death within a week after her wedding.

A mysterious accident recently happened to a Mr. Charles B. Kettredge, a bank clerk, who was shot dead by his own pistol as he lay in a closed satchel on the ground. Mr. Kettredge was on his way to the bank, carrying with him a small bag containing money, notes, and a loaded pistol. When near the bank he noticed that his boot-lace was unfastened, and, pausing for a moment, he placed the satchel on the ground while he tied the string. But the slight jar which occurred as the bag struck the ground discharged the weapon, and the bullet, taking an upward course, entered his abdomen and passed through the spine. He was taken up unconscious and died a few minutes later.

WITHOUT SPEAKING.

Many jokes have been written about people being tied up in folding beds, but here is an instance which occurred as recently as December last, when an elderly couple became so firmly locked in a big folding bed, which closed suddenly upon them, that before their cries were finally heard the old lady was strangled. The husband was just breathing when rescued, and after recovering was unable to say how the accident had happened. It was shown, however, that the balancing weights had in some way become displaced, causing the bed to close with a tremendous snap.

Perhaps the most extraordinary death on the railway which has ever been re-

THE YOUNG KING OF SPAIN

HAS BEEN TRAINED TO BE A THOROUGH GENTLEMAN.

Life Story of the Young Man Who is to Marry Princess Ena of Battenberg.

Young King Alfonso, who is not yet twenty years of age, and who is going to marry Princess Ena of Battenberg, an English Princess, has probably had a more careful and closely-watched training than any other living Royal personage. Born after his father's death, when his dynasty was in danger, everything depended upon his being brought up safe and sound and as a good and popular Spaniard. That object has been abundantly achieved.

When he was a little baby he was given over to the care of a young peasant woman, who came from a small village near the old city of Toledo, and this humble nurse acted, curiously enough, under the instructions of an Englishwoman, Mrs. Davenport, who was nurse-in-chief. The Spanish nurse was very much attached to the kindly baby, and one night, when she was putting him to bed, she was surprised by a punctilious duenna in the act of kissing him. The Spanish lady remonstrated severely with her.

"How dare you kiss the King?" she said. "Why, even we would not dream of taking such a liberty!"

"I nurse him, and I love him as if he were my own child," said the woman. "Why shouldn't I kiss him?"

In reply the duenna simply said that if she ever did such a thing again she would be sent home in disgrace.

At that moment the Queen-Mother entered the room to take a peep at the baby on her way down to dinner and

FOUND THE NURSE IN TEARS.

Learning the cause she exclaimed, "Of course poor Ama wants to kiss the baby she nurses. This is a matter in which etiquette must be forgotten, and you will favor me, ladies, by not interfering again."

Ever since then the nurse's own child has had the privilege of spending a few weeks each year with the Royal Family, and has been granted the further privilege of calling the King "thee" and "thou" as if she were his sister.

When he was about nine years of age the young King's training passed from the hands of women to those of men. One of his first male guardians was a chaplain of Leo XIII. His chief tutor was almost of Ministerial rank, and was known as the "Director de Estudios." This high personage lived in an apartment in the palace, where there were quarters assigned also to the other principal officers in charge of the King's education, these being Colonel Loriga, Colonel Castejon, and Rear-Admiral Aguirre de Tejada.

It was considered necessary above everything that the King should be trained to soldierly instincts and ideas. These three officers were for years the close companions of the monarch, and one of them always slept in his bed-chamber. One or other of them always escorted him when he did not go out with his mother or sisters, and were often present when he received his lessons from his other professors. To enable him to thoroughly understand soldiering,

A REGIMENT OF BOYS

was raised at San Sebastian for his special benefit. These youthful warriors were equipped in every way like full-grown soldiers, even down to having their own special band. Young Alfonso took a great interest in this boy regiment. He attended drill mounted on his pony, and he was always particular about the kind of music the band played.

His education was very practical and thorough. As a child he was taught to speak English, French, German and

HOUSE OF MANY COLORS

ONE IS NOW BEING BUILT IN LONDON, ENGLAND.

Palace of Peacock Hues and Stately Design is Being Erected for Wealthy Merchant.

A house for Mr. E. R. Debenham, of the well known drapery firm of Debenham & Freebody, is being built in the west end of London, England, that makes every other house in that aristocratic neighborhood look insignificant and colorless and cheap.

It is nothing less than an Italian palace—on a moderate scale as regards size—and when it is finished it promises to eclipse any house on that side of the Atlantic or the other in stateliness of design, richness of color, and exquisite beauty of proportion and internal decorativeness.

It is planted, like any ordinary London box of bricks and mortar, in Addison road, half-way between Kensington High road and Shepherd's Bush.

It is a square building, with its "face" to the road, but each face is as rich as the others in design and material.

EMERALD GREEN TILES.

The square face towards the road is made up of four bays, or slightly recessed spaces, running up nearly to the cornice, and round-arched at the top. They are divided by pillars of cream-white terra cotta, from which the arches, of the same material, spring. The four spaces, save for the long, severely cut windows, are made of highly glazed bricks, of a rich sea color.

Above the arches and below the cornice there runs a kind of deep plain frieze of sapphire—also of glazed brick; while the smaller band between the cornice and the roof is a blue of the most gorgeous peacock hue. The ribbed roof, of emerald green tiles—especially imported from Italy in about sixty great crates—rises from projecting eaves of cream-white terra cotta. The stately chimneys are of white terra cotta, with spaces of blue tiles.

The effect of the masses of rich color, cooled by the pillars and arches and cornice of cream-white terra cotta, is one of splendid harmony, and the whole house crystallizes into a picture of perfectly balanced parts and the most beautiful hues.

DECORATED FRONT.

The "front" of the house is like the road face, save that at each extremity projections, something of the "bow-window" type, but running up from ground to cornice, have been skillfully added. There is the same wealth of color and masterly design.

The sides are further dignified with arched, recessed porticos, of great height, the main entrance being at one side, and a garden entrance at the other.

The centre of the interior is a large and lofty hall, the walls of which are now in course of being faced with peacock-blue tiles, of deep tints. The lofty roof is domed, and through arched spaces below the dome one sees a gallery on three sides of the hall, giving access to the upper rooms.

Most of the rooms in the house are of comparatively modest dimensions, but the library, overlooking the garden, is a royal apartment.

DEATH OF MR. GARNETT.

Was For Fifty Years in Library of the British Museum.

The death has occurred at Hampstead at the age of seventy-one, of Dr. Richard Garnett, C. B., who was identified for almost fifty years with the British Museum. Born at Litchfield, the birthplace of Dr. Johnson, Dr. Garnett entered the service of the Museum as a lad of sixteen. His father, a clergyman, was also an official of the Museum, and from him Dr. Garnett inherited a love

BISSELL'S

"Cyclo" Bearing Carpet Sweeper

is the modern, sanitary labor saving appliance for every day use in sweeping carpets or rugs. The corn broom simply scatters the fine dust never cleaning a carpet whereas the rapidly re-

of a Bissell lifts the grit out of the carpet in the pass, the dust. If the true value

and grit, or rug, involving brush fine dust and pet, depositing and confining all a woman could realize of the Bissell sweeper, she would not let a day pass until she had purchased one. It reduces the labor of sweeping 95%, confines all the dust, does the work in one-quarter of the time a corn broom requires, protects your curtains and fine furniture from dust, in fact, makes sweeping a pleasure instead of a drudgery. For sale by all first-class dealers. Prices, \$2.50, \$3.00, \$3.25, \$3.50, \$3.75, \$4.00, \$5.00.

Buy a "Cyclo" Bearing Bissell now, send us the purchase slip and receive a neat, useful present free. Bissell Carpet Sweeper Co., Grand Rapids, Mich., Dept. 77, and Toronto, Can.

Largest Sweeper Makers in the World.

IN MERRY OLD ENGLAND

NEWS BY MAIL ABOUT JOHN BULL AND HIS PEOPLE.

Occurrences in the Land That Reigns Supreme in the Commercial World.

The death is announced of Mr. Mark Markland, for 45 years Midland locomotive superintendent at Peterborough. The estate of the late Mr. Robert Whitehead, inventor of the Whitehead torpedo, has been valued for probate at £900,000.

Rear-Admiral Sir Percy Scott has received £8,000 from the Admiralty for his inventions in connection with naval gunnery.

It is estimated that 30,000 extra cotton operatives will be required in Lancashire if the present boom in trade continues.

Of Queen Victoria's many granddaughters but four, in addition to the Princess Patricia of Connaught, now remain unmarried.

An instructor in kite-flying is to be appointed for the British army. The post of marble expert is, we understand, still open.

The Lord Mayor of London started his business career at the age of fifteen, when he entered the service of the National Provincial Bank.

In Hoxton, London, there is a narrow, dingy street bearing the name "The Land of Promise." It leads to the rear entrance of the workhouse.

At the time of Trafalgar the capital value of the British navy was £10,000,000. In 1902 it was £100,000,000. Now the cost of each vessel approaches £2,000,000.

There are over 4,000 race horses in England, Scotland and Ireland whose training quarters are fully known, and they are stabled in 24 establishments.

Mr. Vyell Edward Walker, of Taylor Walker & Co., brewers, has left estate to the value of £1,598,177. Under his will nearly £25,000 is bequeathed to various charities.

A startling decrease seems to have taken place in recent years in the number of candidates who compete for woman and girl clerkships in the London post-office.

The fact that Great Britain leads the world in fast railway runs is remarkable when it is taken into considera-

was unable to say how the accident had happened. It was shown, however, that the balancing weights had in some way become displaced, causing the bed to close with a tremendous snap.

Perhaps the most extraordinary death on the railway which has ever been recorded occurred in America a few months ago, when a platelayer on the Grand Central Railroad was caught between two trains proceeding in opposite directions. This man, whose name was Rogers, was standing on the tracks when he saw bearing down upon him an express train on the up grade. As he turned he probably also noticed another train coming in the opposite direction, but instead of climbing the bank he stood between the two pairs of rails, thinking, perhaps, that when one train had passed he would be able to step between the vacated metals and allow the second to go by.

But as ill-luck would have it the two engines reached the point where he was standing at almost the identical instant, with the result that he was thrown by the force of the wind from one train to the other.

BACKWARDS AND FORWARDS.

so long as the two trains were passing each other. Then, when the last coach was reached, he was hurled over the track without a sound bone in his body.

Another remarkable accident of a rather different nature is also one which comes from the States. The victim in this case was a Mexican named Pedro Sancho, who, at Southford, Connecticut, was held by the foot for twelve hours by a turtle. He was found in the woods nearly dead from exhaustion, and the turtle had literally to be cut in pieces before it would release its victim. When he recovered Sancho told a remarkable story. He said he was driving a team of horses and a wagon with two black bears in a cage when a storm came on, and the lightning frightened the horses, which ran away, upsetting the cage and liberating the bears. In his fright Sancho fell into a big pool, known as Husker Meadow Pond, and, as it was dark, he for a long time floundered about in mud and quicksand. At last he reached the shore, where he promptly put his foot on a sleeping turtle, which immediately awoke and grabbed him by the heel of his shoe. All his efforts to get rid of the turtle failed and his heel gradually became a bruised mass. He lost consciousness and was found twelve hours later by his companion, James McGovern, who had been dragging the pond for him. Ultimately the poor Mexican's foot had to be amputated to save his life.

ADDITION BY TYPEWRITER.

A German genius has perfected a typewriter which performs the duties of an accountant through an ingenious arrangement of wheels. By the use of this machine a bill may be made out on the typewriter, and, instead of a laborious addition being required to arrive at the total, a set of indicators at one side shows exactly the sum of the columns of figures. The adding device is not new, but the means whereby the figures are registered is exceedingly ingenious.

THE LARGEST PICTURE.

M. Roussel Geo has completed the largest picture ever painted. It measures exactly 807 square feet. The artist had to beg the loan of a studio of suitable size from the State, and he and his easels, some 20ft. high, were accommodated in the Galerie des Machines, the largest one-spanned building in the world. The picture represents the Paris crowd in 1789 rushing to the Hotel de Ville, led by Lafayette, after the taking of the Bastille, and contains over 1,000 life-size figures. It will be hung in a suburban town-hall, that of Ivry.

A man may want to be able to work, but that is no sign that he wants to work.

regiment. He attended drill mounted on his pony, and he was always particular about the kind of music the band played.

His education was very practical and thorough. As a child he was taught to speak English, French, German and Italian, and was master of them all by the time he was twelve. He was subjected to a careful discipline all through his youth. He was made to turn out of bed never later than seven and often much earlier, and from that time until one o'clock he was kept closely at his studies, with only an hour's interval for exercise.

Side by side with his mental training he was carefully coached in all athletic and mental exercises, and he is probably the most athletic prince in Europe. Of his agility a curious demonstration was given in Buckingham Palace one night during his visit to England last year. Queen Alexandra, attended by the Duchess of Portland, was saying "good-night" to him in one of the corridors before retiring for the night, when he suddenly said to Her Majesty: "I am an acrobat; would you like to see me perform?" Surprised and amused, she said she would; whereupon the youthful Sovereign turned a succession of somersaults all the way

DOWN THE CORRIDOR.

He is by no means so weak physically as has often been suggested. Once when a medical congress was being held at Madrid, Professor Adolph Lorenz had the honor of being received by His Majesty, when he was able to convince himself of the erroneous statements that had been made in this respect. When he expressed his pleasurable surprise to the Queen-Mother the young King exclaimed, "Strength, you say! Well, look here." Thereupon he lifted his mother up in his arms and, holding her carefully as if she were a child, carried her three times round the room without showing the least sign of fatigue.

Best of all, the Queen-Mother trained him to be a thorough gentleman in the truest sense of the word, and it is the common remark of those who have come into contact with him that here is a King "without an inch of side."

CHILDREN FACTORY SLAVES.

Parents, Employers and Themselves Evade the Law.

The report just issued by the Prussian Ministry for Trades and Commerce of work done by factory inspectors during the last year in the Berlin district again deals fully with the employment of children.

Inspectors, it states, experience extreme difficulty in bringing to book the employers of children under the legal age, for not only the employers, but the children themselves and their parents or relatives use every means of evading the watchfulness of the authorities. Inspectors are also aware of the fact that a very large number of quite young children are illegally employed in home industries, especially in the manufacture of paper goods, cigarette boxes, toys and ready-made clothes. Fines have in many cases been imposed on persons who regularly employ children, even under 10 years, compelling them to work from eight to ten hours per day.

Inspectors also record the fact that complaints are increasing every year in every branch of industry of the lack of young people of both sexes willing to become apprentices. They prefer to seek employment in large enporiums, which are becoming such a great feature of business life, where no apprenticeship is required, and where they are paid wages from their entrance. After a few years' time many, it is true, return to industrial occupations, but then they are too old to acquire the necessary aptitude.

Possibly all men may be born free and equal, but it is impossible to keep some of them in that condition.

almost fifty years with the British Museum. Born at Litchfield, the birthplace of Dr. Johnson, Dr. Garnett entered the service of the Museum as a lad of sixteen. His father, a clergyman, was also an official of the Museum, and from him Dr. Garnett inherited a love of books, which grew until the keeper of 2,000,000 printed works was able to put his finger on almost any volume wanted in the overwhelming library.

In 1875 he became superintendent of the reading room, from 1881 to 1890 he controlled the catalogue, and from 1890 till he retired in 1899 he was keeper of printed books. He invented or adopted the invention of the sliding-press for museum uses, so that space can always be found for the daily flood of fresh publications. But his greatest work was the completion of the author catalogue, and the substitution of printing for manuscript, whereby space was economized and accessibility increased. Such a work will be rivalled only when a subject catalogue on as huge a scale is ready for use.

In the catalogue Dr. Garnett's name appears as the author of sixty works. He began as a poet in 1858, and a chaste and melodious muse continued to be his till 1904, when he published "Shakespeare, Pedagogue and Poacher," a drama for the cabinet. Lives of Carlyle, Emerson and Milton, translations from German and Italian, an invaluable history of Italian literature, and articles innumerable (notably in the "Encyclopaedia Britannica") came from his pen, while he edited with Mr. Gosse the International Library of Famous Literature.

IRON CANES LATEST.

Carrying Them as Good as a Ten-Mile Walk.

The latest fashion in ultra-fashionable London is to carry a hooked iron bar in place of the ordinary walking cane. Quite a smart business is being done in the West End in these sticks, which are being sold at about 5 shillings each.

To all intents and purposes the iron canes, which are japanned, are ordinary walking sticks. They look like the ordinary ebony canes which have been so fashionable for many years, but, unlike real ebony sticks, they are objects of use as well as adornment. They weigh about ten pounds. As instruments of defence they are invaluable, but they possess another quality which is even more important.

If carried regularly and swung in the way in which one swings an ordinary cane they bring into play muscles which would remain undeveloped.

After the first week or so the weight of the cane becomes unnoticeable, but its value as an athletic implement increases, and it is claimed if one is used regularly it will do as much for the system as an hour's digging in the garden every day or a ten-mile walk.

DRAIN MEXICAN LAKE.

Cortez Had a Fleet on It at Conquest of Mexico.

Historic and picturesque Lake Zumpango, near the City of Mexico, is to be emptied of its waters and its fertile bottom given over to tillers of the soil. This lake is one of the most beautiful bodies of water in the world, nestling above the clouds at an altitude of 8,000 feet. It is considerably higher than the city of Mexico.

In the times of the Aztecs and when Cortez made his conquest of Mexico the lake was much larger than it is now. When flooded, it was a serious menace to the city below.

By means of a fleet which he operated upon Lake Zumpango, Cortez was enabled to push his advance upon the capital of Montezuma. The body of water has an important place in the history of the country.

Much of the basin has been drained since those early days by earthquakes and the work of engineers. Now the water is to be drawn off entirely, and the site is expected to prove one of the world's richest garden spots.

taken place in recent years in the numbering of candidates who compete for woman and girl clerkships in the London post-office.

The fact that Great Britain leads the world in fast railway runs is remarkable, when it is taken into consideration that there is far more traffic on British than on American and continental roads.

On the roll of the new House of Commons Mr. John Murphy, M.P., has signed his name in Gaelic. This is the first time that a member of Parliament has signed the roll in other than English characters.

Every horse in the British army is numbered and has a little record kept. The number is branded upon the animal's hind feet—the thousands on the near hind foot, and the units, tens and hundreds on the off hind foot.

The British Museum has declined to purchase the Nelson memorandum outlining the plan of the Battle of Trafalgar, which was recently sold at auction for \$18,000 and offered to the museum by the purchaser at the same price.

An improvement in the latest London "tube" is stations painted distinctive colors, so that passengers may recognize them without hearing their names called. Not much of a change, suggests an English paper—merely the substitution of a hue for a cry.

Sir John Brunner has arranged for Wilmington, Norwich, what is called "a bonus scheme for healthy babies." Every birth will be reported upon, and at the end of twelve months Sir John will make a grant of 20 shillings to the mother or the guardian of each child that has made satisfactory progress. The object of the scheme is to reduce the infant mortality.

TESTING CIGARS.

The American Department of Agriculture are employing a mechanical smoker with the intention of improving the quality of cigar tobacco. The machine takes five cigars at a time, and smokes them with more regularity than a human being. It takes a ten seconds' even draw, gives a puff, and then waits half a minute before it draws again. Each cigar is watched carefully during the process of combustion, and every detail affecting the filler, binder, wrapper, ash, and aroma is noted down. Where the best results are obtained the seeds of the particular plants used in the manufacture of the cigars are put aside for next year's planting. In this way the department are convinced they will finally produce an unrivalled tobacco.

FRANCE'S LARGEST CLOCK.

The works of a clock made for the cathedral of St. Gervais d'Avranches weigh two tons; there are five sets of wheels, and the hours are struck on a bell weighing over six tons by a clapper of 220 pound. For the quarters and the carillon there are 22 other bells, the weight of the quarter bells ranging from 13 cwt. to two tons. There are four faces to this clock, which is the largest in France.

DISAPPEARING BEDS.

No one ever sees a bed in any of Mme. Patti's private rooms until the evening, when what might be taken to be a handsome wardrobe with a mirror becomes a bedstead. The housemaids, after making the bed in the morning, touch a spring, which causes the bed to sink down into the frame of the bedstead, and it is then drawn up so as to give it the appearance of a wardrobe.

GILDED FOWLS.

In Mexico a gold-mine has just been sold for \$150,000, for the discovery of which chickens are entitled to full credit. A few months ago the value of the property was unsuspected, but one day the employees of Albert Palos, a merchant, of Tapalpa, found grains of gold in the crops of his fowls, and immediately took steps to acquire the land where the birds roamed.

A Big Egg

Mr. Frank Vandebogart showed us on Friday last, a monster in the way of a hen's egg. The egg weighed 4 ounces measured 8 inches by 9 inches. It was from a white Orpington pullet.

Don't Miss Seeing.

The lady with the long beautiful hair in Fred L. Hooper's Drug Store window. Demonstration at this store by the Seven Sutherland Sisters, for two weeks beginning Monday, May 14.

Parish of Camden.

Services Sunday, May 20th, as follows: Camden East—St. Luke's church, 11 a.m.; Yarker—St. Anthony's church, at 8 p.m.; Newburgh—St. John's church, 7 p.m. Rev. S. Seasmell, of Kingston, will preach at all the services (D. V.) All are welcome.

Excursion to Picton.

The Steamer Reindeer will run an excursion to Picton, on Victoria Day, May 24th. Steamer leaves Cressy at 7.30 a. m.; Conway 8 a. m. Return fare 40c, Bongard's, 30c; H. Allison's 30c; Adolphustown, 8.30 a. m., 30c. Returning will leave Picton at 5 p. m. Horse Races and other attractions will be held at Picton on this date.

What Do You Think of That.

She said to her husband as they passed Fred L. Hooper's Drug Store, where a lady was standing in the window combing her long beautiful hair. Just to think of it, one woman having so much hair, and I have not enough to keep my hat on well. Her husband said "You can have more if you use what they do. That lady is one of the Seven Sutherland Sisters."

The Late Mrs. Ernest Loyst.

Martha Jane Russell, wife of Ernest Loyst, Napanee, died, on May 10th, after an illness of three months. She succumbed to a relapse of pleuro-pneumonia. Deceased was the eldest daughter of Nelson Russell, of Empey Hill, Richmond, and was in her forty-first year. Besides her husband she leaves three small children, all under six years of age. Mrs. Loyst was a loving wife and mother and a consistent member of the Western Methodist church.

Killed While at Play.

A very sad death occurred on the Deseronto road, on Tuesday, when little Lizzie Hudson, daughter of Mr. John Hudson was instantly killed. The little girl was playing around the house and climbed up on some steps which were out of use and had been stood up against the house. Her weight overbalanced the steps and they fell over on top of her, one of the steps catching her under the chin, causing instant death. The young husband and his wife have the sympathy of all in their sad bereavement. The funeral took place on Wednesday to the Western Cemetery.

Alys Bateman Coming.

This eminent London Soprano, whom experts claim will take the place of Madame Patti, accompanied by Mr. Edward Parlovitz and Miss Grace Merry, Toronto's most famous elocutionist, will give a concert in the Western Methodist Church, Tuesday evening, May 22. Miss Bateman has appeared before Royalty and was a great favorite among the aristocracy. Her rendition of "Caro Nome" (Patti's celebrated song) never fails to arouse the audience to remarkable enthusiasm by her finished and effective methods. Apart from a marvellously beautiful voice, she has a strongly marked

—AT—

SYMINGTON'S

South Side Dundas Street, Napanee, Ont.

At The Downtown Office of the
NAPANEE CANNING CO., Limited,

funeral took place on Monday.

Hazel Mildred, only daughter of Mr.
and Mrs. Perry Huffman passed away
on Monday afternoon after a long ill-
ness due to rheumatism and heart
trouble. The little girl was aged 4
years and eleven months, and the
sorrowing parents have the sympathy
of a large circle of friends in their sad
bereavement. The funeral took place
on Wednesday afternoon at 2 o'clock
to the Western Cemetery.

A Great Work of Philanthropy.

The United Counties of Lennox and Ad-
dington according to the latest report of
the Registrar General for Ontario, there
were 31 deaths from tuberculosis in the year
from the United Counties, with a popula-
tion of 23,500. This is nearly 1.3 deaths
per 1000 people, and is almost twice the
number from any other disease. Of these
31 deaths, 17 were male and 14 female, 29
Canadians, 2 foreigners, 15 were single and
16 married, 4 were under 12 years of age,
and the average age at death was 24 years.

Statistics also show that the greater
mortality is among the younger married
women, and but impresses the fact, that
in looking to the future generations of this
county, every care known to science should
now be taken to check this terrible disease,
and every assistance be given to the work
now being carried on.

Since the Muskoka Hospitals started
eight years ago the Registrar General
Reports a decrease in the number of deaths
from consumption of over 20 per cent.
This is a splendid record and also shows
that with more Sanitariums and skilled
treatment, the disease can, before very
many years be entirely stamped out.

At present every help should be given by
each municipality and private citizens who
are able to do so to the free hospital for
consumptives at Muskoka. This hospital is
for poor patients and no one has been
refused admittance on account of poverty.
A number of counties have endowed beds,
at cost of \$200, in this hospital, so the con-
sumptive poor of their county may have
free treatment. The United counties of
Lennox and Addington will this year be
asked to do likewise, and it is hoped they
will follow the example of other counties
in this respect.

Mr. G. L. Jennings, Field Secretary of
the Free Hospital for Consumptives at
Muskoka, is in town for a week or so in
the interests of endowing a bed from Napa-
nee. He has been assured of the interest of
the townspeople in the matter, and a grant
will also be asked from the town council.
A branch association will be formed of
those interested in the work, the names of
which will be given later. All subscrip-
tions of whatever size will be most grate-
fully received, and acknowledged in the
local press.

BEAVER LAKE.

Mrs. Fred York of Napanee is spend-
ing a couple of weeks with her sister-in-
law Mrs. Wm. Kirkpatrick, who
has been very ill with pneumonia but
is slowly recovering.

Miss Rhoda York is spending a
couple of weeks with her niece, Mrs.
John Richmond of Leinster.

Mrs. John Johnson took a trip to
Napanee last Saturday.

Mr. Charlie Williams wears a smile.
"It's a boy."

Our school is progressing under the
management of Miss M. Hinchey.

Mr. Claud Williams, of Arden, spent
Sunday at Mr. Nathaniel Hinchey's.

Mr. Wilbert Clement of Moscow and
Mr. Elmore Hilland of Reidsville spent
Sunday at Mr. Geo. McKnight's.

Mr. David Reid, sr, is no better but
is growing weaker.

Addison Kellar and Miss Pearl Card
are on the sick list.

I wonder how the ladies of Bachelor's
Island would like to have the Beaver
Lake ladies to help them in their
baseball club?

great favorite among the aristocracy.
Her rendition of "Caro Nome" (Patti's
celebrated song) never fails to arouse
the audience to remarkable enthusiasm
by her finished and effective methods.
Apart from a marvellously beautiful
voice, she has a strongly marked
personality combining a most fascinat-
ing appearance with an irresistible
charm of manner and exquisite taste
in dress.

Miss Bateman will be accompanied
by Mr. Edward Parlovitz, of London,
England, late of the Watkin Mills
Quintette party who have made a
famous ten months tour of the world.

Miss Grace Merry, the popular
Toronto Reciter, has during three
seasons established herself as Canada's
leading elocutionist. She has been
especially engaged for the Bateman-
Parlovitz party's tour in preference to
any other artist in the profession.
Don't forget the date Tuesday May 22.

New Books at the Library.

The following are a few of the latest
books added to our Public Library.
They touch upon various themes and
departments and thus appeal to the
various tastes of readers.

1. "Stories of the Good Green Wood"—
An interesting nature book for
children.
2. "House of Morilles."—An interest-
ing story of a boy's life from infancy
to manhood.
3. "For the Queen in South Africa."—
Exciting struggles of individuals
for the Queen against her enemies.
A boy's book.
4. "Jessica Trent."—A young girl's en-
deavours to uphold the honor of
her father after his sudden death.
5. "Heart of Lynn."—Struggle of a
mother, three daughters and one
son to gain a livelihood, their lu-
diculous mistakes and ultimate
successes well told. A good book
for girls.
6. "Monopolies Past and Present"—A
concise, readable and instructive
book, on a subject of live interest
at present.
7. "Our Young Folk's Plutarch."—A
well written book giving the sub-
stance of Plutarch's Lives. Lovers
of history will find this interesting.
8. "The Turk and his lost Provinces."—
An excellent and very readable
book dealing with the life and rule
of the "Sick man of Europe."
9. "Salve Venetia," by Marion Craw-
ford.—A beautiful description of
Venice.
10. "The Missions of California."—An
interesting history of Pioneer Mis-
sion Life upon the Pacific coast.
11. "Business Philosophy."—A series
of heart to heart talks with busi-
ness men.

SHARPTON.

Stock of all kinds have been returned on the pastures except working horses. There is a large surplus of last year's hay left over.

There is a young son at Peter Mohan's. Mr. Garrison, Colebrook, who is drilling wells in the vicinity, passed through here.

Israel Babock has moved into Mr. Maine's house.

An unusual number of stallions travel the road.

Miss M. Smith of the city, is visiting her sister, Mrs. S. Somerville.

D. Parks has gone to work in Dexter, N. Y.

Mrs. J. Koen is visiting her mother, Mrs. Drumm, Belleville.

DENBIGH.

Rev. G. Daechsel bought a nice span of bronchos, in Bancroft, and is now able to make the trips to his distant Missions with more comfort and in less time. He made a trip to Eganville last week, accompanied by his daughter, Magda, and improved the opportunity by enjoying a visit at Rev. G. Brackenbusch, of that town.

Emil Stain and Adolph Warlich, who left for the North-west about a month ago have advised their friends of their safe arrival at Saskatoon.

Mr. Jas. Lane, Proprietor of the Denbigh House, and one of the first and most prominent settlers in this part of the country, has sold his Public House and 140 acres of land, near this village, to Mr. John A. Dool, who is already in possession of the property. Mr. and Mrs. Lane are moving to Ottawa, where two of their daughters reside.

Mr. Geo. W. Pennock has moved on the farm lately purchased from Willet Hanes, and has leased his homestead of 300 acres in the township of Raglan to his sons, James and Joseph Pennock.

Mr. Walter Thompson is building a new frame dwelling house. Mr. Albert Crabtree is the architect, which is a guarantee that the workmanship will be in first-class style.

Rev. A. Huffman, of Arden, conducted Divine Services again at the Methodist church, last Friday evening.

A lively time is expected at this year's Court of Revision for this Municipality, which will be held at Vennachar on the 2nd of June next. An unusually large number of appeals against the assessment have been filed with the Township Clerk.

A Warning to Ladies who Use Package Dyes.

The WELLS & RICHARDSON CO., LIMITED, of Montreal, manufacturers of the world-famed DIAMOND DYES, would specially warn all users of DIAMOND DYES as well as retail merchants, that they have not the slightest connection with any firm or combination of people who are now putting up week-and-adulterated package dyes for home use.

The DIAMOND DYES, for their own interests, and for the welfare and protection of tens of thousands of Canadian women, find it necessary to denounce the reports circulated by manufacturers of certain crude dyes that their products are put up according to the formulae of the DIAMOND DYES.

The adulterated dyes manufactured by speculators (jealous of the success of DIAMOND DYES), are not in the same class with the popular DIAMOND DYES.

To insure complete success in home dyeing work, buy only the DIAMOND DYES, and see that the words DIAMOND PACKAGE DYES appear on every envelope.

WELLS & RICHARDSON CO., LIMITED MONTREAL, P. Q., will send FREE to any address their New Direction Book, Samples of Dyed Cloth, and Verse Story, entitled "The Longjohns' Trip to the Klondike."

Special in the Carpet Section

Saturday, Commencing at 10 a.m.

ALPINE AVALANCHES.

These Deadly Snowslides Are Often Started by a Sound.

There are many kinds of avalanches. There are the powdery avalanche, the creeping variety, the glacier avalanche and others. When the sun strikes upon the illimitable snow fields and the snow begins to move the mass in its descent gathers weight and force, tearing away enormous rock masses and millions of tons of soil, until at length, with a noise like thunder, it expends its fury on the level floor of a valley where defenseless villages may be.

A great avalanche of this kind has an invisible forerunner almost as destructive as itself. This is the terrific hurricane caused by the air it displaces. It is no common sight to see giant trees uprooted, broken and twisted, the boughs wrenched from the trunk, leaves and needles clean stripped from the twigs and the very tops wrenched from a larch forest before ever the avalanche itself has struck the wood.

It is on still days when a lighted candle will hardly flicker in the icy air that the danger is greatest. The snow has been falling quietly yet heavily for several days and has settled on precipitous slopes above the village to an immense depth. It needs but the slightest and almost imperceptible cause to set it in motion. Had the wind been blowing it would never have amassed to such depths, but would have slipped down in lesser quantities. On such days the postilion muffles the bells of his team; the father will chide his child for slamming the door. Three enormous avalanches were once started in Switzerland merely by the sounding of the "Vissi," or the first bell for church service. A bird alighting, an icicle falling from a rock—and the monster begins his downward rush. Villagers sometimes try to bring down avalanches at an advantageous time by firing off guns or even by shouting.

LOOSE TEETH.

Sometimes They Are the Result of Nervous Troubles.

He was an honest dentist, and no one could have accused him of tinkering with a sound molar unless it actually needed attention. When the handsomely gowned woman patient came to him and complained that her teeth were getting loose and she was afraid she would lose them he gave her some good advice and charged her nothing, although it was worth a good stiff fee.

"There is nothing in the world the matter with your teeth," he said. "Each one is as sound as a new dollar. But you should consult a nerve specialist. Evidently you have been worrying a great deal lately."

The woman confessed that she had. Her sister had been very ill, and she had been compelled to help nurse her.

"Quit it unless you wish to lose your teeth," commanded the dentist. "Also you should put yourself under the care of a physician. In some nervous diseases the outward symptom is a shrinking of the gums. This is not an un-

Special in the Carpet Section

Saturday, Commencing at 10 a.m.

Carpet ends in an array of designs and patterns. Just what is wanted now at housecleaning time. Just sufficient to cover up a worn spot in the dining room, hall or bedroom, (in Tapestry and Wool.) All this season's samples. We have also fringes to match. You no doubt have had similar samples before, so we need not say come again as we know you will. Saturday prices, Wool 15c. each, and Tapestry 35c each.

See the New Crex Rugs, assorted designs and colorings, sizes 18 x 36 36 x 72 at from 50c. to \$1.75 each.

Wash Goods and Linen Section.

Fashion favours Muslins, Fashion favours Linens, the flurry of Wash Muslins and Linens has began and will continue all summer. Those who have not availed themselves of the remarkable offerings advertised lately, we say come to-day and expect to see a larger and better assortment of Wash Fabrics than any hereabout (we are sale agents for SHAMROCK LINENS, in Napanee.) Dress Muslins, Gingham, Crum's and B. B. Prints, Chambray's, Victoria and India Lawns, Persian and Shadow Lawns, Shamrock Dress Linens fine, medium and heavy weaves. Our MR. W. J. SHANNON needs no introduction and will be pleased to welcome you in the Staple Department.

Dress Goods Section.

Particular people say go to Madill's if you require something real swell in Dress Fabrics and Trimmings. Careful study and attention as to styles, materials, etc., places the Dress Goods Department in the foremost rank with any city store. To see the newest and the most predominating weaves and colorings it is necessary to see our beautiful stock.

Smallwear Section.

This section has grown by leaps and bounds within the past year. Why? because it is equipped for doing things well. To-day we are showing a large assortment of Children's and Ladies' Everfast Hose in black, tan and white, Children's and Ladies' open work Lace and Silk Pleated Hose, Wash Collars, Embroidered Collar and Cuff Sets, Corset Cover and Skirting Embroidery, Laces and Insertions, Ribbons, Gloves, Belts, Collars, etc. Don't fail to visit this specially equipped Department.

MADOLE & WILSON,

"Quit it unless you wish to lose your teeth," commanded the dentist. "Also you should put yourself under the care of a physician. In some nervous diseases the outward symptom is a shrinking of the gums. This is not an unfailing sign, however. Some persons lose their teeth through a shriveling of the gums on account of an excess of uric acid in the system. If they drank plenty of water the trouble would disappear. I have had several patients whom I have cured simply by getting them to drink plenty of water."

"The gums are pretty good indicators of the general health. Persons whose gums bleed frequently think there is something the matter with their teeth. The trouble is constitutional instead of local. A good tonic would put them on their feet, and this, accompanied by plenty of exercise in the open air, would stop the bleeding of the gums."

An Egyptian Delicacy.

Every country has its own little delicacies, and Egypt is famous for its kabobs. The kabob is broiled meat, but is broiled in so ridiculous a fashion as to be really funny. The peddler uses a little charcoal furnace, something like that in use by our plumbers. In it he keeps up a small but hot fire. Attached to the side of the furnace are a lot of iron skewers. When a customer approaches, the hawker takes a small piece of meat, mutton or goat, the latter being the most popular, cuts it with a sharp knife into a long ribbon, winds it around the skewer and places it upon the charcoal fire. Some of the drippings are collected and, with a little salt and spice, make a pleasant sauce for the kabob when it is done.

A Ghost Story.

A London daily tells a short modern ghost story. A man was traveling on a northbound train out of London. Opposite him was a silent stranger, his only companion. Between London and Derby no word passed. Then, as the train drew out of Derby, he said pleasantly, "Good line, this, sir, eh?" The stranger replied, "I think it's a beastly bad line. I was killed on it two years ago."

Business Methods.

"May I ask if I am in the market for a bid for your affections?" asked the youth who did everything in a businesslike way. "You must go to par before I can take any stock in your offer," answered the dutiful broker's daughter.

An Exciting Moment.

"Above all," said the throat specialist, "the lady must talk as little as possible." "Doctor," eagerly asked Mrs. Grey-mair's husband, "is there any hope of it becoming chronic?"—London Tit-Bits.

If we hope for what we are not likely to possess, we act and think in vain and make life a greater dream and shadow than it really is. Addison.

If You Want Good Paint.

TOWN COUNCIL.

Council Chamber,
Napanee, May 21st, 1906.

The Council met in regular session on Monday evening. Mayor Lowry presiding.

Councillors present—Simpson, Meng Williams, Graham and Kimmerly.

The minutes of the last session were read and confirmed.

COMMUNICATIONS.

A communication was read from J. S. Robertson, secretary of the National Sanitarium Association for Consumptives stating that Mr. G. L. Jennings, Field Secretary of the Sanitarium was in this district, and would appear before the council and ask for a grant of \$125 to help along the good work.

On motion Mr. Jennings who was present, spoke to the council in reference to the communication. He mentioned the good work being done by the institution, and stated that the grant was intended to endow a bed in the hospital for consumptive patients coming from the Counties of Lennox and Addington. The county council would be asked to grant \$200. The cost of treating a patient for a year is estimated at \$300.

Mr. F. Burrows also made some appropriate remarks on the above subject.

Moved by Coun. Meng, seconded by Coun. Kimmerly that the Finance Committee be a committee, with power to act in conjunction with the County Council and endeavor to make arrangements in the above matter. Carried.

A communication was read from Allis-Chalmers-Bullis, Montreal, saying they would draw on the town on the 21st of May for the first and second payments of their account and hoped the draft would be accepted.

On motion of Coun. Simpson, seconded by Coun. Meng, the draft was ordered accepted when presented.

The Street Committee reported recommending the acceptance of the tender of the Rathbun Co. for plank walk material. Report adopted.

ACCOUNTS.

The following accounts were paid: W. L. Bennett, assessor, \$200; J. Huffman and others, carting supplies for electric light works, \$2 45; D. W. Spencer, sharpening saw, 50c; M. B. Mills, sharpening saw, 15c; I. Vanalstine, carting and freight \$1.83; J. Vine, drawing sand to power house \$11.00; E. Vine drawing sand to power house, 17.00; C. A. Walters, sundry items 95c; J. N. Wagar, repairing balcony on the town hall, \$3.00; S. W. Pringle two months rent \$2; Chas. Pollard, poundage \$4.00; Chief Graham, bread for tramps furnished during last six months \$1.27; an account of \$12.00 from M. C. Bogart for insurance on Fire Hall and Engine, was referred to the Finance Committee with power to act.

The treasurer was granted a voucher for payments amounting to \$1962.04. Council adjourned.

in Belleville. It will take over the mills, etc., of the Iron and Steel company of Belleville, and conduct a business along similar lines.

Wm. Sherring, of Hamilton, who has brought honor and fame to the whole of Canada, by his winning of the Marathon Race at Athens, reached Toronto on Tuesday on his way home to his native city, and was given a rousing reception. He left the same day for Hamilton, and his reception there was of a princely nature. Long life to Sherring, Canada and Canadians forever.

While looking up another case, Officer Hayes was told of strangers loitering about the first overhead bridge at Belleville. He found the men sunning themselves on the grass and informed them they were under arrest. They said they had been drinking in Kingston, on Tuesday, and had decided to go out for a time and thought that Belleville was the best town they could strike. They arrived on Thursday and had disguised themselves by cutting off their stripes and other marks of identification. They were well supplied with money. Sunday morning they said they were tired of their outing and were quite satisfied to go back.

Use Prism Brand Floor Enamel It dries quickly, has a varnish gloss, and is true to color. The Medical Hall.—Fred L. Hooper, sole agent for Napanee.

ODESSA.

A terrible accident occurred on Saturday afternoon, at the farm of Albert Hartman's, Asselstine factory, a couple of miles from here. They were raising a barn when the wind caught a bent, injuring three men that were below it. One man, Nelson Smith, had his head terribly crushed. He is in a critical condition. Peter Snider was very badly hurt. George Thorns escaped with a few injuries.

L. Remion, who has been visiting his mother, Mrs. R. H. Peters, has returned to Peterboro.

Mr. and Mrs. C. Snider have moved to Brownville, N. Y.

For Marking Linen.

WALLACE'S RED CROSS DRUG STORE sells and indelible ink for marking Linen that makes a jet black mark, is easy to use and does not wash out. Price is 25c.

LAPUMS WEST.

Mr. Isaac Hogeboom, met with a serious accident on Saturday, while entering his pig pen, by a small door, and when half way through the large pig became frightened and endeavored to come out by the same door, each being about half way through and both wedged fast, for some minutes, until finally the pig worked its way through, and Mr. Hogeboom was found some time later partially unconscious. At time of writing under the care of Dr. Qldham, he is doing as nicely as can be expected.

Jas. Huff is having a well drilled at his place here by Hart Bros., of Colebrook.

Mr. John Reid, Elginburg, accompanied by Miss Scott, were visiting at M. Love's and at Jas. Huff's last week. Mrs. Love, sister of Mr. Reid returned home with him.

Mr. and Mrs. Robert Reid were visiting friends at Elginburg a few days recently.

Mr. and Mrs. C. Bush, Camden East at S. D. Brown's on Sunday.

Mr. and Mrs. B. Rose and Mrs. C. Lapum were in Kingston on Saturday.

The world is full of people who are in constant misery from the racking pains of rheumatism, neuralgia, lumbago and kindred diseases. They would give any money to get relief, but having tried various remedies and been disappointed they have become discouraged and sceptical of all remedies.

Does this describe your case? If it does, let us tell you that there is a cure for your trouble, a remedy that will not disappoint you. It is Tuck's Rheumatic Bone Oil. It never disappoints. As its name implies it goes straight to the bone, or joint, the seat of the disease, scatters the poisonous acid, relaxes the stiffened joints, allays the inflammation and effects a sure and speedy cure. It gives comfort where there was misery, a fact for which we have hundreds of letters from those who have been sufferers. This oil is for internal and external use and while it is a great and never failing remedy for rheumatism, lame back, etc. it is also good for other kinds of inflammation such as croup, bronchitis and quinsy. It is the most remarkable remedy of the age and should be in every home. Sold by all medicine dealers at 50c a bottle or by mail prepaid by The Tuck Bone Oil Co., Limited, Smith's Falls. Money refunded if not satisfied.

LIFE'S UNVARYING VALUES

What a Man Is Will Depend on What He Does With the Things He Has.

For a man's life consisteth not in the abundance of the things which he possesseth.—Luke xii., 15.

Only an age that has lost both heart and intellect—the divinely given measuring rods of life—will think of estimating a life by the money measure. It is a shallow world that knows a man as soon as and only when it has scheduled his marketable assets; nor is it a happy augury for a nation when it acquires the habit of estimating its men by the length of the catalogues of their possessions.

A period of outer prosperity is always in danger of being one of inner paralysis. Luxury is a foe to life. Character does not develop freely, largely, beautifully in an atmosphere of commercialism. A moral decline that but presages enduring disaster is sure to succeed the supremacy of the market.

The great danger is that we shall set the tools of life before its work, that we shall make life serve our business or our ambitions instead of causing ambitions, activities, and opportunities all to contribute to the deepening, enriching, up-building, strengthening of the life itself. In the details of making a living it is easy to lose sight of the prime thing, the life; it is easy to forget that the great question is not, what have you? but,

WHAT ARE YOU?

Life cannot consist in things any more than silk can consist of shuttles, or pictures of brushes and palette. Life is both process and product; but things and fame and power are no more than the tools and machinery serving to perfect the product. Life must consist in thoughts, experiences, motives, ideals—in a word, in character. A man's life is what he is.

Let man once set the possession of things as his loftiest ideal, let the average of things enter the heart and speedily the love of the good will leave. To that god all honor, all truth loving, all gentleness and humanity are sacrificed. When possession becomes life's ruling

passion it doesn't take long for principle to be forgotten.

The danger to-day is not that our people will fail in the world's contests because they lack either money, mind, or muscle. We are in little danger from illiteracy or from business incompetency; but we are in danger from moral paralysis, due to undue pressure on the money nerve. We have talked before the youth in the home and amongst ourselves on the street as though the only thing worth living for was money, as though they alone were great who had it and they only to be despised who had it not.

The danger is neither in our market, nor commerce, nor our laws; the danger is

IN OUR OWN HEARTS.

No matter how world potent our merchandise, how marvelous our mechanical and material powers, how brilliant our business strategy, all will not avail to silence the voice that shall say so clearly we shall hear within, "Thou fool, this night thy soul is required of thee." Then whose shall these things be?

We need, not fewer things, not the return of an age of poverty or dreary destitution; we need more power over things; to let the man, so long buried beneath the money and the lands and houses, come to the top; to set ourselves over our things; to make them serve us, minister to our lives and our purposes in living.

There must be an elevation of standards, the institution of new valuations, clearer, nobler conceptions of what living means. Boys and girls must be taught from the beginning that life is more than self-serving, more than fame or glory; it is the service of humanity. A passion for humanity will cure the passion for gold, will teach the true value of life as something that only the infinite can estimate and will give to the heart those true riches that do not tarnish and that cannot be stolen.

HENRY F. COPE.

THE S. S. LESSON

INTERNATIONAL LESSON,
MAY 27.

Lesson IX. Feeding the Five Thousand.

Golden Text: John 6. 32.

LESSON WORD STUDIES.

Note.—The text of the Revised Version is used as a basis for these Word Studies.

We note that in point of time the events of this lesson follow immediately upon those of the last lesson. The miracle of the feeding of the five thousand is one of the very few events of our Lord's life, apart from those of Passion Week, recorded by all four evangelists. A careful comparison of the four accounts reveals many interesting differences of detail in the narrative, revealing in turn difference of view-point on the part of the several narrators, each emphasizing those details which made the deepest impression on his mind, and omitting others which had either slipped from his memory or which to him seemed of less importance. The narrative in Mark is the longest account of the four.

Green grass—A positive proof of the fact that the place was not a desert in our commonly accepted sense of the term. The mention of the fact that the grass was green also gives us a hint as to the season of the year at which the miracle was performed, since in Palestine the grass is only green for a short period after the winter rains. John, moreover, explicitly points out that it was at the time of "the passover, the feast of the Jews" (John 6.4).

40. In ranks, by hundreds and by fifties—"Two long rows of one hundred, and a shorter one of fifty persons. The fourth side remained—after the manner of the table of the ancients—empty and open" (Gereach).

41. He blessed—The offering of a brief prayer before eating was customary, as was also the breaking of the bread.

43. Broken pieces—Those left in the hands of Jesus and the disciples.

Twelve basketsfuls—The basket referred to was the ordinary bag carried by travellers in the Orient.

44. Five thousand men—The arrangement of the seating made possible an accurate count. Matthew, in his account, points out that this number did not include the women and children present.

TRADE OF THE EMPIRE

PART OF MOTORS IN WAR

AUTOMOBILISTS URGED TO ORGANIZE FOR SERVICE.

Could Rush Volunteer Riflemen to the Front While the Defence Was Being Organized.

Excepting Rudyard Kipling, perhaps, there isn't an author in Great Britain who takes a greater interest in military matters than Sir Arthur Conan Doyle, and probably not even Mr. Kipling spends as much time in considering now Great Britain can best be defended in case of another war as does the burly doctor, who would a little rather not be reminded, now-a-days, that he created the redoubtable Sherlock Holmes.

No one, for instance, has taken a more prominent part than Sir Arthur in the movement that it now on foot to increase the number of effective fighting men by encouraging rifle shooting in all parts of the United Kingdom. Beside making many speeches, and writing frequent articles on the subject he recently set a practical example by having a miniature rifle range built on his picturesque estate at Hindhead, and inviting the young men of the neighborhood to use it. The result is that a regular rifle club now exists in the locality, of which the novelist is said to be one of the best marksmen, and one of the hottest members generally.

Now Sir Arthur has been struck with the idea that the motorists of England would be able to render an important service in case Great Britain were invaded by

A FOREIGN ENEMY.

Like Mr. Kipling Dr. Doyle is an ecstatic devotee of the motor car—having been fined once or twice for exceeding the speed limit—and he has written a letter to the London Times in which he explains how he believes that the automobilists of Great Britain could be utilized in case a foreign army had landed on the coast.

"Supposing," says Dr. Doyle, "that such an event had happened. Everything would depend upon swift action so as to prevent any cavalry that force might possess from pushing on in small parties, cutting wires, blowing up bridges, and generally disorganizing the defence." So Sir Arthur goes on to suggest that a thousand English motorists should pledge themselves on the first news of such an invasion instantly to fill up their cars with picked riflemen drawn from their own immediate neighborhood, and to convey them with a week's food, their rifles and their ammunition, to the danger point. "Food, rifles and motor cars," he says, "are already to hand, and the only factor missing is the ammunition, 2,000 rounds of which should be given by the government to the keeping of the motorists who signifies his willingness to serve—such ammunition to be stored in his garage in time of peace.

"In this way," says Dr. Doyle, "within a very few hours such a fringe of irregular, self-supporting riflemen would be formed round the enemy that they

COULD NOT PUSH SWIFTLY ON,

or collect supplies without their patrol being cut off, and an immediate line of resistance would be formed behind which the regular defence could be prepared—all this without putting any tax on the railways."

Dr. Doyle adds that, once the motorists of Great Britain had been organized in this way, it would be easy to test their efficacy, and evidently the author is interested in learning how his idea appeals to his fellow automobilists, for he has asked those who approve of it to communicate with the secretary of the Legion of Frontiersmen, the newly formed volunteer organization, of which he is an enthusiastic member.

It must be admitted, too, that Dr. Doyle is quite in the literary fashion with his new plan of defence for Eng-

AN AUSTRALIAN'S LUCK

HE INVESTED \$1,750 AND CLEARED ONE MILLION.

Steamer and Cargo Sold at Auction Proves Bonanza for Purchaser.

To buy a wreck for \$1,750 and subsequently to acquire from it a fortune of nearly \$1,000,000 is a stroke of good luck such as falls to the lot of few men.

This, however, a Melbourne draper, now the Hon. J. G. Aikman, member of the Legislative Council of Victoria, can claim to have done, and the profits from his purchase are not complete yet, for the wreck is still proving a handsome source of revenue.

The romantic story of this great fortune has only just come to light, and is told by Mr. Aikman himself.

On a June night two years ago the magnificent P. and O. steamer Australia, which cost \$2,750,000 to build, went ashore at the entrance of Port Phillip Bay, a short distance from Melbourne. The vessel herself was subsequently put up at auction and knocked down to Mr. Aikman for the ridiculous sum of \$1,750. Afterward the auctioneer offered the cargo left by the underwriters on the wreck, and this Mr. Aikman secured for another \$300.

COMPLETE SURPRISE.

"The low price at which the whole thing had been knocked down was a complete surprise," declared Mr. Aikman. "I had enough money with me to pay a deposit of \$1,000."

After much trouble Mr. Aikman succeeded in getting divers to work on the wrecked liner, and then came the first of many pleasant surprises.

"It was not long," he says, "before I had the pleasure of seeing the decks filled with cargo. Looking round at the time, you would have seen all classes of goods—drapery, hardware and electro-plated ware. You would have seen 400-gallon tanks filled with enamelware, and a complete set of band instruments which realized very good prices. A great part of the cargo we recovered was in the afterhold, where it had apparently been overlooked.

"During the preliminary operations one of the greatest surprises was the discovery that some one with a fishing boat was removing something from the steamer, apparently without the aid of any diving gear.

TONS OF VALUABLE METAL.

"We determined to make a careful examination of the hull at low water, when, to our surprise, we found a valuable cargo of Muntz metal lying high and dry and quite accessible.

"There were ten tons of it, which were taken out in less than a day, the metal eventually realized \$3,750. Nine hundred tons of bar iron, bar steel, tool steel and shear steel were recovered from the wreck, and were sold at an average of \$50 a ton. I also got 740 tons of galvanized iron and 40 tons of steel during the first operation.

"After six months' operation we left what remained on the boat, with the object of abandoning her, when in conversation with an engineer, that gentleman mentioned that, counting the condenser and the metal, brass and copper piping there must have been hundreds of tons of metal on board.

"He stated that he had seen the steamer when it was being built at home, and he was sure that some of the copper pipes would weigh a ton in themselves."

The statements made by the engineer were fully borne out by investigation, and work was immediately resumed.

THE SECOND ATTEMPT.

"During the second operations on the Australia 19 tons of brass, copper and gun metal were recovered, and 1,950 tons of scrap cast iron were obtained from the engine and other castings on board. Five tandem and four Tannye

from his memory or which to him seemed of less importance. The narrative in Mark is the longest account of the four.

Verse 30. The apostles—The word "apostle" means, literally, one sent with orders. Of the many disciples who believed on and followed Jesus, twelve had been chosen to be his especial representatives. To these he gave the special name, apostles (Luke 6. 12-16). The names of the twelve are given in the reference in Luke just quoted and also in Matthew 10. 2-4. They are: Simon Peter, Andrew, James the brother of John, John, Philip, Bartholomew (perhaps the same as Nathaniel), Thomas, Matthew the publican (Levi), James the son of Alphaeus, Jude (Lebanus, Thaddeus), Simon Zelotes and Judas Iscariot.

Gather themselves together unto Jesus—Immediately upon their return from the special mission on which they had been sent shortly before (Mark 6. 7-13).

31. Come ye and rest awhile—The necessity for this rest is pointed out in the next clause, but in Matthew's narrative (Matt. 14. 13) we are given a hint as to another and deeper reason which Jesus had for desiring to be alone with his disciples at this time. This reason was the profound grief which he felt at the death of John the Baptist, the news of which had just been brought to him.

32. Desert place—By this expression we are to understand not a barren waste of sand, but simply an uninhabited region. The place to which Jesus went with his disciples was the seclusion of a mountain side, back from the northern shore of the Sea of Galilee.

33. Outwent them—Got there first. The distance by land around the north-western shore of the lake was not much farther than the more direct way by boat, and possibly not so far as the boat journey by the path which the small sailing craft was actually compelled to take to reach its destination.

34. He came forth—With this narrative alone before us it would appear that Jesus proceeded to teach the assembling multitude immediately upon leaving the boat; but John's account (John 6. 3-5) makes it plain that Jesus first withdrew with his disciples "into the mountain" and afterwards "lifting up his eyes and seeing that a great multitude cometh unto him," had compassion on them and, leaving his retreat came unto them and taught them.

As sheep not having a shepherd—The figure is a peculiarly strong one. Sheep are not driven, but follow a shepherd who goes before them. They thus become accustomed to looking to a shepherd for guidance and never learn to find their own way. Left without a shepherd they wander about aimlessly and stray farther and farther from the fold.

35. The day was now far spent—It was still the same day on which Jesus had crossed the lake and had retired with his disciples to the mountain-side retreat. We need not, therefore, think of his discourse to the multitude on this occasion as having been necessarily an unusually long one.

36. Two hundred shillings—The coin actually referred to was the denarius, of which the English shilling is more nearly an equivalent in value than any other English or American coin. The actual value of the denarius was between sixteen and seventeen cents, but its purchasing power was in the time of Christ much greater. The sum was, moreover, quite beyond the means of the apostles, so that the question seems to have been intended to imply the impossibility of making provision for so large a multitude.

37. Five loaves and two fishes—About enough for one hungry person under ordinary circumstances.

38. By companies—Lit., "In parterres," a term used for flower beds of many colors, and suggested probably by the colored robes and turbans of the assembled groups. This, with the reference to the green grass in the next phrase, reveals a peculiarity of Mark's narrative, which was rich in coloring as well as concise.

TRADE OF THE EMPIRE

NO LESS THAN SIX BILLIONS OF DOLLARS LAST YEAR.

Inter-Imperial Commerce Shows Steady Development—Foreign Trade Decreasing.

The second number of the Statistical Abstract for the British Empire, issued from the Board of Trade, brings many of the figures concerning population, trade, etc., down to 1904. On of the most interesting sections, which appears in the abstract for the first time, represents the annual consumption of certain articles per head of the population in the principal parts of the Empire. The following figures, taken from the tables, offer some curious comparisons; the words "wheat," "oats," etc., also represent the products of the grain in question:

	Wheat, Bush.	Oats, Bush.	Beer, Gals.	Tea, Lbs.
U. Kingdom	5.99	5.10	28.8	6.00
India	0.67	0.04
Australia	9.16	4.03	...	6.84
New Zealand	8.25	14.54	9.4	6.96
Newfoundland	.793	1.65	0.3	4.81
Cape	3.07	1.34	1.0	1.06
Natal	1.67	0.37	0.2	2.28

In regard to beer-drinking, the consumption per head in the Australian Commonwealth in 1903 was 11.6 gallons, against 20.7 in the United Kingdom. There has been a continued decrease in Great Britain since 1899, when the quantity was at the rate of 32.6 gallons per head.

Besides the above, the consumption of barley and its products in the United Kingdom in 1904 is returned at 2.73 bushels per head, and of maize at 2.01 bushels; Natal leads the list in the latter comestible with 4.60 bushels per head.

The total trade of the British Empire in 1904 reached the enormous total of £1,305,283,000, against £1,274,278,000 in 1903. Not the least interesting feature of the tables is the comparison afforded between the percentage proportions of the foreign and inter-imperial trades. These have been fairly steady during the last three years, but with a gradual development of the latter:

	1902.	1903.	1904.
Foreign	74.1	73.7	73.3
Inter-Imperial	25.9	26.3	26.7

The trade of the United Kingdom with the British colonies and possessions increased (imports and exports) from £271,311,000 in 1903 to £296,661,000 in 1904.

MANY VICTIMS OF ALPS.

Number of Fatal Accidents Last Year Was 172.

The "Club Alpin Suisse" of Geneva, Switzerland, has just published the statistics of the accidents which took place in the Swiss Mountains during the year 1905.

The number of persons who lost their lives was 172, and as more than 150,000 excursions were made up the mountains, the average comes out very little over one per thousand. The majority of the lives were not lost on the higher summits, but on steep slopes at comparatively low elevations.

The largest number of deaths was among the Swiss, and next came the Germans, the French, the Australians and the Italians. Only five English tourists lost their lives, which shows how skillfully and how carefully they go up the mountains, despite the fact that they have a reputation for foolhardiness—among foreigners, at all events.

Mrs. Homeleagh: "Your husband is at his club a good deal, isn't he?" Lady Gadabout: "Yes; the poor boy hates being at home alone, you know."

A corn doctor may make money, but he isn't in a position to acquire much glory.

formed volunteer organization, of which he is an enthusiastic member.

It must be admitted, too, that Dr. Doyle is quite in the literary fashion with his new plan of defence for England, for at no previous time have so many authors on both sides of the channel been occupied with anticipations of a coming great war between Great Britain and some continental power—Germany for choice. There is William leQueux, for instance, whose story of the invasion of 1910 is now running in the columns of the London Mail—not to mention two German novelists, Seestern and Beowulf, who have recently published romances dealing with a supposed conflict between Great Britain and the fatherland. But these writers and one or two others either made England successful in the coming war, or else made

THE STRUGGLE INDECISIVE

and this conclusion has been denounced as "false, misleading and humiliating for the German nation," but still another Teuton romance—Moriturus by nom de guerre—who has just published a work of his own which is called, With the German Army via Paris to London.

Here we have an attempt to describe "the real course of an Anglo-German war," and this, according to Moriturus, is as follows: Germany, first involved in hostilities against the combined forces of England and France, inflicts defeats on crushing on the French army that the French Government is obliged to abandon its alliance with Britain and unconditionally to accept the German terms. Germany thereupon compels France to join her in war against Great Britain, and the united German and French navies annihilate two British fleets in two successive engagements, thereby enabling the German army to carry out a successful invasion of England. After the occupation of London, the German Emperor dictates his own terms of peace to the humiliated English nation. So if Teutons generally have not been satisfied with the anticipations were conducted by Beowulf, Seestern and the rest, they ought to be enchanted with that which has been provided by the triumphant Moriturus.

WORLD'S LONGEST WORD.

No One Who Values His Jaw Will Try to Pronounce It.

The innkeepers of Berne, Switzerland, have decided, in order to get higher profits, to lessen the size of the backs of beer. Their regular customers have decided, for their part, to agitate against this innovation, and have appointed a committee of seasoned drinkers to checkmate the innkeepers. They have also given the committee a title, which, although it is only one word, sums up the whole matter.

It is as follows:—"Vierdeziilliterabgabationskommissionsdelegiertenversammlungspetition."

It is probable that had not the size of the backs been reduced they would never have been able to say all this at once.

WHAT FATHER DOES.

Mothers may talk, work, struggle, to make their sons' models by which to shape a new heaven and a new earth. But the boy's world is in the man who is his father, and the boy believes that whatever may be right on Sundays at prayer time, the things that are really good, that really count in life, are what father does. Moreover it is what father does which defines the means with which the boy shall work, the sphere where his efforts shall be shaped. In a word, what father does is the beginning as it is the end of the boy's achievements.

PROOF.

She—And you really think Agnes married him for his money?
He—There can't be any doubt about it. She preferred him to me.

Australia 19 tons of brass, copper and gun metal were recovered, and 1,950 tons of scrap cast iron were obtained from the engine and other castings on board. Five tandem and four Tannye engines and a large quantity of pig iron were also got from the wreck.

"The four propeller blades, which consisted of either phosphor or manganese bronze, and which weighed fourteen tons altogether, were taken from the steamer, and realized \$5,000 as old metal."

Half the hull of the Australia still remains above water, and quantities of brass, copper and gun metal have still to be recovered.

It is estimated that Mr. Aikman's profits from the wreck approach \$1,000,000. He has recently bought the Melbourne Coffee Palace, which, with proposed alterations, will cost \$500,000, and has also acquired several other well known businesses.

Why the underwriters never removed the valuable cargo or failed to realize the value of the vessel itself is a mystery which may never be solved.

A CHRONIC GRUMBLER.

Grumpy at his best is not a companionable man, but when unusually disturbed in his mind, stomach, or liver he is simply a social terror. He loses all regard for the amenities of life, and is an animated frost moving through the warm currents of society. One of the men with whom he can get along the best is Jolly, but there are stages of his depressions when Grumpy would do his worst to stir up a row with a saint. Grumpy and Jolly met the other morning, with this result:—

"How do you do?" inquired Jolly, cheerfully.

"How do I do what?" growled Grumpy. "I mean, how are you, of course."

"How am I what? Explain yourself."

"Oh, you've got one of your fits, Grumpy. How do you feel?"

"I feel satisfied with nothing. I feel that 99 per cent. of the human race are fools, that marriage is a failure, that our social organization is a huge farce, and that the man who is willing to live his life is entitled to an everlasting reward."

"See here, old man, your spleen's out of order. The whole scope and extent of my curiosity was to ascertain the state of your health."

"Oh, only that? What in creation do you take me for? I've had forty doctors, and all of them put together can't answer your question. You want to know offhand from a layman what these forty professional healers have failed to tell me, though I have paid out enough to make the whole kit of them comfortably well off. You're old enough to know better."

"Good morning," said Jolly, as he moved away, with as great a show of anger as he could ever make.

"Nothing of the kind," shouted Grumpy. "Deuced beastly raw, cold, drizzling morning. A case of pneumonia in every breath. You don't seem to understand your language, Jolly. When you feel able to express yourself correctly and intelligently, come round."

BATTLE PRACTICE DAMAGE.

The enormous concussion caused by the firing of heavy guns on board battleships of the type of King Edward VII., is vividly illustrated by a new order just issued. Damage of minor importance which can be readily repaired, it says, must necessarily accompany the violence of the blast from the heavy guns. Much of the damage to cabin and cupboard doors, etc., which cannot be made strong enough to withstand the pressure caused by the blast of the guns, and also damage to fittings of a light construction, can be avoided by either leaving such doors open or removing the fittings likely to suffer. The Admiralty express the hope that the officers will profit by the experience gained in battle practice, and will take all reasonable precautions in their power to avoid unnecessary damage.

YOUNG FOLKS

WHEN MOTHER IS AWAY.

The house is such a dreary place when mother is away;
There isn't fun in anything, no matter what you play.
The dolls just sit as stupid, and act so still and queer—
They always say such funny things when mother's by, to hear.

The little china tea set looks so lonesome waiting there;
There's no fun playing party and eating only air!
It isn't like the lovely things you most believe you see
Upon the plates and saucers, when mother comes to tea.

There's no use doing up your hair and dressing up in style,
You know it's just pretending, and you're Betty all the while;
You never hear a whisper from the chairs against the wall:
"Dear me, what splendid lady now is coming here to call!"

The pictures in the picture-books are never half so fine,
The stories won't come out and talk for any pains of mine;
An hour goes so slowly, it's almost like a day—
The house is such a lonesome place when mother is away.

TOODLES AND THE OTHER BABY.

Toodles wasn't a curly-haired puppy, as you might think from his name, but a dear little baby with big blue eyes and a head covered with soft yellow ring. He wasn't quite old enough to walk, but oh, how fast he could creep! He would scuttle about over the floor just like a little crab.

One morning he woke up with a snuffle in his little button of a nose, and Doctor Papa said he must stay on the bed all day, for fear of draughts, so mamma looked around to find something to amuse him, for he was such an active little fellow that it promised to be hard work to keep him contented in such a narrow space.

Now, mothers have a great many bright ideas, and presently, one came to Toodles's mamma, and putting down her work, she went to call Bridget. Soon they came back together carrying something between them which they placed carefully on the bed, and what do you suppose it was? Why the other baby!

Oh, how pleased Toodles was! He laughed and waved his little fat hand, and the other baby laughed and waved back. He was a friendly little fellow, that other baby, and smiled every time Toodles looked at him, and that was very often.

What a good time those two babies had!

They played peek-a-boo, and looked at picture books together, and every time that Toodles picked out a favorite picture, the other baby would pick out the same one. When they built block houses the other baby would never build higher than Toodles did, and when Toodles accidentally knocked his tower down, the other baby obligingly tipped his over, too!

Then they played "Pease Porridge hot."

Somehow, Toodles never could play it quite right with any one else, but the other baby seemed to know just when to go to the right and left, and it was great fun to watch the game, and see the four little pink-cushioned palms come together, with a soft little thud, right every time!

Of course, mamma sat near to see

TO WED PORTUGUESE PRINCE.

Patricia of Connaught May Yet be Queen of Portugal.

London society hears that the engagement of Princess Patricia of Connaught and the Crown Prince of Portugal is soon to be announced.

Last year it was an open secret that the Crown Prince was smitten with the charms of Princess Patricia. Both are about the same age, nineteen. He resembles his mother and is as popular as his father. Queen Amelie of Portugal never forgets that she was born in England, and an alliance between her son and a daughter of the royal house of England would meet not only with her approval, but that of the powers of England and Portugal.

The fact that King Edward is in mourning for his father-in-law affords him a timely and convenient excuse for not attending the wedding of King Alfonso of Spain and Princess Ena. This excuse he has adopted, and has thus saved himself from criticism or comment by the various religious sects of the United Kingdom.

Had he gone, the Church of England folk, whose spiritual head he is, and the Non-Conformists, who detest Rome, would have been offended, and, on the other hand, had not this mourning period intervened and the King had not attended, he would have hurt the susceptibilities of millions of his subjects who are Roman Catholics.

HEALTH

THE ANNUAL HOLIDAY.

That was a wise man who said that he could do a year's work in eleven months, but he could not do it in twelve; and although few persons could put it so pithily, it is pretty generally recognized that the poorest economy is that which would curtail or forego the annual holiday.

Even those daily toilers who leave the city each night for a suburban or a country home need their annual outing. If they do not wish to travel for it, let them stay at home and take their rest where they belong. In this way the great value of the vacation is obtained—they get out of the rut, the monotonous regularity of toil that cries for relief.

The holidays may mean many things—change of air and scene, abstinence from every form of work, or ardent occupation with sports. Any and all may be good, but the great thing is to change the point of wear and tear, to have the wheels go round some other way. The "pace that kills" is the same thing, at the same hour, in the same way, until one could echo the poor Irishwoman who thought it would be such a rest to iron Monday and wash Tuesday.

This is why each individual should be (but is not always) the best judge of the kind of rest needed. Each knows best where the grind comes, where the shoe pinches, and the choice of change should be guided by that knowledge. The worn-out teacher, who has all the year been overdriving her reserve force, should spend her time of rest with those who have something to give her, some store of vitality and nervous energy on which she can draw in her turn. The woman who has spent a long winter so troubled with domestic problems that that life has become one long drawn-out irritation should shut up her house, and let some other woman lodge and feed her.

Some measure of outdoor sport should be within reach of all, although the good of a vacation is often destroyed by too much ambition in this respect on the part of those unaccustomed to long or hard exercise. Those who wish to climb mountains or take long tramps or indulge in vigorous exercises of any kind

COSTER KING'S FUNERAL

WELL KNOWN CHARACTER INTERRED WITH POMP.

Donkey Carts Formed the Tail of Procession — Grape on Gal-lon Jar.

Jock Hewett, the Coster King, is dead, says the London Leader.

In life he was a man of parts, with a head for figures, a heart of sympathy, and a free and open hand. He made a fortune of many thousands in selling cheap and good food to the lower classes, and he retired to a villa at Streatham.

The other day his kind heart ceased to beat, and he reached the crowning point of his career in this unhappy wale (as Mrs. Gamp used to say). He was buried with full coster honors in Bow Cemetery.

His memory was perpetuated all along the dusty route from Streatham to Bow by the sale of thousands of mourning cards printed in silver and black, and bearing the picture of a milk-white star shining upon an emblematic cluster of ivy leaves.

POETIC TRIBUTES.

On the obverse side were two little poems, one in rhyme and one in blank verse, thus:

Tho' many tears for him are shed,
Tho' hearts are rent with passing pain,
Yet who'd recall the happy dead,
Or bring the blest soul back again?

Day by day we all shall miss him,
Words would fail our loss to tell;
But in Heav'n we hope to meet him,
Never more to part again!

It was a £300 funeral, carried out with all the very finest trappings of woe, by that famous gentleman, Mr. Alfred Smith, of Southwark Bridge Road, whose pageants in great murder cases and the like are matters of history. It was he who buried poor Maud Marsh, the victim of Chapman, the prisoner, Fireman Sprague, and many another.

He rose to the occasion this time with a four-horse car, draped with the heaviest and blackest of ostrich plumes. The horses were dark as night, and each wore a heavy blue pall which swept the ground. Their necks were arched by (alas) the tightest of bearing-reins, and over their ears nodded more grim plumes.

THE "LID OF FEATHERS."

In front of this car was a smaller one, which carried the Lid of Feathers, guarded by two adipose and extremely mute mutes, "with fittings." It may be explained for the benefit of ordinary people who are put off, when their time comes, with ordinary obsequies, that the Lid of Feathers is a kind of tray on which are piled masses of ostrich plumes trained to arboreal shape. Its history and its meaning are lost in obscurity, but the use of the Lid in these days is confined to costermongers and fish-curers.

The rest of the cortege was made up by four showy carriages, absolutely crammed with mourners, one hansom with three passengers inside, and a "tail" of costers' carts and barrows, donkey-drawn and dismal. Smoking was allowed in that part of the procession not officially supplied by Mr. Smith. Each donkey wore (like his driver) a crape cravat, each whip was similarly mated at its throng, and every lady on board had discovered something in her wardrobe suitably sombre for the occasion.

THE GALLON JAR WAS THERE.

The coster mourns imperially; but there is just a breath of Mark Tapley about him. This was instanced by the appearance in one of the shaves

Fashion Hints.

PRINCESS AND EMPIRE STYLES.

A survey of late fashions satisfies the observer that the only real issue of importance is the waist-line. Get that right and the gown is sure to be correct. The waist is high and apparently untrammelled, whether the gown be princess or not.

The most popular gown is made of soft silk, veiling, chiffon, cloth, lace, and other silk, veiling, chiffon, cloth, and other fine materials. Tailored and semi-tailored gowns in rajah, pongee, and the new mohairs will be most in evidence in the parade. The mohairs, by the way, are extremely attractive. They have the luster of silk, and are far from being the stiff, unwieldy fabrics they once were. Some very handsome mohair skirt and coat suits as well as princess gowns were seen this week.

SHORT SKIRT GOING OUT.

Some of these gowns are made with short skirts, but it is mournful to be obliged to chronicle the fact that the short skirt seems to be passing. Many quite severely tailored street gowns are made with skirts that sweep. Practically all gowns now meant exclusively for outdoor wear are long. The trained skirt never really goes out. After all, there is something fascinating about trailing draperies, and one would be sorry to see the short skirt prevail. Still, it is the only sensible thing for walking.

The loveliest creations, in thin stuffs are to be seen. Everything is Princess or Empire when it comes to gowns. The girdled waist is a rarity. A model, with variations, of course, most frequently seen is the Princess gown cut out in the neck to show a handsome guimpe of lace or hand-embroidered batiste. Tucks, smocking, or shirrings shape the gowns at the waist line and over the hips, and the full skirt is trimmed with lace, needlework, and embroidery. Few skirts are untrimmed, and there is a tendency towards double and triple skirts, with tunic effects.

A VEILING GOWN IN GREY.

A veiling gown in the fashionable "Queen's gray" was fitted at the waist line small, flat tucks, which extended far down the pointed drapery of the skirt. This drapery resembled the old-fashioned overskirt, and was outlined all round by two folds of the veiling, simulating wide tucks. The skirt beneath was very wide, and was trimmed with many rows of grey satin, arranged some inches apart. The waist part was trimmed with satin folds and white Irish lace. There was a guimpe of the lace, a collar of the same, and sleeves almost composed of the lace, and double rows of satin folds, slightly full.

A pastel blue veiling gown was a marvel of ingenious needlework. The entire gown was apparently hand-made and put together with fancy silk stitches. It was a Princess, of course, and was tight-fitting nowhere. The waist and hips were swathed delicately with the material, while the upper half of the waist and lower half of the skirt were

MASS OF NEEDLEWORK.

and fine white lace. The waist was cut square at the neck, not low, but low enough to show two inches of the wearer's throat. The decollete was bordered with an inch-wide band of Valenciennes lace, shirred very slightly, and edged with a row of fancy stitching in blue silk. The shirred lace and silk stitches formed a deep yoke and extended in a pointed design down the front and back of the waist almost to the high waist line. In a triangle of the lace design was set an application of Irish needlework.

come together, with a soft little thud, right every time!

Of course, mamma sat near to see that they didn't hurt each other, but there wasn't a sign of a quarrel all the morning.

By-and-by they took a nap together, and when Toodles had his bottle the other baby had one, too.

The moment Toodles woke up, he looked around for the other baby, and when he saw him he was so glad that he leaped right over and kissed him on his little pink mouth, and the funny thing about it was that mamma, who doesn't approve of much kissing for babies, only smiled, and called to Doctor Papa, who had just come in, to come and see the pretty sight.

When six-year-old Francis came in from school, he wanted to play, too:

"Why, mamma," he said, "it's just like Toodles was twins, isn't it?" and mamma thought it was.

Just then the bell rang for luncheon, and while mamma hastily slipped a clean dress over Toodle's yellow head, Doctor Papa lifted the big mirror off from the bed, where it had stood all the morning, and carried it back to its place in the next room, and with it went the other baby!

part of those unaccustomed to long or hard exercise. Those who wish to climb mountains or take long tramps or indulge in vigorous exercise of any kind should begin very gradually, and keep well within their strength. It is safe to say that people exercise too much rather than not enough in their holidays. It is so customary to join fresh air with exercise in the same phrase that it is easy to forget that one can have all the fresh air one needs with only just as much exercise as one chooses.—Youth's Companion.

THE ART OF KEEPING COOL.

When the hot summer days are upon us and it is impossible to change our environment the best help toward keeping cool is to learn to adapt ourselves to it. But with all of us habit is so strong that few of us think of adaptation, and as a consequence we suffer from a way of living which is suited only to the cold winter months.

The cultivation of peace of mind is the first requisite. Next, the essential of a daily bath. A cool bath taken on rising is the best tonic to prepare one for the day's labor and exposure. A tepid, cool bath or a short hot bath may be taken in the evening, and if greatly fatigued it is one of the most effective means of bringing refreshing sleep. Another necessity to keeping cool is not only in the exercise of body, but in the matter of diet as well. All bodily heat arises from the oxidation or burning of the food we eat. So when the temperature rises the body needs less fuel. A warm weather breakfast should be a very light meal. As four-fifths of our food is used for fuel it is easily seen that in summer we need only a small quantity to supply vitality for bodily and mental work. The ideal breakfast would be whole wheat bread or zwieback, with some wholesome ripe fruit, such as strawberries, plums, melons or apples.

By giving ourselves the benefit of our store of common sense, many of us would go forth to the trials of a day in the heat prepared for it by a diet conducive to health. How many a man prepares for such a day with a breakfast made up of griddle cakes, soda biscuit, fried eggs and bacon, sausages, Worcestershire sauce and strong coffee! By noon he feels the heat to such an extent that he feels compelled to drink large quantities of ice water, beer or other cooling beverages. Contrast the discomforts of such a one in the temperate zone with a coolie working bareheaded in the direct rays of the sun in a climate twenty degrees hotter. The coolie is not uncomfortable because he has adapted his diet to the environment. Any man who excites his heart and irritates his nerves by a diet of flesh foods must expect to need all sorts of artificial means to make his life bearable in the hot weather.

MILK FOR TIRED NERVES.

The jiu-jitsu experts have a plan for resting a set of tired nerves. The jiu-jitsu warrior will take a pint of fresh milk and heat it scalding hot. Then he will slowly cool it until it is pleasant to the taste. He will then sip it, letting each swallow rest in the stomach before taking another. Milk taken in this way is not fattening, and it is certainly very restful.

HEALTH IN SALT WATER.

Salt water is good for the scalp, the eyes, the face, the nostrils, the whole body. Use salt properly and plentifully and—paradoxically as it may seem—you will remain ever fresh.

DISSIPATION.

Underthum—I think it's just a shame! My wife hasn't allowed me to spend any money at all lately.

Henpeck—That's tough. My wife gave me \$25 to spend only the other day.

Underthum—Come, now! you're fibbing.

Henpeck—No, I'm not. She allowed me to call on the landlord and pay the rent.

The coster mourns imperially; but there is just a breath of Mark Tapley about him. This was instanced by the appearance in one of the shays of a gallon jar, with a bow of crape tied jauntily round its neck. It is a long and dusty journey from Streatham to Bow.

The funeral hurried. It hurried so much that when the great rumbling hearse crossed the Thames and struck eastern territory there were only a few survivors left. In this way the procession could be followed by the trail it left behind, and wherever there was a Good Pull up for Carmen there, for sure, could be found a creped donkey-cart—resting. And at all the wayside inns where the funeral donkeys were throttled down for a spell one heard the same remark—"Here's to poor old Jock! One of the best!"

A PACKED CHAPEL.

By Aldgate Pump—and even by the Three Nuns—the carriages rolled, at a fast trot, and the great black horses were steaming as they slowed up at the cemetery gates. Here the two head mutes (with trappings) dismounted, fixed firmly upon their heads their silk hats completely covered with weepers, waved their heavily-draped wands (called "porters' poles" in the profession), spread out their long, rosetted black cloaks, and led the way to the little chapel. Behind them came a second mute, with the great lid of Feathers balanced on his head. It must have weighed half a hundredweight, and he staggered under the mournful load. Two other mutes, with short yellow batons, shod at each end with brass, guided his faltering footsteps.

In such a fashion this amazing mass of pomp forced its way to the chapel through a dust-smothered crowd of sombre women and sombre, pulling babies—babies with little bows of crepe pinned on various parts of them! At the doors, the head mutes stood sentinel with their "fittings" at the salute. The under mute swayed into the chapel, and with a gasp deposited his tray of feathers on the coffin.

First the mourners came out of their carriages, suddenly, like over-ripe chestnuts breaking through the shell, and melted into the building. Then the crowd—pell-mell, helter-skelter, anyhow.

The place was packed in no time and amid a wail of uncomfortable babies, and in an atmosphere that could be felt, the last words of hope and certainty and farewell were said over the body of Jock, the Coster King.

On the grave were many wreaths. One bore the simple lines:

In loving memory from an old friend; Gone, but not forgot.

MAN THE BEST SWIMMER.

It is curious that whereas the rabbit cannot swim at all, the hare is an excellent swimmer. The common mouse and the field mouse can only swim a few yards; they drown in the act of swimming. Yet rats swim splendidly. Lions and tigers swim well, although only from necessity—to cross a river; for example. The horse can swim for miles without being exhausted, and shows a wonderful instinct in choosing the best available landing-place. Beavers and moles swim well, but bats and monkeys are helpless in the water. All reptiles swim; so do most insects. Human beings have greater swimming powers than most of the lower animals. A man has been known to swim thirty miles without a stop. The only land animal known to have even approached this performance is the American black bear; but the American deer sometimes swims twelve or fourteen miles at a stretch.

PREPARED FOR EMERGENCIES.

"Any soap to-day, madam?" asked the peddler.

"No; I don't need no soap," sharply replied the woman of the house, as she made a movement to close the door.

"Then how would a book on grammar do? It's the very latest—" But the door was slammed in his face.

pointed design down the front and back of the waist almost to the high waist line. In a triangle of the lace design was set an application of Irish crochet. The sleeves were mostly lace. The same kind of a decoration, Valenciennes, needlework, and insets of Irish crochet, trimmed the skirt about the height of the knees.

Another tucked gown was in a soft shade of maize yellow crepe de chine. The gown was a Princess and was tucked, or rather laid in folds, from a point immediately below the line of the bust to the hips, making a high cascade of folds. Below the circular skirt fell in ample folds. A group of three wide tucks appeared on the knees and on either side was in the center of yellow lace medallions. Sixteen sets of yellow lace trimmed the collar, which had a fancy shaped tucked collar, cut square to show a piece of Valenciennes put together with needlework stitches in yellow silk.

LINEN SHIRT WAIST.

Interest in linen shirt waists is not quite as lively as it will be later. The newest shirt waist is a very mannish affair, except that it has half-sleeves. Every kind of a garment has half-sleeves, and the excuse for the starched shirt following the general rule is that it gives the arm freedom for tennis, etc. The shirt model, with soft folded collar attached, and pocket on the side, will undoubtedly lead in popularity. Many of these are exquisitely embroidered in heavy linen thread. Other models are pleated on the shoulders and are loose and full. A new devotion to the embroidered monogram on the left sleeve has shown itself. Last year the idea was tolerated, but this year the most exclusive shirt makers are pushing it.

THE SAILOR BLOUSE.

A shirt waist which will be a favorite with girls at the seashore is a sailor blouse exactly like the regulation naval shirt. This has seamless shoulders, a deep applied yoke, and a removable shield, with or without a collar band. The sailor collar is very deep and broad, and the whole effect is loose and comfortable to a degree. These blouses are made in extra heavy linen, and are carefully tailored.

There is nothing especially new about the lingerie blouses. More and more the vogue, one is amazed at the variety in design and decoration. The utmost ingenuity is exercised to keep the hand-made waists different, and yet keep them simple in outline. The machine-made lingerie blouses are often very beautiful. For four or five dollars one may buy a really charming blouse, of good materials and lovely design.

GYPSIES INVADE SCOTLAND.

Undesirable Class of Aliens Swarm Into Land o' Cakes.

Midlothian, Scotland, is suffering from a plague of German gypsies, and wants to cure itself as soon as possible. They are brown-skinned, ragged, fierce-looking and dirty—in fact, thorough gypsies—but the inhabitants of Midlothian do not appreciate this picturesque addition to life.

There are now considerably over 100 of these gypsies in the country, and Capt. Thomas, of the steamer Weimar, which brought across the batch, has it from an authentic source that within a very short time 1,000 of the nomads will be landed in Scotland. The statement is also made that there are 5,000 gypsies in Hamburg, all of whom intend going over there.

The gypsies possess six large caravans, drawn by scarecrow horses. They are sturdy beggars, and steal anything they can. Hen-roosts in the neighborhood have suffered severely, and hay for the dejected horses is taken from ricks in broad daylight. In some instances the gypsies have boldly entered houses, used threats and demanded money and food. In consequence, six of them have already been sent to prison.

These interesting and very undesirable aliens say that they intend to make their way through England to Dover.

ANIMALS WITH FALSE TEETH.

Have Been Treated by Dentists to Their Great Benefit.

Some few years ago Judge Woodfall, of England, was called upon to decide a case brought by a lady, who sued a naturalist for failing to provide a cro fox with a set of false teeth. As it is customary for ladies to make pets of foxes, or for foxes to suffer from lack of molars, the case promised to provide some features uncommon in the general run of County Court litigation, but those present who expected the court to carouse with the witty remarks of judge and counsel, who should have revelled in the possession of such a peg upon which to hang their witticisms, were doomed to disappointment, for it speedily transpired that the fox in question had long since given up the ghost and that the teeth were to be supplied solely in order to give a more realistic appearance to the skin that was to be turned into a boa.

Although the race of reynard has yet to pay a visit to the dentist for professional treatment, canine and equine patients have both been treated by the profession, and have greatly benefited by their visits. Thus, in 1901, Mrs. Jefferson Seligman, of New York, had her \$4,000 saddle-mare, Anna, fitted out with eleven teeth, which enabled the animal, that could not eat before the operation, to masticate its oats with a relish that it had long been a stranger to. It is interesting to note that the equine patient was treated with the same consideration as a human being, the nerves of the teeth operated upon being deadened with cocaine prior to being filled with gold where the fillings were likely to show, and silver where they did not.

A New South Wales shepherd living at Hargreaves, near Mudjee, having a valuable pedigree ram which found great difficulty in masticating its food owing to the loss of teeth, provided the animal with an artificial set that undoubtedly served as useful a purpose as the four gold teeth set with diamonds that graced the mouth of a seven-year-old Gordon setter that was exhibited at the Ladies' Kennel Club show in New York in 1902.

This dog, by the way, is by no means the only canine patient that dentists have had to deal with, as can be gathered from the fact that early in the year before last Beauty Steel, a prize Boston bulldog, was in the dental chair three hours, while Mr. Beardsley cleansed the cavities in two of his lower front teeth, filled them with gold, and put on gold crowns. It may be mentioned, for the benefit of would-be canine dentists, that the doctor in this instance secured his safety without the aid of anesthetics by stuffing a towel into the dog's mouth.

FRUGALITY OF GERMANS

THE TEUTONIC IS A "GENIUS" FOR THRIFT.

An "Envious" Englishman's Views — He Would Not Eat Some German Dishes.

The German workman has always been credited with a genius for frugality. But there are degrees even of genius, and, after reading the recent interesting article in the Daily Telegraph on the "Price of Bread," and one might be disposed to think that the height of it has been reached in domestic economy by the German who boasted "that he lived on two shillings a week," says a writer in the London Telegraph. That particular Teuton, it is true, happens to be a baker—in addition to being a genius—and this fortunate choice of a profession seems to have enabled him to solve the problem of cheap living more completely than might otherwise have been the case. "The bread, which he got free, it was his custom to soak in gravy from the meat sent in by customers to be baked, and when that failed he bought a herring, which served him for both breakfast and supper." After this is astonishing to read that "these men usually come over as boys, and serve with a relative until they have saved a little money, when they set up in business for themselves." Almost any industrious toiler, in receipt of decent wages, might fairly aspire in time, having discovered the beautiful art of living on five pounds a year, to "set up in business" on his own account.

Nobody, it is to be hoped, will be unkind enough to suggest that the resourceful German baker who contrives to make both ends meet on two shillings a week is an

"UNDESIRABLE ALIEN."

On the contrary, there must be a good many poor toilers in London, honest and thrifty, who would cheerfully make his acquaintance in order to find out how it is done. But the truth, of course, is that the case cited is a very exceptional one, and can only be taken as an extreme illustration of the German talent for thrift and self-denial. On the other hand, it is interesting to be reminded once again of the undeniable fact that this London of ours shelters, year in, year out, many thousands of young Germans who find it possible to exist comfortably on appreciably less than what barely suffices for the wants of the ordinary Englishman of the same class.

I know of several myself, hard-working, self-reliant, decently clothed, and sufficiently fed, who seem not only to be satisfied with what would be called a "living wage," but are actually able to put something by out of their exiguous earnings, in view of possible contingencies. They complain not, neither does their appearance or their mode of living suggest that their condition calls in any way for sympathy. Only a few weeks since I heard of a young German, a native of Frankfurt, who came to London some nine years ago, and secured a junior clerkship in the city at sixteen shillings a week. His wages increased by slow stages, but even so he has not as yet reached the modest figure of one pound ten shillings. Nevertheless, without any assistance from home or outside sources, he has managed in that period to bank close on a hundred and twenty pounds, and had, as I was informed, just moved to a better lodging, and "furnished a room quite nicely" out of

SIX MONTHS' SAVINGS.

This, it may be argued, is another quite exceptional case. But I have good reason to believe that it is nothing of the kind. Indeed, it would probably be found to be typical of hundreds of others. Perhaps, then, it will be urged that the young German whose position I have explained, and others of his class, must sacrifice practically everything that

Englishman similarly placed can well help envying him? That remarkable herring which has been said to serve, upon occasion, both for breakfast and dinner, may or not be a gentle myth. But the frugal German is as common a type in our midst as any other to be met with, and no one has compassed so adroitly the art of living contentedly on next to nothing.

WINNING THE "V. C."

How Sir William Beresford Won the Trophy in the Zulu War.

The recent jubilee in honor of the founding of the Victoria cross brings to mind many instances of bravery which won that token of courage. Among the heroic exploits which gained the cross is that of Sir William Beresford, who won the trophy for a deed performed during the Zulu War.

During an encounter the Zulus pretended to flee—a well-calculated snare, as it brought the pursuing British into a carefully prepared ambush. A long line of over two thousand warriors suddenly sprang up, flanking the horsemen. Then the whole plain flashed into life. Hordes had been hiding in the grass.

Buller's alert eye caught the danger instantly and his voice rang out with, "Retire!" There was a quick volley of Zulu bullets, and three Englishmen went down. Beresford, looking back, saw one move into a sitting posture. He who would extend succor at such a crisis must be brave and prompt, quick to decide and quick to act.

The Zulus were perilously near the fallen soldier. Beresford measured the distance with his eye, and thought he might just do it. He galloped back to the wounded man, dismounted, and ordered him to get on the horse.

The poor fellow, dazed and hurt as he was, was not less full of the spirit of sacrifice. He bade Beresford mount and go—why should two die? Then Beresford, in his desperation, declared that he would punch the man's head if he did not get on and be saved! The droll argument prevailed. The wounded soldier allowed himself to be hustled on the horse, his rescuer scrambled on in front, and set the good little beast going at his best pace.

As it was, the two would have been speared had not Sergeant O'Toole turned back and with his rifle held the close-pressing Zulus at bay.

When Sir William received the notification that the Victoria cross had been awarded to him, he returned the answer that he could not receive any recognition of service unless it was shared by Sergeant O'Toole. Immediately another award was made. Both heroes received the badge of distinction that marks England's highest approval of "conspicuous bravery."

NEW WAR OFFICE.

26,500,000 Bricks Used in New 600-roomed Dwelling.

The new War Office in Whitehall, London, England, which has taken just six years to complete, is undoubtedly one of the most wonderful and up-to-date buildings in London. Magnificent and imposing as the exterior is, it gives but a small idea of the vast undertaking involved in its construction.

Here are some interesting details as to the actual quantity of materials used in the building, which help to show the gigantic nature of the task. These include:

Ordinary bricks—Twenty-five millions.

Glazed bricks—One and a half millions. Portland stone—Twenty-six thousand tons.

Lead—Sixteen hundred tons.

Steel—Three thousand five hundred tons (used for floors, etc., the building not being of steel construction).

Concrete—Thirty-five thousand cubic yards.

The immense size of the building is indicated by the fact that there are:

Six hundred rooms.

MILLIONS MADE IN FURS

EDMONTON IS THE CENTRE OF THE TRADE.

The Hudson Bay Company and a French Firm Have Accumulated Fortunes.

I had a chat with one of the chief fur buyers of the North American continent, writes Frank G. Carpenter from Edmonton to the Chicago Record-Herald. The wild lands reaching from here to the Arctic Ocean and from Alaska to Hudson Bay supply the most and best furs of the world. The Hudson Bay Company has been engaged in the business for 200 years, and it has sent out millions upon millions of skins to the markets of London. It had until a generation ago a monopoly of the trade. By its charters from King Charles it controlled the whole country and governed it as it pleased. Then Canada bought its political rights to British North America and now fur trading is free to all.

This town of Edmonton, which lies over 300 miles due north of the United States boundary, is the centre of the new fur trade. It has eight firms which buy skins, and their purchases aggregate hundreds of thousands of dollars a year. One of the most important of the traders is the Hudson Bay Company, which has recently erected a department store here, and its chief competitor is Revillon Freres, the great Paris furriers, who have establishments also in New York and London, and who supply skins and furs to every market of the world.

The Revillons are fit competitors of the Hudson Bay Company. They have been engaged in wholesale and retail fur trading for 175 years, and they are now carrying on their business with a capital of 70,000,000 francs, or about \$14,000,000. They have already established posts all over the Northwest, and they are gradually building up a line of stations throughout the lands which the Hudson Bay people have always considered their own.

BIG TRADE IN FURS.

They have a central station here at Edmonton, another at Prince Albert and a third in Labrador, with two or three hundred branch posts in active operation. They are buying furs all along the Mackenzie River, up and down the shores of the Arctic Ocean, along Hudson Bay and in different parts of Labrador; and they are, I am told, getting a fair share of the best skins of the continent.

In addition to this they have, with the opening up of the wheat belt, established a great wholesale and retail department store here, and are doing business with the new settlers. They are by far the largest wholesale dealers outside of Winnipeg.

In talking with Mr. Secord of the important fur-buying company of McDougall & Secord I was told that the fur business is now as good as it has ever been, and that it will be a long time before men will freeze for lack of fur coats and women become pillars of ice because they have not fur sacques. The skins may continue costly, but there are plenty of animals left, and it will be long before the supply gives out.

Mr. Secord tells me that furs are largely affected by fashion, and also by the supply. In some years the Indians bring in many more of certain kinds of furs than in other years, and, strange to say, the supply of some pieces rises and falls with the rabbit crop. Some varieties of the fur-bearing animals live largely on rabbits, which breed so rapidly that the animals cannot keep them down. At intervals of every four or five years a disease breaks out which kills the rabbits off by the thousand, and following such years come the lean fur years.

This town of Edmonton is at the

dairies have been established, and butter and cheese are now produced away out here in the Northwest.

FAMOUS ABBEY IN DANGER.

Rector Writes 17,410 Letters Asking Aid to Protect It.

The north wall of Crowland Abbey, in South Lincolnshire, England, has buckled. It will be necessary to underpin it immediately if further damage to this famous monastery is to be prevented.

The buckling was caused by the weakening of the foundations, which are laid on a bed of peat. The north window is so seriously damaged that it will have to be rebuilt.

The rector, the Rev. T. H. Leboeff, is making an appeal for funds. He states that since 1884, when he was appointed, he has written 17,410 letters asking for help to restore the abbey. His labors have broken down his health. Mr. Leboeff says his desire is simply to preserve the remains of this once famous mired monastery, the history of which goes back to A.D. 672.

It was the Benedictine monks of Crowland who founded Cambridge University, and the abbey had the first tunable peal of bells in England.

Apart from its historic interest, Crowland Abbey is still a landmark in the Lincolnshire fens.

OLD LAWS MAINTAINED

ENGLAND HAS NOT ENTIRELY OUTGROWN THE FEUDAL DAYS.

Story of How Earl Amherst Obtained a Horse Belonging to Resident of His Domain.

The need of some act which will make a clean sweep of the preposterous relics of the feudal system of land tenure which still survive in many parts of England, has been strikingly shown by a case which has just come to light near Sevenoaks in Kent, writes a London correspondent. There resides Earl Amherst, who, among his other hereditary claims to distinction, boasts that of being lord of the manor of Orford. Within the borders of the domain thus designated, Herbert Coudrey took up his abode some months ago, totally unaware that thereby he incurred any obligation as a vassal of the lord of the manor. The other day, one of the earl's deputy stewards, called upon Mr. Coudrey and seeing a horse and trap standing outside the house, asked Mr. Coudrey if the horse was his. On being answered in the affirmative, the deputy steward cut some hairs from the horse's mane and after depositing them in his pocket, placed a hand on the horse's shoulder, accompanying the action with the words, "This horse is now the property of Lord Amherst."

In the twentieth century this appears more like a bit of fooling from a comic opera than a valid process, but thanks to the medieval laws that still remain un repealed, the deputy steward's

FANTASTIC PERFORMANCE

actually made Earl Amherst the owner of Mr. Coudrey's steed. However, the deputy steward only took away the hairs that he had cut from the mane; the major portion of his lordship's newly appropriated property, which required stabling and feeding, being left with Mr. Coudrey. It was explained to the latter that the earl, being a generous man, did not wish to push his rights to their legal limits and would, therefore, permit Mr. Coudrey to redeem the horse. The price of the redemption was subsequently fixed at \$57.50—about one-third of its real value—which shows that Earl Amherst is a much more liberal man than his feudal ancestors who were wont to exact everything they could

found to be typical of hundreds of others. Perhaps, then, it will be urged that the young German whose position I have explained, and others of his class, must sacrifice practically everything that makes life endurable to his principles of strict parsimony, and that such an existence must needs be one of constant crudelity, hardship, monotony, and sordid joylessness. That depends, of course on the point of view; but there is this to be said, at all events—that within the necessary limits the meagre remunerated German who lives laboriously days in London office is to all seeming as contented with his lot as is the Englishman whose wages as a rule are slightly higher. And certainly he is as well garbed, and looks every whit as well nourished. The German appetite, indeed, is generally a hearty one, and it would be nothing less than foolish to suggest that the Fatherland's sons who make a very slender income suffice for their needs in London go short of food in order to effect petty economies.

Whether his palate is as sensitive as the Englishman's is another matter. To say truth, I have seen in the windows and on the "speisenkarte" of German restaurants of the humbler class in London dishes and "delikatessen" that

NO UNINITIATED PERSON,

unless endowed with something more than ordinary courage, would willingly attack. At such places a meal "satisfying" enough in one sense can be had for a trifle of ninepence or so, and to expect quality as well as quantity in the circumstances would hardly be reasonable. But, as a matter of fact, the majority of expatriated Germans of strictly limited means who make London their home lose in time their taste for foreign edibles, and you will find them regularly frequenting the cheaper restaurants and "breadshops" to which the ordinary Londoner, similarly situated, daily resorts. For that matter, Echo, which, so far as the West End is concerned, is still the neighborhood most largely frequented by foreigners who dine in inexpensive restaurants, rakes but little provision for the German colony, supplying the needs principally of French and Italians, whose gastronomic tastes differ widely from those of the Teutonic immigrant.

To say precisely why the ordinary German of the type referred to is able to make a shilling go further than the Londoner born and bred in a similar sphere, would involve a comparison rather more invidious, perhaps, than the subject justifies. But for one thing, it is certain that the average Teuton is by nature, instinct, and training of a frugal turn of mind. If of humble origin, he is brought up to dispense with luxuries, and from earliest boyhood he is taught that the making of small economies is indispensable to the scheme of life as the acquirement in youthful days of the rudiments of reading, writing, and arithmetic. It will be said that

THE GERMAN LOVES HIS BEER

and that it is essential to his very existence. The fact remains, as I have occasion to know from personal observation, that a great many young Germans—and there is no reason to suppose them to be exceptions—who have to struggle for an existence in this country are extraordinarily temperate in the strictest sense of the word, and seldom drink anything stronger than coffee.

Not a few of them learn even to dispense with the joys of tobacco until such time as they have sufficiently improved their position to indulge that small luxury, and certain it is that you may live a long time in London before you behold such a phenomenon as the sight of a poor German clerk rushing out from his office where he is employed in order to discern the name of the "latest winner." For all that, he is not without resources, as it is easy enough to discover if your knowledge of his language enables you to catch stray scraps of German conversation in trains and buses and cafes. But upon amusements so-called he certainly spends a good deal less in the course of the year than his English competitor. And in the useful art of prolonging the life of an expensive coat he is probably without a rival. All things considered, what

concrete—thirty-five thousand cubic yards.

The immense size of the building is indicated by the fact that there are:

Six hundred rooms.
Two and a half miles of corridors.
Seventeen miles of cornices.
Nine miles of chimney flues.
Seven acres of asphalt.
Fifty-four acres of plasterers' work.
One hundred miles of piping—heat, water, drains, covering for electric wires.
Four acres of mosaic paving in the corridors.

Seventeen hundred windows.
The circumference of the building is 1,500 feet, and the entire height from the concrete foundation to the top of the towers is 156 feet.

In order to ensure dryness, the entire building is set in a concrete "dock" 24 feet deep, the inner walls of which are well removed from the walls of the structure. This dock has a cubical contents of 13,000,000 gallons, and would float several warships.

HOW THE POOR LIVE.

Grim Figures That Give a Peep Behind the Scenes.

Vagrancy in London, England, it is not surprising to learn by the latest official report, is increasing.

In 1882 "casuals" were being relieved at the rate of 6,000 to 7,000 nightly; in 1905 the number had increased to 11,812 to 13,516 every twenty-four hours.

Interesting figures concerning the method of living of the very poor and the inmates of common lodging-houses are given.

The cost of food, for instance, has been reduced to a minimum. Here is the daily menu of a dock laborer of fifty-one: Breakfast, tea, $\frac{1}{2}$ d., sugar, $\frac{1}{2}$ d., toasted bread, 1d.; no dinner; tea, five fresh herrings, 2d., potatoes, 2d., tea, $\frac{1}{2}$ d., sugar, $\frac{1}{2}$ d.; supper, fried fish, 1d., potatoes, 1d.; total cost, 9d. Cost of bed, 4d.; total, 1s. Another lived for 9d. per day, $\frac{1}{2}$ share of meat, 4d., potatoes, 1d., pot herbs, 1d., sugar and tea, 1d., composed the dinner; a pennyworth of tea and sugar and a pennyworth of bread formed the tea. The women were the least extravagant, the highest cost being 1s. 4 $\frac{1}{2}$ d., which included steak and onions.

For clothes these poor occupants paid very little, as the following will show: Coat, 2d., trousers, 1d., waistcoat, nil, shirt, 4d., boots, nil. This is what is called a "samble suit": Coat, 8d., trousers, 9d., shirt, 3d., waistcoat, 2d., socks, 1d., boots, 3d., cap, 2 $\frac{1}{2}$ d. A woman's outfit costs 3s. to 4s. 6d.

"BUSHIDO" AND BUSINESS.

By night or by day, whenever an order is in course of execution for the Japanese Government, there in the workshop is the representative of Japan, supervising, testing, rejecting all that is not above the slightest suspicion of defect or flaw. When relieved by his colleagues he does not rush out like a schoolboy from school, as if relieved from an irksome task. The twin observe together until the new-comer has picked up the threads and can apply himself as minutely as his predecessor to the details of the business. Indefatigable and incorruptible, working heart and mind for the honor of Japan, these watch-dogs of the Mikado have contributed, unseen but effectively, to the overwhelming triumph of their country. Bushido and business aptitude are an unconquerable combination.

SWISS BOYS MUSTN'T SMOKE.

The municipal authorities of St. Gall, Switzerland, have passed a bylaw against smoking by minors. The penalty is five francs for the smokers and for any person furnishing boys with tobacco in any form. Informers are also to receive a reward of five francs. The object of the authorities is to stamp out smoking among schoolboys, which has recently increased to an alarming extent.

five years a disease breaks out which kills the rabbits off by the thousand, and following such years come the lean poor years.

This town of Edmonton is at the northwest corner of the wheat belt. It promises, however, to be the centre of a new wheat and grain region which shall extend hundreds of miles to the north and westward. This region is known as the Peace River Country. Civil engineers are now surveying it for railroads, and settlements will soon be springing up here and there in it.

IN PEACE RIVER REGION.

The Peace River may some day be one of the most important streams on our continent. It rises in the mountains of British Columbia and flows into Slave River, just above where it issues from Athabasca Lake. It is a broad, deep stream, comparing in size with the Mississippi, and it is navigable for several hundred miles by boats drawing ten feet of water. There are now two steamboats upon it, and one of them is 120 feet long and is lighted by electricity.

On the upper parts of this river there are practically no settlements except those of the fur traders and missionaries. At Vermillion about sixty farmers are raising wheat for a flour mill established there by the Hudson Bay Company. They get \$1.50 a bushel for their wheat, and the wheat is said to be some of the best grown on the continent. These farmers are chiefly half-breeds and traders. They have but small patches and till their land in a rude way. At Peace River Landing, which is probably 300 miles southwest of Vermillion, there is another flour mill, which is grinding only for local consumption. Vermillion is in about the latitude of St. Petersburg.

It is a question in the minds of many whether a great city may not grow up in the Peace River country. At present Edmonton would seem to be the best site for the trading centre of the great Northwest, but with the pushing of railroads to the north another centre may grow up at the head of navigation, utilizing the vast Mackenzie system as a means of distribution.

DEVELOPING THE COUNTRY.

The Grand Trunk Pacific Railroad, which is now being built west from Edmonton, will strike across the southern part of the Peace River country. It will not reach the best lands, which are farther north, although a branch road may be built through to the head of navigation. This country is not far from the Rockies, and it is affected climatically by the winds from the Pacific, which are heated by the Black current of Japan. For this reason the Peace River climate is said to be far better than that of Manitoba. Edmonton has a much milder climate than Winnipeg. There is little snow here and no intense cold to speak of. The same is true of Calgary and of most of this State of Alberta.

In addition to the farming possibilities of the Peace River region, it is said that parts of it will support vast numbers of live stock. The natural grass grows from two to five feet in height, and the cattle and horse ranchers who are now being crowded out of Alberta are planning to send their herds to Grande Prairie and Peace River. The cattle will be able to run out all winter and they can feed out of doors all the year round. If this is so, the region will be of great value to the new Canada. The lower part of this State of Alberta and a part of Saskatchewan, which, owing to the slight rainfall, have been used for ranching, are now found to produce winter wheat, and the ranching business may be driven out by grain farming. There are in Manitoba and the Northwest almost a million cattle, a quarter of a million horses and more than that number of sheep and hogs. The Peace River country, with its grain and grass, would seem to be a good stock-raising proposition, and the time may come when the most and best cattle of this country will be raised there.

As for Alberta, it is now going into mixed farming, and its cattle eventually will be kept on the farms instead of on great ranges. A large number of

the price of the redemption was subsequently fixed at \$57.50—about one-third of its real value—which shows that Earl Amherst is a much more liberal man than his feudal ancestors who were wont to exact everything they could claim from their vassals.

Finding there was no other method by which he could recover the horse, Mr. Coudrey bought it back at the price stipulated. Then, in order to call public attention to the case, he brought a suit against the earl for the keep of the horse during the two weeks that the settlement of the matter was pending, for, in accordance with the absurd law, under which it had been seized, for these two weeks the horse was unquestionably the property of Lord Amherst. But this modern sort of procedure was not at all in accordance with feudal notions and the Sevenoaks judge, before whom the suit was tried, promptly gave his decision against

THE AUDACIOUS VASSAL.

Public opinion, however, is with the latter, and it is probable that a bill will soon be introduced in Parliament to put a stop to all such revival of medieval rights.

Mr. Coudrey, it seems, last year bought near Sevenoaks, a property consisting of 2 $\frac{1}{2}$ acres with a house and stable, for \$8,500. The property is what is known as a "customary freehold" of the manor of Orford. And, according to the customs of the manor, is entitled to a "heriot" on every change in the ownership by alienation or succession. As the heriot, the lord may legally seize the tenant's best live beast, but in the absence of a beast to seize, he has to be content, in lieu thereof, with a modest fine of three shillings and sixpence (87 cents). The customary freeholder, who sold the property to Mr. Coudrey possessed no best beast, and so that occasion, Earl Amherst got only the 87 cents. Without any idea that he was thereby jeopardizing his own best beast, Mr. Coudrey recently sold a half acre of his land for \$900. Then Earl Amherst's emissary swooped down on him as already told and claimed his heriot. Mr. Coudrey did not even know what the word meant until he had consulted a dictionary. If he had kept a motor car instead of a horse, he would have been able to settle the earl's claim by paying him 87 cents.

Of course there are many manorial lords, who never think of enforcing the ancient feudal rights which have never been abrogated. But it is always possible for such claims to be enforced vexatiously and oppressively. It is actually on record, though it happened many years ago, that a lord of the manor seized as his heriot,

A TENANT'S RACEHORSE.

worth between \$10,000 and \$15,000. Earl Amherst is not at all the sort of man one would imagine would prove a stickler in such matters. He has plenty of money, and though he has just passed his 70th birthday, is still an active man and a keen sportsman. It is only two years ago that he was credited with bringing down the first stag of the season in Scotland. He is one of the fast diminishing body of veterans of the Crimean War, which he went through as a captain of the Coldstream Guards, and was severely wounded at Inkerman. He is, among other things, a Free Mason of high distinction, and has been pro-grand master of England for the last eight years. The first Lord Amherst was commander-in-chief of the British army in North America from 1758 to 1764, and was subsequently made commander of the whole army. Earl Amherst has been twice married, but has no children by either wife. His heir presumptive is his brother, the Honorable and Reverend Percy Amherst, who took orders more than 40 years ago, but has done no clerical work since he has held a cinch on the peerage.

He: "What can I do to prove my love for you, dearest?" She: "Well, I don't know whether there is anything in it or not, but I have heard that absence makes the heart grow fonder."

CHINATOWN IN 'FRISCO

CHINESE QUARTER WILL FLOURISH ON OLD SITE.

Opium and Gambling Dens Will Open Again for Yellow Patrons.

Those who thought the destruction of the Chinese quarter of San Francisco was the one good feature of the terrible disaster, are doomed to disappointment. The notorious resorts will soon flourish again. A westerner sums up the situation in this way:

"The man who believes these dreams about Chinatown being eliminated from the new San Francisco, or shifted to some other site, is more optimistic than the people of San Francisco.

"Chinatown has a pull that is strong enough to twist Market Street into a figure eight. The Chinese may not vote, but they have money, which cannot only be used to buy votes, but automobiles, houses on Van Ness Avenue and racing stables for those in power in San Francisco. Chinatown, in all human probability, will be rebuilt right where it was before.

"There's a reason for this the man who hasn't lived in San Francisco would not guess. Under Chinatown there was a subway city that had a larger population than the rookeries above the surface.

"These tunnels, passages and halls still exist. Many of them were twisted about by the earthquake, nearly all were filled in at the entrances by the burning debris from above and a few have caved in completely. They can be straightened out, however, much more easily than another underground city could be constructed.

WOMEN BURNED IN DENS.

"In this village of troglodytes festered the cancer spot that the righteous of San Francisco tried for years to abolish. Here were the gambling dens, the gathering places of the tongs and the cages in which were kept the little Chinese women, who were sold with a regularity that spoke well for the industry and commercial instincts of our Consuls in China. There were probably hundreds of these little creatures burned to death the day of the fire. Their bones will be dug out, however, the stone walls of the passages will be strengthened, the walls will be shored up and the first section of the burned over part of the city to be occupied will be this city of caves.

"They will build the houses above ground as they are required. They will pay no attention to the demand for the setting of Chinatown without the city walls and as long as San Francisco is in the hands of the present political masters it can be counted upon as certain that the Chinks will stay where they have been for more years than the Frisco people like to recall."

PRECIOUS STONES IN HIDING.

How Gems of Great Value are Kept Concealed in the Orient.

The turquoise, like the opal, is found in the desolate and waterless parts of the world. The principal deposits so far known are in the Persian desert and on the barren plateaus of New Mexico and Arizona.

Usually the best specimens are taken from disintegrated rock, and the mining of turquoise is not only accompanied with much hardship on account of the location, but can only be performed with great difficulty. The quantity combined with other stones as well as with gold, and by itself, is so extensive in the cities of eastern Europe that more of it is believed to be bought by gem merchants in this way than is at present secured from the principal mines.

This is not strange, however, for not

CASES OF LOST MEMORY

MEN WHO LOSE THEIR IDENTITY FOR MONTHS AND YEARS.

The Most Mysterious Thing That Can Befall a Man Is Loss of Memory.

It is not many months since a man woke up from such a time of oblivion to find himself in the wilds of New South Wales, in the tattered garb of a "Sundowner" and with hands rough with hard labor. Where he was he had not the remotest idea, but he knew that he wanted to go to Los Angeles; and when, after a long, aimless tramp, he encountered a man driving a bullock-team he inquired the road. "Los Angeles?" said the man in answer to his question. "I don't know nothing of that—but this track'll take you to Hill End." "And where is Hill End?" the wanderer asked. "Why, in New South Wales, of course—where else could it be?"

Here was an amazing statement indeed. The wanderer's last recollection was of dozing in a railway car in California on his way to Los Angeles to spend the holidays with his wife and children, and instead of waking up and completing his journey he finds himself six months later many thousands of miles away in an unfamiliar dress and in a totally unknown country. How he got there, and what had been his adventures during those months of mental eclipse he knew no more than

THE MAN IN THE MOON.

A similar experience was that of a prominent Swansea tradesman who disappeared from his home three weeks before last. Whitsundie and completely lost his identity until, seven months later, he found himself in Cheapside, the possessor of an unfamiliar beard, and totally ignorant of all that had happened to him during the long period of his mysterious absence. His friends had abandoned hope of seeing him again, when a telegram acquainted his brother-in-law of his safety, and on Christmas morning he arrived at his home and resumed the life he had so inexplicably dropped.

When asked to describe his feelings when he "came to himself," Mr. Llewellyn said: "How can I describe them? The last words I remember saying were 'My wife!' and the next, 'Where am I?' I had my beard shaved off, and then I wired to Neath. Even then my mind was not clear, and I could only remember the address of my brother-in-law in Neath—not his present address, but his address of many years ago."

EVEN MORE REMARKABLE

was the disappearance a few years ago—in 1898—of a North London doctor. For over four years no trace of him could be found, and it was concluded that he was dead, when a man who had known him intimately recognized in a waiter at a Paris cafe the missing man. When asked if he was not Dr. B— he not only denied the identity, but declared that he had never seen his questioner before, and it was only when his wife and daughter travelled to Paris to interview him that the dormant mind began to wake. A week later he returned to London in full possession of his identity, but the last thing he remembered before his recovery four years later was entering an omnibus on a journey to the city.

A very curious story of restoration to memory after fifty-three years of oblivion is told of Mathias Steingruber, a German, who enlisted in Payne's Cavalry, a Pennsylvania troop, for the Mexican War. In a charge at the Battle of Resaca de Lapalma he was thrown from his horse, fell upon his head, and lost consciousness. When he came to, his mind was

AN ABSOLUTE BLANK.

SUNLIGHT SOAP

Clothes washed by Sunlight Soap are cleaner and whiter than if washed in any other way.

Chemicals in soap may remove the dirt but always injure the fabric. Sunlight Soap will not injure the most dainty lace or the hands that use it, because it is absolutely pure and contains no injurious chemicals.

Sunlight Soap should always be used as directed. No boiling or hard rubbing is necessary. Sunlight Soap is better than other soap, but is best when used in the Sunlight way.

Equally good with hard or soft water

\$5,000 REWARD will be paid to any person who proves that Sunlight Soap contains any injurious chemicals or any form of adulteration.

Lever Brothers Limited, Toronto

A WALES' SUPERSTITION

ACCOUNTS FOR A BIG EPIDEMIC IN WALES.

Belief That Children Must Take Complaints Leads to a Lack of Precaution.

An epidemic of measles in Wales that carried off 130 children has caused Dr. Alexander Gordon, the medical officer of health for Merthyr, to protest against the practice of allowing children to enter infected households. Parents excuse this practice on the theory that it is better that children should have the measles and get over the ailment, a theory that medical men regard as a dangerous superstition.

A well-known specialist in children's diseases gave his opinion on the subject the other day.

"Superstition is even more rife in all classes to-day than it was a hundred years ago," he said. "In no case is it more prevalent and disastrous than in the treatment of measles."

A DANGEROUS PRACTICE.

"The medical profession has tried in vain to stamp out the old idea that every child must have measles, and that a child, therefore, might as well be put into the same bed with a brother or sister who is suffering from the complaint.

"It is a proceeding which ought to be made punishable by law. Hundreds of lives are sacrificed every year to it, and epidemics are spread from village to village by reason of the absurd notion."

A medical officer of health cited a case which came under his notice a few weeks ago. A boy of 14 developed measles, but had contracted the complaint very slightly. The mother feeling sure her other children would be infected took no precautions. The consequence was that all her children were stricken with the disease. The baby, six months old, died after two days' illness, and a little girl of two years has completely lost sight of both eyes. The slight attack in the case of the elder brother infected the younger children with virulent scarlet measles.

TOMBS OF DANISH KINGS

AND ALSO OF MEN OF LEARNING AND EMINENCE.

Building Begun Nearly One Thousand Years Ago — Builder Was an Englishman.

Exactly nine hundred and thirty-one years ago the Cathedral of Roskilde (sometimes and erroneously spelled Roeskilde) was built by Harold Blaat-and, but the present rather striking red brick edifice dates from 1047, nineteen years prior to William the Conqueror's episode at Hastings. The builder of this second fane was an Englishman, vaguely known as William, who accompanied Canute to Denmark and brought with him the inadequate civilization of the time. The cathedral was consecrated in 1084, and a certain portion of the original red brick of that period survives to this day. It has been burned down on at least three occasions—in 1283, in 1443, and in 1554—but the outer walls are still untouched, and retain not a little of their original grandeur and massiveness.

CANUTE'S GRANDFATHER.

The aforesaid Harold Blaatand was father of King Sven and grandfather of King Canute, whose ineffectual tussle with the tides of Great Britain has remained a youthful lesson even unto our time. The name Roskilde is popularly derived from a certain King Hrol, and is equivalent to the expression, Hrol's Well. The etymology, however, is more than doubtful. There certainly are springs in the neighborhood, especially one, the Maglekilde, which even to this day is in active work, and yields something like 500 gallons of medicinal water per minute.

The Dom, or Cathedral, of Roskilde has been the immemorial burying place of Danish Kings, and also of those men of learning and eminence who have aided in the upbuilding of Danish history. The bones of many of them are by a curious local custom, immured in the pillars of the centre aisle. Among these are King Harald (A. D. 985), Queen Margaret Fredkulla (A. D. 1130), Svend

with great accuracy. The quantity combined with other stones as well as with gold, and by itself, is so extensive in the cities of eastern Europe that more of it is believed to be bought by gem merchants in this way than is at present secured from the principal mines.

This is not strange, however, for not only turquoise but other precious stones are known to exist in remarkably large collections in Constantinople, as well as in the cities in Turkestan, Persia and communities of southeastern Europe.

They are hidden away in ginger jars, rugs, old boxes and other receptacles of the household, where the owner believes there is little prospect of search being made for them. Gem collectors who have searched for stones in this part of the world say that no one can tell how many and what valuable specimens are thus hidden away, only to be brought to light when the owner is absolutely forced to part with them through dire necessity.

Undoubtedly many a gem brought from the famous mines of India, Egypt and Persia in the past has been thus secreted. Prof. Flinders Petrie says the Egyptian mines at Sinai, worked from the first to the twentieth dynasty, may have yielded turquoise and copper.

A MUSICAL SMUGGLER.

Did a Big Business for Years in Cigars, Brandy and Laces.

Smuggler's wit has invented a new stratagem in fraud, says the London Globe.

On both sides of the Franco-German border in the Alsace region are hundreds of Italians employed in the metallurgical establishments, and as it may be accepted as a maxim that wherever there are Italians there also are strolling accordion players, the presence of these pariahs excites no surprise on either side of the border. It occurred to an Italian with smuggling instincts that in this fact lay rich possibilities.

He had an accordion specially constructed with chambers, for carrying cigars and brandy from the German side, and taking back expensive laces from the French side. The man is an accomplished player, and on Sundays he combined smuggling with amusements, playing bewitching dances over the border, to which companion accomplices capered expressively.

On the French side there was a confederate innkeeper, through whom contraband goods were exchanged. The traffic had gone on a long time unsuspected, and might have gone on indefinitely had not impudently at length raised up a fatal presumption.

On a recent Sunday evening the smugglers actually emptied their loaded accordion in sight of the customers in the bar, and one of these, a retired French customs officer promptly informed his colleagues.

THE WORLD'S CABLES.

Addressing the Royal Military School at Chatham, Mr. Charles Bright gave recently some facts not generally known about submarine cables. There are at the present time about 225,000 miles of electric cables lying on the bottom of the sea. Each line has cost on the average about \$1,000 per mile to make and lay. About 6,000,000 messages are transmitted by cable every year. The working speed averages up to 100 words per minute. The average useful life of a submarine cable, under present conditions, may be anywhere from 30 to 40 years.

TALL ENGLISHWOMEN.

After taking measurements of the height of women in France, England, and America, a doctor announces that the Englishwoman is the tallest and the American woman comes next. The average height of the French woman is five feet one inch. The American woman is nearly two inches taller, and the women of Great Britain one-half inch taller than the latter. American women, however, weigh slightly more than either of the others, their average weight being about 117 pounds.

of a Pennsylvania troop in the Mexican War. In a charge at the Battle of Resaca de Lapalma he was thrown from his horse, fell upon his head, and lost consciousness. When he came to, his mind was

AN ABSOLUTE BLANK.

For fifty-three years he has lived near Fostoria, having been taken there after the war from Pennsylvania by his parents; but his mind was a blank from the day of his injury. He always insisted he was twenty-one years of age.

His memory of facts before his injury has been perfect, but of events since he knew nothing. A few months ago he was struck on the head by a piece of wood thrown from a circular saw, and when he recovered it was found that he had regained the powers which had so long been absent, and he suddenly realized what was going on about him. The telephone, electric lights, motor-cars, and bicycles made his first visit to town a trip to fairyland. The old man is like one who has been asleep these fifty-three years. He says: "The world has advanced so far, I fear I shall not live long enough to catch up."—London Tit-Bits.

ITALY'S QUEEN IS FEARLESS.

Manifested During the Recent Volcanic Upheaval.

The Queen of Italy, who has just had a narrow escape from being buried in showers of burning ashes and cinders at Torre Annunziata, is one of the bravest of royal ladies, a quality which she inherits from her Montenegrin ancestors, and which, although useless to most women, is an important one to those whom fate has called upon to be one of the sharers of thrones.

Her Majesty's coolness and courage were manifested when she insisted on accompanying her husband into the danger zone, in order to help the victims of the Vesuvian eruptions. While possessing every womanly attribute of beauty, charm and tenderness, Queen Elina can handle rod and rifle with the best, and as an Alpinist has but few rivals, as befits the daughter of a mountain chieftain. Her Majesty is looked upon as something of an Anglomaniac by the more old-fashioned among her husband's subjects, especially where the upbringing of her children is concerned.

The young Prince of Naples and his sisters have since their birth been subjected to the same hygienic rules which prevail in well-regulated English nurseries—a regime which finds no favor with Italians of the old school. All English people of any social standing who go to Rome are sure of a gracious welcome from the Queen, who at the balls and receptions given at the Quirinal moves freely about among her guests with a kind word for all, somewhat to the astonishment of English people accustomed to the much more formal attitude of royalty at home.

BOARDED OUT LUNATICS.

System is Growing in Favor in England.

The treatment of insane persons, at certain stages of their affliction, by boarding them out with families has been growing in favor during the last five years, and the British Medical Journal believes that the London County Council asylums committee will embrace an early opportunity of again seeking a development of this solution of lunacy administration.

Adoption of this system would relieve the congested asylums and furnish healthy, natural occupation and a considerably increased degree of liberty to many of the insane, who are now, for lack of such boarding-out opportunities, detained in the asylum. Such family colonies would be the establishment of half-way houses between the asylum and the home.

Weerily: "It costs so much more to live now than it used to!" Cheerily: "So it ought. It's worth more to live now than it used to be."

quency was that all her children were stricken with the disease. The baby, six months old, died after two days' illness, and a little girl of two years has completely lost sight of both eyes. The slight attack in the case of the elder brother infected the younger children with virulent septic measles.

OTHER SUPERSTITIONS.

The specialist spoke of other superstitions that still prevail among ignorant people.

"The standard cure for a cut finger is still the dirty cobweb," he said. "Lives are yearly sacrificed to septic poisoning traced to this unsanitary remedy."

"I saw a child in a hospital last week whose mother had attempted to cure a broken leg by calling in three old women of her native village and imploring them to perform certain mystic spells beside the cradle. The child nearly lost its leg in consequence of the neglect of proper advice."

END OF THE WORLD.

Convention Held in London Fixes Alternative Dates.

Terrible predictions concerning what will happen to the earth during the next 25 years were made at Exeter Hall, London, England, the other day. The prophets of the disaster, a large number of whom were clergymen, were in attendance at a "prophetic and second advent conference."

While they differed in the details, all agreed that the end of the world was at hand. They were not quite sure whether the final catastrophe will come on May 2, 1929, or April 9, 1931, but were quite sure that one of these dates will prove to be the right one.

There can be no doubt that the world has nearly outlived its usefulness, the prophets declared, the wars and earthquakes which have afflicted it recently are proof positive, and all that is required to fulfill the prophecies is the coming of anti-Christ.

He will make his first political appearance as King of Syria, but, in 1922, he will attack and conquer France; then will extend his rule over the other kingdoms.

There will be 10,000,000 Christians in the world at this time, the prophets declare, but evidently they will not be equally deserving of favor, for in 1924 or 1926, 144,000 of them will be translated to Heaven, while the other 9,856,000 will be transported to the desert, near Mount Sinai, where they will have to wait three and a half years.

TOO MANY PHYSICIANS IN PARIS.

There are too many doctors in Paris; it is impossible for every one to live. Their grievances have found expression in a curious novel entitled "Pauvres Docteurs," and written by Dr. Lucien Nass. The hero is a young medical man named Cadour, who, though clever and devoted, finds it almost impossible to get a living. He sets up his professional brass plate at Grenelle, in the working class district. An old doctor comes to him and upbraids him for his temerity in imagining that he will be able to make his way honestly in Paris. Consider these figures, he says, to his young confrere: "There are 2,700,000 people in Paris. From this number subtract seven hundred thousand who are treated in hospitals and dispensaries. That leaves two million among the three thousand five hundred doctors, or one practitioner to six hundred patients. If allowance be made for the charlatans, institutes, academies, etc., the number available for treatment by the legitimate profession is four hundred—an impossible figure for the man who wishes to live."

"Speaking of bad falls," remarked Jones, "I fell out of a window once, and the sensation was terrible. During my transit through the air I really believe I thought of every mean act I had ever committed in my life." "H'm," growled Thompson. "You must have fallen an awful distance!"

of Danish Kings, and also of those men of learning and eminence who have aided in the upbuilding of Danish history. The bones of many of them are by a curious local custom, immured in the pillars of the centre aisle. Among these are King Harald (A. D. 985), Queen Margaret Fredkulla (A. D. 1130), Svend Estridson (A. D. 1070), and Bishop Wilhelm (same date). The cathedral, as a whole, is not an imposing structure; it has practically no architectural features, and is a plain, up-and-down building of no artistic pretension whatever. However, it answers its purpose, and as a burial place of Kings it probably has not its like in all Europe.

WHERE THE KINGS LIE.

The two spires are very prominent features of the landscape for some miles around, and the general impression is one of simple dignity not without a certain value of its own. The original building, no doubt, had rounded arches; but these, after one of the many fires, were replaced by pointed arches, which remain to this day. The spires were erected by King Christian IV., and in a moment of mistaken zeal he added an Elizabethan west door, which is singularly out of harmony with the rest of the structure.

The monuments of Saxo Grammaticus (1207) and Tycho Brahe are noteworthy, and on the north side of the chancel is the porch of Oluff Mortensen, dating from the early fifteenth century, with a very richly ornamental front, and the image of Pope Lucius, the patron saint of the church, painted, (and very badly painted too) on a copper plaque. The sarcophagi of Frederick V. and his Queen, and all subsequent Kings and Queens of Denmark, including that of Frederick VII. in polished oak, with a wreath of oak-leaves in solid gold, are decently arranged in solemn rows, and in the grey dusk of the cathedral interior one gathers a very coherent idea of Denmark's greatness and prosperity.

Roskilde Dom is not Westminster Abbey, but is a very worthy and particularly reminiscent pile of Denmark's history.

WEDDING CAKE SIX FEET HIGH.

A Monster Confection Made for the Princess Ena.

Princess Ena's wedding cake, which was made in London, was completed the other day and packed for shipment to Madrid. It will be the first royal wedding cake ever seen in Spain.

The English custom was introduced by King Alfonso as a compliment to his bride. The cake is six feet high and weighs more than 340 pounds. It stands upon a huge silver salver, on which the bride's mother's wedding cake was placed. The cake consists of three glistening silver white tiers and is 46 inches in diameter at the base.

The lowest tier is divided into eight panels, separated by Corinthian columns, and is surmounted by Cupids disguised as postmen and messengers. The spaces between the columns are filled with panels of sugar work representing Spanish vines. The panels are festooned with orange blossoms, white heather, myrtle, and white roses. The flowers were chosen by Princess Ena. There are four panels on the second tier. In the centre of each is a shield with the monogram, "A. V.," surmounted by the Spanish crown. Medallions, sprays of myrtle, and tiny white roses embellish the third tier, on top of which is a beautiful group of children in white Parian marble, bearing aloft a vase holding a bouquet. Four long floral festoons reach from the top to the bottom tier.

A gold knife with an ivory handle two feet long accompanies the cake and will be used to cut it for presentation to the guests.

CLERGYMAN AS BARBER.

For the past six months the Rev. Andrew Ping, rector of Thorpe, near Newark, England, has acted as barber to one of his parishioners, John Waddington, a confirmed invalid, lives in a little, isolated village, and twice a week the rector rides over and shaves the bed-ridden man.

For the Children

To succeed these days you must have plenty of grit, courage, strength. How is it with the children? Are they thin, pale, delicate? Do not forget Ayer's Sarsaparilla. You know it makes the blood pure and rich, and builds up the general health in every way.

The children cannot possibly have good health unless the bowels are in proper condition. Correct any constipation by giving small laxative doses of Ayer's Pills. All vegetable, sugar coated.

COURT OF REVISION.

Notice is hereby given that the Court of Revision for the hearing and determining of

Great things were expected from the Railway Commission when it was created, and strangers visiting the country go home and tell wonderful tales of the simple and effective way in which Canada deals with her railway rate problems. Sometimes one wonders whether the railways of this country are not responsible for a good deal of this expressed admiration for the system we have set up. The average business man is unable to see that the Railway Commission is accomplishing much. The Railway Committee at Ottawa used to be influenced by the powerful lobbies that the companies turned loose on the members. Now that the Railway Commission has matters in hand, the trouble is of another sort. The Commission are straight enough and not open to influence, but they drift along the current that carries away all men placed in such positions of authority; they grow more and more profoundly respectful for law, for legality, and see all kinds of reasons why nobody should be permitted to do anything that common sense would recommend. Some day there may be such an uprising of business men in this business-man's country that there will be appointed a Railway Commission composed of business men who will forbid any lawyer to come within forty rods of it while it is in session.—Toronto Saturday Night.

WHAT OTHER PAPERS SAY

Toronto Star.

The military camp at Petewawa will contain sixty thousand acres, the idea being to have a place big enough to hold the headquarters staff's opinion of itself without bulging.

Kingsdon Whig.

The earthquake settled the United States senate in favour of the sea level canal at Panama. If it had at the same time settled the senate on the railway anti-rebate bill the president would have been happier.

Toronto News.

A man put \$1,000 on the collection plate at one of the Hamilton churches last Sunday. The police have a description of him, but he is still at large.

Brantford Expositor

It seems that some of the Dominion immigration officials in Great Britain have been travelling in third-class railway carriages and charging the country up with cost of first-class transportation, or about double the money. This is a very polite, and perhaps not uncommon, form of pilfering, but it is pilfering just the same.

Winnipeg Free Press.

The power of an official to debar a publication from the mails—thereby destroying the property—with no redress is one that should not be recognized in a democracy. If publications are unfit for the mails, their unfitness

NATURE IN THE OCEAN.

Creatures Devouring Each Other to Prevent Overproduction.

It is estimated that the cyclops will beget 442,000 young in the course of the year, and if these were all permitted to mature and reproduce themselves the seas would in a short time be a simple mass of living organisms. But the cetochilus, or "whale food," constitutes almost the exclusive food of the vast shoals of herrings and the sea living salmon and salmon trout. Their existence is one of the greatest economic triumphs of nature, for these minute creatures scour the sea of its refuse and keep it sweet, while they form the food of fishes, which in turn furnish wholesome food for millions of human beings.

Feeding on dead vegetable and animal matter, these entomostraca are converted into the food fishes of the world by one remove, being first assimilated by the herrings, then absorbed by the tunny, cod, mackerel and other fishes which follow herring shoals and prey upon the latter. They mainly swim on the surface of the water, and it is the search of them in this position which brings the shoals of herrings to the surface. Their countless numbers are also augmented by the microscopic larvae of fixed shells, such as the barnacle, which begins life in this form first as a one-eyed swimming crustacean, then growing a pair of eyes and finally attaining itself.

In rivers these larvae are the sole

Albert College Belleville, ONT.

Business School founded 1877. Practical and thorough. Five complete courses. Many graduates occupying important places as book-keepers and shorthand reporters.

\$37.00 pays board, room and tuition, electric light, use of gymnasium and baths, all but books laundry, etc., for 10 weeks—longer time at same rate. Special reduction to ministers, or to two or more entering at same time from same place. CURED HIS WIFE of LA GRIPPE

Quebec Man tells how the Great Consumptive Preventative was an all-round Benefit

"My wife took La Grippe when she was in Ottawa," says R. N. Dufosse of Northfield Farm, Que., in an interview. "She got a bottle of Psychine and after using it for a few days she was quite well. I took a cold and am using it and am getting all right. I think Psychine is one of the best tonics on the market to-day."

There you have the whole matter in a nutshell. La Grippe and colds are among the forerunners of consumption.

This man had one, his wife had the other. Psychine not only cured both but it built them up so that their bodies are strong enough to resist disease. All seeds of consumption are killed by

PSYCHINE

stress is one that should not be recognized in a democracy. If publications are unfit for the mails, their unfitness should be defined by statutory enactments and the enforcement of the law should involve a judgment by a competent court. It is reasonably plain that there is to be, within the next generation a great enlargement of the powers of Government, which means of course, that public officials will come into our business lives with increasing frequency as the years pass. Because of this there is all the more reason for discouraging the growth of bureaucratic practices.

Seaforth Expositor.

It is a great pity that Mr. Whitney should have married a fairly good sessional record by rushing through the Legislature the last day of the session a couple of cash railway bonuses amounting to \$340,000. One of these is for a proposed railway on Manitoulin Island. In giving these subsidies Mr. Whitney is going contrary to his expressed views while in Opposition, and, we believe, contrary to his own judgment.

Toronto Globe.

The idea of disfranchising the indigent is taking hold. If people are unwilling to bear their part in public affairs they should not be left with the power to interfere.

Hamilton Times.

The mail and Empire sneers that the \$100,000 voted to the San Francisco sufferers should be sent away at once lest it be stolen by bootleggers. The Mail ought to be an authority on bootlegging. Was it not a Mail manager who some years ago got into trouble for trying to purchase the Legislature with envelopes full of cash bootleg? It is qualified, therefore, to preach at others.

Toronto Star.

The town of Renfrew, in this province, has a citizen who can open a safe of any kind, and, whose fame has spread from end to end of this Dominion. He is Mr. Gravelle, editor of the Renfrew Journal. The other day he opened a safe that had been closed for ten years. This is a tremendous power, and it makes one tremble to think what would have happened if it had been enjoyed by anybody but an editor. An editor is a person who may be entrusted with untold wealth. We do not claim that he is more honest than others, but simply that money has no attractions or temptations for him. In the early days he carried on his business by means of a system of barter, receiving cordwood, potatoes and maple syrup for subscriptions. He advertised various persons, associations and movements for nothing. He was the means of bringing fame and opportunities for wealth to others, seldom to himself. He was always opening safes for other people. This is how Mr. Gravelle got the habit of opening safes, and this is why none of our large banks need be afraid when he visits Toronto. To him a pile of fresh, damp exchanges is more attractive and tempting than a pile of bank bills or debentures.

The Decline of Chivalry.

Wife (drearily)—Ah, me! The days of chivalry are past. Husband—What's the matter now? Wife—Sir Walter Raleigh laid his cloak on the ground for Queen Elizabeth to walk over, but you get mad simply because poor, dear mother sat down on your hat.

finally afflicting itself.

In rivers these larvae are the sole food of all young fish and often also of older fish. In early spring the creatures in every stage—eggs, larvae and perfect though microscopic entomostrea—swarm in the water, on the mud and on the water plants, and were it not for nature's provision for keeping them in check so rapid would be their rate of multiplication that the whole character of the water would speedily be entirely changed.

The Perfect Spanish Beggar.

There is a calm dignity about the Spaniard of every class which will strike a stranger. Even the beggars, of whom, goodness knows, there are plenty, seem to stand on a higher platform than their confreres in other lands. In our country the statutory address is, "Could you spare me a copper?" but a Spanish beggar thus addressed us at a railway station, and we give his address as typical of his class, "O senorito, da me un almonita, y rogare por su feliz viaje!" which may be translated into English thus: "Oh, little gentleman, give me an alms, and I will pray for you a happy journey."

A Singular Epitaph.

At Annapolis, N. S., and in the military cemetery attached to old Fort Anne is a tombstone with the following odd inscription:

Here Lyeth the Body of
Margaret Whitely,

Born the 6th day of April, 1723, and Dyed the 28th of February, 1722.

The singular part of the epitaph is that the child, according to the engraving on the headstone, died nearly a year before its birth.

Interpreted.

"Father," asked the youth, "what is your understanding of the saying, 'The race is not always to the swift?'"

"Practically, my son," replied the wise father, "it means that in the race of life the fast men don't usually come out ahead."

For Your Protection

SCOTT & BOWNE, CHEMISTS,
Toronto, Ont.

CARE OF THE EAR.

Never put anything in the ear for the relief of toothache.

Never wear cotton in the ears if they are discharging.

Never apply a poultice to the inside of the canal of the ear.

Never drop anything into the ear unless it has been previously warmed.

Never use anything but a syringe and warm water for cleansing the ears.

Never strike or box a child's ears. This has been known to rupture the drumhead and cause incurable deafness.

Never wet the hair if you have any tendency to deafness. Wear an oiled silk cap when bathing and refrain from diving.

Never scratch the ears with anything but the finger if they itch. Do not use the head of a pin, hairpins, pencil tips or anything of that nature.

Never meddle with the ear if a foreign body enters it. Leave it absolutely alone and have a physician attend to it.

All He Needed.

A number of Wall street men at luncheon one day were discussing the remarkable ability of a certain operator in the street to weather any financial storm.

"Why," said one of the financiers, "that chap's a wonder. I don't know how many times they've had him against the wall, yet he always contrives to get away."

"I have heard it said," observed another, "that Blank is resourceful enough to make a living on a desert island."

"Yes, he could do that, too," affirmed the first speaker, "if there were another man on the island."

They Stand Alone.

Standing out in bold relief, all alone, and as a conspicuous example of open, frank and honest dealing with the sick and afflicted, are Dr. Pierce's Favorite Prescription for weak, over-worked, debilitated, nervous, run-down, pain-racked women, and Dr. Pierce's Golden Medical Discovery, the famous remedy for weak stomach, indigestion, or dyspepsia, torpid liver, or biliousness, all catarrhal affections whether of the stomach, bowels, kidneys, bladder, nasal passages, throat, bronchia, or other mucous passages, also as an effective remedy for all diseases arising from thin, watery or impure blood, as scrofulous and skin affections.

Each bottle of the above medicines bears upon its wrapper a badge of honesty in the full list of ingredients composing it—printed in plain English. This frank and open publicity places these medicines in a class all by themselves, and is the best guaranty of their merits. They cannot be classed as patent nor secret medicines for they are neither—being of known composition.

Dr. Pierce feels that he can afford to take the afflicted into his full confidence and lay all the ingredients of his medicines freely before them because these ingredients are such as are endorsed and most strongly praised by scores of the most eminent medical writers as cures for the diseases for which these medicines are recommended. Therefore, the afflicted do not have to rely alone upon Dr. Pierce's recommendation as to the curative value of his medicines for certain easily recognized diseases.

A glance at the printed formula on each bottle will show that no alcohol and no harmful or habit-forming drug enter into Dr. Pierce's medicines, the being wholly compounded of glyceric extracts of the roots of native, American forest plants. These are best and safest for the cure of most lingering, chronic diseases. Dr. R. V. Pierce can be consulted FREE, by addressing him at Buffalo, N. Y., and all communications are regarded as sacredly confidential.

It is as easy to be well as ill—and much more comfortable. Constipation is the cause of many forms of illness. Dr. Pierce's Pleasant Pellets cure constipation. They are tiny, sugar-coated granules. One little "Pellet" is a gentle laxative, two a mild cathartic. All dealers in medicines sell them.

THE PALACE OF DOOM

STRANGE LEGEND OF A MYSTERIOUS STATUE IN ROME.

**It Pointed the Way to a Scene of
Silent and Dazzling Splendor—The
Fate of the Man Who Solved the
Enigma of the Finger Message.**

There stood in Rome many ages ago a beautiful marble statue the mystery of which attracted the attention of all the wise men from far and near. Nobody could remember when it had been erected, and nobody knew what it meant.

It was the figure of a woman, tall, strong and supple. She stood erect, with her right arm outstretched, her mantle falling in graceful folds about her figure, on her face a look, half smile, half frown, luring, yet appealing, but always holding the observer by a strange feeling that it roused of mystery, glory and horror.

But even all that, written so clearly in the mystic signs that art uses, might have been overlooked by the people had it not been for a more material puzzle presented by the statue. On the third finger of the outstretched hand was written in unfading letters, "Strike here." And therein lay the mystery.

Years came and went, and wise men puzzled their brains to find the secret. Seers from faroff lands came to Rome, attracted by the statue, and still it stood, mute, cold, inexplicable.

One day a young man stood before it. He had grown up with the idea of solving the mystery, and each day since he was a little child he had come for a few moments and stood silently gazing at the strange countenance.

He had learned to love the face, the wise lips that looked as if they might part and tell the secret that ages had yearned to know, but through these ages only he had been sincere in his search. Faithful through all disappointments he had gained strength and wisdom, and now as he stood before the statue the sun, halfway up the eastern sky, shone full upon the image.

A strange thrill passed through the man, and, looking in the direction indicated by the pointing finger, he saw, some yards away, the shadow of the outstretched hand on the ground. He gave a low cry, and, after noting the spot well, he departed.

That night at midnight he went to the place and began to dig in the ground where the shadow of the hand had fallen. A long time he worked, never ceasing his digging, when suddenly his spade struck something hard. Then his zeal increased, and, clearing a space, he saw beneath him a trapdoor, with a great stone ring. Grasping the ring he pulled open the door and started back, dazzled, for a flood of light burst upon him from out of the depths.

Quickly recovering, the young man looked again and beheld a wide marble staircase descending from the trapdoor. Throwing down his spade he passed through the door, down the steps and found himself in a vast hall. The floor of this room was of marble, pure white, while the walls and ceiling were of the same material in many colors. The huge pillars upholding the vast dome shone like alabaster. Rare paintings hung upon the walls, and rich rugs lay strewn upon the floor.

In the center of the room a fountain stood. The water in its basin was as pure as crystal, but not a ripple stirred its surface, and no pleasant lapping charmed the ear as it does when water falls from on high, for, though the fountain was apparently perfect, no

DR. AGNEW

WITH THE FORESIGHT OF A PROPHET, BY THE AID OF THAT GREATEST OF KNOWN TREATMENTS—"DR. AGNEW'S CURE FOR THE HEART"—IS LEADING THOUSANDS OUT OF "EGYPTIAN BONDAGE," OUT OF ILL-HEALTH AND UNTOLD SUFFERING TO THE "PROMISED LAND" OF PERFECT HEALTH

DOES YOUR HEART ACHES?

DR. AGNEW'S CURE FOR THE HEART WILL STOP THE PAIN

Is there palpitation — Is there fluttering — Is your breath short — Is it hard to find your pulse sometimes — Do you have smothering spells — Do your feet and ankles swell — Do you have fainting turns — Do you have nightmares — Do you have pain in the left side, shoulder or arm — Ever experience great hunger and exhaustion — Do you have chilly sensations? Dr. Agnew's Cure for the Heart has saved thousands of sufferers, and it can help and cure you; but you cannot afford to toy with heart troubles, so if you have any of the heart symptoms today then to-day is the day to put yourself in touch with a remedy — this great heart treatment that never fails.

"I was under treatment," says Mr. A. Lavers, of Collingwood, Ont., "with some of the best physicians in London (England) for what they diagnosed as incurable heart trouble. I suffered agonies through pain about my heart, fainting spells, palpitation and

ter that had streamed from our eyes.

The Bloodstone.

Almost every jewel has superstition of some sort attaching to it, and the bloodstone is not wanting in this particular. The story is told of it that at the time of the crucifixion some drops of blood fell on a piece of dark green jasper that lay at the foot of the cross. The crimson crept through the structure of the stone, and this was the parent of this beautiful jewel. The dark red spots and veins were supposed to represent the blood of Christ, and many wonderful properties were attributed to the stone. It was thought to preserve its wearer from dangers, to bring good fortune and to heal many diseases.

Great Men Have Been Erect.

The first object of physical methods should be to straighten and expand the body. The world may in a broad, general way be divided into two great classes—the erect and the inerect, the strong and the weak. The epoch makers—the Cromwells, Luthers, Napoleons, Wellingtons, Washingtons and Websters—have been men marked by a straight spine and a broad, high, deep chest. The mastered millions, the defeated ones, have been the inerect.—Outing.

Extenuating Circumstances.

A woman was charged with stealing a dozen cases of silver. She appeared before the second judicial chamber. Said the judge, "Come, tell us the truth." Said the woman: "The truth, my good judge, is that I have not been able to resist the temptation. Consider, your honor—they all bore my initials."—L'Indepandance Roumaine Bucharest.

No Wonder.

"What makes Archie Feathertop have such a strange, preoccupied look about him lately?"

"Preoccupied is the right word for it. He's engaged to a girl, but he has found another girl that he likes better."

Birds That Carry Their Young.

The woodcock, it is said, has been known to carry away her young when threatened with danger. She places them on her spread feet, pressing them between the toes and the breast. A naturalist says many woodcocks also carry their young down to marshy feeding grounds in the evening, returning before dawn. In fact, they have no means of feeding their young except by carrying them to their food, for they cannot convey their food to them.

Not a Bombardment.

Kissam—Has her papa ever fired you?

Higgins—He has never resorted to bombardment. His tactics are more in the nature of a passive blockade.

"How is that?"

"When I call to see his daughter he remains in the parlor during the whole of the interview."

Also When Is a Sea Dog?

"Maw!"

"What is it, Johnny?"

"Do the ocean greyhounds ever bite the ocean tramps?"

It is very easy to get angry with somebody for doing what it would be very unreasonable for anybody to get angry over if you do it.

CASTORIA.

The Kind You Have Always Bought

runs from on high, for, though the fountain was apparently perfect, no water rose from it to fall again.

On seats running around this silent fountain were many men in rich brocades and costly fur robes. Lifelike they looked, but to the touch they were as marble. It was as if in the midst of life death had come and petrified these beings in mockery.

Around on tables and benches were scattered piles of gold and precious gems. Delicate enameled vases and swords inlaid with gems added their wealth to the place.

But rarest of all the gems was a great carbuncle, which stood in a corner of the room and from which came the sole light by which the place was relieved from darkness. In the corner opposite to this stone stood an archer, his bow bent, his arrow on the string, aimed at the carbuncle. On his bow, shining with reflected light, were the words:

"I am that I am. My shaft is inevitable. You glittering jewel cannot escape its stroke."

As he looked on all this in silent wonder the young Roman heard a voice utter one word—"Beware!"

Then he passed into the next room and found it fitted up as magnificently as the one he had just left. All manner of couches were about this room, and reclining on them were wonderfully beautiful women. But their lips were sealed in this place of silence.

From there he passed on, finding many more wonders—rooms filled with treasures of art, stables filled with fine horses, granaries filled with forage. Everything that could make a palace complete was there.

The young Roman returned to the hall.

"I have here seen," he said, "what no man will believe. I know that of this wealth I should take nothing, but to prove to them that I speak truth can be no harm."

Then he took in his arms a jeweled sword and some rare vases, but suddenly all was dark.

The charm was broken. The arrow had left the bow and shattered the carbuncle into a thousand pieces. Pitch darkness overspread the place.

Then the young man remembered the warning, but too late. And there he probably adds one more to the silent watchers in the magic chamber.

Has this story a moral? Let those answer who have eyes to see.

Fruit-a-tives

OR "FRUIT LIVER TABLETS"

Fruit-a-tives will cure the worst case of Chronic Constipation and Biliousness.

Because Fruit-a-tives are the true liver tonic. They strengthen and invigorate the liver—make the liver give up enough bile to move the bowels regularly. The bile is nature's laxative.

Fruit-a-tives are the finest Kidney and Bladder Remedy in the world.

Fruit-a-tives reduce inflammation and congestion—relieve the over-supply of blood—enable the kidneys to rid the system of waste—and thus prevent the formation of uric acid. Fruit-a-tives take away that pain in the back—and quickly cure irritated bladder.

Fruit-a-tives completely cure Headaches and Rheumatism.

Headaches and Rheumatism both mean poisoned blood. Either the skin, kidneys or bowels are not ridding the system of waste matter. Fruit-a-tives invigorate and strengthen these organs—start up healthy, normal action—rid the system of poisons—and purify and enrich the blood. That means away with Headaches and Rheumatism.

Fruit-a-tives are the ideal tonic for everyone.

Fruit-a-tives build up, strengthen, invigorate. They sharpen the appetite—steady the nerves—enable one to sleep well—and keep the whole system in perfect health. They are fruit juices, concentrated and combined with tonics and internal antiseptics.

See a box or 6 boxes for \$2.50. Sent on receipt of price if your druggist does not handle them.

FRUIT-A-TIVES LIMITED - OTTAWA.

How Would You Like This Butter?

The Moor prepares butter in an original way and gets a different taste from the usual one. Fresh butter ("sibida," as he calls it, as known by us, he despises and uses only for cooking. It must be old if it is to be liked. After it has lain in a hole in the ground for some years and has got a certain appearance it becomes a delicacy. To make butter a gooshkin is turned inside out. It is filled with milk, bound tight and tied to a tree. There it is beaten backward and forward till the butter is made. That is why you cannot get butter in Morocco without hairs all through it. The butter is then laid on pieces of wood and the maker goes to sell it. Possible buyers lift the dirty cover, put in their fingers and take out a taste and if the goods do not please close it down again and the salesman pursues his way.

Ingrowing Toe Nails.

It has been found by some that the copious application of dried powdered alum is sufficient to cure most cases of ingrowing toe nails. The applications are not painful, and the inflamed tissue is dried up, and a hard, resistant, nonsensitive bed is formed for the nail. The toe is wrapped in a cloth soaked in soap and water for twenty-four hours beforehand, and then the powdered alum is poured into the space between the nail and its bed, using cotton to keep the alum in place and repeating the application daily. The supuration, if any exists, rapidly dries up, pain and discomfort are almost immediately relieved, and, the application being repeated for about five days, a cure usually results.

WONDERFUL MIRAGES.

These Seen In the Winter Twilights In Northern Alaska.

The most wonderful mirages ever beheld by mortal eyes are those that are seen in the twilight winter days in northern Alaska. These remarkable ghastly pictures of things, both imaginary and real, are mirrored on the surface of the waste plains instead of upon the clouds or in the atmosphere. Mimic lakes and water courses fringed with vegetation are to be seen pictured as real as life on the surface of the snow, while grassy mounds, stumps, trees, logs, etc., which have an actual existence some place on the earth's surface, are outlined against mountains of snow in all kinds of fantastic shapes. Some of these objects are distorted and magnified into the shapes of huge, ungainly animals and reptiles of enormous proportions. The fogs and mists are driven across these wastes by the winds, and as the objects referred to loom up in the flying vapors they appear like living creatures and seem to be actually moving rapidly across the plain.

At other times they appear high in the air, but this is a characteristic of the northern mirages that are seen near the seashore. When the vapors and mists are driven out to sea the images mirrored in them appear to be lunging through the waters at a terrific rate of speed, dashing the spray high in the air, while huge breakers roll over them and onward toward the mountainous islands beyond and against which they all appear to be dashing. Monstrous serpents, apparently several hundred feet long, sometimes with riders on their backs, men on horseback thirty to fifty feet in height, animals and birds of all kinds of horrible shapes and colors seem to be scurrying past, racing and chasing each other until they are lost in the twilight fogs or dashed to pieces upon the rocky islands mentioned above and which are twenty miles out to sea.

THE RED SQUIRREL.

He Stores Very Little Food For Use In Winter.

In Maine—in fact, all over New England—red squirrels do not put by great hoards of any kind for winter use. When a Maine red squirrel has filled itself with acorns and beechnuts it will hide a few here and there—under leaves, in hollow logs, in cracks of rifted trees and among stone heaps.

An average red squirrel, having the run of an oak grove in the fall of the year, may in the course of two weeks hide away from two to four quarts of acorns, though they will be in perhaps twenty different places, and in no instance which we have noted has any nut been shelled.

The squirrel which plans a hoard of nuts and makes deliberate preparations for winter is the little chipmunk, or striped squirrel, which seeks winter quarters soon after heavy frosts and which remains in hiding all winter. The chipmunks often hide as many as two quarts of shelled beechnuts in one place. Their storehouses are, as a rule, under the ground, in sloping and sandy soil, the burrows having been dug with true engineering skill, so that no freshet can drown them out.

It is believed that most observing woodsmen will say that the red squirrels of this vicinity seldom make large caches of provisions for winter consumption and never shell the stored

Slaves to Spring Cat

SPR

Pe-ru-na

Hon. Wm. Legislature, Washington
"The great my opinion, as observat
"The most bad cold. F
catarrh, in mind and be
dersement."

Miss Lydia Herziger, Grand Recorder of American Daughters of Independence, writes from Neenah, Wis., as follows:

"I have used Peruna now for four years, each Spring and Fall, and it keeps me perfectly well and strong.

"I am able to continue working and do not have to take a three months' rest, as I used to do every year. This is a great comfort to me, as I was not able to afford such a long rest.

"I find that it is a great preventative for colds and coughs and soon rids the system of all disease and is an admirable medicine. I can honestly endorse it."—Lydia Herziger.

Spring Catarrh.

Almost every one has come to believe that spring is a season that brings derangements of the body dependent on blood impurities.

This belief is an old one, is nearly universal, and has arisen, not as the result of the teachings of the medical fraternity, but has been learned in the bitter school of experience.

Nervous Depression.

Depression of the nervous system at the approach of spring is a fertile source of blood impurities.

There are general lassitude, dull, heavy sensations, continual tired feelings, with irregular appetite, and sometimes loss of sleep.

That Tired Feeling.

That tired feeling, which is the natural result of the depressing effect of warm weather immediately after the invigorating cold of winter, quickly disappears when Peruna is taken.

The Proper Remedy.

Peruna meets every indication and proves itself to be perfectly adapted to all their varied peculiarities. Peruna invigorates the system, rejuvenates the feelings, restores the normal appetite and procures regular sleep.

Do Not Delay.

Get a bottle of Peruna when the first languid feelings make themselves apparent in the spring. Take it according to the directions on the bottle. Continue this treatment through the first months of spring.

This course of treatment is no experiment; it is as positive in its results as any fact of science can be.

A Spring Tonic.

Almost everybody needs a tonic in the spring. Something to brace the nerves, invigorate the brain, and cleanse the blood. That Peruna will do this is beyond all question. Everyone who has tried it has had the same experience as

nuts. In fact, the red species have no need to pay much heed to such matters, as they are abroad and active in the coldest days of winter as much as they are in midsummer, so precautions for food are not demanded. As the red squirrels subsist for a good part of the year upon the cones of pines and spruces, which hang to the limbs, they do not care how deep or hard the snow may be, feeling secure in finding all the food they want among the tree-tops.

AIR IN HIGH ALTITUDES.

The Same as In Other Places, but It Contains No Microbes.

It is an error to think that the chemical composition of the air differs essentially wherever the sample may be taken. The relation of oxygen to nitrogen and other constituents is the same whether it is on the heights of the Alps or at the surface of the sea. The favorable effects, therefore, of a change of air are not to be explained by any

From the president of the nation down to the humblest citizen the fascination of grip and password enthalls. It is not that the lodge is a secret organization, though that is part. It is not that its membership is chosen with caution, though such exclusiveness undoubtedly makes it more eagerly sought. It is not that it gives direct benefits or that it offers protection to the family when the bread earner has departed. Not these things alone make the lodge popular. Greater than these is the desire for social companionship, the love of fellowship, the power of community of interest. Not a substitute for club or church, yet filling a place in men's lives that neither occupies, the lodge has developed the old time guild idea and fitted it to modern conditions and is an institution that exerts a tremendous power in business, in politics and in society. So rapidly does it increase in popularity that it shows little indication of ever wielding less power over men's destinies than it does today.—C. M. Harger in Atlantic.

Catarrh Restored to Health by Pe-ru-na.

Wasting the Time to Cure Catarrh.

It Invigorates Mind and Body.

Wm. G. Hunter, Ex-member North Carolina House, writes from the Census Office Building, Washington, D. C., as follows:
"I am pleased to speak a good word for Peruna, as I found it an excellent tonic and spring medicine and very effective in ridding the system of cold and catarrh."
"About two years ago my system was all run down in the spring and I thought I would try and see if Peruna would be of any assistance in bringing back my health and strength."
"I found that it was splendid and all the medicine that I needed. In a little over a month I was well and did not need to take any more medicine."
"I shall recommend it to every one in need of a tonic, and know that I have only to take a few doses of Peruna when I take a cold and I will soon be over it."
—Wm. G. Hunter.

HON. Wm. G. HUNTER

Takes Pe-ru-na Every Spring.

Miss Tilly Marx, 421 14th St., Milwaukee, Wis., writes:
"I am pleased to endorse Peruna, as I found it very efficient in ridding my system of a severe cold and catarrhal trouble, after I had tried many other remedies without getting relief."
"I took Peruna for two weeks, when I was much better, and in two weeks more I was entirely rid of the cold and catarrh. I shall take it every spring as a tonic, as I found that it made me much better in every way."
—Tilly Marx.

MISS TILLY MARX

JAMES A. MOODY

Mr. James A. Moody, Ex-president Board of Education, Mineral Co., W. Va., writes from 314 Massachusetts Avenue, N. E., Washington, D. C., as follows:

"My family have used Peruna for several years past with excellent results and I take pleasure in testifying to its superiority as a remedy for catarrh."

"Every spring that dreaded disease will show up in my family and we always turn instinctively to Peruna to ward it off."

"It has never yet failed, and I never lose an opportunity of recommending it to my friends."
—James A. Moody.

Mrs. Winnifred Power, an artist, who, in a recent letter from 215 7th St., Portland, Ore., says:

"I am pleased to speak a good word for Peruna, as I found it an excellent tonic and spring medicine and very effective in ridding the system of cold and catarrh."

"About two years ago my system was all run down in the spring and I thought I would try and see if Peruna would be of any assistance in bringing back my health and strength."

"I found that it was splendid and all the medicine that I needed. In a little over a month I was well and did not need to take any more medicine."

"I shall recommend it to every one in need of a tonic, and know that I have only to take a few doses of Peruna when I take a cold and I will soon be over it."
—Winnifred Power.

Nature's Assistance.

Spring is the best time to treat catarrh. Nature renews herself every spring. The system is then renewed.

spring weather. This renders medicines more effective.

A short course of Peruna, assisted by the balmy air of spring, will cure old, stubborn cases of catarrh that have resisted treatment for years.

A Word of Advice.

To those who have been afflicted with chronic catarrh we wish to say that the spring season affords you a splendid opportunity to get rid of your disease.

It may be you have been afflicted for several years; you may have tried different remedies. Perhaps you have become discouraged.

Now Is Your Opportunity.

This failure was during the winter months. But now is your opportunity. Nature comes to your assistance at this season.

Just help her a little and she will bring you out of the nightmare to which you have been chained so long. Give Nature a little assistance and her strength is all your own.

A Typical Case.

Geo. M. Fillmore, late 1st Lieut. 3rd U. S. Artillery, writes from 909 L St., N. W., Washington, D. C., as follows:

"I brought forward from winter into spring a sickening case of catarrh which was making existence miserable for me, until I was induced to try a bottle of Peruna."

"An immediate improvement gave me hope, if not relief. I kept up taking Peruna and it has so strengthened and relieved me that I am now confident of a cure. I heartily endorse Peruna for catarrhal affections and am sure for their weakening effects."
—Geo. M. Fillmore.

A short course of Peruna now will be just in time. During the month of April you will find the strategic time to rid yourself of chronic catarrh, one of the most persistent, stubborn diseases in the whole list of human ailments.

After you have tried it you will say Peruna is positively the best spring medicine you have ever used.

A great many years of extensive trials of this remedy in this class of derangements have demonstrated that there are no failures.

Thousands of Testimonials.

Thousands of cases might be quoted in which Peruna has rescued people from the ravages of spring catarrh, and put them on a good, solid foundation of health.

We can give our readers only a slight glimpse of the vast array of unsolicited endorsements. Dr. Hartman is constantly receiving. No other physician in the world has received such a volume of enthusiastic letters of thanks.

If you do not derive prompt and satisfactory results from the use of Peruna, write at once to Dr. Hartman, giving a full statement of your case and he will be pleased to give you his valuable advice gratis.

Address Dr. Hartman, President of The Hartman Sanitarium, Columbus, Ohio. All correspondence held strictly confidential.

Crushing a Bore.

An Englishman, complimenting Americans on their skill at postprandial oratory, went on to discuss the possibility of boring an audience. He said the severest reproof for a bore which he recollected was that administered by the great Talleyrand while driving with a friend who kept telling him stories. As they passed through the streets of a continental town, which in those days were policed by many sentries, they observed one sentry yawn at his post, and Talleyrand said to his friend: "Hush! We are overheard."

BATH.

JAMES COLLIER, Captain.

KAI WANG;

A TALE OF SOUTHERN CHINA.

CHAPTER VII.

No doubt Larry Kennedy was just as susceptible to flattery as the average man, and the very first feeling that swept over him was pleasure at the thought of being deemed a person of such importance by these high and mighty personages concerned in the plot of the Dowager Empress.

This sensation, however, was only fleeting; when a man's life is in danger such things are apt to lose much of their glamour. Life was just as dear to the little dude from London as to the most favored child of fortune, and as the outcries along the street increased in volume, he knew his departure from the house of the idol-maker was to be marked with more or less red fire.

Little he cared. His confidence in Kai Wang was so great that he stood ready to back him against the combined force of those who conspired to bring about his downfall.

The Chinese merchant seemed to consider; then he took an observation, while Larry awaited his decision. Did Kai Wang tell him to walk forth into the midst of the howlers he would have done so with unlimited assurance that in some mysterious manner the magician would blind the eyes of the mob so that they might believe him to be one of their number.

When Kai Wang returned he declared the riot had assumed greater proportions than he had at first suspected, and the chances were he would have to allow a search of his building if he wished to save it from total demolition.

He showed little concern regarding his own private affairs, but was anxious with regard to the safety of this friend, for whom he had conceived so great and sincere an affection.

"You must escape without delay and seek the protection of your own people. My house has sheltered you since the last moon, but the time has come when it may no longer afford an asylum to my friends. Little the world suspects what strange and mysterious things are taking place in China—only those people of the North are allowed to have a hand in governing our destinies. It is all wrong, and will bring much trouble to a confiding people. Now listen to me, and I will give you directions how to escape."

It was simple enough. A black robe, a few magic touches from the resourceful hands of Kai Wang, and, lo! for the time being Larry might pass for one of the sombre priests who daily performed in the temples where the great joss held forth.

There was no need of lengthy instructions. All he had to do was to keep a still tongue between his teeth and attract as little attention as possible.

Kai Wang gave him a few directions with regard to the interior of the adjoining pagoda and then hustled him to the rear door, which was connected by means of a passage with the side of the temple.

Then Larry launched forth for himself, leaving to the other the task of placating the mob.

Perhaps one might hardly believe, upon seeing Larry Kennedy for the first time, that he was capable of doing much thinking or capable of engineering a campaign; but that is just where the careless observer would make a mistake.

nection with the hideous hydra-headed monstrosity, for it suddenly began to heave and groan frightfully, while tongues of fire seemed to issue from its several mouths.

Larry was provoked, but not at all alarmed.

His ordinary good sense would have been a safeguard against anything like a panic, and if that were not enough, he had examined the mechanism of these wonderful figures, so that their abilities were quite familiar to him.

The only thing that gave him cause for anxiety was the possibility of the heaving of the great idol bringing about an influx of worshippers or priests, and the consequent danger of discovery.

He had hardly passed the distressed god when he almost ran into the arms of a figure clad in a black robe similar to his own.

The priest had evidently been busily engaged somewhere in the rear, and, astonished at the sound, had hurried round the base, to discover who had the audacity to stir up the joss.

Perhaps that was his especial duty, and he was indignant at any interference with his prerogative.

Larry had to guess at this. True, the dignity of the temple was not backward about letting him know what he thought of such a disgraceful proceeding, but the trouble was, Larry's education had been sadly neglected, so that he was not very familiar with Chinese verbs.

He simply knew instinctively that he was being called down with the choicest expletives in the lengthy repertoire of a Chinese scholar, just as any sane man may understand when he is being scolded, no matter whether the tirade comes in Russian, Sanscrit or Choctaw. Larry was a peaceable chap; he really wanted no trouble, and would go out of his way to avoid it, though, should the crisis be forced upon him he always toed the mark.

Hence, bent upon propitiating the angry fellow of the black robe, he raised his hands aloft after the fashion Kai Wang had taught him, and which was as much to declare that, being under a vow, speech was for the present denied him.

But even this did not calm the excited disciple; perhaps something about the other had ere now aroused his suspicions; be that as it may, he continued to block Larry's progress, even while backing before him, and the volley of Chinese that flowed from his lips pronounced him a man of uncommonly high literary attainments.

And Larry, seeing no escape, finally came to the conclusion that his only chance lay in descending upon this heathen Chinese hip and thigh.

CHAPTER VIII.

There was a good quality about this little man exiled from London; when he made up his mind to do anything he usually plunged into it with his whole heart, no matter whether the occasion represented a season of enjoyment or some disagreeable duty like that of the present.

The way he went at that voluble, gesticulating pagan was a caution; it would have reminded an old traveller of the sirocco whipping along over desert wastes, whirling the sand in blinding clouds.

No doubt the fellow was more con-

streets of the native quarter, and gaining the European section, where safety was assured to a peripatetic son of New York.

He had occasion to rejoice that the Chinese render a certain amount of homage to the attendants of their temples, and that his passage through the street was not apt to be obstructed by evil-disposed persons, for he it known Larry had experienced as much fight as he craved for one night's entertainment, and if given his way would have kept the peace henceforth.

He missed the link-boys, with the consequent glory and excitement attending his other triumphal passage through these same streets; and it was not long before a certain fact began to loom up before him with tremendous force; there was a strong possibility that he might get lost in the labyrinth of cow paths which the swarming natives called streets.

And the odors! But Larry had by degrees become accustomed to their inevitable presence, and, being something of a philosopher, endured what he could not possibly cure.

It might be entertaining reading to tell how Larry stumbled along once he lost his bearings, utterly unable to ask his way because of the peculiar conditions surrounding him, and wondering if he were a child of misfortune, doomed to walk on forever, like the Wandering Jew—but time and space forbid.

Besides, other events of a more tragic and deeply interesting nature await their turn, and these minor matters, upon which no particular action hinges, can be readily left to the imagination.

Larry looked upon his predicament as anything but trifling, and was seriously concerned lest he should bring up again in the street where stood the pagoda in which he had struggled with the priest; he had heard of men who were lost in the desert almost invariably moving around in a circle, and he did not see why the same thing might not apply in a city where the miserable streets turned and twisted in a most confusing manner.

It was in this sore strait that his good sense and stubborn British nature played him a favor, for he resolved to keep working to the right, in order to resist this tendency to bear toward the left, and keep pushing on—that last means victory in nine cases out of a dozen, and with Larry the result was joyful enough, for he detected a change in the appearance of things, and sounds came to his ears, sounds that must have their origin in the quarter where pagodas and kiosks were not known, and where, instead, the ringing of church bells summoned the few faithful to worship on a Sabbath morn.

It was an intense relief to find himself again beyond the spell of ancient witchcraft and mummery that held sway within the region of Canton proper, and see signs around him that told of civilization, enlightenment, progress and Christianity. After crossing the bridge, away went the sable-hued garment into the canal, and Larry blossomed out as himself, in all the panoply of loud-checked garments, tourist topee and divine little side whiskers, while strapped to his back was a bundle which contained the amount of his present worldly possessions.

It was easy travelling now, for his tongue could aid him if necessary.

The hotel was his objective point, the hotel and Avis, about whom he felt particularly anxious, since a new fear had flashed into his head. What if this lordly Russian, acting in conjunction with the powerful emissaries of the Dowager Empress, and suspecting that the valuable papers might have already passed into the keeping of Dr. Jack's wife—as indeed they positively had, though transferred by her to the security of the British consulate's safe—what if, under these conditions, the plotters had conspired to rob Avis, or to abduct her, after the winning fashion of Chinese chicanery and trickery, and she without the aid of a stranger arm to defend her!

It made Larry groan to remember that the arm which had so often and so loyally come between this charming woman

FROM ERIN'S GREEN ISLE

NEWS BY MAIL FROM IRELAND'S SHORES.

Happenings in the Emerald Isle of Interest to Irish-Canadians.

The last time Irish war pipes were played "in action" was during the advance of the regiments forming the Brigade at Fontenoy.

Mr. Wm. McCord, of Stewartstown, retires on a well-earned pension after a service of 44 years in the postal service on the Ardrea route.

A bank of earth fell on the Keady & Armagh Railway, in course of construction. Four men were seriously injured, of whom one subsequently died.

There being no criminal business for trial at the Limerick City Quarter sessions on the 27th ult., Judge Adams was presented with a pair of white gloves.

At Belfast Assizes on the 29th ult., in the breach of promise action by Miss Robinson against a Belfast clergyman named Smith, plaintiff was awarded £270 damages.

Gout is rarely known among the working classes of Ireland. Their immunity from this complaint is thought to be due to the fact that their food consists largely of potatoes.

It is stated that the residence of Thomas McInerney, situated midway between Ennis and Limerick, was attacked by parties unknown and several shots fired through the doors and windows. Luckily, none of the inmates was injured. McInerney is a farmer and land bailiff on the Going estate. The police are investigating the matter.

Mr. Justice Johnson, at the opening of the Cork Assizes, commented on the fact that, while the general condition of the county of Cork was favorable, there was a considerable increase in the number of persons under special police protection. He characterized as disgraceful the conduct of the tumultuous gathering which, within a few miles of Cork city, ostentatiously assailed an officer of the court while engaged in serving the King's writ, and dared him to come on.

John Desmond, aged 76, a farmer residing near Kinsale, recently visited that town and purchased half a pint of carbolie acid and half a pint of whiskey, both being contained in exactly similar bottles. He put the bottles in his pockets and proceeded home. After his arrival he took a drink from what he supposed to be the whiskey bottle, but discovered, when too late, that he had swallowed a quantity of carbolie acid.

The Marquis of Dufferin, who was 40 the other day, has given few signs as yet of inheriting his father's brilliant abilities, although he made a good start in the Diplomatic Service. He entered that service in 1891, and served at Constantinople, Paris and Stockholm. He is now an assistant clerk in the Foreign Office. Until a few years ago Lord Dufferin had little prospect of succeeding to the title, as he was the second son. His elder brother, however, was killed at Ladysmith during the war.

The report of Mr. Drury, Local Government Board auditor, on the audit of the accounts of the Dublin Corporation for the year ended 31st of March last reveals an extraordinary state of affairs. The auditor states that expenditure is steadily mounting up. Without apparent proportionate increase in obligations, wages had risen from £53,000 in 1885 to £81,500 in 1905. In accordance with a decision of the King's Bench Division, the auditor disallowed the sums paid to the Lord Mayor during the year ended March, 1895, for his own and his secretary's salary.

A DANGER TO CHILDHOOD.

perhaps one might hardly believe, upon seeing Larry Kennedy for the first time, that he was capable of doing much thinking or capable of engineering a campaign; but that is just where the careless observer would make a mistake.

Thrown upon his own resources, the little man was capable of doing considerable planning, since all affection, which he dearly delighted to indulge in under ordinary conditions, was tossed aside for the serious business in hand.

Calmly and confidently he passed along the short, covered way that led to the door of the temple.

Kai Wang had assured him there was good reason to believe the place of worship would be untenanted at that hour save by the grim figures of the ugly gods.

This was a consummation devoutly to be wished, as his situation gave Larry more or less uneasiness.

The shoulds still continued, only with increased vigor.

At least there was one favorable thing he could hope would spring out of this clamor—any worshippers who might chance to be in the joss house at the time would, of course, rush out to discover what all this tremendous hubbub meant.

Curiosity gets many a man into trouble, but it also occasionally serves one well.

When Larry pushed his way into the sacred joss house he found lights burning, as usual, on the altar before the great image that represented the majesty of creation to the deluded idolaters.

The interior of the temple was fragrant with burning incense.

Larry had ere now obtained fugitive glimpses of this interior, so that it was not wholly strange to him—an ordinary London man could not live in a house of idols next door to the house of joss for many weeks without having a natural desire to know something about the peculiar methods of worship in vogue there.

So Larry profited by his opportunities, and had found occasion to obtain an insight into the mystery of mysteries, which the devout believers in the doctrines of Confucius, as a usual thing, keep so religiously from the profane eyes of the foreign seoffer.

All seemed favorable to the carrying out of his little enterprise.

Most actors crave the privilege of a full house, but Larry was well content to waste his talents upon an empty one.

Circumstances alter cases, since there had been times in his past when he had been only too glad to invoke the applause of gallery gods, whereas now he appeared before a different class of deities, and, no matter how well he played his part, could expect nothing from them in the way of applause.

Softly he moved across the floor of the vast building, where hundreds knelt at certain hours in adoration before the miserable work of human hands, but which was now apparently given over entirely to him.

Desirous of reaching a door on the opposite side, the existence of which was known to few save the priestly attendants, he brushed past the foot of the idol, just where a heap of offerings remained.

In so doing he must have stepped upon some loose board that had a direct con-

The way he went at that voluble, gesticulating pagan was a caution; it would have reminded an old traveller of the sirocco whipping along over desert wastes, whirling the sand in blinding clouds.

No doubt the fellow was more surprised now than ever, but one thing was immediately accomplished, to Larry's satisfaction—his prompt tactics had shut off the Chinaman's supply of wind so that the vocal factory closed for lack of material.

It was a battle royal for a few brief seconds, for the combative priest, recovering somewhat from his surprise and consternation, put up a fair quality of fight, though sadly deficient in the knowledge of tactics connected with the manly art, which was fortunate for Larry, as he was shorter by half a head than his antagonist.

How that grim old heathen god must have enjoyed the little affair! Larry fancied the ignominious greens to which he gave vent had turned into chuckles, but then, it might be that the supply of air was running short.

Since the affair had unluckily taken on this serious phase, the only thing that could establish Larry's peaceful progress was the complete crushing and elimination of the meddler.

How he yearned for the athletic abilities of a Dr. Jack, to be able to whirl the black-robed fraud into the lap of his idol, and leave him there, too astonished and horrified for speech.

Liliputian tactics, while lacking the dash and vigor attending the rush of giants, may be just as effective, so far as results are concerned; and Larry, having gotten the range of his adversary, proceeded to land blow after blow where it would be most effective.

Such vicious treatment could have but one result—the final knockout of the recipient.

When the pounded priest did eventually go over in a heap, Larry, winded as he was, gave evidence of his intense satisfaction; just as the bantam rooster, after downing his antagonist, might leap upon the nearest fence, flap his diminutive wings, and crow most shrilly.

It was an event of some importance to him.

He did not forget where he was, and how essential there should be a speedy exit if he hoped to reap all the results of his victory.

So, with one last upward look at the grinning monster before whom this little battle royal had been fought, he again headed for the door that had been in his mind at the time he was halted.

Once outside, he readily found a way to the street.

It was in great commotion.

Hundreds of excited Celestials were clamoring in front of Kai Wang's domicile.

As yet he had not admitted any of the mob, but was parleying with them in his own inimitable style, agreeing to a search of his house from one end to the other; but the work must be done, in order not to bring down the vengeance of the outraged gods, by a respectable committee appointed by the people.

Of course they would do this, for Kai Wang had a strange influence over the minds of those who came in contact with him, so that they were in a measure afraid of him; and once this was done the maker of idols would befuddle that wretched committee until he had them in a condition to believe black was white, while the object of all this intense solicitude was steadily placing a greater distance between the coign of danger and his own person.

Larry cast one last look at the scene of turmoil, and mentally thanked his lucky stars he was elsewhere than in the midst of those excited Celestials. A mob is bad enough even under the most favorable conditions, and particularly to be dreaded when composed of ignorant heathens, inflamed by religious bigotry and hatred.

Then he moved away.

This departure held no comparison with the magnificent position he had occupied when posing as a wearer of the yellow jacket, and drawn in a noble jinrickshaw; still, he had high hopes of passing unmolested through the narrow

plotter had conspired to rob AVis, or to abduct her, after the winning fashion of Chinese chicanery and trickery, and she without the aid of a stranger arm to defend her!

It made Larry groan to remember that the arm which had so often and so loyally come between this charming woman and trouble could never again be raised in her behalf.

Alas! Dr. Jack was no more—treachery had laid him low.

With such uneasy thoughts taking possession of his disturbed mind, Larry at length pattered into the hotel, totally unprepared for the shock that lay awaiting him there.

(To be continued).

BLOODLESS GIRLS.

Can Obtain New Health Through the Use of Dr. Williams' Pink Pills.

Anemia means bloodlessness. Dr. Williams' Pink Pills actually make new, rich, red blood and thus cure anemia. When the blood is poor the nerves are starved and irritable. Then comes hysteria, neuralgia, sleeplessness and other nerve disorders. Headaches, backaches and sideaches wear out and depress the poor pale victim. Dr. Williams' Pink Pills soon bring ruddy health and lively vigor. They soothe the jangled nerves and give new strength to every organ.

Miss Winnie Allen, Montreal, says: "I was so weak and run down that my friends thought I was going into consumption. I was as pale as a corpse, had no appetite and did not sleep well. The least exertion tired me out, and if I walked a few blocks I would be almost breathless. My sister advised me to take Dr. Williams' Pink Pills, and after using them for a few weeks I am again enjoying good health, and have good color. I think every weak girl should take Dr. Williams' Pink Pills."

Dr. Williams' Pink Pills will cure any case of bloodlessness just as surely as they cured Miss Allen. The pale anemic needs only one thing—new blood. Dr. Williams' Pink Pills make new, rich blood with every dose. That is why they cure all common diseases like anemia, indigestion, neuralgia, palpitation of the heart, headaches and backaches, St. Vitus dance, partial paralysis and the secret troubles that make the lives of thousands of women miserable. Dr. Williams' Pink Pills are sold by medicine dealers or by mail at 50 cents a box or six boxes for \$2.50 from The Dr. Williams' Medicine Co., Brockville, Ont.

GIRL SEES VISION ON DEATHBED.

She Describes the Death of Her Missing Father.

An unusually interesting instance of "second sight" is reported from Accrington, Lancashire, England. A young woman on her deathbed, not only announced her father's death, but described the spot where his body lay, the fact of his death not being known to anybody at the time. The man in question was Isaac Marsden, fifty-three years old, who lived in Stevenson Street, Accrington. His daughter, 25 years old, had been wasting away with consumption for months.

About a week ago Mr. Marsden disappeared from home under mysterious circumstances—that is, no reason was known for his going away, and nothing could be learned of his whereabouts. Miss Marsden was deeply distressed by this event. On Thursday she told those who were at her bedside that she had seen her father's form.

"You will find his body in the water at Aspen Bridge, Oswaldtwistle," she said.

About an hour later Miss Marsden died. Mr. Marsden's body was found in the canal at the spot named by his daughter.

NOT IN THE FISHING SEASON.

"The early bird," remarked the Spring Philosopher, "may catch the worm, but not if he goes looking where the enthusiastic angler has been digging overnight for bait."

sums paid to the Lord Mayor during the year ended March, 1895, for his own and his secretary's salary.

A DANGER TO CHILDHOOD.

No mother would give her little one poison if she knew it, and yet all the so-called soothing syrups and many of the liquid medicines given children contain poisonous opiates, and an overdose will kill. When a mother uses Baby's Own Tablets she has the guarantee of a government analyst that this medicine does not contain one particle of opiate or narcotic that it cannot possibly do harm. This assurance is worth much to the mother who cares for the safety of her little ones. Mrs. Chas. McLaughlin, DeBart Station, N.S., says: "I have used Baby's Own Tablets for colic stomach troubles and other ailments of childhood and find them so valuable that I would not be without them in the house." Sold by medicine dealers or by mail at 25 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

A TERRIBLE STORY.

How the Natives of East Africa Are Civilized.

The Hamburg correspondent of The London Daily Mail sends this story to his paper of the triumph of civilization in German East Africa:—

A stirring account is to hand of the valuable assistance which an English elephant hunter, Mr. Southerland, gave the German troops in their fights in East Africa.

A certain station was in great danger, when the defenders determined to attack the oncoming Wagonis. The little expedition only consisted of two German officers, Mr. Southerland and thirty-two native warriors. The next morning the enemy, 700 to 800 strong, were encountered.

The enemy badly armed, but with fanatical courage, attacked undaunted. Captain Rishter felled their leader with a well-aimed bullet, and the natives on the German side with their fire created great havoc, but still the savages swept forward.

The situation was most critical, when the Englishman, a splendid shot, began to use his heavy No. 12 elephant gun, with expansion bullets. Every shot aimed at the head, told with fearful effect. The enemy retired, but only to attack again and again. The Englishman, however, stayed at his post until the ground was covered with his victims. The rest of the savages then fled, panic-stricken.

A number of the rifles had fallen into the hands of the rebels, but by a ruse of Mr. Southerland's they were destroyed. Forty highly-explosive cartridges, too heavily loaded for the rifles, were placed so that they fell into the rebel's hands. When used they exploded, and several rifles were found later bearing evidences of the violent end of those who had fired them.

RECIPE FOR A VOLCANO.

Englishman Tells How to Have One in Back Yard.

A writer in the London Spectator gives a recipe by which a volcano can be produced in any suburban back-garden:

"Water, percolating through the crust," he says, "and sinking to the heated depths at which it is raised above its critical temperature—about 77° degrees Fahr.—becomes an exceedingly powerful explosive as soon as an outlet for its powers is discovered.

"If a shaft could be dug sufficiently deep to reach the subterranean fires, and a river turned into it, we should have all the conditions necessary to start a very fine volcano anywhere in the British Isles.

"Fortunately no device has yet been invented for tunnelling to the necessary depth, though something might be done by boring down a mile or so and then exploding fifty tons of dynamite, and repeating the process until nature took it over."

AFTER 18 YEARS OF SUFFERING

AN ONTARIO FARMER FINDS A CURE AT LAST IN DODD'S KIDNEY PILLS.

The Direct Cause of His Trouble Was a Strain in the Back Which Affected His Kidneys—Dodd's Kidney Pills Cured Him.

Ardoch, Ont., May 14.—(Special).—Mr. Ami Jeanneret, of this place, gives a very interesting account of his experience with Dodd's Kidney Pills. He says:—

"I hurt my back and strained my kidneys and for 18 years I suffered on and off intense agony. I was subject to attacks of Rheumatism and Lumbago. My joints were stiff, my muscles cramped. I lost my appetite, my flesh began to fall away, my nerves were shaken, I could not rest or sleep at night and I was sinking into a deplorable condition when I was advised to try Dodd's Kidney Pills. I used six boxes and I am now as strong and healthy as ever I was. I am certain I owe my cure wholly to Dodd's Kidney Pills."

SPORT IN THE NILE DELTA

NOVEL AND REMARKABLE PLAN OF CAMPAIGN.

Parties are Organized Throughout the Winter to Shoot the Wildfowl.

Bordering the coast of Egypt in the broad alluvial delta are several inland lakes, three at least of these being each as large as a good sized English county. In very few parts are they more than six feet deep, the average depth being about four feet. These lakes are all salt to a greater or less degree, but abound in fish of various species and afford plentiful keep for the vast flocks of wildfowl which visit them in winter.

During the autumn months, from September onward, these birds include several varieties of duck, widgeon and teal, also enormous quantities of large black coot as well as a fair number of wild geese. All these congregate on the lakes. The natives hold organized parties throughout the winter to shoot these wildfowl. Each party is called a "sed." The plan of campaign at a sed is most novel and remarkable, says P. H. Lamb in the London Field, and it is in the number of guns more than the sum total of the bag that the record consists. On the given morning at sunrise some twenty natives, all armed with guns, breech or muzzle loaders, meet at some prearranged place on the bank of the lake. The small party of Europeans, of which I have more than once been a member, turn up in small punts, each capable of accommodating two guns. Each punt is

ABLY PILOTED BY A FELLAH, who pushes from behind as he wades along in the water. There are usually a few natives out in similar craft, but these they navigated by means of thin bamboo rods, which they work, one in each hand.

When all are ready this huge regiment spreads out in the form of a long chain across an arm of the lake. There is no attempt to keep at regular spaced distances of, say, fifty yards, for if this were done the guns would often sweep a stretch of nearly six miles. This, however, is quite unnecessary, for every man has, as a rule, as much shooting as he can well manage when the guns are much more concentrated. The awful army covers a width of about

to between 2,000 and 3,000 birds all told. The coot as well as the ducks afford very good eating, and those which the natives do not require for their own use they can readily sell at from 3d. to 4d. each.

REMARKABLE BIRD.

The "Tion-Tion" of Guinea Can Speak All Languages.

There is a bird of Guinea which deserves to be widely known; this is the "tion-tion" (pronounced tee-yawn tee-yawn) on account of its cry. This bird is valued by the natives for its brilliant plumage, especially the tail feathers, which they wear in their head-dress, and make clothing of; but the most interesting characteristic of this strange bird is its imitative faculty.

A naturalist became acquainted with the bird's powers in a curious manner. He was awakened from his sleep one night by hearing cries of distress in French. Someone was being murdered not far away, so much was absolutely certain. There were cries for mercy and help, uttered in excellent French, shrieks of agony and groans. Jumping to his feet he awoke his Indian guides, saying that they must all go to the assistance of the victim. At that very moment the same voice uttered a shout of ironical laughter, followed by "tion-tion," and the guides turned over with a grunt of vexation. The learned naturalist had a great deal to learn, they remarked sarcastically.

The tion-tion is the worst of chatter-boxes; it can, and does, imitate every sound it hears with the utmost fidelity. It can speak all languages, giving the proper accent and intonation. This is a strong statement, but it is correct. It will shout for assistance in the best English or German, and you will really believe that some fellow-countryman is in dire distress, until the bird interrupts its own pleadings with a derisive laugh. Then you feel like one who has been the victim of a 1st of April joke. If the bird could be caught and so far domesticated as to be happy in confinement, the parrot would go out of fashion as a home pet.

Contributor: "You see, I followed your rules and wrote only on one side of the paper." Editor: "You can do still better." Contributor (eagerly): "How?" Editor: "Don't write on either side."

Why go limping and whining about your corns when a 25 cent bottle of Holloway's Corn Cure will remove them? Give it a trial and you will not regret it.

According to indications, it takes a quart of liquor to drown a spoonful of trouble.

Fever the Curse of the Tropics. In the slow and tedious recoveries from this and all other diseases "Ferrovin" is the best tonic. Remember the name, "FERROVIN."

BEST OF SPORT.

"Miss Sillye, what do you think of this automobile scorching as sport?" "I think it is just perfectly killing."

A Liniment for the Logger.—Loggers lead a life which exposes them to many perils. Wounds, cuts and bruises cannot be altogether avoided in preparing timber for the drive and in river work, where wet and cold combined are of daily experience coughs and colds and muscular pains cannot but ensue. Dr. Thomas' Electric Oil, when applied to the injured or administered to the ailing, works wonders.

Even the man who objects to stepping on tacks would like to walk all over the tax collector.

of, say, fifty yards, for if this were done the guns would often sweep a stretch of nearly six miles. This, however, is quite unnecessary, for every man has, as a rule, as much shooting as he can well manage when the guns are much more concentrated. The awful army covers a width of about two miles long, and the drive is usually about three miles long, occupying some four hours. During this time firing is practically continuous.

The natives do not mind the water in the least, but wade along quite comfortably for hours together, in water varying in depth from the knees to the chest. What is more they manage under these conditions to keep their cartridges or powder dry, and those with muzzle loaders seem to experience but little difficulty. Needless to say, these do not fire unless there is every probability of an addition to the bag; but those with cartridges are surprisingly lavish with them, and do not hesitate to take very sporty shots. Here one can see shooting of every class.

The drive consists in merely advancing in line down the selected arm of the lake. All along in front of the surface of the lake is seen

BLACK WITH WILDFOWL.

They do not seem to trouble themselves much, but slowly retreat as the line advances. Presently, however, they begin to realize that they are being enclosed, and then they rise in small detachments. They might now easily escape by making a circuit over the land, for the banks are, as a rule, quite unguarded; but this they seldom attempt to do.

They seem like the stag and the otter, to rely mainly upon the water for safety—a sorry safeguard, indeed. Neither do they seem to learn wisdom by experience, for the natives have a shoot of the kind twice weekly, and yet when pressed the birds always rise and come straight back over the guns. As soon as the flight commences an awful bombardment follows. Enormous charges of black powder detonate on every side, and the whole heaven resounds. The noise of this terrific cannonade can be heard distinctly at a distance of four miles through the clear air. The barrels of one's gun soon become uncomfortably hot. The whole atmosphere stinks of powder. Birds are seen dropping in all directions, while spent shot rattles on the water around one.

Though the number of guns is quite phenomenal, the bag also is not inconsiderate, amounting, as it usually does,

One Cold and Another

The season's first cold may be slight—may yield to early treatment, but the next cold will hang on longer; it will be more troublesome, too. Unnecessary to take chances on that second one. Scott's Emulsion is a preventive as well as a cure. Take

When a man gets the worst of an argument he always tries to act as if he had merely been drawing the other man out.

Mirrors are a nuisance in the house of a man whose face is branded with eczema. His own reflection shames him. Let him anoint his skin with Weaver's Cerate and purify his blood with Weaver's Syrup.

"But I do not love you," objected the young woman. "Then, why," howled the indignant youth, referring hastily to divers memoranda in his pocket diary "did you eat a total of sixty-five boxes of chocolates I bought you during the past year if you didn't love me?" "Because," she said, with a rapt expression on her lovely features, "I do love chocolate."

"My Stomach gave out entirely and I suffered untold agonies." This was the experience of Mr. D. G. Whidden, Postmaster, East Wentworth, N.S., after three attacks of La Grippe. Doctors and doses gave him no permanent relief, but Dr. Von Stan's Pineapple Tablets had the permanent virtue that won him back to perfect health—pleasant and harmless but powerful and quick. 35 cents.—100.

Miss Kulcher — "You can always tell a woman who has enjoyed the benefits of higher education." Mr. Crabbe—"Not much! You can't tell her anything; she thinks she knows it all."

HOW IT SPREADS

The first package of Dr. Leonhardt's Hem-Roid (the infallible Pile cure) that was put out went to a small town in Nebraska.

It cured a case of Piles that was considered hopeless.

The news spread, and although this was only two years ago, the demand prompted Dr. J. S. Leonhardt, of Lincoln, Neb., the discoverer, to prepare it for general use. Now it is being sent to all parts of the world.

It will cure any case of Piles. There is a month's treatment in each box.

Sold for \$1.00, with absolute guarantee.

It is for sale by druggists, or by The Wilson-Fyle Co., Limited, Niagara Falls, Ont.

"Yes, I'm in the lecture business," said the long-haired passenger, "and I'm making money. I've got a scheme, I have, and it works like a charm. Big houses wherever I go." "A scheme?" "Yes. I always advertise that my lectures are especially for women under thirty years of age and men out of debt. You just ought to see the way people come trooping in."

Mother Graves' Worm Exterminator is pleasant to take; sure and effectual in destroying worms. Many have tried it with best results.

She — "Mr. Flaxman is unusually stingy." He—"I should say so. Why, he wouldn't laugh at a joke unless it was at somebody else's expense."

"Thought it meant death sure."—Mrs. James McKim, of Dunnville, Ont., says of her almost miraculous cure from heart disease by Dr. Agnew's Cure for the Heart: "Until I began taking this remedy I despaired of my life. I had heart failure and extreme prostration. One dose gave me quick relief and one bottle cured me. The sufferings of years were dispelled like magic."—3.

"Your daughter! Is it possible? Why, you look more like twin sisters." "No, I assure you she is my only daughter," replied the pleased mother. And the polite old gentleman spoiled it all by remarking, "Well, she certainly looks old enough to be your sister."

Dr. J. D. Kellogg's Dysentery Cordial is a speedy cure for dysentery, diarrhoea, cholera, summer complaint, sea sickness and complaints incidental to children teething. It gives immediate relief to those suffering from the effects of indiscretion in eating unripe fruit, cucumbers, etc. It acts with wonderful rapidity and never fails to conquer the disease. No one need fear cholera if they have a bottle of this medicine convenient.

REPLY TO CZAR'S ADDRESS

Demands Amnesty for Crimes Committed From Religious or Political Motives.

A despatch from St. Petersburg says: Sitting until long after 2 o'clock on Friday morning, the Lower House of the National Parliament set its seal upon its first great work, the adoption of the address in reply to Emperor Nicholas' speech from the throne at the Winter Palace and setting forth the aims and aspirations of Russia's millions.

Despite attacks both from the right and left, the leaders of the Constitutional Democratic party held their followers together to the last, and the address was adopted substantially in the form in which it was proposed by the commission. The amendments adopted Wednesday and Thursday, affect important details but do not change the general tenor of the document, which, extreme as it may be in the eyes of the autocracy, falls far short of the expectations of the Radicals. Time after time, during the long three days' of debate, the extremists, with their undying hatred of the whole ancient order, launched their fiery attacks against the "mildness" of the various paragraphs only to break against the firmness of the restraint of the chiefs of the party. When the discussion had been finished, the deputies, with the exhortations of the country, to speedy action ringing in their ears, ventured no further delay, and, though they had been already in session 14 hours, took a recess until 2 o'clock on Friday morning for the reading and adoption of the final draft of the address, instead of postponing this formality until the opening of Friday's session.

DOUMA ACHIEVES AMNESTY.

As if running a race to see which should be the first to present to Emperor Nicholas a demand for amnesty, the Council of the Empire also was in session well into the early morning hours, discussing its address in reply to the speech from the throne. This document, which is far simpler and more conservative than that of the Lower House, proposes an amnesty which does not include those who coupled with political offences, murder or violation of property rights. In other words, political assassins, or participants in agrarian excesses.

The Lower House demand for amnesty, the kernel and most pressing point in its address was altered at the last moment by the commission itself, which, in response to complaints as to the indefiniteness of the expression, "full political amnesty," substituted amnesty for all crimes committed from religious or political motives, as well as agrarian offences.

The commission also accepted a new clause to meet the wishes of the discontented in the army and navy, asking the Emperor to revise the conditions of service on the basis of right and justice.

Most of the amendments proposed in the closing hours of the debate of the wayside only one out of 31 proposed alterations of the agrarian paragraph, for example, being accepted. The discussion of this plank lasted four hours, practically every peasant in the House taking the rostrum to voice the demands of their constituents for "Land and Liberty."

The paragraph with regard to the rights of the various nationalities was adopted without change, and practically without discussion, though it was expected that the Poles would demand a fuller statement for autonomy.

The last feature of the debate was an attempt by Prof. Kovalevsky to introduce a declaration in favor of peace.

will consist of jewels valued at half a million dollars. They will comprise a golden crown studded with diamonds, a diadem, a diamond necklace, a pearl necklace, a gold bracelet studded with diamonds, brooches and earrings. The gems were taken from old pieces of jewelry in possession of the sovereign and reset in newer fashion. The crown is a magnificent piece of art work. One of the pendants is composed of enormous pearls, which the King selected from hundreds submitted to him. Princess Ena will give the bridegroom a splendid sword, with a jeweled hilt. The scabbard is sumptuously decorated with allegorical devices.

It is estimated that several thousand South American and Cuban visitors will be in Madrid at the time of the wedding. Many are already here.

DIED AT THE ORGAN.

After The Preacher Had Told Story of the Disaster.

A despatch from Philadelphia says: During a memorial service for the victims of the San Francisco earthquake, held in the influential Fifteenth Baptist Church on Tuesday evening, Miss Bertha Gerson, the organist, fell forward, dead, with her face resting on the organ keys. The Rev. Mr. Cross arose and began to describe the earthquake and the fire. He dwelt upon the unexpectedness with which death had come in San Francisco. Thomas Alexander, the fiancé of the organist, saw the color gradually leave her cheeks as the minister proceeded. When the sermon ended Miss Gerson slowly turned to the organ for a farewell hymn. Fainter and fainter grew the music from the loft, and the congregation, turning, mystified, saw Miss Gerson fall forward. Mr. Alexander rushed to her aid, crying, "Get help quick," but when he saw that she was dead he collapsed. The Rev. Mr. Cross, his voice quivering with grief, reascended the pulpit and offered a prayer, the entire congregation kneeling. The girl's death was due to heart disease.

PRINCE ARTHUR HOME.

He Arrived Safely in London on Friday Night.

A London despatch says: Prince Arthur arrived in London on Friday evening. At the station he was received by Col. Sir Alfred Egerton, Comptroller of the Duke of Connaught's household; Sir Edward Seymour, General Sir Thomas Kelly-Kenny, the Japanese Charge d'Affaires and Major Greif Wilkinson, private secretary to the Duke of Connaught. The party drove away in carriages sent by the King to Buckingham Palace.

On landing from the Virginia he was welcomed by the Lord Mayor of Liverpool. Referring to his extended trip, the Prince said it had been most delightful in every way. The run across the Atlantic had been pleasant throughout, except for the wait necessitated outside of Liverpool by the prevalence of a heavy fog for several hours.

BOY SHOOT A YOUNG INDIAN.

Serious Affair With a Shotgun in Outskirts of Guelph.

A despatch from Guelph says: A

THE WORLD'S MARKETS

REPORTS FROM THE LEADING TRADE CENTRES.

Prices of Cattle, Grain, Cheese and Other Dairy Produce at Home and Abroad.

Toronto, May 22. — Flour — Ontario wheat patents are quoted at \$3.10 bid in buyers' sacks outside for export. Manitoba first patents are quoted at \$4.40 to \$4.50, Toronto, and strong bakers' at \$4 to \$4.10, Toronto. Bran is firm, being quoted at \$16.50 to \$17 outside in bulk; shorts, \$19 outside.

Wheat—No. 2 Ontario white, No. 2 red Winter, and No. 2 mixed were each 81c bid at outside points, but none offered. No. 1 Northern, Manitoba, offered at 85c Point Edward, and No. 2 Northern at 82½c Point Edward, with 82c bid.

Peas—No. 2 offered at 83c outside, with 82c bid.

Oats—No. 2 white offered at 38c outside, without bids.

COUNTRY PRODUCE.

Apples—Choice stock, \$4 to \$4.25 per barrel, and inferior qualities, \$3 to \$3.25.

Beans—Hand-picked selling at \$1.80 to \$1.85, and primes at \$1.70 to \$1.75.

Honey—Strained honey quoted at 8½ to 9c per lb, and combs, \$1.75 to \$2 per dozen.

Hops—14 to 17c per lb.

Hay—Car lots of No. 1 timothy are quoted at \$9.50 to \$10 on track Toronto, and No. 2 at \$7 to \$7.50.

Straw—\$5.50 to \$6 per ton.

Potatoes—Ontario stock, 75 to 85c per bag, and Eastern, 85 to 90c per bag on track.

Poultry—Turkeys, fresh killed, 14 to 16c; chickens, last year's, 14 to 16c; live chickens, 9 to 10c per lb.

THE DAIRY MARKETS.

Butter—Pound rolls are quoted at 18 to 19c; large rolls, 15 to 17c; good to choice dairy tubs, 15 to 17c, and inferior at 14 to 15c. Creamery prints sell at 19½ to 21c, and solids at 18½ to 19c.

Eggs—The market is firm, with offerings only moderate. Sales at 16½ to 17c per dozen in case lots. Splits, 13 to 13½c.

Cheese—The market is quiet, with prices unchanged. New are quoted at 11½ to 12c per lb.

HOG PRODUCTS.

Dressed hogs in car lots are nominal. Bacon, long clear, 12 to 12½c per lb 'n case lots; mess pork, \$21 to \$21.50; short cut, \$23.

Hams—Light to medium, 14½ to 15c; do, heavy, 14c; rolls, 12 to 12½c; shoulders, 11½c; backs, 15½ to 16c; breakfast bacon, 15c.

Lard—Tierces, 11½c; tubs, 11½c; pails, 12c.

BUSINESS AT MONTREAL.

Montreal, May 22.—There was a fairly active demand for Manitoba wheat from over the cable this morning, and offers showed some improvement, but business is still about a cent a bushel out of line. The market for oats was fairly active, and prices ranged from 39½ to 40c in store for No. 4, 40½ to 41c for No. 3, and 41½ to 42c for No. 2. Flour—Manitoba Spring patents, \$4.50 to \$4.60; strong bakers', \$4 to \$4.10; Winter wheat patents, \$4.20 to \$4.40; straight rollers, \$3.90 to \$4.10; do, in bags, \$1.85 to \$1.95; extras, \$1.40 to \$1.50. Feed—Manitoba bran in bags, \$18 to \$19; shorts, \$20 to \$21 per ton; Ontario bran in bags, \$19.50 to \$20; shorts, \$20.50 to \$21; milled mouillie, \$21 to \$25 per ton, and straight grain, \$28 to \$29. Provisions—Barrels heavy Canadian short cut pork, \$23; light short cut, \$21.50; barrels clear fat backs, \$22.50; compound lard, 7½ to 8c; Canadian pure lard, 11½ to 12c; kettle rendered, 12½

GREAT FOREST FIRE.

It Is Raging Around Cities in Northern Michigan.

A despatch from Detroit says: Fragmentary reports have reached Detroit from Escanaba and Gladstone, Mich., stating that a disastrous fire is raging in the upper peninsula in the neighborhood of the two cities mentioned. It is reported that three towns have been destroyed, that thirty square miles of territory have been devastated, and that several persons have been burned.

A despatch from Marinette, Wis., says: The best information obtainable at this hour is that the forest fire which is sweeping the country north of here has reached Iron county, north of Dickinsons. This makes four counties which are suffering from fire. The area is 200 square miles. The country swept by the flames varies from pine timber land to barrens. Part is iron mining country, and the district includes immense tracts of hardwood. In the barrens settlers have taken up their residence, and it is for these that the greatest anxiety is felt. Information received at Marinette, is that the village of Shafter on the Metropolitan branch of the Northwestern Railroad in Dickinson county was wiped out. No word could be received as to loss of life there. The village of Saunders in Iron county, a lumber town, directly north of Florence, Wis., also has been swept by the flames. Here, as at Shafter, many may have met death. The town consists of a few residences, four saloons, a couple of hotels and a big sawmill.

LATER.

Four known dead, a score or more persons missing, hundreds of families homeless, several millions of dollars of property burned, four towns wiped out entirely and a dozen more partially, five counties devastated, and 100 square miles of territory laid waste is the record of the forest fire that has swept the northern Michigan Peninsula. The flames have gone down and for the time being the danger is over, unless a new gale arises. Scores of homesteaders and woodsmen are missing. Many have probably perished in the flames.

Following is the summary of the property damage:—

Territory devastated is Marquette, Menominee, Delta, Alger, and Dickinson Counties. Towns totally burned:—Talbot, Mich., 200 population, only few houses left standing; Quinnesec, Mich., 400; only one house remains; Sauniers, Mich., 150, all wiped out; Niagara, Wis., 300, all wiped out.

Towns partially destroyed:—Northland, Cornell, Antoine, Spring Valley, Kingsley, Woodlawn, Foster City, Salva and Metropolitan.

EXPLOSION OF DYNAMITE.

Twenty-Fve Houses Were Wrecked at Cobalt.

A Cobalt, Ont., despatch says: Cobalt, the silver city of Ontario, experienced its first disaster on Friday, when several tons of dynamite in the north-western section of the town exploded, wrecking 25 houses and throwing the citizens into a panic. A number were more or less injured by flying debris, but in no case was the injury of a very serious nature. The explosion was caused by a forest fire igniting the building in which the explosive was stored. The shock was terrific, and a number of houses in addition to those destroyed suffered more or less, the glass in the windows being shattered. The wildest excitement prevailed for some time, but as soon as the people realized the limited extent of the disaster quiet was restored.

LATER.

All danger of further inroads of fire upon Cobalt is over, but the people have not yet entirely recovered from the panic into which they were thrown by the disastrous explosion of dynamite. The scenes which followed the explosion

The last meeting of the debate was an attempt by Prof. Kovalevskiy to introduce a declaration in favor of peace and pan-Slavism as the guiding principle of the empire, but an amendment commending the Emperor Nicholas for his peace manifestoes, and pledging the Government to cherish the aspirations of the Slavonian peoples outside the empire was rejected.

GIRL IS AVENGED.

A despatch from Tamboff says: Senhoff, a police officer who participated in the brutal maltreatment of Maria Spiridonova, was shot and killed on the streets here on Thursday by an unknown person. The avengers of the young revolutionist recently meted out the same fate at Borisoglebsk to Abramoff, the Cossack officer who boasted of his cruelty to her while she was in prison.

AMNESTY TO BE GRANTED.

The Times' correspondent at St. Petersburg cautions on Saturday as follows: I am able to state positively that the Emperor will grant amnesty, though I cannot say whether the Sovereign will place limits to his prerogative. The Ministry of Education has already notified the academic councils that they will have the widest discretion in applying amnesty to all students expelled for political offences.

ALARMING REPORTS FROM ODESSA.

The Reth reports from Odessa alarming accounts of a projected massacre of the Jews. Arrests and other repressive measures continue in full swing throughout the country.

STRENGTHEN'S REACTIONISTS

Count Witte has notably strengthened his position of reaction by his insidious onslaught upon the Duma. There is only one opinion in St. Petersburg regarding his extraordinary pronouncement: it is that he has at last shown himself in his true colors, and proclaimed himself a reactionary. The majority of the Council of the Empire have little in common with his opinion either in St. Petersburg or throughout Russia at large, and to this small group of survivors Count Witte's words carried the conviction that amnesty would lead to another revolution. I hear Count Witte is soon going abroad. If this be true he looks as though his speech were a deliberate attempt to render the hoped-for reconciliation between the Czar and people impossible, thus paving the way for Witte's return to power.

PLOT AGAINST DOUMA.

The St. Petersburg correspondent of the London Tribune claims to have unquestionable information of a military plot against the Duma, which was elaborated at large meetings of the officers of four regiments. The conspirators propose to surround the Tauride Palace, where the Duma meets, arrest the deputies, and proclaim Gen. Trepoft military dictator of Russia. They will then deal with the monarch, in whose name they would claim they had been acting.

1,200 TONS OF FLOWERS.

Lavish Outlay for King Alfonso's Wedding.

A Madrid despatch says: King Alfonso, who was twenty years old on May 17, is engrossed with the preparations for his wedding. Among the lavish outlays, that for flowers is noteworthy. Florists from Orotava, Canary Islands, have been summoned by telegraph to lay a floral carpet on the streets of the capital for the wedding procession. Twelve hundred tons of flowers have been ordered to decorate the Plaza de Toros alone. The floral product of Seville, Murcia, Granada, Valencia, and Aranjuez, from May 30 to June 6, has been ordered to be sent to Madrid. The cost has been largely subscribed by the public.

Alfonso's wedding gift to Princess Ena

A despatch from Guelph says: A shooting affair occurred about 7.30 on Saturday evening in Brooklyn, an outside section of the city. Some lads were in an empty house and one of them, named Wakefield, picked up a shotgun, as Frank Millar, a young Indian lad, approached the door. Pointing the gun at him, Wakefield ordered him to stop or he would shoot. Whether intentionally or by accident, the gun, which was loaded with fine shot, was discharged, and a good deal of the contents lodged in Millar's breast and mouth, but did not penetrate deeply. The police authorities are inclined to think no malice was intended.

LAI D OUT FOR BURIAL.

A Faint Cry Warns Friends That She Still Lives.

A despatch from Middlebro', Mass., says: While the body of Mrs. Bertha Haskins, wife of John A. Haskins, who was believed to have died late on Wednesday afternoon, was being prepared for burial next day she suddenly revived and uttered a faint cry. The funeral arrangements were called off, and Mrs. Haskins may yet recover. The woman, who has pneumonia, is living with the family of William Nichols, on Oak Street. During her illness she was attended by Dr. T. S. Hodgson of South Main Street. He and the nurse, Mrs. T. F. Clutterly, were greatly surprised when the woman thought dead was found to be alive. Her breathing had ceased, it was said, and there was no perceptible action of the heart.

CROWDED WITH IMMIGRANTS.

Hospital Accommodation at Quebec Severely Taxed.

A Quebec despatch says: The temporary immigration hospital, located at Savard Park, on the outskirts of this city, is taxed to its utmost limit with immigrants suffering from various physical ailments, including trachoma, who have been detained by the medical examiners connected with the immigration department. No less than 141 foreigners, who arrived by the steamer Montrose, were detained after inspection, and now crowd the Government house of detention. In the meantime the work of construction of a new hospital, to replace the old one destroyed by fire last fall, has been commenced.

ANOTHER BIG NUGGET.

Was Found on Rothschild Property, South of Groux Lake.

A despatch from Cobalt says: A nugget, the second largest yet found in the camp, is reported to have been discovered on the Rothschild property south of Groux Lake. This claim adjoins the celebrated Nugget claim, an interest in which was recently sold to American capitalists. A party of four men left on Thursday morning for Fox Rapids to search for the bodies of Bellisle and his companion, lately drowned while attempting to pole a canoe against the current.

WARNING TO CHINA.

Diplomatic Body to Oppose Change in Customs Administration.

A Peking despatch says: At a meeting of the diplomatic body held on Saturday representatives of all foreign Governments announced that they would support Great Britain's protest against a change in the Customs administration. The British Charge d'Affaires has addressed a second note on the subject to the Chinese Government, the reply to the first note being unsatisfactory. The Chinese Government recently made some appointments of Chinese officials to prominent positions in the Chinese Customs service, which for years had been under the control of Sir Robert Hart.

pound lard, 7½ to 8c; Canadian pure lard, 11½ to 12c; kettle rendered, 12½ to 13c; hams, 13½ to 15c; breakfast bacon, 17 to 18c; Windsor bacon, 15½ to 16c; fresh killed abattoir dressed hogs, 10c; alive, \$7.50 to \$7.75 per 100 lbs. Eggs—New laid, 15½ to 16½c per dozen. Butter—Choicest creamery, 20 to 20½c. Cheese—Colored, 10½ to 11½c; white, 11½ to 12½c.

UNITED STATES MARKETS.

St. Louis, May 22.—Wheat—Cash, 94c; May, 82c; July, 80½c; September, 78½c. Minneapolis, May 22.—Wheat—May, 81½c; July, 81½ to 81½c; September, 78½ to 79c; No. 1 hard, 84½c; No. 1 Northern, 83½c; No. 2 do., 81½c. Milwaukee, May 22.—Wheat—No. 1 Northern, 85 to 86c; No. 2 do., 81½ to 84½c; July, 81½c asked. Rye—No. 1, 61½ to 62c. Barley—No. 2, 55c; sample, 40 to 51½c. Corn—No. 3, cash, 49 to 50c; July, 47 to 47½c.

LIVE STOCK MARKET.

Toronto, May 22.—There was little improvement in trade at the City Cattle Market this morning. Export Cattle—Choice, \$4.90 to \$5.10; medium to good \$4.50 to \$4.75; bulls, \$3.50 to \$4; cows, \$2.75 to \$4.25. Butcher Cattle—Picked lots, \$1.60 to \$4.80; good to choice, \$4.40 to \$4.60; fair to good, \$3.75 to \$4; common, \$2.50 to \$3; cows, \$3 to \$4; bulls, \$3.25 to \$4; canners, \$1.50 to \$2. Stockers and Feeders—Short-keep feeders, \$1.75 to \$4.85; heavy feeders, \$4.40 to \$4.90; medium, \$2.50 to \$3.50; bulls, \$2 to \$2.75; good stockers run at \$3.75 to \$4, light at \$3.25 to \$3.70; rough common, \$2 to \$2.75 and bulls at \$1.75 to \$2.50. Milch Cows—\$30 to \$60 each. Calves—3½ to 6c per pound. Sheep and Lambs—Export ewes are quoted at \$5 to \$5.25; bucks, \$3.50 to \$4; culls, \$3.50 to \$4. Grain-fed yearling lambs are quoted here at \$7 to \$7.50, and barnyards at \$4.50 to \$5.50; spring lambs, \$3 to \$6.50 each. Hogs—The market is quoted unchanged at \$7 per cwt. for select and \$6.75 for lights and fats.

JAPANESE IN MANCHURIA.

Not to Evacuate Before Assured Russians Will Leave.

A despatch from Tokio says: The Premier, Marquis Satonji, has returned here from his tour of inspection in Manchuria. It is expected that his report will suggest a solution of the deadlock between the military and civil authorities over the best means of settling the Manchurian difficulties. The Japanese and Russians in Manchuria are closely watching each other's movements. The Japanese apparently will not evacuate that territory before they are assured that the Russians will get out in accordance with the stipulations of the Portsmouth Treaty.

TORPEDO BOAT CAPSIZES.

Was in Tow of a Cruiser When Accident Occurred Off Port Said.

A despatch from London says: Lloyd's agent at Port Said telegraphs that British torpedo boat No. 56 capsized off Port Said during Friday night and that seven of her crew were drowned. The complement of a British torpedo boat is usually 18 men. The Admiralty has issued a statement that the boat capsized and sank while she was in tow of the cruiser Arrogant.

UNIVERSAL WEDDING DAY.

Many Spanish Couples to Marry the Same Day as the King.

A despatch from Madrid says: The priests of the various parishes here will have a busy time on Alfonso's wedding day. There is a rush of betrothed couples of the poorer classes to be married on the same day as the King. In one parish alone the banns of forty couples have been published. This is typical of the other parishes.

by the disastrous explosion of dynamite. The scenes which followed the explosion were remarkable. Hundreds of frightened refugees gathered along the tracks, men, women and children, who had precipitately fled from the doomed portion of the town, fearing further explosions. No one would have thought there were so many women and children in the place, until they were seen herded together; the whole town was in a state of intense excitement, bordering on frenzy; the north end of the town was wrecked, over a hundred buildings were destroyed, and scarcely any escaped injury.

BARTENDERS' LICENSES.

Thirteen Hundred of Them Have Been Issued So Far.

A Toronto despatch says: Some 1,300 bartenders' licenses have been sent out from the License Department in response to applications from the inspectors of a number of cities and towns, by whom they are issued. Of the number mentioned 340 have been requisitioned up to date by Chief Inspector Purvis of this city. The licenses are in neat pocket-case form, leather bound, and the cost of thus preparing them is borne by the department.

\$100,000,000 TO REBUILD CITY.

Huge Mortgage Corporation Formed in New York.

A despatch from New York says: It was determined on Tuesday that \$100,000,000 shall be the capitalization of the new mortgage loan corporation which is to be organized here to advance money for the rebuilding of San Francisco. The promoters of the enterprise at first argued that \$10,000,000 capitalization would provide an ample vehicle for handling hundreds of millions of investments, but it was found that San Francisco favored a much larger capitalization than the \$10,000,000 at first proposed, thus giving opportunity for investment by the Pacific Coast interests. Plans for the perfecting of the huge corporation have been adopted, and it is now expected that all the preliminaries will be completed this week, and the work of advancing \$100,000,000 or more for the reconstruction of the destroyed city will begin within thirty days.

IMPROVING BRITISH NAVY.

21 Vessels Removed From Fighting Effective and 19 Reclassed.

A London despatch says: The rapidity with which Great Britain is removing from the navy all but her really efficient warships was evidenced by a statement presented to Parliament, on Wednesday, showing that no less than 40 battleships and cruisers have been practically removed from the list since 1902. The exact figures are eight battleships, ten armored cruisers, and three protected cruisers removed from the fighting effective, while three battleships and 16 protected cruisers were reclassified, placing them on the list of ships of the smallest fighting value. During the same period the construction of 13 new battleships, 18 armored cruisers, and four protected cruisers was commenced.

ROYALTY AT GUILDHALL.

City of London Entertains Prince and Princess of Wales.

A London despatch says: The Lord Mayor and corporation on Thursday afternoon entertained the Prince and Princess of Wales at the Guildhall and presented them with a congratulatory address in commemoration of their Indian tour. The reception was preceded by the usual procession through decorated streets. About eight hundred persons sat down to the luncheon at the Guildhall, including the German burgomasters who are now visiting the city. They were the only foreigners present.

E. J. Riordan advises Irishmen not to emigrate, as their conditions were more hopeful at home.

At an Eastern League ball game in Rochester, the "bleachers" collapsed, on Saturday afternoon, injuring twenty people.

About the House

JUST MACARONI.

Macaroni a La Creme. — One pint of cream or rich milk, four tablespoons of flour, the rind and juice of one lemon. When the cream comes to a boil stir in the flour smoothly; let it boil for ten minutes. Then pour in some macaroni that has been boiled in water and drained. Pepper and salt. Bake it for one-half an hour or serve it stewed.

Macaroni and Cheese. — Take as much macaroni as will fill an ordinary baking dish, boil it in water for two hours, drain it off and add one pint of cream or milk, one tablespoonful of butter, and one of grated cheese. Mix well and put in a baking dish; cover with grated cheese and cracker dust; keep in the oven until browned on the top. It will take one-half an hour.

Macaroni Pudding. — Take an ounce and a half of the best macaroni and simmer it in a pint of milk with a little cinnamon till tender; put it into a dish with milk, three eggs (but only one white), some sugar, and a little nutmeg.

Macaroni Soup. — Take one quart of milk or of clear gravy soup and boil in it one pound of fresh macaroni until it is tender; take out half the macaroni and put it in a little milk or water to keep it moist, and let the remainder boil to pieces in the the gravy, and then add what was taken out; let it come to a boil and take it off. Boil the macaroni in water for one hour before putting it in the gravy.

Macaroni with Salt Codfish. — Break two ounces of macaroni in two inch lengths; throw them into boiling water and boil rapidly for thirty minutes; drain, blanch for fifteen minutes in cold water, then cut in pieces half an inch long. Wash half a pound of boneless salt cod, cut it in dice, cover with cold water. Bring just to boiling point, but do not allow it to boil; drain, cover again with boiling water, and let it stand for five minutes, then drain. Rub together one rounding tablespoonful of butter with one of flour; add half a pint of strained tomato, a tablespoonful of grated onion half a teaspoonful of salt, and a saltspoonful of white or black pepper. Stir until boiling. Add the macaroni and fish, stand over hot water for five minutes and serve in a heated dish.

ITALIAN STEW.

Seems more modern to us, but as a fact the use of cheese for "savour" is old. Take a largish veal cutlet, lay a cabbage leaf upon it, on this put a tablespoonful of Swiss cheese (or Parmesan), on this lay a layer of sliced onion, another cabbage leaf, young of course, a tablespoon of tomatoes, and a bay leaf. On this lay a small cutlet, trimmed and seasoned. Repeat the process and pin over the large cutlet for a casing above, skewer on some strips of bacon to mask the top. Fry the under side of this sack to sear, then put it in a pan with one-quarter of an inch of hot water and let it simmer, covered tight, 1½ hours. Have ready a cup of green peas, cooked without any addition but a little salt. To not add cream or cream-sauce. Lift the cutlet sack upon a hot serving dish, make a little brown gravy of any liquid that remains to serve in a bowl apart, and pour the peas around the cutlets on the dish.

Fricassee of Macaroni. — Cook sufficient macaroni in boiling salted water in one saucepan and make a cooking water in another. For this take a large cup of cold water, three small onions, one bay leaf, half a lump of sugar, half a fresh lemon rind not cut or grated, and let them stew till the macaroni is done. Then lift out the lemon rind and bay leaf and put the macaroni, drained, cut in small and larger pieces, into the cooking water, to which has been first

DOMINION PARLIAMENT

NOTES AND PROCEEDINGS OF THE OTTAWA HOUSE.

FOREIGN-MADE BUOYS.

Mr. Foster was informed by Mr. Brodeur that 227 foreign-made buoys had been purchased by the Government between July 1, 1904, and March 30, 1906, for use in Canadian waters.

SALE OF TIMBER.

Mr. Bennett learned from Mr. Oliver that the timber on the Whitefish Lake Indian reserve, near Sudbury, had been sold by the Indian Department during the past year. The sale had been by tender, after advertisement in the press.

IMMIGRATION MATTERS.

Mr. Smith (Nanaimo) was told by Mr. Oliver that since 1896 standing instructions had been in force in the Immigration Department to encourage none but agricultural classes or domestic servants to emigrate to Canada. Subsequently, when the immigration bonus was increased to \$5, the class was enlarged to include miners, navvies, etc., who intended to go in for farming in Canada.

THE ROSS RIFLE.

Col. Hughes was given some details of the report by the commission which examined the Ross rifle before it was adopted by the Government. The gist of the information was that the rifle was a better one generally than the Lee-Enfield, and that a few defects discovered could be easily corrected.

PLACER MINES IN THE YUKON.

Mr. Oliver's bill respecting placer mining in the Yukon was given a second reading, and considered in committee.

Mr. Thompson (Yukon) explained that the bill was the outcome of the work of the commission, which had examined the whole subject in the Yukon. The principle of the bill was agreed to practically by everybody in the Yukon.

Mr. Oliver explained that the object was to crystallize the regulations which had been found to be acceptable, and give them the stability of an Act of Parliament. The present regulations were unsatisfactory, because they were not of a permanent nature. Most of the clauses of the bill were carried, and a few were allowed to stand.

RIEL'S MOTHER DEAD.

Will Be Buried Beside Her Son—Was 85 Years Old.

A despatch from Winnipeg says: The mother of Louis David Riel, the chief of the two Red River rebellions, died Saturday at the ripe age of 86 years in the little French Canadian parish of St. Vital, situated immediately south of the City of Winnipeg. She leaves two sons and a daughter. Mrs. Riel was buried in the family plot in the cathedral church-yard at St. Boniface, beside the simple white shaft which bears the significant inscription, "David Riel, 1885."

WORRIED TO DEATH.

Sad Case of a Young Woman From Ontario at Winnipeg.

A Winnipeg despatch says: A young woman belonging to a respectable family in Ontario died under peculiarly sad circumstances here on Friday. Complications following the publication of the name she bore are thought to prove that she had no right to it, as the man she believed to be her husband had been leading a double life, and has a wife where his business headquarters as cattle buyer are located farther west. The young woman was stricken with heart disease at the place where she

ON THE FARM

WHY POULTRY FARMERS FAIL.

Of all phases of farming none are accountable for so many failures as what are termed poultry farms, writes a farmer's wife. Hundreds have come to grief through them. A poultry farm has rather a fascination for some. The position must be in the country; all is an attraction to many. A very great amount of capital is not needed, which allows of those who could not invest in a stock and arable farm to go in for this form. The work connected with poultry is not very laborious, and the idea of securing endless eggs and choice fowls for the table in abundance causes those in search of an ideal life to infer that this and this only is their forte. A villa, cottage, or bungalow, with several acres of land, are included, and what more could anyone wishful of a quiet, easy and remunerative existence desire? The desire is commendable and all right, but what of the accomplishment? Ah, this is the question, and it is, as a rule, disregarded, and it is here the mischief is played. The accomplishment implies conducting everything successfully; mere money will not secure this. Practical knowledge alone will carry one through, and it is from absolute lack of this that 80 or indeed 90 per cent. of the failures in poultry farming occur. I know of poultry farms at the present time, conducted by both men and women, from which they not only secure a good living, but the profit amount to more than that. It was no to ample funds originally or the special facilities of their farms that the credit is due, and experience alone enables them to start and continue.

ON THE RIGHT LINES.

This is the only highway to successful poultry farming, and with such a position the very often asked question "Does poultry farming pay?" may safely be answered in the affirmative. This has been my conviction for long and is so still. It is not very often one meets with country people starting poultry farming. It is mainly those returning, leaving towns that have a hankering after it. Some of them will tell you they were born and reared in the country and, although they never had much experience of poultry keeping then, they fancy it now. Others are wholly town reared, never kept fowls, but they feel pretty sure if they did they would be successful. Now, I would ask if a mere idea like this can possibly qualify anyone to run a poultry farm, either renumeratively or otherwise? Just imagine what kind of figure a ploughman, shepherd, or myself would cut dumplings in the centre of a great city under the pretence of conducting a successful drapery, grocery, decorative or some other business. We would all be submerged from the start; and yet this is only a parallel position with that taken up by the inexperienced when they attempt poultry farming. I do not write now or at any time to discourage poultry farming, neither do I agree with those who imply that success is not the question under all conditions; but consider those who are qualified to speak and do not hesitate to warn the inexperienced are doing a public duty. That there is a vast demand and urgent call for eggs and poultry far beyond this country produces or is likely to produce under present conditions is well known to all. It is not the poor demand that favors failure, neither is it low prices, but, I come to it again.

THE WANT OF KNOWLEDGE.

No amount of energy and good intentions will compensate for this, and the best advice that anyone can give to a contemplating poultry farmer, who lacks experience, is to place themselves in the hands of the successful, becoming

more hopeful at home.
At an Eastern League ball game in Rochester, the "bleachers" collapsed, on Saturday afternoon, injuring twenty people.

UNITED STATES.

Red Cross receipts for the California earthquake sufferers amount to \$2,125,000.

Bankers and bookkeepers in the Ohio State Penitentiary have formed an anti-sweating club.

St. John's Convent, Paterson, N. J., a three-storey brick building, which weighs 4,000 tons, has been moved half a city block and turned to face east instead of south.

Frances Graboski, of Jersey City, N. J., while acting as bridesmaid for a friend, caught her high heel in her train, stumbled downstairs and fractured her skull. She died almost immediately.

At Des Moines, Iowa, on Friday, while a thousand delegates to the Presbyterian General Assembly were being photographed, the platform collapsed. No one was killed.

A total of 27,738,000,000 feet of lumber was cut in the United States during 1905, according to figures announced yesterday by the Government forestry service. The stock in hand January 1 is given as 6,504,000,000.

While playing hide-and-seek with her five children, Mrs. John Hammond of Corona, Long Island, yesterday fell through a decayed cistern cover and plunged ten feet to her death. Her children searched for her three hours before the body was found.

GENERAL.

Morengo, leader of the rebellion in German Southwest Africa has been captured in British territory.

The Tageblatt suggests that Germany move for a more amicable trade arrangement with Canada.

GENERAL RISING FEARED.

Basutos Openly Sympathize With Rebellious Zulus.

A London despatch says: The English correspondents in South Africa concur in stating that there is danger of a general flare-up among the natives. A majority of them are simply watching the turn of events. If the Natal force, which is now operating against the rebellious chief, Bambaata, is not speedily successful, extensive trouble is almost inevitable. The Basutos, one of the most warlike of the tribes, strongly sympathize with the Zulus, who show an increasing disposition to side with Bambaata. The Swazis are also restless, and are holding great meetings nightly.

JOHN ARCETTE KILLED.

Another Explosion of Dynamite at Parrywood.

A despatch from Kenora says: Another fatal dynamite explosion occurred at Parrywood, about forty miles east of here, whereby one man is dead and two more injured. About 8 o'clock on Wednesday morning Frank Viden, foreman at Viden & Parson's construction camp, and his assistants, Charles Beerg and John Arcette, were taking powder out of an old hole that refused fire the previous night, when the explosion occurred. Viden's face is badly injured, but the doctors think they can save his sight. Charles Beerg is only slightly hurt, but Arcette died in the afternoon soon after bringing him to the hospital.

BIG VOTE FOR PROHIBITION.

King's County, P.E.I., Goes 1,547 For to 203 Against.

A despatch from Charlottetown, P.E.I., says: The full returns of the prohibition plebiscite elections in King's county were declared on Thursday. For prohibition 1,547, against 203.

Remove the lemon rind not cut or grated, and let them stew till the macaroni is done. Then lift out the lemon rind and lay leaf and put the macaroni, drained, cut in small and larger pieces, into the cooking water, to which has been first added two ounces of Swiss cheese. Add seasoning if required and a scant cup of rich milk. Simmer half an hour, or until a creamy mass. To be eaten with a fork and dessert spoon.

Parsnip Fritters. — Parsnips can be just like the little boy in the poem. When he was good—you know the rest. Now this is "a company fixing." See that they are tender and boil them in salted water, a lump of sugar and a tablespoon of butter. Take out, drain, cool, and when ready to use cut and trim them into long pieces, not quite as long nor as thick as "lady fingers." Dip in a delicate pancake batter. Fry a golden brown on both sides, drain, put on a hot napkin or a hot plate, and when serving sprinkle with powdered sugar and cinnamon. Serve with sections of lemon. They lose their identity with some and pass as a hot sweet.

EAT CURRANTS.

Only a few days ago nobody knew that there was any food value to the little dried so-called Greek currant. Since then food chemists have demonstrated that there is far more nutrition in them than in lean beef. Sir Francis Laking, physician to King Edward, says that nutrition in white bread is greatly increased by them, and that thirty parts of currants should be added to 70 parts of dough. To add them to bread, wash, dry well, and mix with the flour after sifting it with salt. They also make a good winter substitute in all bread and batter recipes that call for fresh huckleberries. The best variety to get are the Zanti currants, which come from the island of Zanti. They are really not currants, but are a small variety of seedless grape.

To use them with sour cream, salt a cup of sour cream. Put in a little less than you believe to be just enough soda to neutralize the acid. Beat in until foamy. Sift a pint with one cup of sugar and one teaspoonful of baking powder. Add one cup of dried currants or fresh blueberries, and bake as muffins.

Currant Tea Cake. — Bake this in sheets and use as hot bread, or as a dessert with sugar and thick cream; or, if preferred, a handy sauce. Sift two cups of flour with two-thirds of a cup of sugar, one heaping teaspoonful of baking powder, and a pinch of salt. Mix with one cup of sweet milk, add one beaten egg, a teaspoonful of melted butter, and one large cup of currants previously steamed or simmered for a few minutes.

Currant Pancakes— Make batter with one egg, one pint of milk, enough flour to make a thin batter, salt, two teaspoonfuls of baking powder, and a teaspoonful of melted lard. Add a scant cup of currants and serve buttered and sprinkled with sugar.

Bread and Butter Pudding — Strew layers or dried currants between slices of buttered bread, crusts cut off. Pour over them a boiled custard flavored with nutmeg or other flavoring. Set in the oven and bake about fifteen minutes.

SENSIBLE SUGGESTIONS.

Clean Sinks. — A porcelain sink can be cleaned by scrubbing with hot soda water and then rubbing with rotten stone, where there are hard stains.

Substitute for New Potatoes. — By cutting old potatoes into small balls, allowing them to soak for three or four hours in cold water, then boiling in cold salted water and serving with cream sauce, a good substitute for new potatoes is obtained.

How to be Careful of Soap. — Never leave it standing in water, because it wastes it; never throw your shells of soap away, but put them in a jar, fill up with water, put it in the oven, and let it boil well, with a lid over the top, and when the soap is all dissolved take it out and put it to cool, and you will be able to cut it out; therefore, you can use it again. It is useful for washing flannels.

been leading a double life, and has a wife where his business headquarters as cattle buyer are located farther west. The young woman was stricken with heart disease at the place where she was boarding. She was known here by the name of McCannon.

STEPPED ON A MATCH.

Mrs. Dora Dunn Received Very Serious Burns.

A Toronto despatch says: About 6 o'clock Thursday evening Mrs. Dora Dunn was taken to St. Michael's Hospital suffering from severe burns about the legs and arms. She was employed as cook at the Hewitt House, and Thursday afternoon visited some friends at the rear of 63½ Queen Street west. How the accident occurred cannot be ascertained, but it is thought that Mrs. Dunn stepped on a match, which set fire to her underclothes. In trying to extinguish the flames she had her arms badly burned also. She was immediately taken to the hospital, and her injuries have proved very serious.

IN THE ARCTIC CIRCLE.

Superintendent of Forestry Will Make an Arduous Trip.

A despatch from Ottawa says: Mr. E. Stewart, Superintendent of Forestry, has left on a trip of inspection to the Arctic circle. From Edmonton he will proceed to Athabaska Landing, thence down the Mackenzie River to Fort Macpherson. From the latter point he will cross over by the head waters of the Porcupine to the Yukon, and will reach Vancouver in time to attend the meetings of the Canadian Forestry Association there in September.

FIX HEIGHT OF BUILDINGS.

San Francisco Committee Decides on Certain Limitations.

A San Francisco despatch says: At a meeting of the Council on Building Laws with the various sub-committees, on Wednesday, it was definitely decided to recommend that on streets 100 feet wide or over that the height of buildings facing thereon shall be unlimited. On streets 80 feet wide or over the height of buildings shall be limited to 200 feet, and on streets less than 80 feet wide the height of buildings may be one and one-half times the width of the street upon which the buildings face.

WOMAN TO BE HANGED.

Sentenced at Odessa for Firing at a Policeman.

An Odessa, Russia, despatch says: A courtmartial on Wednesday sentenced to death by hanging, a woman who fired on a policeman, but did not injure him, during a domiciliary search.

UNEMPLOYED PARADE.

Thousands in Hyde Park Hear Speeches of Labor Leaders.

A London despatch says: Thousands of unemployed persons of both sexes marched on Monday afternoon to Hyde Park, where James Keir Hardie and George Nicoll Barnes, Labor party members of Parliament, presided at meetings. The object of the demonstration was to impress on the authorities the fact that there are thousands of men unemployed in the Metropolis. Resolutions calling on the authorities to recognize the right of all to work were adopted.

VACANT HOUSES IN EDINBURGH.

More Than Last Year Because of the Emigration.

A despatch from London says: Unrented property is said to be greater in Edinburgh than last year because of the large numbers emigrating to Canada.

tions will compensate for this, and the best advice that anyone can give to all contemplating poultry forming, who lack experience, is to place themselves in the hands of the successful, becoming thoroughly acquainted with details, when there need be no hesitation in investing. Those who cannot see their way to do this have two methods open to them. One is to go in for poultry farming and meet the inevitable failure which is almost the universal experience of those who attempt things they do not know anything at all about, or the other way is to shun the business. In other lines apprenticeships vary from three to half a dozen years, but a sojourn in a good poultry yard from March to November will give all considerable qualification, as it is in breeding and rearing, which is now going on, that a painstaking system must be closely followed, and minute details are indispensable.

Apart from the want of practical knowledge as to how to treat the chicks and fowls, there is a very ruinous process going on, setting up a great collection of poultry houses and appliances generally before there is any actual demand for them. Not very long ago a man who dealt in machinery took it in his head to go in for poultry farming. As a start he bought a dozen pens and runs which cost him \$250, and in less than a year they became my property at \$25. They were worth more, but their size and construction did not appeal to buyers; they were practically of little use to the original owner, but they fully verify my contention that it is very desirable that money should not be locked up, or, should I not say, be thrown away, on fancy appliances, before it is actually known what is wanted.

SWINE NOTES.

Sows, of all animals, require the least help during parturition, and the wisest course is to leave them to themselves. Pigs never grow so well as when they can fill their stomachs with suitable food and lie in the warm sun on a dry bed.

A sow will rear a litter of pigs when she has the run of a good pasture on half the food she will require if she is deprived of this important condition.

In managing the brood sows it is never a good plan to make a radical change of food just before or after farrowing.

It is not so much of a question, as far as profit is concerned, how much a pig will weigh when dressed as how much it has cost.

An old sow does not cost as much for keeping as a young and growing one, and her pigs are worth considerably more. They are larger when born and never lose this advantage.

PUMPKINS FOR SHEEP.

We want to bespeak a good pumpkin crop for 1906. Nothing better for sheep. You can raise a few loads to every acre of corn and raise no less corn. A load hauled out on the back grass pasture every day or two next fall will be a great boon to the flock. You can burst them in throwing them from the wagon and the sheep will eat the seeds first and then scoop out everything but hard shell. The seeds are the best worm medicine you can feed. Be sure to make arrangements for the planting of the pumpkins. They are good for sheep, they are good for pigs, they are good for cows, and pumpkin pies are good for boys.

TO START A BALKY HORSE.

Take a rope about 15 feet long, pass around the foreleg and let drop down below the fetlock joint. Take one end in each hand, walking ahead of the horse while the driver starts him. This will cause the horse to jump with one leg on the ground, or take a step, and when he does this he will forget to ston again, and if the rope is dropped he will likely walk over it without further trouble. If treated this way a few times he will get so he will start at sight of rope and it won't be necessary to use it in case he balks.

Hello! Hello!

Yes, this is
The J. J. HAINES
Shoe House

Excuse us, please, but we are calling up everybody on the line. We just want to say that our

New Spring Footwear

is now ready and we want you to see it. We have the best and finest display our 3 Towns ever saw.

THE J. J. HAINES SHOE HOUSES, Napanee, Belleville, and Trenton.

THE BEST FLOUR. DAFOE'S NONESUCH DAFOE'S MANITOBA PATENT

By numerous tests by the best Bakers the above mentioned grades have been proven to be the best Flours in the market.

When buying Flour ask for Dafoe's, and patronize your home mill, thereby producing Bran and Shorts that you can purchase cheaper than the product of the Western mills, which has to be transported thousands of miles at great expense, and usually, when it reaches you, of inferior quality.

The grocer complains if the farmer or the mechanic sends to Toronto or to outside points for an article he can get at the home store just as good, but he does not hesitate to buy Flour from mills hundreds of miles away, and sell you an inferior Flour for more money than you can purchase the home product for, every bag of which is guaranteed.

CHOICE CORN MEAL and BUCK-WHEAT FLOUR always on hand.

FEED GRINDING a specialty, with the best feed mills known to the trade. A full stock of the best ANTHRACITE COAL. Also in the market for the purchase of all kinds of Grain.

Ask for prices at the big Mill before purchasing your Flour, Feed or Coal.

NAPANEE,
16th January, 1906.

The Salvation Army Emigration.

Blank application forms for farmers who wish to apply to The Salvation Army for farm help may be had at this office.

Card of Thanks.

Mrs. Manley Conger wishes to tender her thanks to the officers and members of Argyle Lodge, No. 212, I. O. O. F., for their kindness to her deceased husband during his illness, and their promptness in settling the benefits paid by the Lodge on the death of one of the members of the order.

One gallon of Prism Brand Paint will cover 360 sq. ft., two coats. Every can guaranteed. The Medical Hall.—Fred L. Hooper, sole agent for Napanee.

The New Ferry Rates.

The new Ferry is now running and in good order. The Sunday hours are from 7 to 11 a. m. and 4 to 7 p. m., night rates are 50c one way and 75c return for a team, for one horse, 40c one way and 60c return. Day rates 25c and return 40c for team, for one horse 20c and 30c return. The ferry is being well patronized and the patrons are well pleased.

Jumped The Track.

Shortly before twelve o'clock, Saturday noon the engine of the B. of Q. suburban train jumped the track at the switch, near the Belleville crossing while coming to Napanee to meet the G. T. R. mail train. The engine turned completely over on its side. The engineer and fireman saved themselves by jumping, but not before the engineer had his arm scalded by escaping steam. The cause was a defect at the switch. The track, for a distance

MADOLE & WILSON.

Will Wonders Ever Cease?

"Wait a minute, she said to her husband, let us see what all this excitement is about." A large crowd had gathered in front FRED L. HOOPER'S Drug Store window. All were looking at a lady standing in the window combing her long and beautiful hair. She was one of the demonstrators for the Seven Sutherland Sisters.

Presented With a Ring.

A number of the members of Napanee Lodge No. 86, called at Garratt's restaurant to bid Mr. Jas. Garratt goodbye, on the eve of his departure from Napanee, and at the same time presented him with an Oddfellows' ring as a small token of their friendship and appreciation of the years of faithful service. Bro. Garratt has given to Napanee Lodge No. 86. The address was read by Bro. E. McLaughlin, and the ring presented by Bro. G. B. Joy. Mr. Garratt was taken by surprise, but made a very suitable reply, thanking the brothers for their kindly appreciation of his efforts on behalf of the order.

Black-Smith.

A quiet wedding was celebrated on Wednesday morning when Miss Dot Smith, eldest daughter of Mr. and Mrs. Robt. Smith, South Napanee, became the bride of Mr. Chas. D. Black, an employee of The Robinson Co. The ceremony was performed by Rev. J. R. Real, a few intimate friends and relatives being present. Miss Black, of Stirling, sister of the groom, acted as bridesmaid and Mr. Maurice Smith, brother of the bride assisted the groom.

The happy couple left on the noon train for a short honeymoon before returning to take up their residence in Napanee.

Consecration Services, Church of St. Mary Magdalene.

The Bishop of the Diocese will hold his annual visitation of this parish, on Friday, June 1st, when the church will be consecrated and confirmation will be held. The consecration service will be at 10.30 a. m. or as soon after the arrival of the train from the east as possible. The preacher will be the Ven. Archdeacon Bogert, of St. Alban's, Ottawa, formerly Rector of Napanee, through whose efforts the church was begun thirty years ago. The confirmation will be at 7.30 p. m. A large number of the Clergy of the Diocese have accepted the invitation to be present.

Drunkards in Turkey.

The Turks have a singular manner of regulating drunkenness. If a Turk overtaken with wine falls down in the street and is arrested by the guard he is sentenced to the bastinado. This punishment is repeated as far as the third offense, after which he is regarded as incorrigible and called "imperial drunkard" or "privileged drunkard." If he is then arrested he has only to name himself, mention his lodging, say he is a "privileged drunkard." He is released and sent to sleep upon the hot ashes of the baths.

Savored of the Truth.

"That's no lie," remarked the man with the newspaper.
"What's no lie?" queried the other party to the dialogue.

We present this style to let you know,
What lovely styles we have to show,
No time to hang them better than now,
You'd better see us for WE KNOW
HOW.

SYMINGTON'S

South Side Dundas Street, Napanee, Ont.
At The Downtown Office of the
NAPANEE CANNING CO., Limited,

Mrs. C. Loucks, who for some years conducted a laundry in the east end of the town, passed away on Sunday morning after about three weeks' illness. The funeral took place on Tuesday.

The building of the foundations for the machinery and boilers at the Electric Light Power House is being rushed and will be completed in a few days. The boilers and engines are on the way.

The Concert given in the Western Methodist church Tuesday, by the Bateman-Merry-Parloritz-party, was a musical treat indeed, a large number of music lovers were present, and all the numbers were heartily encoered.

May 24th passed off very quietly in town. Quite a number of the citizens spent the day down the river, while the Forester's excursion to Picton was well patronized. There was also quite a number who attended the celebration at Kingston.

Mrs. Deborah Normile, mother of Councillor Wm. Normile and Mrs. Geo. Caton, passed away on Sunday, at her home on Adelphi street, after a short illness, aged 75 years. Deceased was one of Napanee's best known residents a devout member of St. Patrick's church and was held in high respect by all who knew her. The funeral took place on Tuesday, services being held in St. Patrick's church thence to the R. C. Cemetery.

In the obituary notice of the late D. W. Allison, we gave the maiden name of his widow as Embury, instead of Membury. Mrs. Allison's grandfather, Amos Membury, came from Dorsetshire, Eng., in 1842, and settled on the United Empire Loyalist farm purchased from Capt. Mabey and now owned by J. B. Allison, who also married a Miss Membury. The family name can be traced back to Doomsday Book, a town in Devonshire still retains the name, and just outside the town are the ruins of a castle still called Castle Membury.

Diamond Dyes

The Only Package Dyes Which Give Special Colors For Wool and Silk, and for Cotton, Linen, and all Mixed Goods.

Diamond Package Dyes for Cotton, Linen or Mixed Goods will color wool, silk, cotton, or linen in the same bath better than any other dyes ever produced. For the finest results, however different strengths are needed for animal products, and for vegetable products, therefore the Diamond Dyes give the ladies one dye for silk or wool and one dye for cotton, linen or mixed goods.

The crude and weak package dyes put up by some speculators to imitate the DIAMOND DYES, have brought dismay and ruin to many homes. They produce dull blotchy and hideous colors, destroying good and valuable materials and are positively dangerous to handle. Such dyes are sold by some merchants for the big profits they yield.

In all well regulated and economical homes, our women at all times make use of the DIAMOND DYES when doing home coloring. Never accept from your dealer or merchants substitutes for Diamond Dyes; no other dyes can do your work as you would have it done.

Send your name and address to Wells & Richardson Co., Limited, Montreal, P. Q., for instruction Book, Card of Dyed Samples and Verse Story entitled, "The Longjohn's Trip to the Klondike." FREE to any lady residing in Canada or Newfoundland.

will close on Saturday night.

If you care to get a nice up-to-date coat at wholesale price come in on Saturday.

C. A. Graham & Co.

"That's no lie," remarked the man with the newspaper.

"What's no lie?" queried the other party to the dialogue.

"This paragraph to the effect that 'wise men are more often wrong than fools are right,'" answered the other.

Why Bodies Were Embalmed.

The Egyptians believed that the soul lived only as long as the body endured; hence their reason for embalming the body to make it last as long as possible. It is estimated that altogether there are 400,000,000 mummies in Egypt.

Bad men live that they may eat and drink, whereas good men eat and drink that they may live.

It is some compensation for great evils that they enforce great lessons.—Bovee.

IT'S DELICIOUS! What's Delicious?

A Cup of Malagana Black Tea. Try half pound package, which will only cost you 20 cents, and which we think you will want more of after trying.

For sale by

THE COXALL CO.

Saturday evening twelve new lawn seats were placed in the Harvey Warner Park. They were well patronized on Sunday.

The bill posters at their annual convention at Niagara Falls declared against handling any more objectionable advertising paper.

The cigar dealers in town are having a little fun in their line all by themselves. They are selling 10c cigars, 4 for 25c, and some particular 10c brands are being sold at 5 for 25c. The racket is said to have been caused by some of the merchants handling cigars as a side line and cutting prices. Now is the time to lay in a stock of cigars. Ten cents ones are just as cheap as five.

CHEESE BOARD.

Board met in Council Chamber in the town hall on Friday last.

Mrs. Eliza Bunnhour, died at the re-

THE success of pastry depends upon the flour. Bread and pastry must be more than merely appetising; they must be wholesome, digestible, nourishing.

The flour depends upon the wheat and the way it is milled.

Royal Household Flour

is made from spring wheat only. It is milled by the newest and best machinery. It is purified by electricity.

Use it and you get bread not only light, crisp and appetising, but also wholesome, digestible and nourishing.

You will better your baking by buying Ogilvie's Royal Household Flour from your grocer.

Ogilvie Flour Mills Co., Ltd.
Montreal.

101

"Ogilvie's Book for a Cook" contains 130 pages of excellent recipes, some never published before. Your grocer can tell you how to get it FREE.

The Gibbard Furniture Co.

—THE—

New Cream Dress Materials

Correct color, correct texture. may be said in regard to the materials to hand this week. The new Golf Suitings are simply beautiful. Fashion demands *Creme*. Being prepared for the occasion we invite your inspection and criticism. New cream chiffon serge with black hair stripe, new Panama suitings (cream), new canvas serges, fancy weave with blue stripe and overcheck, Priestley fabrics shrunk ready for use.

Gloria Silks for suits and dusters, in all the leading shades. Trimmings, gimp braids, and allover laces, most appropriate for these materials.

PINK LEMONADE.

The Story of Its Introduction to the Circus Public.

"Old Peter Conklin, the clown," said a circus official, "was the first to give pink lemonade to the world.

"It dates back to 1857, when Conklin was traveling in the south with Jere Mable's big show. Conklin had a dispute with Mable and jumped the show down in Texas. I've had the story right from his own lips. He bought a couple of mules and an old covered wagon, some tubs, tartaric acid, a lemon, a bushel or two of peanuts and started in the refreshment business. He followed the circus with his wagon, and every time the tents were pitched he would mount a box and harangue the crowd with:

"Here is your ice cold lemonade,
Made in the shade.
Stick your finger in the glass;
It'll freeze fast.

"The lemonade sold splendidly, and he couldn't wait on the people fast enough. One day he was surrounded by a mob scrambling for 'the juice,' when his water supply ran out. There were no wells or springs at hand. He rushed into the big tent, but there was ne'er a drop of water to be had. In his excitement he invaded the dressing tent. Fannie Jamieson, the bareback rider, was wringing out a pair of pink tights, the aniline dye coloring the water a very pretty shade. Conklin didn't stop to ask any questions. He grabbed up the tub and ran. Into the tub he threw some acid and the property lemon and called out:

"Come quickly. Buy some fine strawberry lemonade."

"His sales were doubled that day, and since then no well regulated circus is without pink lemonade. However, we do not make it the same way now, and sometimes strawberries are used as well as lemons."—Exchange.

BRUNSWICK STEW.

A Gastronomic Triumph With a National Reputation.

This celebrated stew originated in Brunswick county, Va., from which it takes its name—a county most famous in antebellum days for its perfect cuisine and gastronomical predilections. The originator was either Mr. Haskins or Mr. Stith, each claiming during a long life the distinction of having made the first stew and dying without a proper adjustment of the controversy. While made everywhere in the habitable globe, it is seldom made properly. It was introduced in Paris by Judge John T. Mason of Virginia. Only in Brunswick county is this stew so appetizing, so piquant in the seasoning to be found in all its perfection. To this remark of the writer made to a gentleman in the far south he replies, "The egotism of a Virginian suggests perfection in all things there, and the slow pace of the state ample time to arrive at it." The recipe is as follows: One of three kinds of meat is used—lamb, chicken or squirrel. If chicken, it is first parboiled, cut up as

... to arrive at it." The recipe is as follows: One of three kinds of meat is used—lamb, chicken or squirrel. If chicken, it is first parboiled, cut up as if to fry, the outer skin removed, then put on in hot water—a plenty to cover it—a large onion cut fine, a large slice of maddling meat cut fine, black and red pepper in abundance and salt. After cooking until the bones can be extracted, and hot water added if not enough, corn cut off the cob and tomatoes chopped fine are added, with half a pound of butter, more pepper and salt. Before serving add stale light breadcrumbs. Never add Irish potatoes or butter beans or any vegetable save corn and tomatoes. Serve in a tureen. It should be the consistency of thick soup and very highly seasoned. It is considered one of the finest of stews and has a national reputation.

"Americanism."

"Fired out," commonly supposed to be an "Americanism," has been traced home to Shakespeare. In one of his sonnets he says:

Yet this shall I ne'er know, but live in doubt
Till my bad angel fire my good one out.

"Say," as an exclamation to attract attention to the beginning of a remark, is common enough and not very elegant. At least so thought a school-teacher who resolved to break his pupils of the habit of using it. A bright one quoted, however, this from "The Star Spangled Banner":

Oh, say, can you see?
If the American people sing "say!"
In the national hymn, say, why not say "Say?"

As to Bow Legs.

A bow legged man usually possesses more than ordinary strength. Why? Because his legs in supporting great weight can bend in one direction only, whereas the man with straight legs is inclined to be wobbly. Such being the case, why should not a knock kneed man be stronger than a bow legged one? His knees, being braced against each other, ought to be more steadfast than legs bending outward. Yet we all know that the knock kneed man generally goes into consumption and is at all times weaker than his bow legged brother.

Optimistic Sure.

Newberry—Is Sanford of an optimistic temperament? Baldwin—I should say he is. I have known him to go into a restaurant without a cent in his pocket, order a dozen oysters and feel satisfied that he could pay his bill with a pearl.

Just Playing Possum.

"So you are going to retire from politics?"

"Yes," said the municipal boss, "I'm going to retire. But I'm not going to sleep so soundly that I can't be awakened."

Men ought not to investigate things from words, but words from things.—Mysor

If You Want Good Paint.

This is one of the very best farms in the county, well drained and fenced, and free from foul soil. 140 acres under good cultivation, 10 acres woodland, 30 acres new land ready to stump. Good orchard, 4 splendid wells. Fine brick residence, lawn and shade trees. 2 large barns, tenant house, new poultry house, hog house, etc. Very convenient to church, school, post office and blacksmith shop. 8 miles from Napanee, 4 miles from Bath, and 3 miles from station.

five years ago, tried to escape from the penitentiary last night. He dug a passage from his cell to a chimney in course of erection and climbed seventy feet by means of a rope. Near the top his strength failed and he fell, breaking his leg and injuring his spine. He was found at 8.30 o'clock this morning.

Belleville, Ont., May 25. Percy Peck a thirteen-year-old boy, this morning, while playing in an old quarry picked up a piece of dynamite. Not knowing what it was he threw the explosive on the ground, when it went off, shattering his left hand and badly injuring his right hand. His face was also badly cut. Peck was taken to the hospital.

In Parliament on Monday Mr. W. F. Maclean moved for a committee of the House to investigate life insurance in Canada. Hon. W. S. Fielding speaking to the motion, defended the Insurance Commission and the officials of the department. The motion was defeated. Mr. Fitzpatrick announced some amendments to the Bell Telephone bill, which will compel the company to secure an agreement with the municipalities in future before entering upon the streets.

Use Prism Brand Floor Enamel It dries quickly, has a varnish gloss, and is true to color. The Medical Hall.—Fred L. Hooper, sole agent for Napanee.

Belleville, May 29.—The Police Commissioners yesterday resolved to reorganize the police force, and to that end the resignations of all the members will be asked for, to take effect June 30th, next. The intention is to have the reorganized force consist of five, a chief at a salary of \$850, sergeant \$600 and three constables at \$450, with annual increases of \$25 until the salary is \$500. Applications for new members will shortly be asked for, who must be between the age of 25 and 30 years. This means that at least two of the oldest members of the force will be retired.

London, May 35.—A notable career closed to-night, when, after a long and painful illness, Michael Davitt died peacefully and painlessly at 12 o'clock in the presence his eldest son, Michael and his two daughters, who had devotedly attended him through his illness, and many of his intimate friends, including John Dillon. Shortly before his death Father Hatton had been with him. Mrs. Davitt, who had been in constant attendance on her husband until a few days ago, when she herself was taken ill, lies prostrated in the same hospital, too weak to leave her room. She has not yet been informed of her husband's death. It is stated that Mr. Davitt left a written message.

A shocking accident occurred Tuesday afternoon when Hugh Gribbon, a prosperous farmer of the eight concession of Tyendinaga, was almost instantly killed near Belleville by being struck by a freight train from the west. He had been in the city alone and was returning home, apparently intoxicated. When driving over Carleton crossing on the Grand Trunk the horse turned down the track toward the station, just as a freight was entering. The horse was between the tracks, with the buggy on the same track as the incoming train. Before the train could be stopped the rig was struck, smashing it to atoms, and mangled Gribbon in a terrible manner. He died instantly. He was a bachelor sixty-five years of age, and lost his two legs several years ago, by having them frozen. He was well-known. He had a new wooden leg in the rig when killed. The horse was not injured. Dr. Yeomans, coroner, has ordered an inquest to-day as the crossing is considered dangerous.

Painting White.

If you intend painting white either inside or outside, use Sherwin-Williams Gloss White. It will cover more surface, wear longer, remain whiter, and cost you less than any other white paint. It will not chalk off like Pure White Lead. Ask us for prices before painting. The Medical Hall.—Fred L. Hooper, sole agent for Napanee.

STELLA.

Hay and grain crops are looking well, considering the cold weather.

The grand lodge of 'Prentice Boys is to meet here early in June. Rev. J. Cumberland is to preach a sermon to them.

Our mail carrier has purchased a fine new gasoline launch. Some parties tried to stop him carrying passengers, but he took his boat to Mr. Davis, inspector of hulls, at Kingston, and has made the necessary arrangements, so that he can now carry passengers. It is a much needed conveyance, to this island.

R. A. Caughey, guard at the penitentiary with his wife and child, spent their holidays here lately.

Mrs. Charles Howard and Miss Jane Finlay are seriously ill.

Mr. and Mrs. John Allen visited here last week.

There was a meeting of the bandmen this week. The object was not made known to the public, but we understand the instruments will likely be sold. It is hoped some arrangements will be made to keep them here, as we miss our once fine band so much. Why cannot the county buy them?

Will not save a diseased tree. Whatever it is that threatens the life of the tree must be discovered and attacked directly. It is the same with rheumatism which has been considered incurable in advanced stages because the ordinary remedy instead of going at the root of the disease simply prunes the branches. The trouble is in the bone or joint and must be got at there, must be driven out. This is where the pre-eminence of Tuck's Rheumatic Bone Oil comes in over all other remedies. It goes straight at the root of the trouble in the quickest and most direct way, penetrates to the bone and effects a sure, permanent and speedy cure. Here is what one sufferer says of it:—

Dear Sirs—You ask me if Tuck's Bone Oil did me any good. I can tell you that it did. It cured me of rheumatism and nothing ever helped me for neuralgia until I got that. I suffered everything for years from rheumatism and at times I thought it was going to my heart and would kill me. All my neighbors know how I suffered and they all know that Tuck's Bone Oil cured me, because I tell everybody I see. I took small doses of it, about four drops in milk, and I had it thoroughly rubbed into my legs which were both affected. It seemed to penetrate right to where the pain was and even the first application gave me relief, but the grumbling pain came back in a few hours. I kept on using it and before I had used all of the fourth bottle I was completely free of rheumatism. During this time I had a terrible attack of neuralgia. I used Tuck's Bone Oil and got almost instant relief. I am willing for you to use this any way you like because I think your Bone Oil should be known of by everyone.

W. H. Dean,
Farnham, Quebec.
For rheumatism, lame back, neuralgia, sprains, coughs, colds, quinsy or diphtheritis, in short for any and all kinds of inflammation there is nothing to equal Tuck's Bone Oil. A bottle should be on the shelf in every home. For sale by all medicine dealers at 50c a bottle or sent prepaid by The Tuck Bone Oil Co. Limited, Smith's Falls, Ont.

CASTORIA

For Infants and Children.
The Kind You Have Always Bought

Bears the Signature of *Dr. J. C. Hooper*

Maud Butterill returned on Saturday from North Bay where they had been visiting for a few days.

A number of men are, to-day erecting a very tall flagstaff on Frederick Shibley's island.

A number went to Kingston on the 24th and report a good time.

A party had tea on Craig's island and enjoyed a pleasant social hour. The day closed with a display of fireworks which attracted a large crowd.

The saw mill is now running with a full staff. There will be about six weeks cut.

WILTON.

Almon Brown has built a new hay barn.

J. W. Babcock is building an addition to his house.

Miss Nellie Stewart, Harrowsmith, pleased the congregation at the Presbyterian church on Sunday evening by a very pretty solo.

Newman Babcock, who has been in the Kingston General Hospital for several weeks, was visiting his father, a few days last week, but has returned to the hospital for further treatment.

Thomas Mills, who has been very ill is better. His daughter, Mrs. Jordan, Campbellford, has come to visit him. All regretted to hear of the accident which befel another daughter, Mrs. Birdsall, Chicago, who was preparing to come to Wilton, but unfortunately broke her arm.

Miss Irish, has returned to Napanee after a few days spent with her aunt, Mrs. Alfred Babcock.

Miss Susie Parrot, Kingston, is visiting friends in Wilton.

Mr. and Mrs. E. Day, Harrowsmith, spent Sunday at B. B. Shibley's.

Mrs. Thompson, and grandsons, Lloyd and Clifford Lapun, Watertown arrived in Wilton, Sunday, to visit their friends in this vicinity. They were accompanied for the day by Mrs. and Miss Moxley and Walter Moxley, of Kingston.

Refrigerators that furnish dry cold air, are the only kind to buy. Everything cool and sweet, easy on ice, and easy to put it in. This kind is sold at BOYLE & SON.

In Parliament on Wednesday Mr. Borden introduced his motion regarding the land policy in western Canada and spoke in criticism of the work of the Immigration Department. Hon. Frank Oliver replied and Mr. Edmund Bristol and Mr. Bole took part in the debate.

COBALT-The World's Richest Silver Mining Camp THE COLUMBUS COBALT SILVER CO., Limited.

Authorized Capital Stock, \$450,000. Shares \$1 each.

BOARD OF DIRECTORS:

HON. RICHARD HARCOURT, President,
Director of the Ontario Bank, and
formerly Treasurer of the Province of Ontario

JOHN FLETT, Esq., Vice-President, Head
of the firm of Flett, Lowndes & Co., Dir-
ector of Ontario Bank.

SOLICITORS—Clark, McPherson, Campbell & Jarvis, Toronto.

The company owns as a mining claim, free from any encumbrances, the favorably and well-known Columbus Mine of 40 acres, which has a 5-foot vein, one foot being high-grade cobalt, with good silver value, at only four feet depth, located in Coleman Township, near Groulx Lake, in a most favorable location nearby many of the big paying mines, such as the Drummond, Jacobs and others, and only a few feet from the famous Gillies timber limit, which is so rich in silver that the Government decided to develop it for the benefit of the public. The undersigned personally offers for sale at par only a limited number of shares, as it is expected that in a short time it will greatly advance. There is now a full force of miners developing the property. Send for full particulars. Mail your order, with marked cheque or express order, to the order of

DANIEL SIMPSON, P. O. Box 129, Cobalt, Ont.

KAI WANG;

A TALE OF SOUTHERN CHINA.

CHAPTER IX.

When he threw away his priestly disguise Larry Kennedy had no intention of letting his caution go with it.

The knowledge that he had enemies without number in this imperial city of China was a fact that could not be discounted, a fact that haunted the little man day and night, so that he was not likely to let it pass out of his mind even when apparently in the midst of friends.

Those who are best acquainted with Chinese ways have the greatest respect for the cunning of the Celestials, and Larry's experience thus far had taught him that when dealing with such shrewd schemers no one was really safe until he had thoroughly cleared the woods.

When he entered the hotel, it was with the idea of bodily taking up his quarters there, thus giving his enemies to understand that he no longer had cause to fear them; they could draw whatever conclusions they pleased from his action, he did not care the snap of his finger, though naturally they would consider that his new course was brought about by his having jettisoned his cargo—relieved himself of the papers which were the cause of his troubles.

The very first person Larry set eyes on after entering the hotel was the Englishman to whom they had intrusted the documents but a couple of hours before.

Lord Rackett was comfortably stretched out in a chair and smoking a pipe weed.

He looked the picture of contentment. Larry, though not at all suspicious by nature, could not but wonder what brought him there.

How could he help it if his mind went back some years to stirring scenes in the harbor of Valparaiso, where this same bold Briton, furious because Dr. Jack interfered with his plans for a fortune, and stung with Jealousy, since he had been a suitor of Avis Morton before she ever met Evans after the bull fight at Madrid, had done his level best to make her a widow, and failing in this laudable endeavor, had even descended to the miserable work of having her kidnapped and carried to his steam yacht, from which she had been rescued only through the gallant endeavors of Dr. Jack and his friends.

Yes, such stirring scenes, together with others equally as exciting, in which the English bulldog had had a hand, flashed athwart Larry's memory as he saw mildred comfortably installed in the building where Avis, secretly mourning for her lost husband, had taken up her abode.

Could it be that Plympton— No, perish the unworthy thought! The Briton had professed such devout contrition for the pain and trouble his conduct in the past had given Avis, and was so zealous in his desire to make the amende honorable that Larry was compelled to believe him sincere.

Perhaps, as was quite natural, he had lodgings at the hotel himself; or it might be such a common centre proved the attraction for many foreigners after the dinner hour, a sort of vantage ground where they could meet and exchange views upon the grave questions of the time concerning Russian, German and British concessions in the awakening empire; or it might be the in-

only right I should see Mrs. Evans again. You spoke of her resolution to again enter the Forbidden City in order to look upon the spot where her husband was cut down, and to assure herself, as it were, that the very last chance for hope in his case had become exhausted. I have determined to accompany you to Peking and share your venture, if you will allow me."

Larry was struck in a heap by the unexpected offer, it was so generous, so noble, for no man could be better acquainted with the danger than Lord Rackett, who showed such a willingness to take his life in his hands.

In dealing with such a man, Larry could no longer maintain his studied affectation, which he cast aside as easily as one does a top coat when the sun shines toward the zenith.

"That is good of you, my dear fellow. Years ago you tried your level best to make my cousin a widow, and now that she seems to be one through no fault of yours, by Jove, you are ready to risk your life in the endeavor to find Dr. Jack, if perchance he may still be in the land of the living. Demme, it's simply remarkable, that's what it is!"

"At any rate, that's just what I mean to do. I told you words were cheap, and that deeds spoke louder. That devilish past has given me many a pain, and I'd be beastly glad to wipe it all out, and feel myself clear of the stain."

The glow of manliness in his eyes touched a sympathetic chord in Larry's heart.

They shook hands again.

"I accept your offer and appreciate the motives that urge you to make it. God willing, we shall know the worst before long. It is useless trying to influence Avis against undertaking this desperate move—she is a woman who dares anything when the man she loves is in question. But I have felt the need of a strong arm, and I welcome you as a comrade in time of necessity."

Which was a very clever speech on the part of Larry, more given to saying ridiculous things than words of wisdom.

Lord Rackett showed positive signs of satisfaction—his blooming countenance took another shade of red, and there was a firm look about his mouth that spoke well for his newly-made resolutions.

"That was one of the things I came here to tell her," he remarked.

"Then you had another?" queried his companion.

"Yes. After you left I had a visitor—perhaps you can guess who he might be?"

"Ah! yes, the Russian, to be sure?" "Count Petoskey it was. You see, it was already known that she had been at the office of the consul, and they jumped to conclusions as to her mission; he also mentioned you, and this gave me an idea they had penetrated even that very clever mandarin disguise."

"Quite likely," murmured Larry, as his hand involuntarily toyed with the treacherous little puffs of blonde hair deep set on his jaws, and which he had reason to believe had been the means of his betrayal; "in fact, I am positive that what you say is true, for a howling mob congregated in front of Kai Wang's door, and shouted themselves hoarse in demanding that I appear and have my hair cropped in the prevailing Chinese style—the head to go with it."

A PRINCE OF SILENCE.

Sir Henry Peyton was famous a generation or two ago for his gray team and his lack of small talk. It is related, in the "Life" of the second Earl Granville, that Sir Henry once honored a pretty Englishwoman with the seat on the box of his coach for a sixteen-mile drive.

Half way he opened his lips for the first time:

"Woolly weather for coach horses, my lady," he remarked.

On another occasion he fairly outdid himself. His health was being drunk enthusiastically at an agricultural meeting.

"Thanks," said he, and drank their health in return.

Sitting down, he kicked his neighbor, Lord Jersey, and muttered:

"I didn't say too much, did I?"

DELICATE BABIES.

Every delicate baby starts life with a serious handicap. Even a trivial illness is apt to end fatally, and the mother is kept in a state of constant dread. Baby's Own Tablets have done more than any other medicine to make weak sickly children well and strong. They give the mother a feeling of security, as through their use she sees her delicate child developing healthily.

Mrs. S. M. LeBlanc, Eastern Harbor, N. S., says:—"Up to the age of fifteen months my baby was weak and sickly and at that age could not walk. It was then I began using Baby's Own Tablets, and the change they wrought in her condition was surprising. She began to get strong at once, and has ever since been a perfectly well child." Every mother who values the health of her little one should keep a box of Baby's Own Tablets in the house. Sold by all medicine dealers or by mail at 25 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

A BISHOP ON SUNDAY RECREATION.

The Bishop of Bath and Wells, speaking at Taunton, England, said he was not going to lay down any rule as to what should be done with regard to the observance of Sunday, for what was right in the case of one was altogether wrong in the case of another. It was quite wrong for the rich man who had all the week in which to amuse himself to take Sunday for pleasure; but it was not all wrong for a hard-worked man, who never goes out except on Sunday, to have a kind of recreation on that day which would be absolutely wrong in the case of the rich.

HOW HE BEAT THE STREET CARS.

A Torontonian Keeps a Record of Fares He Never Paid.

A small account book was picked up in the street recently showing a systematic record of the number of times its owner got ahead of the street railway company. The blank pages of this

MOUNTAIN'S SILENT MAN

ONE OF THE EFFECTS OF THE WELSH REVIVAL.

The Movement in Wales Has Left Many Curious Human Landmarks of Its Progress.

The Welsh revival has left strange marks upon many fervent people who were swept along during its progress through the country.

None is more curious than the stranger of singularly handsome appearance, who is attracted to any particular locality in Wales where the highest religious fervor is for the time being to be found. He is a silent man of splendid proportions and his close-fitting suit of rough material—the only garb he has ever been seen to wear—shows off his lithe and athletic frame to perfection as he swings along with buoyant step.

HIS ELOQUENT PRAYERS.

The early morning prayer meeting, of which many are still held in Wales, has a great attraction for him, and his fervent and eloquent intercessions are as striking as his personality. When the gathering disperses he strides away towards the mountains, often showing his disdain of such obstacles to his rapid progress as gates and hedges by leaping them in his exuberance of spirits as cleanly as a greyhound.

Not long ago a wanderer on the mountains came across this swarthy stranger of simple life singing with bared head and uplifted face Jane Taylor's hymn:—

Great God! and canst Thou condescend
To be my Father and my Friend?
A child like me, and Thou so high,
The Lord of earth and air and sky?

MANY OTHER CASES.

There are many other instances of revival eccentricity. Recently Miss Morgan one of the mistresses of a girls' school at Bridgend, absented herself, and it was found that she was lying prostrate at the house of a friend. A voice, she declared, had bid her remain in solitude until she was called away. She had taken an active part in the Welsh revival, and at a meeting of the school managers, who decided to give her considerable leave of absence, one speaker said that the schools had been made the rendezvous of religious fanatics.

A prosperous Welsh tradesman, who has been deeply moved by the revival, suddenly left business and friends, and for months nothing could be ascertained as to his whereabouts. One day recently his brother received a telegram, followed by the appearance of the missing man. During his absence he had grown a beard, and his haggard features told a sad story of privation. The man's mind is absolutely a blank as to what happened in the long inter-

A small account book was picked up in the street recently showing a systematic record of the number of times its owner got ahead of the street railway company. The blank pages of this book are ruled off in ledger form and each account headed with the name of a street car route in Toronto. For instance there was "Church street," with a debit on the left hand side and a credit on the right. "Bloor and McCaul" the same, and so on over the entire system. Evidently when the owner of this book paid a fare he charged it up against the car line he patronized, and whenever he saved a fare he credited himself with five cents.

At first glance it might appear that the owner of this account book was in the habit of dodging the conductor's box but this was not the case. The fact is the fares were saved by riding a bicycle instead of paying the street car company for comings and goings and the fares were contributed on rainy days when the wheeled was unpleasant. On August 6, 1905, he made an entry against "Bloor and McCaul" as follows: "One fare—last of quarter's worth of tickets bought June 2." The total of fares unpaid amounted to nearly \$30 in seven months.

Green: "I thought you said that fellow Skinn was as good as his word?" Brown: "That's what I said." Green: "Well, he lied to me about a business transaction." Brown: "But I didn't say his word was any good."

They are Carefully Prepared. — Pills which dissipate themselves in the stomach can be expected to have much effect upon the intestines, and to overcome costiveness the medicine administered must influence the action of these canals. Parmelee's Vegetable Pills are so made, under the supervision of experts, that the substance in them intended to operate on the intestines is retarded in action until they pass through the stomach to the bowels.

HAD BEEN CONSIDERED.

"Was his death sudden?" inquired the tenderfoot.

"Sudden?" said the resident. "No, stranger; he'd been under suspicion a long time."

There can be a difference of opinion on most subjects, but there is only one opinion as to the reliability of Mother Graves' Worm Exterminator. It is safe, sure and effectual.

VERY LIKELY.

"What do you consider the best foundation," asked the ambitious youth, "on which to build a successful business?" "Rocks," promptly replied the multi-millionaire.

Hostess: "Well, Tommy, you can tell your mother for me that you are the best behaved boy at table I ever met." Tommy: "Thank you, ma'am, but I'd rather not." Hostess: "Rather not! And why, pray?" Tommy: "She'd think I was ill, and send for the doctor."

gram, followed by the appearance of the missing man. During his absence he had grown a beard, and his haggard features told a sad story of privation. The man's mind is absolutely a blank as to what happened in the long interval of absence. He only remembers that while wandering along a London street he suddenly recalled the address of his brother in Wales, and promptly despatched a telegram to him.

NERVOUS CHILDREN.

St. Vitus Dance, Neuralgia and Head-aches Common Among School Children.

St. Vitus dance is a disease that is becoming more and more frequent among school children. Young people tire the nerves with study and the nerves cry out. Sometimes the trouble takes the form of neuralgia, headache, nervous exhaustion, weakness of the limbs and muscles, and what we call "feng run down." In other cases St. Vitus dance is the result, and the sufferer frequently loses all control of the limbs, which keep up a constant jerking and twitching. There is only one way to cure this trouble—through the blood which feeds and strengthens the nerves. And Dr. Williams' Pink Pills are the only medicine that can make the new rich, red blood that feeds the nerves and strengthens every part of the body. The case of Flossie Doan, of Crowland, Ont., proves the value of Dr. Williams' Pink Pills. Mrs. Doan says: "A couple of years ago my daughter Flossie was dangerously afflicted with St. Vitus dance. She became so nervous that after a time we could not let her see even her friends. She could not pick up a dish, lace her shoes, or make any movement to help herself. She had grown thin and very pale, and as she had been treated by several doctors without benefit I feared she would not recover. A friend advised me to give her Dr. Williams' Pink Pills, and after she had used a couple of boxes I could see that they were helping her. We gave her nine boxes in all, and by that time she was perfectly well, and every symptom of trouble had passed away and she is now a strong, well developed girl."

If your growing children are weak or nervous, if they are pale and thin, lack appetite or complain of headaches or backaches give them Dr. Williams' Pink Pills and see how speedily the rich, red blood these pills make will transform them into bright, active, robust boys and girls. You can get these pills from any medicine dealer or by mail at 50 cents a box or six boxes for \$2.50 by writing The Dr. Williams' Medicine Co., Brockville, Ont.

AMENDING THE DECLARATION.

"My friends," exclaimed the candidate, in a fine burst of disinterested patriotism, "I don't want this office if you think I am unworthy to fill it!" Here he stopped and took in a drink of water.

"And I might add," he proceeded, "that my candidacy is not the result of any corrupt political bargain."

"Yes, you might," interrupted an old farmer in the audience; "but if you did you'd be lyin' like Sam Hill!"

PLAIN MAN WANTED.

This odd advertisement recently appeared in the Lahore (India) Tribune: "Wanted—An assistant master, strong in English and good at sports. Pay Rs 60 per month. Anyone with a proud look and a high stomach not wanted. Apply to Principal, Church Mission High School, Singapur, Kashmir."

Nothing pleases a loafer so much as an opportunity to pose as a martyr.

Binks: "Are you going to get a new suit this summer?" Jinks: "No; my tailor says he can't afford it."

ground where they could meet and exchange views upon the grave questions of the time concerning Russian, German and British concessions in the awakening empire; or it might be the internal affairs of China, connected with Li Hung Chang, the weak Emperor and that most remarkable woman in the case, the Dowager Empress, in relation to whom new and startling surprises were of daily occurrence.

So Larry throttled the first feeling of distrust that caused a fluttering of his pulse.

Friends were too scarce under the flag of the yellow dragon to despise this hearty good-will offered with such ardor.

Lord Rackett chanced to set eyes on him at about this moment.

Down came his feet from the chair where they had been resting. Yankee fashion, and immediately he sprang erect, advancing toward the other with eager, outstretched hand, and a broad grin upon his glowing face.

"By Jove! now, this is a pleasure! It was difficult for me to place you, in that beastly togger of a yellow-jacketed mandarin, but now I have no trouble whatever—only your appearance makes me squirm, d'ye know, as I remember some very deucedly unpleasant facts connected with the past, which I had hoped to entirely forget."

Larry accepted the proffered hand, but with the caution of one whom experience had taught wisdom; these giants had such a grip and seemed utterly unconscious of the pain they caused in squeezing a set of tender digits.

Larry was a two-faced fellow—that is, he had a way peculiarly his own of picking up his affection at will or tossing it aside when the occasion demanded manly qualities. It seemed to be an amusement for him to pose as a little Piccadilly swell; nor did he often neglect a favorable opportunity to strut and pose in this attitude when he had nothing better to do.

So now he cocked his monocle into his right optic, and gave mildred his hand in the most execrable as well as the latest absurd high grip, all of which tickled Plympton.

"By Javve! glad to see you, my deah fellow. Assure you I am delighted to assume my ordinary attire—vildicious garb, that mandarin affair—beastly feeling—solemnly declare I felt uncommonly like one of the mummies, ye know, such as came from the Pyramids. Pwesome you put up at this establishment; quite an honor to English enterprise, by Javve!"

"As you say, it is something of a building for this part of the country; but I have my own private lodgings," returned the other.

Larry thought he detected a gravity in his manner that was unusual—at any rate, after his recent exciting experiences he was just in the mood to take the alarm.

"Do you know—are you aware that she is under this roof?" he asked, pointedly.

"She told me so herself, you remember," replied the other, composedly.

"Ah! then you may have come here with the intention of seeing my fair cousin?"

Lord Rackett glanced hurriedly around, and there was enough of mystery in his action to set that valiant little heart of Larry's thumping at an unusual rate against his ribs.

He scented action in the air, and mentally groaned to remember that whatever was coming he must meet it alone, deprived of the sturdy arm and daring spirit upon which he had been so accustomed to lean.

"Pardon me for acting as I have done, but it seems to me as though there is danger in the very air we breathe, and in China it is never safe to assume that the very walls themselves have not ears."

Confusion! you alarm me, you do, by Javve, now. But, pway, do not hesitate, Lord Wackett, but proceed. What's up?"

That covered the whole question, as it were, in a nutshell—what was up? "I became anxious and thought it

ing mob congregated in front of Kai Wang's door, and shouted themselves hoarse in demanding that I appear and have my hair cropped in the prevailing Chinese style—the head to go with it."

"Ah! I see; and, declining this favor at their hands, you picked up your bed and walked, which showed remarkably good sense on your part. But, as I remember, you were always able to take care of yourself, as well as do some thinking for others."

This throwing of bouquets at each other was all very well, and doubtless had some effect in drawing the two strange comrades closer together in the bonds of friendship, but all the same it was not business, and shrewd little Larry knew it.

So he "returned to his mutton," and took up the case at the point where it had been dropped.

"What did he want, this minion of the Czar?"

"The papers, of course."

Larry uttered a cry of alarm.

"What cursed assurance! But these Russians would not hesitate to claim the sun by right of first discovery. Of course, you declined to grant his favor?"

How confidently he said this! The other noticed it and showed his pleasure.

"You may be certain I did. He tried specious arguments to prove the documents belonged to him; they failed to work. Then he showed me a commission from the Dowager Empress, giving him full authority to seize those documents wherever found, and confiscate them in the name of the empire."

Larry emitted a low whistle.

"Carried it pretty far, I should imagine."

"Correct, my boy. He found me stubborn, and begun to use violent threats. I gave him one minute to apologize or be thrown from the door."

"That cooled his ardor?"

"Like a bucket of ice-water down his back. When he saw me start to take off my coat he came to his senses and withdrew his offensive remarks."

"Oh! if I had only been there to see it all."

"We went into argument again, and he became heated once more, though careful to refrain from personal insults. I snapped my fingers in his face and told him that was all I cared for any threats—the papers were upon British territory and would be defended against any and all comers. He went away mighty hot under the collar, I assure you."

That Lord Rackett rather enjoyed the situation, the broad smile upon his face testified; it is not every day that a sturdy Englishman finds a chance to get in a fair blow at a representative of the mighty rival power that crowds the interests of the British empire in China and along the Indian borders.

"But—such a desperate man, backed by the authority of so bold a ruler as the Empress of China, might not hesitate to even sack the consulate—of course concealing his hand in the game," spluttered the troubled Larry, but the other continued to smile.

"Ah! yes, that same thought occurred to me, d'ye know. Strange how great minds move in a similar channel—eh, Larry, my dear man?"

"Then you took precautions?" eagerly.

"That I did."

"And looked the safe?"

"Better even than that—called upon the captain of Her Majesty's gunboat Hornet, who chanced to drop in, having business at the consulate, for a guard of marines, and there is a cordon of blue-jackets stretched around the building that will hold it against any force Petoskey could bring to the front."

Larry waved his topee wildly above his head.

"Good for you!—that's the true spirit—checkmate Petoskey, my boy! I think he will have to go to school again and take a few more lessons before he finishes this game. I tell you, it relieves me to know those papers are safe."

"You value them highly."

"Why not? They are worth millions to Avis, and represent what Dr. Jack

gave his own precious life for. I endured considerable rough work myself in their interest, and feel a decided concern in their safety, as should you and every other Anglo-Saxon in China. They stand for our victory over other foreign interests."

"Well, worry no longer about them, since they are safe from any attack."

"By Jove! now, I am glad to hear you say that; but we should continue to be on the alert. It was Jack's policy never to underestimate a foe."

"And deuced good policy, too; but, d'yee see, I'm unable to understand what this fellow could do to secure the papers."

"Being outgeneraled in regard to force, he will next try diplomacy—these Cosacks are great on sly tactics."

"But we are not babes in the wood, that he can play with us. With force a dead letter, how could he lay hands on the documents?"

Larry threw up both hands.

"Ask the wild winds or the sad sea waves, they can tell you as easily as I; but, all the same, I feel, I know, Petoskey is never the man to stop at trifles; and something tells me it won't be long before we discover he is far from having gone to sleep. Here comes a yellow flunky looking for you, I imagine, Lord Rackett."

"Oh! yes, the fellow who brought up a card a deuce of a time ago, with a request for an immediate interview."

He turned and spoke with the Celestial servant of the caravansary, and when Larry once more set eyes upon the florid face of the Englishman he instantly discovered signs of new apprehension there.

(To be continued).

A WELL-KNOWN BANDA MAN SPEAKS

A Well-Known J. P. is Cured of Kidney Trouble of Long Standing by Dodd's Kidney Pills.

Banda, Ont., May 21—(Special).—There is no one more widely known and highly respected in this section of the country than Wm. Bell, Esq., J. P., and the statement he makes below concerning his cure by Dodd's Kidney Pills bears weight and carries conviction with it.

"For more than a year I was a sufferer from kidney trouble," Mr. Bell says. "Always in pain at times the agony would become unendurable and I was practically unable to attend to any of my duties. I doctored with several local physicians and tried every means to get cured, but without success. At last I was induced to give Dodd's Kidney Pills a trial. I have the greatest pleasure in stating that they drove away the pains entirely and restored me to my old time health and strength. I am sure I owe this entirely to Dodd's Kidney Pills."

CUSTOMS OF ABYSSINIA

EXPEDITION JUST RETURNED FROM UNKNOWN PART.

Several Members of the Party Were Murdered — The Method of Choosing a King.

Some remarkable tribal customs have just been reported by an expedition sent into the comparatively unknown countries between the Abyssinian capital and the north-west of Lake Rudolph, in the neighborhood of the Anglo-Abyssinian boundary.

The expedition, which was accompanied by the secretary of the British Legation at Adis Ababa, was composed of over 2,000 men, and was sent out by

one side four spacious, well-thatched huts and a curious mound, probably sacrificial. By the side of the huts thousands of cowbells, sweet in tone as those in a Swiss upland valley, were hung on rude trestles, and swung backward and forward by bands of women under the direction of an old witch.

The hard level flooring of the clearing shook under the feet of hundreds of naked warriors, chanting a wild song of death, now advancing in a rhythmic rush, now retreating and leaving two of their number in the open, who, with their twelve-foot spears held horizontally just over their shoulders, the shafts quivering like a snake before it strikes, danced a wild war dance, keeping time to chant to the chorus.

When the din grew louder the crowd surged around the dead king's hut, suddenly parted, and through the lane thus formed dashed a gleaming figure adorned with a leopard skin, orange-colored ostrich feathers, beads and bands of copper and brass and ivory round his neck and arms.

Three times he rushed round the clearing, followed by the shouting, singing warriors, and then disappeared as quickly as he had come. The new king had been chosen.

NEVER WASHES.

These Shankalla tribes have each their own customs and dialect. In one case the ruler might never touch water, and when his curiosity to see a white man made him break the "taba" his man had to carry him over every stream lest he should be defiled.

In another tribe, when a father is getting on in years the son bids him climb into a tree and jump down from the branches. If the old man staggers on landing, the son spears him on the spot. His usefulness is over.

One tribe has a custom of sewing chance visitors up in fresh hides and leaving them to be killed by the contraction of the skins; in another the only orthodox way of dealing with strangers was to tie them in a bundle and roll them over a precipice.

In the Sorma country, where the natives are elephant hunters and eaters, the women are of a particularly repulsive type. They make a practice of disfiguring themselves by distending their lower lips until they hang almost down to the breast. This is brought about by means of a saucer of clay which they insert in the lower lip.

Are you a sufferer with corns? If you are, get a bottle of Hollway's Corn Cure. It has never been known to fail.

He: "The minister preached a scathing discourse on the extravagance of women." She: "Yes; and there his wife sat, with a \$20 hat on." He: "That was probably the cause of the sermon."

Sunlight Soap is better than other soaps, but is best when used in the Sunlight way. Buy Sunlight Soap and follow directions.

Mr. Sprigg (gently): "My dear, a man was shot at by a burglar, and his life was saved by a button which the bullet struck." Mrs. Spriggs: "Well, what of it?" Mr. Sprigg: "Nothing; only the button must have been on."

A Small Pill, but Powerful.—They that judge of the powers of a pill by its size, would consider Parmelee's Vegetable Pills to be lacking. It is a little wonder among pills. What it lacks in size it makes up in potency. The remedies which it carries are put up in these small doses, because they are so powerful that only small doses are required. The full strength of the extracts is secured in this form and do their work thoroughly.

Young Man (enthusiastically, to Mr. Henpeck): "Your daughter, sir, has taken my heart by storm!" Mr. Henpeck (sadly): "I daresay, young man, it runs in the family. Her mother takes me by storm every time I come home."

Yes, it is humiliating to have a skin covered with foul eruptions. It is painful, too. Why not use the trouble and restore your skin to its nat-

sinian boundary.

The expedition, which was accompanied by the secretary of the British Legation at Adis Ababa, was composed of over 2,000 men, and was sent out by the Emperor Menelik to capture Shifara, an Abyssinian outlaw, who had been murdering and raiding in Abyssinian territory. It was away eight months and failed to capture Shifara.

For considerable distances the expedition was followed by natives, who hid themselves amid the thick elephant grass nine feet high bordering the path, and it became necessary to fortify the camps and make varebas every night.

ALL FORMS OF DEATH.

Several of the expedition were murdered, others died of sunstroke and want of water, and large numbers of animals were speared.

The route followed by the expedition from Adis Ababa to the south-west passes through the interesting little Malcommedan State of Djimma, which is presided over by its own king, Abagifar, the last of the rulers from whom Menelik has his title of "King of Kings of Ethiopia."

No self-respecting Djimman is ever seen without his or her parasol of stripes of date palm leaves, and the ladies of the country wear embroidered white blouses, skirts of softly dressed hide and "coiffures" of closely plaited black hair, too often someone else's. Fashion laws must be obeyed, and the Djimman perruquier is a master of his craft.

Beyond Djimma and Kaffa lie fertile and level-watered but mountainous countries, whose inhabitants are all alike called Shankallas by the Abyssinians. Some of the tribes are splendid men, rich copper in color, well built and muscular, with curious patterns burnt on chest and thigh, and innocent of all clothing save their armlets and ornaments.

While the expedition was sitting out at Maji, the Abyssinian post in the south-west, the local Shankalla king died. He was sewn up in a fresh hide bag in a sitting position, and placed on the floor of his hut which stood in a clearing in the forest, and from miles around his subjects came to the lying-in-state.

CHOOSING THE KING.

The ground of the clearing was of hard-beaten clay. All round were thick rows of huge "gogo" palms, and on

it runs in the family. Her mother takes me by storm every time I come home."

Yes, it is humiliating to have a skin covered with foul eruptions. It is painful, too. Why not end the trouble and restore your skin to its natural fairness with Weaver's Cerate?

Disgusted Uncle: "I shall leave my money to the poor and needy." No-good Nephew: "Heaven bless you, uncle; I always said you wouldn't leave me out."

A Requisite for the Rancher. — On the cattle ranges of the West, where men and stock are far from doctors and apothecaries, Dr. Thomas' Electric Oil is kept on hand by the intelligent as a ready-made medicine, not only for many human ills, but as a horse and cattle medicine of surpassing merit. A horse and cattle rancher will find matters greatly simplified by using this Oil.

Said the night watchman, when, about dusk, he was invited to drink a cup of coffee: "No, thank you; coffee keeps me awake all night." And then he saw his blunder, looked very embarrassed, and tried to explain, but it was no use.

The heat of the Tropics fades red cheeks. It takes away the energy. "Ferrovin" is the best tonic to brace you up. It stimulates the system. It makes the weak strong. It is pleasant to take. All druggists sell it.

Charlie: "Don't you remember? It was that day you borrowed \$1 of me." Jack (hastily): "I don't recollect anything of the sort." Charlie: "But you paid it back next week." Jack: "Oh, yes; I remember that perfectly."

Very many persons die annually from cholera and kindred summer complaints, who might have been saved if proper remedies had been used. If attacked do not delay in getting a bottle of Dr. J. D. Kellogg's Dysentery Cordial, the medicine that never fails to effect a cure. Those who have used it say it acts promptly, and thoroughly subdues the pain and disease.

THE BEAR'S STRATEGY.

The Deceit Which It Practised on the Unwary Hunter.

A writer describing some bear-hunting experiences in the Rocky Mountains, says:—

"We came to some dense undergrowth which my companion thought was a likely place for the bear to be found. Hardly had he expressed this opinion, and as I was pushing my way forward, there was a sudden rustle among the undergrowth in front of us, which was accompanied by a savage growl. Jenkins yelled, 'Look out,' and jumped quickly to one side, but before I had time to move, the bushes within a yard of me parted and a gigantic bear burst out, growing furiously, and with a look in his wicked little eyes which I shall never forget.

"I was so utterly taken aback by this sudden appearance that I stood stock still, a fact which very probably saved my life, for bears are not very quick with their eyes, although exceedingly so with their noses, and this one, scenting man, missed me but made straight for Jenkins who was ten yards away. We fired almost simultaneously, and Bruin went down like a stone.

"I was so carried away with the excitement of the moment, and with exultation at having helped at the destruction of our bear, that with a whoop I ran forward and was about to plant my foot, like a sort of conquering hero, upon the shaggy carcass, when to my horror it got upon its feet and aimed a terrific blow with its fore-paws at my head. Instinct more than presence of mind caused me to dodge this and jump aside, and a second bullet from my companion's rifle put an end to any further efforts at my destruction on the part of my adversary.

"Even this adventure was mere child's play compared to one which befell me a few weeks later.

"We came to a piece of rocky rising

ground, across which, direct in our path, a large tree trunk had fallen. If a bear came down on us while we were getting up here," Jenkins whispered to me, "we would be in a pretty pickle." I agreed with him entirely, but had scarcely time to say so when we reached a position which enabled us to see some dark object on the other side of the tree trunk. It was the very bear that we were after. After raising his head and staring us straight in the face he gave a sniff and, turning tail, made off at full speed. For a moment I utterly forgot the danger of our position, and I let fly at him a bullet which struck him, we afterwards discovered, right in the flank.

"With a perfect bellow of rage he turned around, and, after raising himself for a moment on his haunches, made straight for me. I was standing about three yards behind the tree trunk when I fired my shot, and he could not have been more than twelve yards away when he started to charge. Neither of the others could fire for fear of hitting me, for they were directly behind, and although I had time to shoot again, my hand was so unsteady and I was so excited, that I missed him altogether, and he had reached the tree before I fully realized the danger I was in. I turned tail and started to bolt down the hill for dear life. Almost my first step, unfortunately, was upon a loose stone, which flung me upon my face, and set me rolling downwards with the bear coming after me about twice as fast. It was at this moment that Jenkins took action. Knowing that the bear having once turned his attention to me would

take little notice of anybody else, he waited till he passed him within five yards, and then fired point-blank at his head, killing him on the spot."

Little Elsie: "Brother Johnny can't come to school; he has diphtheria." Teacher: "Indeed! Where did he get it?" Little Elsie: "In the neck."

"What?" called the fair young thing to the man who had fallen from his horse for the tenth time that morning. "Falling off again? Where did you study horse-riding? In a correspondence school?"

ASTONISHED THE DOCTOR.

Mrs. Eaton Recovering, Although Her Physician said She Might Drop Dead at any time.

Mrs. ROBERT EATON. "The Doctor told me I had heart disease and was liable to drop on the street at any time," says Mrs. Robert Eaton, of Dufferin, Ont.

"My trouble began four years ago with a weak heart. I was often afraid to draw my breath, it pained me. I was bothered with nervousness, dizziness, loss of appetite, smothering and sinking spells, and I could not sleep.

"Sometimes a great weakness would seize me and I would have to lie down to keep from falling. My hands and feet would seem to go to sleep and a sort of numbness would come all over me and perhaps immediately after the blood would rush to my head and a series of hot flashes would envelop me.

"I took all kinds of medicines, but kept gradually growing worse until about eight weeks ago, when I began using Dr. Leonard's Anti-Pill. From the start I improved until now my appetite has returned, I can sleep well, and have no nervousness, dizziness, palpitation, faintness or any of my other troubles. They have all entirely disappeared. I feel much stronger, look better, and altogether Anti-Pill has made a new woman of me.

"I am entirely cured and cannot say too much for this wonderful remedy. I would most heartily recommend Anti-Pill to any one suffering as I did."

THE ONE AT THE HELM

Evidence of the Care of the Most High for All the Sons of Men.

Carest thou not that we perish?—dark iv., 38.

Danger tears away our disguises. In hours of peril the true man appears, and at such times, if ever, the man peaks the truth. Fearing the boat was sinking, these men have little thought of the dignity or the divinity of the one who lies asleep in the helmsman's place; rudely they awaken him with their indignant cries, wondering why one who had spoken such wondrous words before seems indifferent now to their danger.

Every man who has been accustomed to take God for granted has used almost the same words at some time in his life. The hour of tempest, when he uncontrollable waves of trouble and winds of adversity seemed ready to overwhelm him, when he had done all that mortal might do, then it seemed as though this God to whom he had prayed so often, of whom he had learned to think as part of his life, was absent or indifferent.

It is the question of every soul in sorrow or testing. "Does God care anything about me?" It is more than a speculative inquiry then. Theologians may have drawn up their specifications of the most high, in the peaceful ways of their lives, they may be satisfied with their handiwork. But when, even into their doistered walks,

SOME GREAT SORROW

A grim death has come stalking, then, dry lips and moist brow they cry, "Master, are you asleep? Do you not care?"

What is there at the helm of this great ship of life? Is there any one or is it steered automatically, blindly holding its way and heeding neither waves nor rocks nor other craft? Has this universe a heart or only an engine at its centre? The inquiry becomes pressing and pertinent, indeed, when inextinguishable distress and anguish that seem all unnecessary break down all the man's strength and courage.

A man can no more content himself with a far off being, sitting in the heavens in royal state, winning reverence by remoteness, than his own children could be satisfied to know him only as a sovereign. He craves the friendship of that one; he longs for compassion,

THE S. S. LESSON

INTERNATIONAL LESSON,
JUNE 3.

Lesson X. The Gentile Woman's Faith.
Golden Text: Matt. 15. 28.

LESSON WORD STUDIES.

Note.—The text of the Revised Version is used as a basis for these Word Studies.

Two discourses of Jesus — After the miracle of feeding the five thousand Jesus sent not only the multitude away, but his disciples also, directing these to go before him unto the other side of the lake, that is, back to Capernaum. When at last he was left all alone he sought the deeper seclusion of the mountain-side to engage in prayer. Meanwhile night had come and the disciples in their little craft on the lake were much distressed by contrary winds and waves. "And in the fourth watch of the night he (Jesus) came unto them, walking upon the sea." Their fear and the

sympathy, assistance—such as friend gives to friend; in a word, he looks for love. You cannot love an absentee God any more than you can love an abstraction or a theory.

But the need of one who will come close into our lives, who aids in the hour of extremity does not meet itself. The fact remains that often we seem to be left to the mercy of the tempest; the elements do their worst and no hand is lifted and no voice is heard that still the waves. Full often the storm seems to finish its hard work and only clinging to the wreckage or swept on the waves do we come into port.

Is there any answer to the great question, does any greater one care for our lives? If we are looking for an answer as susceptible to demonstration as a mathematical proposition we are

DOOMED TO DISAPPOINTMENT.

It is possible to believe in providence without being able either to prove or fully comprehend it. The child must become the parent before he can understand the ways of the father or mother with him; yet he can know their love before he can comprehend their ways.

Nothing could do more harm than to have the absolute assurance that an almighty friend would fly to our aid and protection in every time of danger or need. A friend whose power relieved us from the necessity of prudence or courage or endeavor would be a foe indeed. The All Wise loves man too well and too wisely to make plain always his ways of caring for him and his purposes of protection.

The furrowed faces and whitened heads of men may be the will of love as truly as the smooth ways of ease and complacency. There is one at the helm, but his concern is more for the making of strong sailors than for the securing of smooth sailing. The best evidence of the care of the Most High for all the sons of men is not in the immediate unbarring of his arm for their protection, but rather in the manner in which he causes the wind and the waves the struggle with the tempest, the need for the serving of the soul in the hour of peril all to work out his will, the will of great love, the bringing of the mariners to his likeness in character and soul.

HENRY F. COPE.

woman, yet she was not hindered by that everything from drawing nigh and craving the boon that her soul longed for."—French. The woman is called Syrophenician, to indicate that she was a Phœnician living in Syria as distinguished from Syrians living in Egypt or elsewhere.

27. The children.—The rightful heirs, here referring to the Jews as the Covenant people of Jehovah.

The dogs.—The word used in the original is the diminutive, meaning little dogs. In harmony with this literal meaning Wyclif translated little whelps, and Tyndale and Cranmer both, the whelps. The word thus does not designate the wild dogs which infested and still infest oriental towns, but the small pet dogs attached to the household.

28. Yea, Lord.—The woman accepts the declaration of Christ, but points out in that very declaration is involved the granting of her petition.

Crumbs.—Probably not crumbs in our sense of the word, but broken pieces of bread purposely cast to the dogs during the course of the meal. "It was the custom during the meal for the guests after thrusting their hands into the common dish, to wipe them on the soft white part of the bread which, having

MANY CRIMINAL'S CLUBS

SECRET SOCIETIES WHICH ARE RUN BY BURGLARS.

Gangs of Thieves are Joined Together in Strong Bonds of Union.

The police of Paris are pluming themselves just now in the belief that they have succeeded in dealing a deadly blow at organized crime in that city. They have lately laid hands on some fifteen habitual criminals who they think were members of one of the most dangerous bands of law-breakers they have ever had to contend with, and to whom an immense amount of crime against property is attributed.

This secret society of criminals was organized some five years ago by a mysterious man whose identity the police have never been able to discover. It has been run on lines very similar to those of a trade union, and had its secretary, who was not an active member, but a salaried servant; it had its entrance fee, yearly subscription, sick fund, defence fund, and an elaborate list of rules, which were strictly enforced. It embraced almost all forms of crime, from pocket-picking to forgery; but one of the most remarkable rules was that which created all members equal.

All proceeds of crimes committed by individual members were "pooled" and divided up into as many shares as there were members, but the producer of the new proceeds, in addition to his own share, was rewarded with the share of the member who had not produced anything for the longest period, times of sickness and imprisonment being excepted from the reckoning. Any infraction of this rule for the pooling of "swag" was visited, so the police believe, with the severest punishment.

TWO OR THREE MURDERS.

of habitual criminals are attributed to this cause.

But although this much is known and a vast deal more suspected about the gang, so cleverly has its secrecy been assured by its organizers that it is impossible to guess how many members it had, who was their chief, or where they met. It was hoped that, when the police laid hands on some of the men suspected of being members, one might be induced or bluffed into betraying the others, but in this the police were disappointed; not one of the men arrested would utter a single word on the subject, though a young Belgian, when severely pressed, drew his thumb across his throat and smiled significantly. So that it is quite possible, although the police have arrested a goodly number of the organization, it may survive the blow, though it must suffer by the loss of such thorough-paced scoundrels as the police declare their prisoners to be.

About three years ago the police of Belgium broke up a similar organization, some of the members of which were sent to prison for life. This gang, however, devoted all its attention to the gentle art of burglary, at which some amazingly large hauls were made. The members shared their profits after the manner of their friends in Paris; and one of their number, who was clever at disguises and had "a taking way with him," did nothing else than make the necessary inquiries about premises and persons it was thought might pay for a visit. It is believed by the authorities that in one year only the gang "collected" property to the value of

UPWARDS OF \$70,000.

It is but rarely, however, that criminals of the type which might be described as "violent" organize themselves, for the reason that they are much better able to work "on their own" than criminals who make specialties of long-firm frauds, forgery, bank-bilking, etc. But it is generally found, as an exception to this rule, that criminals of the latter type are very strongly or-

Fashion Notes.

SOME FORECASTS.

When one is not wearing the flimsiest of lingerie waists, says a fashion writer in the New York Post, she puts on the most mannish of linen blouses with a soft rolling collar, and, generally speaking, elbow sleeves with gauntlet cuffs. There are at least a dozen variations of this waist, and almost any figure may be suited. It appears in linen, pique, and madras, white, and colored. A good model in pique is quite plain, without so much as a tuck or a flait on the shoulders, having a wide fold down the front and a small patch pocket high upon the left side. The buttons are large pearl ones. Another in linen has two plaits on the shoulder and a very wide turnover collar. In lighter weight linen a shirt has three stitched tucks on either side of the button fold. This is the only departure from the plainness of the model, which shows the convenient little pocket. Many of the linen shirts are beautifully embroidered.

TOO MUCH EMBROIDERY.

The trouble with most of the hand embroidered lingerie waists is that the embroidery is too obviously a decoration. Of course it never is anything else, but when it is worked in with the tucks, etc., that make up the design it looks like a part of the blouse. When on the other hand, the waist is merely plastered with a lot of hand work one loses a certain respect for it as embroidery. The needlework should seem to serve to separate groups of tucks, or something of the kind.

This may be one reason why the all-over eyelet embroidery and hedebo waists are so attractive. Batiste is a favorite material for these waists, white and ecru being equally popular. They are expensive, naturally, but so are all hand-made blouses. Some of the ecru waists are lavishly trimmed in white lace, and the embroidery is

A PRETTY MODEL.

A pretty model in ecru batiste had a collar striped with a narrow band of white Valenciennes, pointed, slightly in front. Between the rows was a band of the batiste, tucked in the tiniest possible tucks, and a similar tucking formed the shallow pointed yoke. This was outlined with a pointed band of lace, and two strips of lace crossed the shoulders. The blouse was tucked for fullness, and was decorated with openwork embroidery in empire wreaths. The sleeves were short, and were embroidered above the lace-trimmed cuffs.

Embroidered batiste motives and bands are used to trim many net and all-over lace waists, white and ecru. Often the yolk is of the batiste, and the effect is wonderfully good with the filmy net beneath. One may buy medallions, motives, yokes, and fancy collars of embroidered batiste, and with the aid of the home dressmaker get up charming waists at comparatively little cost. The many little embroidered and lace boleros are boons to the woman with a short dress allowance. The boleros are not exactly cheap, but they are less so than the elaborate waists offered in the shops.

BELTS AND STOCKS.

A great deal of attention is being paid this spring to such blouse accessories as belts and stocks. It is, after all, the details of a gown that make the perfect effect. The belt, for instance, is a very important detail, since the waist line is always important. Colored belts to match the shoes and stockings are shown. A belt of fine linen embroidered in deft blue is intended to be worn with plain blue stockings and shoes. Another white linen belt with scarlet dragon flies may be destined to accompany scarlet shoes, but one hopes not. A very beautiful linen belt is wide in the back and very narrow and tapering where it joins the round pearl buckle. It is scalloped and embroidered in openwork and raised embroidery.

Besides the linen belts, which are

night had come and the disciples in their little craft on the lake were much distressed by contrary winds and waves. "And in the fourth watch of the night he (Jesus) came unto them, walking upon the sea." Their fear and the Master's words of comfort are recorded by Matthew, Mark and John, Matthew adding the incident of Peter's walking on the water at the command of Jesus (Matt. 14, 29-31). On the morrow many of those who had seen the miracle of feeding the multitude again found Jesus and eagerly followed him. Jesus, however, knowing their hearts better than they themselves, said unto them, "Verily I say unto you, Ye seek me, not because ye saw signs, but because ye ate of the loaves, and were filled. Work not for the meat which perisheth, but for the meat which abideth unto eternal life, which the Son of Man shall give unto you" (John 6, 26, 27). Then follows in John's narrative the longer discourse of Jesus upon the Bread of Life (John 6, 27-65). Soon afterward, though probably on another occasion and day, certain of the scribes and Pharisees from Jerusalem openly criticized the disciples of Jesus for eating bread with unwashed hands, thereby furnishing the occasion for another discourse of earnest warning, in which Jesus sets forth the necessity of obeying the spirit rather than the letter of the law (Matt. 15, 1-20; Mark 7, 1-23). About this time Jesus left the vicinity of Capernaum and journeyed into northern Galilee and farther still into the coastal region in the vicinity of Tyre and Sidon. Matthew and Mark both mention this journey into non-Jewish territory and an incident connected therewith which furnishes the text for our to-day's lesson.

Verse 24. From thence — Probably from Capernaum.

Into the borders of—Into contiguous territory which was under the jurisdiction of these cities.

Tyre and Sidon — Two ancient cities and capitals of Phœnicia. Of the two cities Sidon was the older and the farther north. Lacking the advantages of a good harbor, however, Sidon was finally surpassed in importance and external glory and prosperity by Tyre. The latter city was built partly on the mainland and partly on an island, and had an excellent harbor. Tyre belonged to the original territory of Israel (Josh. 9, 29); is mentioned in 2 Sam. 24, 7; and is denounced and prophesied against by Isaiah, Jeremiah, and Ezekiel. Alexander the Great accomplished its destruction and left it a heap of ruins. Since then Greeks, Romans, Turks and Crusaders in turn have sought to rebuild it, but in vain. The prosperity of Tyre in the time of our Lord was very great, one of the chief sources of its wealth being the export of the celebrated Tyrian dyes. Its population probably exceeded that of Jerusalem, the distance of Tyre from Capernaum was about fifty miles, and the distance from Tyre to Sidon about twenty miles.

Into a house—Probably the house of Jewish friends or acquaintances.

Would have no man know it—Apparently Jesus was still in quest of a place of seclusion in this journey beyond the borders of Galilee, where at this time he was at the height of his popularity.

25. An unclean spirit—Demoniac possession is often referred to in the gospel narrative as having an unclean spirit. Mark uses the expression more frequently than either Matthew or Luke. In a total of twenty-four references he uses demon thirteen times and unclean spirit eleven times. Luke also refers to the unclean spirit once, evil spirit twice and unclean demon once. Matthew in a total of twelve references uses unclean spirit twice and demon ten times. For note on demoniac possession compare Word Studies for February 18.

26. A Greek, a Syrophenician—The word "Greek" here signifies Gentile, and he describes the woman's religion. The second name describes the race from which she came, "which was even that accursed stock once doomed of God to total excision, but of which some branches had been spared by those first generations of Israel that should have exterminated them root and branch. Everything, therefore, was against this

bread purposely cast to the dogs during the course of the meal. "It was the custom during the meal for the guests after thrusting their hands into the common dish, to wipe them on the soft white part of the bread which, having thus used, they threw to the dogs."—Maclear.

29. For this saying—For the faith which this saying indicates.

The demon is gone out of thy daughter—One of the few instances in which Jesus works a miracle at a distance.

30. And she went away—Her faith in the word and power of Jesus was implicit and she fully expected to find, and did find, her child well and the demon gone out.

LIONS ATTACK A VILLAGE.

Eleven Natives Eaten by Herd of Hungry Animals in Africa.

Word from Blantyre, British Central Africa, states that a herd of hungry lions attacked the town of Choruno, British Central Africa, and not only killed eleven natives, but put the rest of the population to flight and demolished many of the huts. Between fifteen and twenty lions made the raid at dusk. They first attacked two natives on the outskirts of the town. One of the natives escaped, and while the body of his companion was being torn to pieces he ran to the government building.

The watchman on duty refused to believe his story, and while the frightened native was protesting the lions suddenly dashed into the main street. Three watchmen were struck down before they could reach their rifles, and the native who had previously escaped was likewise killed. A fourth watchman, who fled to an inner room, was pursued by two of the brutes, and torn to pieces. A child was seized in front of one of the huts, and when the frantic mother attempted to rescue it she was likewise attacked and eaten. Three other natives were killed and eaten.

The lions killed a large number of goats and other live stock, and afterwards roamed through the town, prowling round some of the huts, in which the inmates had barricaded themselves. A large number of natives, who managed to escape from the town, got into their canoes and paddled to the middle of the River Shire, where they spent the night. They could distinctly hear the shouts of the besieged.

Choruno is situated near the Elephant Marsh game reserve, where fifty elephants lived last year.

SPIDERS THAT CATCH BIRDS.

Larks are Frequently Caught in Their Webs.

Far up in the mountains of Ceylon, there is a spider that spins a web like bright yellowish silk, the central net of which is five feet in diameter, while the supporting lines, or guys, as they are called, measure sometimes ten or twelve feet. The spider seldom bites or stings, but should anyone try to catch him, bite he will, and, though not venomous, his jaws are as powerful as a bird's beak.

The bodies of these spiders are very handsomely decorated, being bright gold or scarlet underneath, while the upper part is covered with the most delicate slate-colored fur.

So strong are the webs that birds the size of larks are frequently caught therein, and even the small but powerful scaly lizard falls a victim. A writer says that he has often sat and watched the yellow monster—measuring, when waiting for his prey, with his legs stretched out, fully six inches—striding across the middle of the net, and noted the rapid manner in which he winds his stout threads round the unfortunate captive.

He usually throws the coils about the head until the wretched victim is first blinded and then choked. In many unfrequented dark nooks of the jungle you come across skeletons of small birds in these terrible snares.

for the reason that they are much better able to work "on their own" than criminals who make specialties of long-firm frauds, forgery, bank-banking, etc. But it is generally found, as an exception to this rule, that criminals of the hoodigan type are very strongly organized. The "Push Larrikins," who are villains of the most violent description, owe their survival from the most vigorous police prosecution simply to their excellent organization.

They are a special feature of life in Sydney, and, although not now nearly so strong as they were some years back, they still make their existence unpleasantly felt, highway robbery being their favorite pursuit. At one time it was believed that they numbered more than 200; but probably they are less than half that strength at the present time, despite the fact that many a Larrikin has found it a cruelly difficult thing to reform, as the men have very rough-handed methods of dealing with "traitors."

They are divided up into gangs or "pushes," each one of which elects a "king," whose word is absolute law to those under him; anyone disobeying the "king," indeed, is liable to be thrashed or otherwise brutally ill-treated by his fellow-members of the "push" on the first two offences, and

CLUBBED TO DEATH

on the third. All profits from crime are deemed the common property of the gang, whose members share it equally; and when a Larrikin falls ill the others of his "push" are obliged to contribute a certain small sum weekly for his support. Moreover, whenever a Larrikin gets into the arms of the law a small fee is levied on every Larrikin of every "push" to defray the cost of his defence.

Strictly speaking, the Mafia society is a secret political organization, but it so frequently descends to crime—even to the degree of murder—to attain its end that it may certainly be regarded as a criminal union, and as such it holds first place for size and power, only exceeding, perhaps, one or two of a similar kind in China, of which practically nothing is known. The Mafia is so perfectly organized and so influential and secret that the laws of Italy, the police, and the whole Government of the country have been rendered impotent against its members again and again. Judges and juries have acquitted various offences in absolute defiance of law, common sense, and justice, simply because they feared to incur the displeasure of the society. Police officials have allowed Maffias to slip through their fingers for no more reason than that they barely suspected them.

BELONGING TO THE SOCIETY.

Its members are to be found among the highest and the lowest in every city, town, and village in Italy, and its influence extends to the farthest corners of the globe.

Only a little while ago an Italian was murdered in Canterbury, New Zealand, by a newly-arrived companion. The victim was not a member of the Mafia, but he had given evidence in Italy some months previously against a man who was a member. He fled to escape the anger of the society, but was followed and done to death.

Repeated attempts have been made to destroy the power of this wonderful organization, but they have failed, and that to a great extent because it is impossible to know who are members of it and who are not. A thread of the corruption of the Mafia runs through everything in Italy, so that neither the police, the judges, the juries, the army and navy, nor even the individual members of any Government can be absolutely relied on to act against the society. And thus it still exists, with every likelihood of outliving the century.

THE IMPOSSIBLE.

Jorkins: "I did not suppose that there is a man living who could successfully forge my name to a cheque and get it cashed."

Morkins: "Is your signature such a peculiar one?"

Jorkins: "No; but I haven't any money in the bank."

but one hopes now. A very beautiful linen belt is wide in the back and very narrow and tapering where it joins the round pearl buckle. It is scalloped and embroidered in openwork and raised embroidery.

Besides the linen belts, which are very popular, all sorts of soft leather and suede belts are worn. The pongee shades are modish, and a few white and pale colors are seen. As for belt buckles they often come under the classification of jewelry, so expensive and beautifully wrought are they. Coral turquoise, and opal matrix, lapis lazuli, and other semi-precious stones are used to embellish these lovely buckles, and one is much more justified in spending money for such substantial treasures than for frivolous and perishable embroideries.

NOVELTIES IN VEILS AND SHOES.

No dress accessory is more important than the veil, and it is agreeable to note that the new veils are much more refined in appearance than those of last season. There has been a reaction in favor of the small dot, a thing to rejoice over. The large spots were quite vulgar, and much too striking to suit quiet tastes. Real lace veils, black and white, are very much admired. A few colored lace veils are seen, brown being popular. Some grey veils are worn, but they are not especially becoming. Large chiffon veils continue to be worn, usually with a mesh face veil beneath. White, champagne, grey, reseda, brown and black are favorite colors. One should be careful about wearing pure white chiffon veils. They are very trying. The champagne and mongee shades are much less so, and are quite fashionable even with a white straw hat.

There is nothing new about shoes, except that a great many grey ties and pumps are being sold. Pumps for walking shoes are as stylish as ever, and patent leather divides popularity with Russia. White shoes in castor and canvas are to be worn a great deal. Walking ties are very mannish in appearance. A word of caution: The boy's tie will be a great deal heavier than the shoes you have been wearing, and will probably cause some anguish until you get used to them. Wear them a few hours at a time the first week or so.

BALLOON RAILWAY.

An Austrian Engineer Invents a New System.

An Austrian engineer, Herr Balderauer, of Salzburg, has been experimenting with much success in the mountains near Salzburg with a novel balloon railway. It consists of a large captive balloon attached to a single steel rail, which in turn is fixed firmly to the side of a steep mountain, whose precipitous slopes no other form of railway could climb without making a series of serpentine detours and passing through tunnels.

The balloon remains balanced in the air about ten yards above the rail, to which it is attached by a stout wire cable, and it is moved up and down the side of the mountain at the will of the engineer.

For an ascent the balloon itself furnishes the lifting force by means of hydrogen; for the descent a large reservoir attached to the balloon is filled with water at the highest station, and serves as "ballast."

Under the balloon is a circular car, seating ten persons. The wire cable from the balloon passes through the floor of the car to a speed regulator underneath, which is controlled by the engineer.

Herr Balderauer has made dozens of ascents both alone and with the car filled with people, and has never had an accident.

The inventor claims that the balloon railway will replace the funicular railway in the future. It is cheap to construct and the sensation while traveling is delightful.

The passengers are whirled up thousands of feet in a few seconds, without the slightest jar. The balloon can be instantly released in case it becomes unmanageable, and an automatic brake keeps the car under control.

YOUNG FOLKS

A MYSTERIOUS PERFUME.

It was Lois who first noticed it. She began to sniff as soon as she came in from school.

"What is it smells so good?" she asked. "What are you cooking?"

"Nothing but potatoes," her mother answered. "I guess it's the wood in the oven. The kindlings seem damp this morning, so I put some in to dry."

"I never knew any wood smell like that; it's delicious!"

"Oh, what are we going to have for dinner?" cried Elliott, bursting into the kitchen with a clatter and a bang. "I should think it was sassafras soup by the smell!"

"Sassafras soup! What a boy!"

"Well, it would be good! What is it, anyhow?"

"It isn't sassafras, for there isn't a tree on the farm, laughed Lois. "I wish there were."

"Who's eating wintergreen candy?" asked little Sophie. "Give me some—do!" and the outer door opened and shut, letting in a whiff of fresh air.

"I declare I believe I smell something now! It must be the wood," Mrs. Alford sniffed at the oven door. "I don't know whether it's here or not," she concluded; "but I must broil the steak—I know that!"

"Dinner smells good," said the father, coming in breezily. "What is it this time—Banbury turnovers or orange shortcake?"

The others laughed.

"We've all been fooled," answered Lois. "It's just beefsteak and potatoes and apple pie. Somebody has been perfuming the wood, I think. It ought to be the first of April."

After dinner Elliott inspected the oven. "I have it!" he exclaimed, triumphantly, inhaling the odor up and down the length of a small stick. "It's this birch!"

The rest crowded around him, and the wood passed from hand to hand.

"It smells just like wintergreen candy, anyway," insisted Sophie, "if you did laugh at me!"

"I remember there was a small black birch in the corner of that swamp we've been cleaning up," said Mr. Alford, "and this must be a piece of it."

"And Sophie isn't so far out of the way, after all," put in Elliott; "for Mr. Thrall told me once that essence of wintergreen was often made from black birch."

"Well, I'm not going to have a bit of that burned up!" declared Lois. "We'll keep it to perfume the house. We can put it in that little oven on top of the parlor stove, and make everybody wonder what it is smells so good. It will be fun! Come on out to the woodshed. Elliott and Sophie, and let's pick out all we can find!"

BRAY'S ENEMY.

"Please, Mr. Jones, there's a little boy at the back gate to see you."

"At the back gate? Bring him in, Peter."

"He won't come in, sir; says he's awful busy, and hasn't got time."

"How big is he?"

"About as big as my fist, sir," said Peter.

The good-natured gentleman went out to the back gate. "Well, countryman," he said, pleasantly, "what can I do for you?"

The small boy—for he was a very small boy—looked off a soft, dirty hat, and held it behind him. "I've come to tell you, sir, that Bray's got to be killed."

"Bray, my big Newfoundland dog? And who sent you here with that information?" asked the gentleman, losing all his pleasant looks.

"Nobody sent me," the boy answered, stoutly. "I've come by myself. Bray has runned my sheep for three days. He's got to be killed."

"Where did you get any sheep?"

MODERN GHOST STORIES

PROFESSOR JAMES H. HYSLOP TELLS A FEW GOOD ONES.

From a Purely Scientific Spirit and Without Desire to Cause Cold Chills.

Some interesting modern ghost stories are told by Professor James H. Hyslop in his latest book, *Enigmas of Psychical Phenomena*. Dr. Hyslop, since the death of Dr. Richard Hodgson, is probably the foremost scientific investigator of these phenomena. He is interested in the study from the purely scientific side. The curious exhibitions of mind or soul power with which we are surrounded are classed and considered with reference to their cause, and to what they may indicate. Professor Hyslop takes no sides; he is simply setting forth certain facts. These latter are well attested instances of the exercise of some strange power which is not normal. He considers the old bracers, the mystery of dreams, crystal gazing, telepathy, apparitions of the living, of the dying and of the dead, clairvoyance, premonitions and mediumistic phenomena. What relation have these things with presence among us of spirits from another world, or of the power of willing, doing, seeing things with a consciousness which is not material? These present some of the enigmas of physical research.

Dr. Hyslop tells the world something of what he and others have learned, but without stating conclusions. He seeks to stimulate others to investigate. Perhaps some day he will state his conclusions and tell us how he reached them. In the meantime, however, we must be satisfied with what he wishes to give us.

We quote from the book a few instances illustrating the sort of things which do not belong to our normal life, but which are reported under such authority that the truth of the narrative is

NOT TO BE DOUBTED.

"About 2 o'clock on the morning of October 21, 1881 (recorded in 1883), while I was perfectly wide awake and looking at the lamp burning on my washstand, a person, as I thought, came into my room by mistake, and stopped, looking into the looking glass on the table. It soon occurred to me it represented Robinson Kelsey, by his dress and wearing his hair long behind. When I raised myself up in bed and called out it instantly disappeared. The next day I mentioned to some friends of mine how strange it was. So thoroughly convinced was I that I searched the local papers that day (Saturday) and the following Tuesday, believing his death would be in one of them. On the following Wednesday a man, who formerly was my driver, came and told me Robinson Kelsey was dead. Anxious to know at what time he died, I wrote to Mr. Wood, the family undertaker at Lingfield. He learned from the brother-in-law of the deceased that he died at 2 a.m. He was my first cousin, and was apprenticed formerly to me as a miller. Afterward he lived with me as a journeyman, altogether eight years. I never saw anything approaching it before. I am 72 years old, and never feel nervous. I am not afraid of the dead or their spirits."

This narrative is signed by a Mr. Marchant, and attested by three others, who assert that Mr. Marchant told them of the experience the next day after it happened. Mr. Marchant had not spoken to the man for twenty years.

Apparitions have had their part in history and literature, and a belief in this form of phenomena has been a part of the religion of the people of many nations. Here is

A ROMANTIC INCIDENT.

which will appeal to the women who married "the other man."

"I send you a short account describ-

the figure. We were the only friends he had in England, but why I saw him I cannot tell.

IT DID NO GOOD TO ANYONE.

One thing I should tell you, I had not been thinking or speaking of him.

"The headstone on the man's grave reads: 'In memory of Frederick Guyas Le Maistre, second officer of the barque Gauntlet of London, native of Jersey, Channel Islands, aged 24 years and five months, whose body was found near Orfordness Harbor, October 22d, 1876, his death having been occasioned by falling from on board the above-named vessel in the Downs on the 27th of September of the same year.'"

The chapter on premonitions is one of the most interesting in the book, and will undoubtedly cause an extended discussion. Professor Hyslop relates incident after incident of circumstances where the death of some person was foreshadowed in the premonition of another and which afterward occurred substantially as predicted. The most interesting incident is taken from the experience of Dr. Libenault, the celebrated French physician, who was so successful in the practice of hypnotism.

"M. S. de Ch. came to consult me to-day at 4 p.m. (January 8, 1886), for a slight nervous ailment. M. de Ch. is much preoccupied by a lawsuit and by the incident which I proceed to recount."

"On the 26th of December, 1879, while walking in Paris, he saw 'Mme. Lenormand, Necromancer,' written on a door. Urged by thoughtless curiosity, he entered the house, and was shown into rather a dark room. Mme. Lenormand came to him, and placed him at a table. She went out and returned, and then, looking at the palm of one of his hands, said: 'You will lose your father in a year from this day. You will soon be a soldier (he was nineteen years old), but not for long. You will marry young have two children, and die at 26.' M. de Ch. confided this astounding prophecy to some of his friends, but did not take it seriously. However, as his father died after a short illness on December 27, 1880, precisely a year from the interview,

HE BECAME LESS INCREDULOUS.

And when he became a soldier, for seven months only, married, had two children and was approaching his 26th birthday, he became thoroughly alarmed, and thought he had only a few days to live. This was why he came to consult me, hoping I might enable him to avoid his fate. For, as the first events had taken place, he thought that the last would. On this and the following days I tried to send M. de Ch. into profound sleep in order to dissipate the impression that he would die on the fourth of February, his birthday. Mme. Lenormand had not named a date, but he was so agitated that I could not induce even the slightest sleep.

"However, as it was absolutely necessary to get rid of his conviction, lest it should fulfill itself by self-suggestion, I changed my tactics and proposed that he should consult one of my somnambulists, an old man of 70 or so, nicknamed the prophet, because he had exactly foretold his own cure of articular rheumatism of four years' standing and the cure of his daughter, the cure of the latter resulting from his suggestion. M. de Ch. accepted my proposal eagerly. When put into rapport with the somnambulist his first question was, 'When shall I die?' The sleeper, suspecting the state of the case, replied, after a pause, 'You will die . . . you will die in 41 years.' The effect was marvelous; the young man recovered his spirits and when the fourth of February passed he thought himself safe."

"I had forgotten all this, when at the beginning of October I received an invitation to the funeral of my unfortunate patient, who had died on September 20, 1886, in his 27th year, as Mme. Lenormand had foretold. To prevent the supposition that the whole affair was an illusion on the part, I kept this letter of invitation, as well as the record made at the time of De Che's visit to me. I have since learned that the unfortunate man had been under treatment for biliary calculi and died of peritonitis caused by an internal rupture."

HEALTH

PAINFUL FEET.

There are few of the so-called minor ills of the body that more surely rob one of comfort than painful feet. Standing or walking, the pain is always present and will not allow the sufferer to forget his trouble for a single moment.

Almost all forms of painful feet are due directly or indirectly to badly fitting, or rather to tight, shoes. An exception to this rule is flatfoot, a condition in which the fibrous tissue that passes between the two ends of the long arch of the foot and, like the string of a bow, keeps it curved, has lost its tone, and, becoming stretched, allows the bones of the arch to sink down.

Another condition, in a measure the reverse of this, is the contracted foot, in which there seems to be a slight shortening of the muscles of the sole and of the calf of the leg. The instep is a little higher than it should be, and one standing erect in bare feet will be unable to raise the ball of the foot from the ground. In both these conditions standing and walking cause severe pain in the sole of the foot, and also usually in the instep.

There is another arch in the foot—a transverse one in the front portion where the toes begin. A relaxation of the ligaments holding the bones of this arch in place is the underlying condition of a very painful affection called, after the surgeon who first described it, Morton's neuralgia. The pain here occurs in very severe cramp-like attacks, often coming on suddenly while the person is walking, and increasing in intensity as long as the exercise is continued. Usually relief is effected by removing the shoe and rubbing the foot. The pain is generally felt at the root of the fourth toe, or between the third and fourth, or fourth and fifth; but unless quickly relieved it spreads to the toes and over the instep.

Neuralgia of the sole is a very distressing affection. It is an inflammation of the nerves following some infectious disease, such as typhoid fever, malaria, or influenza, or it may be due to rheumatism. The skin of the sole is often exquisitely tender, and there is a spontaneous persistent burning pain.

Another so-called neuralgic affection of the foot is rather of a congestive character. It comes on only when the feet hang down, and is relieved when they are raised. With this pain the feet often become pink and then almost purplish in color. Most of these painful affections of the foot require treatment to restore or strengthen the arch.—Youth's Companion.

VALUE OF PINEAPPLE JUICE.

During the last few years we have been learning of the medicinal effects of fruit juices, particularly as aids to digestion. No fruit has more value for this purpose than the pineapple. Many experiments with its juices prove it. A freshly cut slice of the fruit laid on a piece of beefsteak will in surprisingly short time cause softening, swelling and partial digestion of the meat for a considerable depth from the surface. It is stated that bromoline, the active principle of the pineapple, has been used in the preparation of the well known Masquera beef jelly.

The reputation of the pineapple has suffered because it has been eaten in too large quantities at a time and the fibrous part has been swallowed with the juice. To obtain the full digestive value of the juice one quadrant of a slice half an inch thick is ample at one meal. It must not be cooked and should be just ripe. The preserved fruit has practically no digestive power.

Another use other than digestive in cases of diphtheria, for the juice has a strong solvent action upon plastic exudation, such as the diphtheria membrane. When it is applied to it on a swab or spray its time of contact is not enough to cause solution, but it is of material service in softening the plastic and stringy exudations so as to

And who sent you here with that information?" asked the gentleman, losing all his pleasant looks.

"Nobody sent me," the boy answered, stoutly. "I've come by myself. Bray has runned my sheep for three days. He's got to be killed."

"Where did you get any sheep?" asked Mr. Jones.

"My sheep are Mr. Ransom's. He gives me fifteen cents a week for watching 'em."

"Did you tell Mr. Ransom that Bray had been running them?"

"No, sir; I told you."

"Ah, that's well; I don't want to kill Bray. Suppose I give you fifteen cents a week for not telling Mr. Ransom when Bray runs his sheep; how would that do?"

As soon as the little shepherd got the idea into his head he scornfully rejected it. "That 'd be paying me for a lie," he said, indignantly. "I wouldn't tell lies for all the money in the world."

When he said this, Mr. Jones took off his own hat, and reached down and took the small, dirty hand in his. "Hurrah, herdsman!" said he. "I beg your pardon for offering you a bribe. Now I know that the keeper of Mr. Ransom's sheep is not afraid of a man four times his size, but that he is afraid of a lie. Hurrah for you! I am going to tell Mr. Ransom that if he doesn't raise your wages I shall offer twice fifteen cents and take you into my service. Meantime, Bray shall be shut up while your sheep are on my side of the hill. Will that do? All right, then. Good morning, countryman."

SPECIMEN OF SELF-CONQUEST.

Things had gone his way in town, and Dawson was in quite an amiable and even melting mood when he came home in the evening and settled himself for a quiet hour with his cigar and book. Presently he said to his wife:

"Now, here's something that's got good sound sense to it. You listen to it—'Real glory springs from the silent conquest of ourselves.' That's the talk. Give me the man who is master of himself. I have a perfect contempt for those unbalanced fellows who go all to pieces over nothing and— Why, what's the matter with this lamp? It gives a miserable light."

"I think it needs trimming," replied Mrs. Dawson.

"Why didn't you have it trimmed before night?"

"I didn't know that it needed trimming."

"I should think it was your place to know what condition the lamps are in."

"Humph! It's your place to know lots of things you don't know. If you'd known, as a man ought to know, the condition of the drainage pipes on your own ground, we wouldn't have had that sickness last spring, and—"

"Oh, there you go and bring up those old drainage pipes!" howled the convert to the self-control theory, as he flung his book clear across the room and kicked the hassock at his feet against a frail table and sent it over with a crash. "It beat's me that a man can't have a minute's peace in his own home. I'll just be eternally dinged if I don't join a club or board away from home if I can't have any peace under my own roof! What with smoky old lamps and your tongue going like a trip-hammer all the time, and the young ones bawling and the servants quarrelling, and dirt and disorder everywhere, and—"

"A beautiful specimen of self-conquest you are, Mr. Dawson!"

"Don't you say 'self-conquest' to me, or I'll—I'll—well, I'll not be responsible for what happens! The fool that wrote that didn't have to put up with smoky lamps and— Well, leave the room if you want to, madam! I'm going to leave the house, madam; do you understand?—do you understand?"

RARE INSECT.

There is in the American Museum of Natural History a butterfly which cost its owner between \$7,500 and \$10,000. This rare insect exists only in Sierra Leone, and an expedition had to be fitted out and maintained for two years before it was captured.

history and literature, and a belief in this form of phenomena has been a part of the religion of the people of many nations. Here is

A ROMANTIC INCIDENT.

which will appeal to the women who married "the other man."

"I send you a short account describing what I experienced at the time of the apparition of my friend, who was a young gentleman much attached to myself, and who would willingly (had I loved him well enough) have made me his wife: I became engaged to be married and did not see my friend (Mr. Akhurst) for some months, until within a week of my marriage (June, 1878), when in the presence of my husband he wished me every happiness, and regretted he had not been able to win me."

"Time passed on, I had been married about two years and had never seen Mr. Akhurst, when one day my husband told me he (Mr. Akhurst) was in Newcastle, and was coming to supper and was going to stay the night. When my husband and he were talking he said my husband had been the more fortunate of the two, but he added if anything happened to my husband he could leave his money to whom he liked and his widow to him, and he would be content. I mention this to show that he was still interested in me."

"Three months passed, and baby was born. When he was about a week old, very early one morning I was feeding him, when I felt a cold waft of air through the room, and a feeling as if someone touched my shoulder; my hair seemed to bristle all over my head and I shuddered. Raising my eyes to the door (which faced me), I saw Mr. Akhurst standing in shirt and trousers, looking at me, when he seemed to pass through the door. In the morning I mentioned it to my husband. I did not hear of Mr. Akhurst's death for some weeks after, when I found it corresponded with that of the apparition, and, though my father knew of it before, he thought in my weak state of health it were better I should not be told."

"The husband confirms the story and states that it was six months afterward before he learned that Mr. Akhurst was dead and inquiry showed that he had died at about 1 a. m. on July 12th and the date of the apparition was in September following, this being fixed by the birth of the child in that month."

THE NEXT INSTANCE.

given by Professor Hyslop he terms a good one essentially, as the distance involved and the independent attestation of a newspaper show that the death could not have been known in the ordinary way.

"On the second of November, 1876, I arrived at my brother's house. My journey had been a long one—from 8 a. m. to 8 p. m. I sat up late talking to my sister-in-law, and about 12 o'clock went to my room. There I spent some time arranging my belongings. I found I had left something I wanted down in the hall, and, feeling restless, I suppose, thought I must get it then, and not wait until the morning. So down stairs I went. The house is a large one the passages long. My room was in the third story and I had to go to the entrance hall. It took me some time. On returning and entering the corridor in which my room was, I saw, standing beyond my doorway, a figure. It looked misty, as if, had there been a light behind it, I should have seen through the mist. This misty figure was the likeness of a friend of ours whom I knew to have been on a voyage to Australia. I stood and looked at it. I put my hands over my eyes and looked again. Still it was there. Then it seemed to pass away, how I cannot say. I went on and into my room. I said to myself, 'My brain is tired out,' and I hurried to bed so as to get rest."

"Next day I told my sister-in-law what I had seen. We laughed about my ghost. I was away from home three weeks. Or, my return my mother showed me the account in a newspaper of our poor friend's body having been cast on shore at Orfordness, and buried as an unknown castaway the very time I saw

supposition that the whole affair was an illusion on the part. I keep this letter of invitation, as well as the record made at the time of De Che's visit to me. I have since learned that the unfortunate man had been under treatment for biliary calculi and died of peritonitis caused by an internal rupture."

There are many stories of this sort, all well attested, enough of them to make the reader sit up and think a bit.

HOME OF THE ACADIANS

MAGDALENS ARE AN AGGREGATION OF FOURTEEN ISLETS.

Group in the St. Lawrence Where Dwell the Remnant of the Exiled People.

"Rarely does the world hear of the Magdalen Islands or of the people who occupy them, the descendants of Longfellow's Acadians, immortalized in 'Evangeline,' many of whom settled here," writes P. T. McGrath from St. John's Nfld. "This group of islets is in the Gulf of St. Lawrence, 150 miles from the coast of Newfoundland. This spring they have been brought into prominence because of the 30,000 seals that have been killed on their shores. The Magdalen Islands are an aggregation of 14 islets, some so small as to be uninhabited, and others sustaining about 1,800 souls. The group is chiefly remarkable for its shipwrecks, for it lies right in the track of shipping bound to and from Montreal. The Gulf of St. Lawrence is filled with ice floes from December to May, and no ships but the Newfoundland sealers can force their way through these masses, so that the Magdalen Islands are cut off from all communication with the outer world save by the telegraph. No intercourse is possible even with the neighboring coasts. Every fall a half year's stock of provisions has to be laid in, as there is no means of replenishing the stores until spring comes."

OWNED BY COFFIN FAMILY.

"The settlers are French of speech and action, and their industrial habits are moulded on French patterns and their domestic life is virtually that of the Breton peasant. The Acadians first settled here in 1763, after France had been deprived of Canada and Acadia had been ravaged, as Longfellow tells. In 1789 the British monarch bestowed the islands on Admiral Coffin for services before Quebec and to his descendants the group now belongs. The settlers pay an annual rental on the basis of 20 cents an acre of the lands they occupy, and recent legislation obliges the landlord to sell whenever a tenant proffers a sum equal to fifteen years' rental, but most of the occupants are too poor to purchase. In addition to fishing, agriculture in its elementary forms is followed."

INTERESTING PEOPLE.

"All too rarely are the Magdalen Islands visited by tourists and health seekers. They form an admirable summer resort. The settlers are simple, frugal and industrious, with old-world habits, unfamiliar speech and dress and the manners which so charm the visitor to the lovely Norman dales and pleasant Breton valleys. The islands are not all mere rocks. In many places sandstone cliffs rise sheer from the sea 500 feet, a danthingedipat2.Eo shrdlu emfwp and again they seem to overhang where the sea has fretted away their base. At some points the hills slope gradually upward from the water to the middle of the islands, rising 600 feet high, and the interior presents an interesting variety of scenery. In the bays are to be found fine sea trout, which yield excellent fishing."

Most men love their neighbor's money as they love their own.

practically no digestive power. Another use other than digestive is in cases of diphtheria, for the juice has a strong solvent action upon plastic exudation, such as the diphtheria membrane. When it is applied to it on a swab or spray its time of contact is not enough to cause solution, but it is of material service in softening the sticky and stringy exudations so as to admit of its easy detachment. It also softens horny epidermis in the same way as, though more slowly than, salicylic acid. If a thin slice be kept in close contact with a corn for eight hours it will be softened so as to be readily removed.

AN AWKWARD HABIT.

Don't lean over and pull your shoulders forward and together while you are reading and writing. If you contract this awkward habit you will be doing a great deal toward putting your lungs and heart out of order. You can't breathe deep and full when your lungs are cramped, and that's what you are doing when you double over while reading and writing. You need to breathe the length and breadth of your lungs to keep the respiratory organs vigorous—to keep the heart beating regularly and healthfully.

HOW ONE SHOULD REST.

To understand how to rest is of more importance than to know how to work. The latter can be learned if one will give one's mind to it, but the former is an art some people never acquire. Rest necessitates change of scene and activities. Lounging is very often tiring, sleeping is not always restful, and sitting down, with nothing to do is simply to invoke weariness. A change is needed to bring into play a different set of faculties and to direct the thoughts into a new channel. The man or woman who is weary with care finds work in active employment with freedom from responsibility. The brain worker generally finds the best rest in playing hard. It is quite a mistake always to expect to find it in idleness.

SENTENCE SERMONS.

They seek in vain for power who fear all pain.

Toleration may be but a synonym for sloth.

He cannot reach earth who does not touch heaven.

Plattitudes in the pulpit make pharisees in the pews.

Star gazing will never make you shine as the stars.

The two-faced never have more than half an outlook.

Many a man thinks he is busy when he is only buzzing.

The man who will not waste his love always wastes his life.

Dreams of heaven do not come in slumbers in the church.

Hell is never far from him who thinks that all men are demons.

The heart that is hot with passion may have an icy face for the poor.

It's easy to have large ideas of liberality with other people's money.

He cannot be a light to others who is unwilling to be consumed himself.

Heavenly mansions cannot be leased with the rent from reeking tenements.

The only worth while kind of aspiration is that which gets up a perspiration.

The wave of speculation always makes more splutter than the rock of faith.

The more of a bore the sermon is the less of a hole it makes in the walls of sin.

It is by no means certain that you can lead men into light because you love the limelight.

It is better to give a hungry world the most old fashioned loaf than the latest thing in theological logic.

The bottom would speedily fall out of the fortunes of some church saints if the city nailed the lid down.

The only men who ever complained of God's service were those who sought his pay-roll for their own promotion.

Some men think that heaven is to blame for all their troubles because they always say, "Thy will be done" before eating lobster salad.

When the Hair Falls

Then it's time to act! No time to study, to read, to experiment! You want to save your hair, and save it quickly, too! So make up your mind this very minute that if your hair ever comes out you will use Ayer's Hair Vigor. It makes the scalp healthy. The hair stays in. It cannot do anything else. It's nature's way.

In spite of the unprecedented volume of immigration there are not enough of farm laborers to supply the demand in this Province. Unless the balance between demand and supply can be more completely redressed, next year is likely to see a still more extensive abandonment of cultivation and the conversion of farms to the pasturage of cattle. Even the raising of cattle will have to be discontinued by many who have been feeders in the past.

STATE OF OHIO, CITY OF TOLEDO, ss.

LUCAS COUNTY.
Frank J. Cheney makes oath that he is senior partner of the firm of F. J. Cheney & Co., doing business in the City of Toledo, County and State aforesaid, and that said firm will pay the sum of ONE HUNDRED DOLLARS for each and every case of Catarrh that cannot be cured by the use of Hall's Catarrh Cure.

WHAT OTHER PAPERS SAY

Toronto Globe.

A good piece of advice to the people of Canada is to make no departure from the policies and methods that have given us ten years of the most prosperous times the country has ever enjoyed.

London Free Press.

It is noted from Owen Sound that local option has already lessened crime in that good place, the jail having fewer inmates than for a long time past. It may be early, however, to pass felicitations on this head. Such results from prohibition are contrary to all previous experience, in Ontario or elsewhere.

The Hamilton Times

It is said that Mr. Carscallen will not have that Railway Commissioner-ship without a struggle. C. C. Robinson, father of Mr. Hendrie's railway bill, and James Leitch of Cornwall are mentioned as aspirants. A snap with \$6,000 a year attached is not picked up every day, and the "boys," are hungry. The lucky man will be chosen before the end of this week.

Teeswater News

An English immigrant who is engaged on a farm not ten miles from Teeswater, and who, by the way, is giving excellent satisfaction, having heard of the groundhogs that are just now so much in evidence on the farms, had occasion to say something about the animals, and referred to them as "earth pigs." Sounds funny that, doesn't it? Now, what's the difference between "ground hog," and "earth pig,"?

Montreal Herald.

Mr. W. T. R. Preston, Commissioner for Immigration for Canada at London, is altogether too picky. We wouldn't have a bit of this trouble at Ottawa if he didn't entertain his old-fashioned notions about who should, and who should not, read letters marked "private" and "confidential." If he were the kind of man who had no objection to people passing such letters around, to making them public, or to picking them out of other people's desks in a friendly way, he probably wouldn't have any objection to breaking faith with those European ticket agents either.

EARLY FIRE IMPLEMENTS.

Appliances Used in This Country in the Seventeenth Century.

Undoubtedly the first fire company organized in this country was formed in New York in 1658. It was called the Prowlers and was composed of eight men, with 250 buckets, hooks and small ladders. Where the buckets were obtained and whether or not they were in addition to those owned by the town the records fail to state. In 1679 Salem purchased two or three dozen cedar buckets, besides hooks and other implements; also the selectmen and two others were authorized to take command at fires and to blow up and pull down buildings when such action was necessary. This practice appears to have been much more common before the use of engines than afterward. Boston on Sept. 9, 1679, ordered that every quarter of the town should be provided with twenty swobes, two scoops and six axes. The swobes, or swabs, as they are now called, were long handled mops that could be used to put out roof fires. The general use of swabs has long since disappeared, but when a slight blaze is beyond the reach of a pail of water and more improved apparatus is not at hand a long handled mop is today the most efficient article to be used. In Japan these swabs may be seen on many roof tops.

In 1690 New York ordered that five ladders and also hooks be made. In Philadelphia no mention is made of public precaution against fire until 1696, when a law was passed forbidding the firing of chimneys or allowing the same to become foul. Each house was to have a swab, bucket or pail. Another act was passed in 1700 ordering every household to have two leather buckets. In the following year six or eight hooks for the purpose of tearing down houses were ordered to be made.

BINDING THE FEET.

This Queer Chinese Custom Is a Comparatively Modern One.

China's custom of binding the feet of its women is not as ancient as has been supposed. A correspondent of one of the native Chinese papers quotes from the letters of Yuan Mei, who lived in the eighteenth century. In one of his letters Yuan Mei wrote to a friend: "You ask me to get you a handsome wife and ardently desire, as your first requisite, that she shall have small feet. Surely you cannot be one who admires true beauty. An admirer of true beauty has his own individual tastes, disdaining to follow the dictates of others. Our ancient literature, in both prose and poetry, has many allusions in praise of beautiful women, but in no instance touches upon small feet.

"A work treating of the customs of the Sung dynasty by Shen Yo says a man's well made shoes are said to be square, and a woman's round, at the toe. In the T'ang dynasty, the first allusion to the feet of Yang Kwei Fei, the court beauty, was about her silk stockings. In one of Han Tung Lang's poems, referring to a woman's feet, he says, 'Her six inch feet so bright and sleek.' These allusions clearly point to unbound feet."

Yuan Mei's letter concludes by saying that the taste of those who ignore the beauty of face and form is depraved. He laments that sensible men should be so led away by a foolish fashion.

ANATOMY OF AN OYSTER.

The Bivalve's Organs and Where They Are Located.

Every oyster has a mouth, a heart, a liver, a stomach and other necessary internal organs, including a set of cunningly devised intestines. The mouth is at the small end of the oyster's body, near the hinge of the shell. It is oval in shape, and, though not readily discovered by an unpracticed eye, it may be easily located by gently pushing a blunt bodkin or similar instrument along the folds of the surface of the body at the place mentioned. Connected with the mouth is the canal which the oyster uses in conveying food to the stomach, from whence it passes into the curious little set of netted and twisted intestines referred to in the opening.

To discover the heart of an oyster the fold of flesh which oystermen call the "mantle" must be removed. This is fatal to the oyster, of course, but in the interest of science and for the benefit of the "curious" it is occasionally done. When the mantle has been removed the heart, shaped like a crescent or horned moon, is laid to the view. The oyster's heart is made up of two parts, just like that of a human being, one of which receives the blood from the gills and the other drives it out through the arteries. The liver is found in the immediate vicinity of the heart and stomach and is a queer shaped little organ, which is supposed to perform all the functions of a blood filter.

JAVA'S ISLAND OF FIRE.

It Is Really a Lake of Boiling, Bubbling Mud and Slime.

The greatest natural wonder in Java, if not in the entire world, is the justly celebrated "Gheko Kamdka Gumko," or "Home of the Hot Devils," known to the world as the Island of Fire. This geological singularity is really a lake of boiling mud situated at about the center of the plains of Grobogana and is called an island because the great emerald sea of vegetation which surrounds it gives it that appearance. The "island" is about two miles in circumference, and is situated at a distance of almost exactly fifty miles from Solo. Near the center of this geological freak immense columns of soft, hot mud may be seen continually rising and falling like great timbers thrust through the boiling substratum by giant hands and the again quickly withdrawn. Besides the phenomenon of the boiling mud and columns there are scores of gigantic bubbles of hot slime that fill up like huge balloons and keep up a series of constant explosions, the intensity of the detonations varying with the size of the bubble. In time past, so the Javanese authorities say, there was a tall spirelike column of baked mud on the west edge of the lake which constantly belched a pure stream of cold water, but this has long been obliterated, and everything is now a seething mass of bubbling mud and slime.

CRUEL PUNISHMENTS.

The Old Time Use of Torture in Legal Processes.

The constitution of the United States and the constitutions of the various states in prohibiting cruel and unusual punishments were not fighting an absurdity. The use of torture in legal processes was not, when these instruments were framed, so remote as it is now.

When Sir Thomas Dole came as high marshal to Virginia he crushed a conspiracy by killing the ringleaders by torture. One had a bodkin thrust through his tongue and was chained to a tree until he died. Others were broken on the wheel. It is quaintly stated that Sir Thomas was "a man of good conscience and knowledge in divinity." Dole's date was 1611.

The next notable instance of the use of torture was in 1692, in the Salem witchcraft excitement, when Giles Cory was pressed to death—the "peine dure et forte," the most horrible of deaths.

Executions were in public throughout the east until comparatively recent times. When Quelch, the pirate, and six others were hanged in Boston, Sewall wrote in his diary, "When the scaffold was let to sink there was such a screech of the women that my wife heard it, sitting in our entry next to the orchard," though the gallows was a mile away and the wind unfavorable.

The use of torture to wring the truth from witnesses is said to have been recognized as legal in Austria until well within the century.

Naturally.

Knicker—There goes a man who would rather fight than eat. Bocker—Soldier? Knicker—No; dyspeptic.—Watson's Magazine.

READ AND YOU WILL LEARN

That the leading medical writers and teachers of all the several schools of practice endorse and recommend, in the strongest terms possible, each and every ingredient entering into the composition of Dr. Pierce's Golden Medical Discovery for the cure of weak stomach, dyspepsia, catarrh of stomach, "liver complaint," torpid liver, or biliousness, chronic bowel affections, and all catarrhal diseases of whatever region, name or nature. It is also a specific remedy for all such chronic or long standing cases of catarrhal affections and their results, as bronchial, throat and lung diseases (except consumption) accompanied with severe coughs. It is not so good for acute colds and coughs, but for lingering, or chronic cases it is especially efficacious in producing perfect cures. It contains Black Cherrybark, Golden Seal root, Bloodroot, Stone root, Mandrake root and Queen's root—all of which are highly praised as remedies for all the above mentioned affections by such eminent medical writers and teachers as Prof. Bartholow, of Jefferson Med. College; Prof. Hare, of the Univ. of Pa.; Prof. Finley Ellingwood, M. D., of Bennett Med. College, Chicago; Prof. John King, M. D., late of Cincinnati; Prof. John M. Scudder, M. D., late of Cincinnati; Prof. Edwin M. Hale, M. D., of Hahnemann Med. College, Chicago, and scores of others equally eminent in their several schools of practice.

The "Golden Medical Discovery" is the only medicine put up for sale through druggists for like purposes, that has any such professional endorsement—worth more than any number of ordinary testimonials. Open publicity of its formula on the bottle wrapper is the best possible guaranty of its merits. A glance at this published formula will show that "Golden Medical Discovery" contains no poisonous or harmful agents and no alcohol—chemically pure, triple-refined glycerine being used instead. Glycerine is entirely unobjectionable and besides is a most useful ingredient in the cure of all stomach as well as bronchial, throat and lung affections. There is the highest medical authority for its use in all such cases. The "Discovery" is a concentrated glyceric extract of native medicinal roots and is safe and reliable.

A booklet of extracts from eminent medical authorities, endorsing its ingredients mailed free on request. Address Dr. R. V. Pierce, Buffalo, N. Y.

Those who are gaining flesh and strength by regular treatment with

Scott's Emulsion

should continue the treatment in hot weather; smaller dose and a little cool milk with it will do away with any objection which is attached to fatty products during the heated season.

Send for free sample. SCOTT & BOWNE, Chemists, Toronto, Soc. and \$1.00; all druggists.

OCEAN ROPES.

A Marine Plant That Grows a Stem Three Hundred Feet Long.

The largest marine plant and probably one of the highest plants known on this globe is a gigantic seaweed, the *nerocystis*, the stem of which has been found to grow as much as 300 feet long. It was first discovered not far from the Alaskan coast, but has since been found floating in various parts of the Pacific ocean along the American and Asiatic shores. This seaweed grows in a very curious manner. Large quantities of it are found at a little distance from shore and at depths not exceeding 300 feet. On loamy bottoms large thickets of this plant take root, and a stem of the thickness of ordinary cord grows upward. At its top there is a pear shaped balloon, which grows with the stem, and when it reaches the surface of the water it often measures six feet and more in length, with a diameter of four feet six inches. This balloon has, of course, an upward tendency and keeps the stem growing until it floats on the surface of the water. From the top of this balloon a large tuft of strong, thick, spadellike leaves grow out, which originally are not more than two feet long and which grow and split until from the balloon a rosellike growth of from fifty to sixty-five feet in diameter covers the water. This gigantic weed grows in such quantities that near the shore large meadowlike islands are formed, which impede navigation. The natives of the Aleutian islands make manifold usage of this plant. From their strong dried stems they make ropes 250 feet and more long, while balloons of this weed furnish them with large vessels after they are dried, the smaller ones being used in their boats to bail out water. The long leaves, after being dried, are cut into narrow strips and used for wickerwork, the making of baskets and similar furniture.

LAPP WOLF HUNTERS.

Swift Runners on Snowshoes Make Short Work of the Brutes.

The Swedish Lapps live entirely with, by and upon their reindeer. A Lapp who owns a thousand deer is a very rich man; but, as taxes are assessed upon the number of deer, he is inclined to underestimate his herd. The most dangerous enemy to the herd is the wolf, who, if so disposed, can kill thirty deer in a night. A band of wolves can make a rich Lapp poor. When the snow is deep and soft and it is announced that wolf tracks have been seen in the neighborhood of the deer the swiftest runners on snowshoes prepare for an exciting chase. The wolf may have a start of a mile or two, but the track it leaves in the deep, soft snow is so prominent that the hunters can follow it at their best speed.

The wolf, though he may run fast, has but slight chance of escaping the short men who on snowshoes rush through the wood, dart down steep hills and jump from ledges several yards in height. Each hunter does his best to outrun the others, for the wolf belongs to the Lapp who strikes the first blow. As soon as the leading hunter is close enough to the wolf he gives it a heavy blow across the loins with his strong spiked snowshoe staff. If there are other wolves to be pursued, he kills it outright; if not, he disables it and waits till all the hunters arrive before giving the death stroke.

THE CUPEY TREE.

One of the Most Curious Growths of the West Indies.

The cupey, or, as it is sarcastically called in the English possessions, "the attorney," is one of the most curious, as it is one of the most picturesque, denizens of the virgin forests of the West Indian islands. It belongs to the parasitical family of trees or plants; but, terrible to relate, it invariably, with the basest ingratitude, destroys all life in the unfortunate tree that cherishes it in its early growth. The seeds are borne on the wings of the wind and deposited on the branches of other trees, when they burst into roots, which are dropped toward the ground all around the "nurse" tree. In time these roots reach the ground and strike into the soil.

From this moment the roots grow stronger and stronger until they resemble a lot of rope ladders thrown over the tree. Next the parasite sends down a great cord, which twines around the trunk of the supporting tree, at first as though in loving embrace, but it grows tighter and tighter, eventually strangling its benefactor out of existence. The nurse tree thus killed rots to decay, and from the immense fibrous roots of the destroyer now springs a great trunk, which rises high into the air. When a cupey is full grown it presents a magnificent spectacle, for the cordlike root rises often to fifty or sixty feet and supports in midair the vast tree itself.

MARIE ANTOINETTE.

Two Dramatic and Contrasting Episodes In Her Life.

Thistleton-Dyer, in his "Royalty In All Ages," describes two dramatic and tragically contrasted episodes in the life of Marie Antoinette, the lovely and ill fated queen of France. Once, in the days of her greatest popularity, when she went to the opera of "Iphigenia," when Achilles came to the line "Let us sing and celebrate the queen," he turned toward the radiant young sovereign and sang two additional impromptu lines of charming compliment. This graceful and unexpected homage so delighted the audience that "all was shouting and clapping of hands, and—what never happened at the opera before—the chorus was encored, and there were cries of 'Long live the queen!' at which expression of feeling her majesty was so affected that she shed tears."

On the next occasion, when Marie Antoinette's sun of popular favor had set and she was nearing the tragic close of her life, one of the actresses in "Unforeseen Events" bowed to her as she sang the words "Ah, how I love my mistress!" In a moment all was in uproar, and the theater was full of hoarse, angry cries of "No mistress! No master! Liberty!" and "No master! No queen!" and it was some minutes before the tumult quieted down and it was possible to proceed with the play.

SOUPS AND BROTHS.

They Are Stimulating, but Have Little Nutritive Value.

Soups and broths made of the meat pieces alone and without the addition of meat substance, eggs, vegetables or cereals have little nutritive value, although they do possess stimulating properties.

A dog would starve to death in ten days if fed upon beef broth pure and simple.

Soup interferes with digestion whenever a full meal is eaten. I consider it as being entirely superfluous and advise its discontinuance in a substantial

Red Rose Tea costs no more than other teas

EVERYONE agrees that the best in anything is always the most economical even if it costs more.

But when you can get the best in tea at the same price you pay for inferior teas,

—when you can get that "rich fruity flavor" of Red Rose Tea,

—when you can get all the good qualities of both Indian and Ceylon teas with none of their weaknesses,

—when, in short, you can get Red Rose Tea at the same price as other teas; why not have it?

Red Rose Tea

is good Tea

St. John, N.B., Toronto, Winnipeg

RESTORED TO MANHOOD

The New Method Treatment of Drs. K. & K. has restored thousands of weak, diseased men to robust manhood. No matter how many doctors have failed to cure you, give our treatment a fair trial and you will never regret it. We guarantee all cases we accept for treatment. Not a dollar need be paid unless cured for you can pay after you are cured. Drs. K. & K. established 25 years.

We treat Varicocele, Nervous Debility, Stricture, Blood Diseases, Kidney Bladder and Urinary Diseases. If unable to call, write for Question Blank for Home Treatment. Consultation Free.

NOT A DOLLAR NEED BE PAID UNLESS CURED.

DRS. KENNEDY & KERGAN, 148 Shelby Street, Detroit, Mich.

NOBODY NEED HAVE INFLAMMATORY RHEUMATISM!

THAT'S FACT THAT MEDICAL SCIENCE CAN PROVE TO YOU EVERY DAY IN THE YEAR—CARELESSNESS COURTS IT—PRECAUTION PREVENTS—IT'S NOT A CONTAGION THAT STEALS IN UNAWARES!

South American Rheumatic Cure

is the fortress behind which you may be perfectly secure; and why take chances if, through exposure to heat and wet, you feel those unwelcome chills, then the fever, then the sweating, then the pains in the joints. Do not put off securing the greatest of rheumatic and neuralgia cures. Experience shows that the duration of inflammatory rheumatism, under ordinary treatment, will cover a period of six to eight weeks; and what a wracking it gives to the sufferer, and it seems almost incredible that the great South American Rheumatic Cure has, in thousands of instances, controlled and conquered most stubborn and next to baffling cases in from one to three days.

Lumbago is one of rheumatism's full brothers. It comes and prostrates at times with the suddenness of a thunderclap, and yet, as in the most acute inflammatory cases, the great South American Rheumatic Cure comes as a ministering angel, holds out its healing hand, and bids the

stroke.

On Tipping the Hat.

New Yorkers still cling to the ancient custom of tipping their hats when greeting a male friend or acquaintance. It is a common sight to see a staid, prosperous looking business man as he passes an acquaintance tipping his hat, although the other is alone and unaccompanied by a woman. It is the same after a party has been together somewhere, at dinner, probably, or at the theater. You will notice that as one separates himself from the others he will say good night or au revoir and then tip his hat. Also when one man is introduced to another it is dollars to a subway ticket that he will lift his chapeau. Wonder why it is. They don't do it in Pittsburg.

Crusty.

The new stenographer's yellow hair glittered in the flood of sunlight that poured through the window of the office.

But old Duke, the bookkeeper, had no eyes for the girl's beauty. He lighted a cigar and set to work.

"Mr. Duke," said the stenographer.

"Huh?" the old man grunted.

"Look here," she said imperiously, "I am sorry, but smoking always makes me sick."

"Then," said Duke, without looking up, "don't ever smoke."

An Irish Compliment.

An Irish gentleman said to an English officer, "Do you know Mr. X. of —?" The officer disclaimed having that pleasure. "Ah, he is a very nice fellow and a good friend of mine. But he has been dead these six years. An', shure, you're very like him!" The officer said he had been compared to a good many things in the course of his lifetime, but never before to a six-year-old corpse.—London Spectator.

Latter Day Breeziness.

"How often do your housemaids dust?"

"Do you mean how often do they fan the furniture," asked slangy Mrs. Nuwedd, "or how often do they skip out?"

If poverty is the mother of crimes want of sense is the father of them.—Ruyera.

A Serious Threat.

Stutts (who stammers)—Miss D-D-Dimple—D-D—Dollie! I lul-lul-lul—I lul-lul-love you! Wu-wu-will you b-b-wu-wu will you b-be mum-mum-mum-wu-wu will you b-be mum-mum-my wu-wu-wu—mum-mum-my wife? Dollie Dimple (cooly)—Oh, Mr. Stutts! I—I hardly know how to answer you! Stutts (desperately)—Ac-ac-ac-sus-sus—accept my pup-pup-proposal or I'll sus-sus—or I'll sus-sus-say it all over a-gug-gug-again!

Easily Remedied.

Bank Clerk—This check, madam, isn't filled in. Madam—Isn't what? Bank Clerk—It has your husband's name signed to it, but does not state how much money you want. Madam—Oh, is that all? Well, I'll take all there is.

Good Luck.

Mrs. McCall—Is Mrs. Gassaway at home? The Servant—Faith, she is not, ma'am, be great luck, but ye'd best I've yer card an' skeddaddle away, fur she's like to be in anny minute now.—Philadelphia Ledger.

CASTORIA.

Bears the Signature of *Chas. H. Plummer* The Kind You Have Always Bought

Soup interferences with digestion whenever a full meal is eaten. I consider it as being entirely superfluous and advise its discontinuance in a substantial dinner menu.

Soup, being practically all water, plays an important part in conjunction with the large quantities of other liquids injected during mealtime in delaying and interfering with digestion and laying a foundation for stomach trouble. Through it and the other liquids used the stomach is not only overfilled and unnecessarily burdened, but the gastric secretions are so weakened by dilution that they can act but slowly upon the food mass. Here again we have the food remaining in the stomach for too long a period, and there is likely to be produced all of the symptoms and signs of an intoxication due to the absorption into the system of the products of decomposed foods.

Soup eaten by itself or with a light meal, as a rule, does not act harmfully. —What to Eat.

Card Etiquette.

"Hand in a lot of cards," said the elder woman.

"Why?" was the hurried inquiry.

"Well, if you don't hand in enough," she said, as her companion dived deep into her case, "they will say you don't know what is right. If you give too many, however, they will think that you know better than they do and that there is some new style they have heard nothing about. Hand him a lot."

At the Hotel.

Mr. Verdant—Let's try this here demitassy at the end of the programme. Say, waiter, bring us some demitassy. Mrs. Verdant—Now, par, you promised me you wouldn't take nothin' stronger'n tea or coffee.

Unappreciated Liberality.

"You are going to be tried before a very liberal judge," said a lawyer to his client.

"I am glad of that."

"You needn't be. If you are found guilty he'll give you all the penalty the law allows."

His Specialty.

Bacon—When he was out camping did your brother kill much? Egbert—He nearly killed everybody in the camp. He was the cook.

Removed the Growth.

DOUGLAS & CO., NAPANEE, ONT.

DEAR SIRS,—During year 1890-91 I was troubled with a large lump growing on the right side of my neck near the ear. Had consulted several physicians and used everything I could hear of, all to no use. Was told to use

Douglas' Egyptian Liniment.

I did, and before I had used half a twenty-five cent bottle was permanently cured. Since then I have used it for everything where outward application is required; am yet to learn of anything in reason that I cannot cure with it. No man has any idea of its value until he has used it; would not be without it under any circumstance

Respectfully yours,

NATHANIEL W. REID.

Enterprise P. O.

We have a full supply of Groceries, Flour, and Feed, Patent Medicines, Boots and Shoes, and Hardware, in fact everything kept by a general store.

We are able to compete with any general store in the provinces

We pay Highest Price for all Farm Produce.

S. BOND & CO., ODESSA.

The "If" Is Rather Important.

Here's something that may save your life when a bull gets after you: When a bull charges, just before the final lurch he shuts his eyes, and if you have the presence of mind to stand stock still until he is about two or three feet from you all you have to do is to step aside, and he misses you. Any child with sufficient presence of mind to do this can let a bull charge all day with perfect safety. This is not a new thing, as it is one of the secrets of the bullfighter in the countries where the sport is practiced. The bullfighters say that a cow does not do this, and they would never try any such tricks with a mad cow.

A Judge's Advice.

Recently a retired English judge was asked what was the most prominent conviction that remained with him after his long judicial experience, and he is said to have replied, "That every means should be tried for the settlement of a dispute before it be taken to the law courts."

Her Dilemma.

Young Matron—Why so pensive, dear? Angelina—I'm desperate! Will adores me in pale pink, while Max says I'm an angel in blue. I can't have but one gown, so you see my whole future depends on the color I select. It is sending me crazy—London Tit-Bits.

Best Kidney Remedy Known To Science

For pain in the back—scanty urine—highly colored urine—irritated bladder—irregular bowels—bad stomach—there is nothing that will bring such quick relief and so certain a cure as **FRUIT-A-TIVES**.

These marvelous tablets are nature's natural remedy for irritated or weakened kidneys. They act directly on the kidneys—soothe the irritated membranes—clean, heal and strengthen the organs—and help them to new vigor with their work.

Often kidney trouble is not due to any organic defect in the kidneys. If the bowels are constipated—if the skin does not throw off the tissue waste of the body—then these impurities are carried to the kidneys. In a vain endeavor to rid the system of impurities, the kidneys are overworked—the blood vessels are dilated—the nerves inflamed. That causes a host of kidney troubles.

Fruit-a-tives

OR "FRUIT LIVER TABLETS"

not only heal and strengthen the kidneys but they also increase the action of the skin, and act directly on the liver, thus curing the constipation.

FRUIT-A-TIVES are the natural and logical cure for all kidney troubles. They are made of fruit and tonics—are pleasant to take—and a guaranteed cure when faithfully used. 50c. a box or 5 boxes for \$2.50. Sent on receipt of price if your druggist does not handle them.

FRUIT-A-TIVES LIMITED - OTTAWA.

ODD WATER WHEELS.

Some Float on Streams—Huge Ones Make a River Lift Itself.

The people of Syria and Tiddis make their streams do things that Americans do not seem to have learned the secret of perambulating the water courses of this country to perform.

At Tiddis the natives have learned how to utilize the power of the current of the river Kur without building dams. What they have accomplished possibly might be done by an American farmer living on the banks of a rapidly moving stream and desiring a rapid, cheap power. The Caucasians build floats on the surface of the river. Into them are set water wheels. The whole affair is fastened to the bank in such a way that it will rise and fall with any change in the level of the surface of the river, so that the power is about constant all the time.

In Hama, the ancient "entering in of Hemath," the Syrians have accomplished a feat that makes one think of lifting oneself over a fence by tugging at one's bootstraps. They have harnessed the historic Orontes, or Nahr el Asi, as the Syrians call it, into the work of lifting itself many feet toward the zenith and trained it thus to water their fruitful gardens and orchards.

As for size, the water wheels which do this work are as to other water wheels that Niagara is to other waterfalls. As one stands by one of these great wooden frames revolving upon its wooden axle and looks up at its perimeter forty feet above one thinks it large and is astonished when he turns his gaze up stream to see that relatively it is not a great wheel, for in

the distance looms up one sixty feet in height. Even then he is not prepared for the spectacle of one ninety feet in diameter grunting around on its cumbersome axle just outside the town.

Life in Hama for some people is like the liking of others for olives, an acquired taste, because of these very water wheels. According as one feels about it, it is a musical city or one filled with nerve racking groans. Day and night without ceasing these massive, slow revolving structures utter speech. For those who have acquired a taste for their companionship the never ceasing tones are soothing, resembling the ocean roar or a slow fugue played on some cyclopean organ. The diapason tones are deeper and louder than the deepest organ stop. Now they are in unison, now repeating the theme, one after another, now for a brief moment in a sublime harmony never to be forgotten, according to one traveler, then once more together in a tremendous chorus. The sounds are described as a slow movement up the scale, followed with a heavy drop to the keynote as: Do mi sol, do do do; do sol la, do do do. This unceasing Sisyphus music, it is said, has been going on for a century at least.

BURNS DIED PENNILESS.

His First Obituary Notice Called For Help For His Family.

When Robert Burns died the following obituary appeared in the Edinburgh Advertiser of July 26, 1796: "On the 21st inst. died at Dumfries, after a lingering illness, the celebrated Robert Burns. His poetical compositions, distinguished equally by the force of native humor, by the warmth and the tenderness of passion and by the glowing touches of a descriptive pencil, will remain a lasting monument of the vigor and versatility of a mind guided only by the lights of nature and by the inspiration of genius.

"The public, to whose amusement he has so largely contributed, will learn with regret that his extraordinary endowments were accompanied with frailties which rendered them useless to himself and his family. The last months of his short life were spent in sickness and indigence, and his widow, with five infant children and in the hourly expectation of a sixth, is now left without any resource but what she may hope from the regard due to the memory of her husband.

"The public are respectfully informed that contributions for the wife and family of the late Robert Burns, who are left in circumstances of extreme distress, will be received at the houses of Sir William Forbes & Co., of Messrs. Mansfield, Ramsay & Co. and at the shops of the Edinburgh booksellers. It is proposed to publish some time hence a posthumous volume of the poetical remains of Robert Burns for the benefit of the author's family. His friends and acquaintances are requested to transmit such poems and letters as may happen to be in their possession to Alexander Cunningham, writer, George street, Edinburgh, or to John Syme, Esq., Ryedale, Dumfries. It is hoped that in the meantime none of his original productions will be communicated to the public through the channel of newspapers or magazines so as to injure the sale of the intended publication."

LAPLANDER STYLES.

They Haven't Changed Any in the Last Thousand Years.

There is one corner in the world where the fashions of the people have remained the same for the last thousand years. The Lapp lady is not concerned about the latest toque from Paris nor is she subject to that soul harrowing experience, the bargain counter crush. However, she may properly lay claim to having been the original bloomer girl, for the nether garment worn by her today is of the same design as that worn by her ancestors of a thousand years ago.

The summer garment of the Laplander is usually of coarse woolen goods and has something the cut of a shirt with a high collar. Among the sea Lapps it is for the most part undyed. Among the other Lapps usually blue, sometimes green or brown and even black smock frocks have been seen.

Round the waistbands, along the seam in the back and on the edges this smock is ornamented with strips of red and yellow cloth. Under this garment is a similar one, either plain or figured, worn next to the body, for the Lapp never wears linen underclothing.

The trousers are of white woolen goods, rather narrow and reaching to the ankles, where they are tied inside the shoes with long slender shoestrings. Over these drawers are usually worn leggings of thin, tanned skins, reaching from the ankles to the knees.

Stockings the Lapp never wears. He fills the upper curving tip of his shoes with a sort of grass, which is gathered in summer and beaten to make it soft and pliable. The winter costume only differs from that worn in summer in that every piece is made of reindeer skin with the hair on.

The dress of the women differs very slightly from that worn by the men. The smock is somewhat longer and is made without the big standing collar. Instead of which a kerchief or cap is worn about the neck. To the woven and often silver ornamented girdle hang a knife, scissors, key, needle and thread. The head covering is not only different in the two sexes, but also differs according to the locality.

CURIOUS FISH.

They Keep Their Eggs In Natural Pockets In Their Mouths.

In the sea of Galilee, or Lake Tiberias, as it is also called, there is a strange fish named the Chronis simonis, which is more careful of its young than fish generally are. The male takes the eggs in his mouth and keeps them in his natural side pockets, where they are regularly hatched and remain until able to shift for themselves. By this ingenious arrangement the brood is comparatively guarded against its natural enemies. It is easily fed, too, but it is a puzzle how the little ones escape being eaten alive. A while ago, says a traveler writing to a religious contemporary, I found in my net a number of these fish without eyes.

Others of the species, when I lifted them up, dropped a number of little fishes out of their mouths, which swam away hastily. The natives explained the phenomenon. The blind chronis is the victim of sea hawks. When these birds have eaten their fill they begin to look out for tidbits. After catching a fish they hit its forehead with their sharp beak, knocking out the middle part, in which their eyes are set. The bony structure is dropped into the water, but the eyes are eaten by the birds with great relish. Strangely enough the fish generally

THE SLIME ON FISHES.

Common to All Species and Essential to Their Existence.

A fish just taken from the water, if handled, is found to be slippery and coated with slime. All fishes, the meanest and the noblest, killifish and shark, shad, salmon and trout, wear this slime. They could not exist without it.

The slime is secreted usually in a continuous series of ducts, with numerous openings arranged in a line extending along the side of the fish. Some fishes have one line on a side, some have five or six. The lines may be plainly visible, and in some cases appear to be a marking on the fish. More often they are not observable at all. Some fishes store this secretion in pores distributed over the whole surface of the body, the larger number, however, in pores in lateral lines. There are also pores for the secretion of mucus, or slime, in the fish's head.

The slime is exuded through the divisions between the scales to the outer part of the body, over which it spreads, forming a sort of outer skin or covering, transparent and having elasticity and tenacity and often considerable body. It would not be remarkable for a fair sized fish, say a fish of two pounds weight, to have a coating of slime a thirty-second of an inch in thickness. Fishes vary greatly in the amount of slime which they secrete. The eel will suggest itself as one that is very slimy.

The fish's slimy coating reduces its friction when in motion and helps to increase its speed. It aids in protecting the scales from injury, being of sufficient substance to serve in some measure as a cushion. The slimy covering makes the fish hard to hold and so enables it the more readily to escape from its enemies. It is sometimes repugnant to other fishes, which are repelled by its odor. It is the slime from the fishes handled that makes the angler "smell fishy," as the expression goes.

A most important function of the fish's slimy coating is to protect it from the attacks of fungus, a form of plant life found in all waters, salt and fresh, including the purest. The slime covers the entire exterior surface of the fish, including the fins. Fungus does not attach to the slime, but if the fish were to be injured so that there was upon it some spot uncovered by the slime upon that spot some minute fragment of fungus, so small as to be scarcely more than visible, would be likely to lodge. Once lodged the fungus is reproduced very fast.

Fish sometimes recover from attacks of fungus, but much more often they do not. The fungus displaces the skin, inflammation is set up, and the place attacked becomes practically a sore. With its continued growth the fungus may cover the side of the fish and extend over the gills and finally kill it.

Cats Like Perfumes.

A cat characteristic little recognized even by lovers of the sinuous pets is intense love of perfume. The keenness of scent so useful to pussyskins in her hunting avocation makes her quick to detect and recognize the fragrance of natural flowers and toilet preparations, and, unlike the dog, which will detect in a moment the scent affected by master or mistress without evincing any pleasure save that of associated ideas, the cat really enjoys the sweet itself. Sensitiveness to sweet odors varies in individual felines, and some animals show a decided preference for violet fragrance over that of rose powder, for

The Best Hair Tonic

Hall's Vegetable Sicilian Hair Re-nower. It tones up, invigorates, strengthens the hair-bulbs. The hair grows faster, thicker; stops falling out; does not split at the ends. Tested and tried for half a century. For the whiskers and moustache we make BUCKINGHAM'S DYE. It colors a rich brown or a soft black. R. P. HALL & CO., Nashua, N.H.

INDIAN PROVERBS.

The coward shoots with shut eyes.
Small things talk loud to the Indian's eye.
The paleface's arm is longer than his word.
When a fox walks lame old rabbit jumps.
A squaw's tongue runs faster than the wind's legs.
There is nothing so eloquent as a rattlesnake's tail.
The Indian scalps his enemy; the paleface skins his friends.
Before the paleface came there was no poison in the Indian's corn.
There will be hungry palefaces so long as there is any Indian land to swallow.
When a man prays one day and steals six the Great Spirit thunders and the evil one laughs.
There are three things it takes a strong man to hold—a young warrior, a wild horse and a handsome squaw.

The Prime of Life.

The larger part of the great fortunes of this country have been accumulated after their amassers have passed forty. In fact, the first forty years of a man's life are the preparatory years, the years of training and discipline. A large part of this time he is laying the foundation—just getting ready to rear the superstructure. Many of us stumble around many years before we get into the right place, and then for additional years we make many mistakes. Most men do not get wise until they have passed forty. They may get knowledge before this, but not much wisdom. Wisdom is a ripening process. It takes time. Every man makes his own dead line. Some reach it at thirty-five, some at forty, some at fifty; some do not reach it at eighty; some never reach it because they never cease to grow.

The Change of a Word.

A remarkable instance of verbal degradation is the word "slave." Its original, the Russian "slava," meant glorious, being etymologically akin to the English word "glory," and was proudly taken as their name by the Slavonic people. But when the Germans reduced hosts of the Slavs to servitude their name, from malice or accident, as Gibbon says, became synonymous with "servile." It retains no more suggestion of its racial origin now than does "ogre," which is really "Hungarian," from a confusion of the Magyars with the Huns, and of both with the terrible Tartars.

A Good Reason.

Two Irishmen were digging a sewer. One of them was a big, strong man about six feet four inches in height, and the other one was a little, puny man about four feet six inches. The foreman came along to see how the work was progressing and noticed that one of them was doing more work than the other. "Look here," he cried, "how is it that little Dennis Dugan, who is only half your size, is doing nearly twice as much work as you, Patrick?" Glancing down to his partner, Pat replied: "And why shouldn't he? Ain't he nearer to it?"

Fixtures.

One day four-year-old Fred climbed upon a chair to reach something he wanted.
"You must not get on that chair with your feet, dear," said his mother.
Fred looked down at his feet, evidently puzzled. "Why, mamma," he said, "I can't take 'em off!"

When you plan your meals you never think of bread, yet you always have it, and if it is left off the table it is the first thing that is missed.
You can live without bread, but you can live without any other food with less hardship—think along these lines and the absolute necessity of bread comes home to you.
And because it is a necessity, its quality should be the best—quality in bread depends largely upon the flour.
Royal Household Flour has convinced the women of Canada that it is the best for pastry as well as for bread.
Try Ogilvie's Royal Household. Your grocer recommends it, because it gives such good results.

DENBIGH.

Mr. E. T. Anderson, Assistant School Inspector, made one of his official visits to the Public Schools in this Section. A change of Teachers in our Village School is again anticipated at the close of the present half year. A meeting of the Ratepayers of our School Section, was held last Saturday in order to decide upon either building a new School House or repairing the present one. The meeting was very poorly attended and the Trustees have decided upon improving and repairing the present one. Confirmation Services will be held in the Lutheran Church on Sunday June 3rd prox.

Murder and Suicide
At Railton.

John Joyce Shoots his Father-in-law and Wife, then cuts his throat.

Sydenham May 29.—One of the most frightful tragedies in the history of the county of Frontenac occurred two miles beyond the village of Sydenham at 11 o'clock this morning. John Joyce aged thirty-three, an English emigrant, who has been in this country three years, fatally shot his wife in the breast, seriously shot his father-in-law in the shoulder, and then committed suicide within thirty feet of the scene of the tragedy by cutting his throat.

The tragedy discloses a horrible mode of life. Cornelius Wood, the wounded father, formerly lived near Wilmur, where he was tarred and feathered for a crime against his own daughter. He was tried in Kingston, before Judge Wilkinson, and sent to penitentiary for five years. Last fall Wood was released from prison settled in the old hut near Railton.

Joyce's wife is only about twenty years of age, and her reputation is not without blemish, Joyce knew this, but in spite of friendly advice married the girl on January 4th last. The couple got on well for a time till the girl's father and brothers and Eli Smith an associate of the family, began to coax her away from her husband to her former life.

On Thursday evening one of the sons Noah, came home by stage from Kingston and stopped at Joyce's small house on the farm of William McAuley to see his sister. Though she and Joyce had been seen in loving embrace that afternoon, a few hours later she was yearning to join her brother Noah. Next day Joyce came in from work to find that Eli Smith and Noah had been at his house and taken away his wife and her few goods.

It seems that Joyce went to the house of his father-in-law about 7 o'clock Saturday morning and meeting him in front of the door demanded his wife. The father refused to allow her to return. Goaded to desperation, Joyce went to an adjoining field where he had left a loaded rifle borrowed from a neighbor on some pretext, and coming back deliberately fired at his father-in-law, but the rifle missed fire. He reloaded, and shot Wood in the shoulder as he started to run away. The old man dropped to the ground, and Joyce started for the hut, twenty feet off. His young wife and her sister-in-law, Mrs. Angus Wood, had barricaded the doors. Joyce broke these very quickly and also the inner bedroom door, and although his wife pleaded with him not to shoot, he shot her with the last bullet he had and she dropped near the door.

Apparently Joyce had deliberately planned what he intended to do, for he made no attempt to harm Mrs. Angus Wood, who was inside. He then went out and wandered a little from the porch. In the meantime the other woman slipped out and ran to a neighbor's for help.

Joyce, it is thought, went inside again, and seeing his wife dying, returned to the open and cut his throat from ear to ear in a most horrible manner. His body lay all day where he fell, his gun within reach, and the

MONTREAL HOUSEWIFE
CAN NOW PERFORM
HER USUAL DUTIES—
THANKS TO PE-RU-NA.

Josephine Lupien, Hotel Dieu, Montreal, Can., writes:

"Four months ago I commenced to take your Peruna. I can tell you with entire truth that I do four times as much work this spring as I did before. I have done washing and house-cleaning without becoming much fatigued. I have received great benefit through your medicine and recommend it to every one."

"I have not had a cold or bronchitis this winter. The constipation has entirely disappeared, also the rheumatic pains."

One such case as that of Josephine Lupien ought to be all the evidence any one needs to be convinced of the priceless benefit of Peruna.

This lady was changed from an invalid into a busy housewife. She asserts that through Peruna she is able to do four times as much work as before, that she does not take colds any more, and that the rheumatic pains and constipation which had troubled her have disappeared.

Any medicine that brings about these changes needs no further recommend.

and surrounded with ice. Monday morning after 10 o'clock it could not be found when sought for burial. Some trafficker had taken advantage of a good chance.

Let thy speech be better than silence or be silent.—Dionysius.

Our Hospitals

Number of Operations Per- w women May Avoid them.

Dear Mrs. Pinkham:—
"I was in a very serious condition when I wrote to you for advice. I had a serious female trouble and I could not carry a child to maturity, and was advised that an operation was my only hope of recovery. I could not bear to think of going to the hospital, so wrote you for advice. I did as you instructed me and took Lydia E. Pinkham's Vegetable Compound, and I am not only a well woman today, but have a beautiful baby girl six months old. I advise all sick and suffering women to write you for advice, as you have done so much for me."
Miss Lillian Martin, Graduate of Training School for Nurses, Brantio, Ont., writes:
Dear Mrs. Pinkham:—
"While we are taught in the training schools through the country to look down upon patent medicines, and while the doctors in the hospital speak slightly of them to patients, I have found that they really know different. I have frequently known Physicians to give Lydia E. Pinkham's Vegetable Compound to women suffering with the most serious complaints of female troubles, displacement of organs, and other disorders. They would be a rule, put it in regular medicine bottles and label it 'female' or other names, but I knew it was your Compound and have seen them fill it in prescription bottles. Information and liberation have been believed and cured in a few weeks by its use, and I feel it but due to you to give Lydia E. Pinkham's Vegetable Compound paper credit."
Lydia E. Pinkham's Vegetable Compound at once removes such troubles. Refuse to buy any other medicine, for you need the best.
Mrs. Pinkham, daughter-in-law of Lydia E. Pinkham, invites all sick women to write her for advice. Her advice and medicine have relieved thousands to health. Address, Lynn, Mass.

A Will In Three Words.
In the probate division of the London county court Sir Gorell Barnes was asked to admit to probate the will of Frederick Thorn of Amesbury avenue, Streatham, who died leaving property valued at \$4,000. A day or so before he died, counsel stated, Mr. Thorn had a paralytic stroke. He asked for a piece of paper, and they gave an envelope to him. He wrote on the back of it, in the presence of his wife and two of his children, "All to mother. F. T." This was witnessed by Arthur Thorn and Percy Thorn. The will was handed up to his lordship, who remarked that it was probably the shortest one on record. It was duly executed and witnessed and he therefore pronounced for it.

again, and seeing his wife dying, returned to the open and cut his throat from ear to ear in a most horrible manner. His body lay all day where he fell, his gun within reach, and the razor with which he committed suicide a short distance behind. Dr. Tovell of Sydenham arrived at 11 o'clock and dressed the wounds of the father and daughter.
He appears to have left his house dressed in a suit of blue stripe, for he was always neat and clean. He brooded over the breaking up of his home. Noah and Angus Wood stayed at their father's house all night and left early a few minutes before Joyce arrived. Angus returned to Railton on Saturday but Noah was still absent. Eli Smith hearing the shooting was seen speeding over the field, escaping a death that would have been sure if Joyce had caught sight of him and had had more bullets. Mrs. Wood, the murdered wife's mother, was said to be hiding in a small house in Railton.
Mrs. Joyce breathed her last about five o'clock Sunday morning having lived much longer than expected. Her remains were left in the bed in the bed in the little hut, till viewed Monday by the coroner's jury, which had also to hold an inquiry into her death.
Cornelius Wood was taken to Kingston General Hospital Sunday in a waggon, improvised as an ambulance. Though still in a critical condition, he was resting easy on Monday.
The body of Joyce still lay unburied Monday afternoon. Interment could not take place till after the jury's sitting.
The Coroner's jury met Monday afternoon near Railton to inquire into the Joyce tragedy, and returned a verdict to the effect that Mrs. Joyce came to her death from the effects of a rifle shot wound inflicted by her husband and that the latter died by his own hand.
The body of Joyce, the murderer and suicide, has disappeared. It was placed on Saturday night in a log enclosure

DOUMA ANGRY AT THE CZAR

Amnesty and Land Scheme Are Definitely Rejected.

A despatch from St. Petersburg says: The crisis in Russia's destinies has grown more acute, the outlook is dark, and no man can foretell the final issue.

The Government in its declaration to the Douma on Saturday granted universal suffrage, but refused complete amnesty and expropriation of the lands, the two demands on which the people through the Douma insist in the same spirit that the American colonies resisted taxation without representation in 1776.

The Douma responded at once with a demand for the dismissal of the Ministry and the appointment of one representative of the country. Thus the issue is drawn.

The Crown's address through Premier Goremykin is specific enough; nevertheless the impression is widespread that the Government has no fixed policy, and many believe that the Czar will yield much more under greater pressure.

There is not the slightest doubt that this pressure will be forthcoming, but the perilous question arises, Will the later concessions suffice to save the throne? In other words, can a revolution be averted?

THE DAY'S DEVELOPMENTS.

When the Douma met on Saturday morning the Ministers were present for the first time. Premier Goremykin read the Ministerial programme, which is the reply to the Douma's address to the Czar.

The statement declared that the Government was fully prepared to lend its entire support to an elaboration of the main points suggested by the Douma, provided they did not go beyond the limits of legislative initiative assigned to the Douma. The Council of Ministers, the Premier said, must exercise special caution in regard to questions raised by the Douma on immediately satisfying the needs of the rural population and placing the peasants on an equal footing with other classes; of satisfying the requirements of the work people; of framing a measure for obligatory elementary education; of making the wealthier classes liable for the payment of taxes and of reorganizing the provincial administration and introducing a system of self-government with special consideration for the peculiar conditions in the frontier provinces.

TO COUNTERACT ABOVE.

The council, the Premier said, attaches no less importance to the suggested law of liberty of the subject, of conscience and of the press and the freedom of meeting and association, but it considers it necessary when preparing such laws to provide the administration

with such effective means as will enable the Government to prevent and counteract any abuse of the liberties conceded.

With reference to the solution of the agrarian question with the help of Crown appanages and monastery and Church lands, and by the forcible expropriation of private lands and property, which includes the private property of the peasants, the council, the Premier declared, holds it to be its duty to declare such a mode of settlement absolutely inadmissible.

ONLY PARTIAL AMNESTY.

In regard to amnesty, Premier Goremykin declared that the pardoning of persons convicted of whatever form of crime they may have committed was the prerogative of the monarch. The council considered that it would not be beneficial to grant amnesty to persons implicated in murders and acts of violence. The Cabinet had taken steps to procure the release of those by whom the public safety was not threatened.

Dealing with the legislative field, Premier Goremykin declared that the welfare of Russia was unattainable so long as the prosperity of agriculture was not assured.

The reforms announced by the Emperor, the Prime Minister declared, cannot be thought of so long as the power of law is not firmly established. The council will place in the forefront of its labors the question of the creation of local courts of justice on lines which will simplify the change of procedure in trials from the present system.

BOMBS AT SEBASTOPOL.

A despatch from Sebastopol says: Several bombs were thrown here on Sunday while a review of troops was being held after the Te Deum in celebration of the anniversary of the Emperor's coronation. Three persons were killed and several wounded. Among the wounded are the commander of the fortress, General Neptueff, who received slight hurts, and the chief of police, who was gravely injured. Other high dignitaries escaped. Vice-Admiral Chouknin, commanding the Black Sea fleet, who is a special subject for terrorist revenge, was not present. Two of the bomb-throwers were arrested.

A despatch from St. Petersburg says: Despatches received here concerning the bomb outrage during the review of the troops after the celebration of the anniversary of the Emperor's coronation at Sebastopol on Sunday say that eleven persons were killed, including five children, and that over one hundred persons were wounded. The despatches also say that four arrests were made.

large banners, with portraits of the bride and bridegroom, with ten bears; two pyramids, surrounded by golden angels bearing the arms of Spain and Battenberg, each borne by 20 men, and a fantastic portrait gallery, carried on high by 150 persons.

GIRLS BURNED TO DEATH.

A Prairie Fire in the Vicinity of Neudorf, Saskatchewan.

A Winnipeg despatch says: Information of two deaths caused by prairie fires in the vicinity of Neudorf, Sask., has just been received here. The victims were Maria Ulmer and the seven-year-old daughter of Mr. Niebergall. The former was assisting in fighting the fire on a farm, where she was employed as a domestic, when her clothes were ignited, inflicting injuries to which she succumbed shortly afterwards.

THE WORLD'S MARKETS

REPORTS FROM THE LEADING TRADE CENTRES.

Peas—No. 2 offered at 83½¢ east, without bids.

Oats—No. 2 white offered at 39½¢ on track Toronto, at 40c to arrive Toronto, and at 38c outside, without bids. No. 2 mixed offered at 39½¢ to arrive, Toronto, and at 36½¢ outside, with 35½¢ bid outside on C.P.R.

Rye—No. 2 wanted at 72c outside, prompt shipment, while they offered at 70c, September delivery.

COUNTRY PRODUCE.

Apples—Choice stock, \$4 to \$4.25 per bbl, and inferior qualities at \$3 to \$3.25.

Beans—Hand-picked selling at \$1.80 to \$1.85, and primes at \$1.70 to \$1.75.

Honey—Strained honey quoted at 8½¢ to 9c per lb, and combs \$1.50 to \$2 per dozen.

Hops—14 to 17c per lb.

Hay—Car lots of No. 1 timothy are quoted at \$9.50 to \$10 on track, Toronto, and No. 2 at \$7 to \$7.50.

Straw—\$5.50 to \$6 per ton.

Potatoes—Ontario stock, 75 to 85c per bag, and Eastern, 85 to 90c per bag on track.

Poultry—Turkeys, fresh killed, 14 to 16c; chickens, last year's, 14 to 16c; live chickens, 9 to 10c per lb.

THE DAIRY MARKETS.

Butter—Pound rolls are quoted at 18 to 19c; large rolls, 16 to 18c; good to choice dairy tubs, 16 to 18c, and inferior at 14 to 15c. Creamery prints sell at 20 to 21c, and solids at 18½ to 19c.

Eggs—Sales at 16½ to 17c per dozen in case lots. Splits, 13 to 13½c.

Cheese—The market is quiet, with prices unchanged. New are quoted at 11½ to 12c per lb.

HOG PRODUCTS.

Dressed hogs in car lots are nominal. They are quoted as follows: Bacon, long clear, 12 to 12½¢ per lb in case lots; mess pork, \$21 to \$21.50; short cut, \$23.

Hams—Light to medium, 14½ to 15c; do., heavy, 14c; rolls, 12 to 12½¢; shoulders, 11½c; backs, 15½ to 16c; breakfast Bacon, 15c.

Lard — Tierces, 11½¢; tubs, 11½¢; pails, 12c.

BUSINESS AT MONTREAL.

Montreal, May 29.—There was no improvement in the demand for Manitoba wheat from foreign sources. The oat market was firm. Sales of car lots of No. 2 white were made at 42c; No. 3 do., 41½c, and No. 4 do., at 40½c per bushel, ex store. Flour — Manitoba Spring patents, \$4.50 to \$4.60; strong bakers', \$4 to \$4.10; Winter wheat patents, \$4.20 to \$4.40; straight rollers, \$3.90 to \$4.10; do., in bags, \$1.85 to \$1.95; extras, \$1.40 to \$1.50. Feed—A fair volume of business was done in millfeed, and the undertone to the market is steady; Manitoba, in bags, \$18 to \$19; shorts, \$20 to \$21 per ton; Ontario bran, in bags, \$19.50 to \$20; shorts, \$20.50 to \$21; milled mouillie, \$21 to \$25 per ton, and straight grain, \$28 to \$29. Rolled Oats — Firm at \$2.10 per bag. Provisions—Barrels heavy Canada short cut, \$23; light short cut, \$21.50.

TRAGEDY AT RAILTON.

Frontenac Farm Hand Avenge Desecration of Home.

A Kingston despatch says: John Joyce, a farm laborer, on Friday morning shot his wife and father-in-law, Cornelius Wood, in a log shanty near the Village of Railton, and then committed suicide by cutting his own throat with a razor. Mrs. Joyce is fatally wounded, and her father lies in a precarious condition, with a bullet in the upper portion of his body.

Joyce, who was 33 years of age, came to Canada as a boy, and had worked for farmers in the district. Latterly he was employed by William McAuley, a farmer residing near Railton. Last January he married the 19-year-old daughter of Cornelius Wood, and the two lived together in apparent harmony, although the wife's reputation was not of the best. Last Friday Mrs. Joyce left her husband's home at the solicitation of one of her brothers, and returned to her father's house. This angered Joyce, and the following morning he visited his father-in-law and demanded that his wife return to him. The old man refused, and Joyce, threatening vengeance, went away. In a short while he returned with a Lee-Metford rifle, which he had borrowed.

In the house with Wood were Mrs. Joyce and the wife of Wood's son Angus. They saw Joyce coming and went out to remonstrate with him, but Wood received a bullet in the shoulder, which dropped him. Joyce then forced his way into the house, and in spite of his wife's entreaties, shot her with the cartridge remaining in his rifle. The bullet passed through the stomach and back, and the woman's recovery is impossible. Having shot his wife, Joyce, ignoring her terrified sister-in-law, went outside and cut his own throat from ear to ear.

PULLMAN TURNED OVER.

Accident on the Intercolonial near Amqui, Quebec.

A despatch from Montreal says: The rear Pullman car of the I.C.R. Maritime express, due on Sunday, jumped the track and overturned near Amqui, Que., about four hundred miles from Montreal, at 5 o'clock on Sunday morning, and though it carried twelve sleeping passengers, none of them were reported seriously injured. The escape was rather remarkable, and may be attributed in part to the low embankment and to the immediate action of the emergency brake, which operated automatically, owing to the break in the coupling. The car lay on its side, and so severe was the jolt that all the lower windows were smashed and the framework badly wrenched. The front Pullman was forced from the track, but did not turn over. It is supposed the accident was due to spreading rails, even though the engine and three colonist cars had passed over safely. When the passengers in the overturned Pullman regained composure and managed to get out, they observed that if the car had left the track a few yards farther ahead they would have been hurled over a fifty-foot embankment to a stream of water.

ANYTHING FOR A FIGHT.

Zulus in South Africa Spoiling to Get at Each Other.

A London despatch says: The situation in Natal is unchanged. Little news comes through, but early in the week it seemed as if several leading chiefs would lay down their arms. Of the five chiefs who met on Tuesday only one announced his loyalty to the Government and ordered his men to disarm. Two others have since been organizing raids in Zululand. The rebellion continues to draw support from the natives who want to fight each other as well as those who want to fight the whites. This adds to the difficulty of suppressing it.

WANTS 2,000 MORE MEN.

The Pietermaritzburg correspondent of the London Daily Telegraph says that

AT THE ROYAL WEDDING

PRINCE AND PRINCESS OF WALES TO REPRESENT KING.

It Will Be the Most Gorgeous Royal Pageant Witnessed for Many Years.

The wedding of King Alfonso and Princess Ena of Battenberg on May 31 will be one of the most gorgeous royal ceremonies that have been witnessed for many years.

There will be princes and princesses by the score. Indeed, so numerous are the members of royal houses who will be present that the Spanish Government

ceremonies that have been witnessed for many years.

There will be princes and princesses by the score. Indeed, so numerous are the members of royal houses who will be present that the Spanish Government is in a state of perplexity how to find them accommodation fitting their rank.

A committee composed of high State and court functionaries has charge of the arrangements. The princes and princesses of the British and Spanish houses will be lodged in the Royal Palace, but the other guests will have their quarters in various palaces which the grandees are offering for their reception, and which are being hurriedly prepared for the occasion.

The list of foreign representatives at the wedding is still incomplete, but the following names are now announced:—

THE FOREIGN GUESTS.

Great Britain—The Prince and Princess of Wales, who will represent the King and Queen.

Germany—Prince Albert of Prussia. Russia—The Grand Duke Michael. Austria—The Archduke Franz Ferdinand, nephew of the Emperor Francis Joseph, and heir-apparent.

Italy—The Duke of Genoa, cousin of King Victor Emmanuel.

Portugal—The Crown Prince, Louis, Duke of Braganza.

Belgium—Prince Albert of Flanders, nephew of King Leopold, and heir to the throne.

Sweden—The Crown Prince Gustave. Greece—The Crown Prince Constantine, who will be accompanied by his wife.

France—Gen. Dubois, chief of the President's "quartier militaire." United States—Lieut. Grant, President Roosevelt's aide-de-camp.

China—The Ambassador to Great Britain.

Even Morocco will be represented by three high dignitaries, and a special embassy will come from Argentina.

Among the many other royal personages who will be present are Princes Alexander Leopold and Marice of Battemberg, brothers of the future Queen; the Archduke Eugene, brother of the Queen-mother of Spain; Prince Alexander of Teck and his wife, the Princess Alice of Great Britain, daughter of the Duke of Albany, and the Grand Duchess Mary of Russia, wife of the late Duke of Saxe-Coburg-Gotha and Duke of Edinburgh.

The Grand Duchess will be accompanied by the Princess Beatrice, her youngest daughter, who is 22 years of age.

THE RETINUES.

The two retinues of the bride and bridegroom will meet on the wedding day in the Puerta del Sol, the centre of Madrid, and will then proceed to the Church of San Geronimo in one great procession. This procession will be the most magnificent spectacle seen in Madrid for many years. Twenty-nine royal coaches of antique design, and adorned with costly gilding and bronze and nacre decorations, will convey the foreign guests and the representatives of the Spanish and British royal families.

These coaches will be drawn by six or eight horses, with postillions in eighteenth century costume.

Twenty-one coaches will contain the Spanish grandees, and there will be in addition the State carriages of Ambassadors, Ministers, court and Government officials.

Some of the banners will be inscribed as follows:—"Long Life to Queen Victoria Eugenie"; "Long Life to the King of England"; "All honor to the British nation"; "In memory of Lord Byron"; "Long live the City of London"; "In remembrance of Stephenson."

The preparations at the Church of San Geronimo are almost completed. The street front will be widened and a staircase 30 feet across constructed.

The Lord Mayor of Madrid has written to all the Mayors of Spain, asking them to subscribe to a presentation album. A wonderful illuminated procession is being organized by the Town Council. It will include the following items: Two royal crowns, 15 feet across, each carried by 16 persons; two

year-old daughter of Mr. Niebergall. The former was assisting in fighting the fire on a farm, where she was employed as a domestic, when her clothes were ignited, inflicting injuries to which she succumbed shortly afterwards. Niebergall's little girl was playing around the stack, which had been on fire, but the flames were believed to have been extinguished. The wind blew the embers on the child's clothes, and she was burned to death. The prairie fire which resulted in both fatalities was caused by a man throwing a cigar-stub in the grass.

CRUSHED BETWEEN CARS.

A Man Killed on the Guelph-Goderich Line.

A despatch from Guelph says: A fatal accident occurred on the Guelph and Goderich Line late on Friday afternoon at the Grand River Bridge. A donkey engine with some dump cars was standing on the line, and underneath the engine was a young man named Joseph Pigott, son of Contractor Pigott, while Edward Neil, of West Montrose, was standing between two cars. Coming down a grade switch line was a similar train. The latter was not stopped quickly enough to prevent it running into the one standing on the main line. In the collision Neil received such severe injuries that he died shortly after reaching the General Hospital at Guelph. Pigott escaped with painful, but not serious, injuries. He is in the hospital.

TOMMY ATKINS SOBER.

Temperance Makes Gratifying Strides in the British Army.

A despatch from London says: At the annual meeting of the Royal Army Temperance Association, held on Friday at the United Service Institution, under the presidency of the Duke of Connaught, the gratifying statement that sobriety is increasing in the army was made.

The secretary of the association, of which the King is a patron, declared that they now had 213 branches, with a total membership of 47,665, 24,899 being in India. Of the remaining 22,776 no fewer than 19,365 were total abstainers.

The Duke of Connaught said that in recent years the association had nothing to complain of in their treatment by the War Office. It had been recognized that the association played an important part in raising the morals of the British soldier, and in preparing him for whatever employment he might obtain in after-life.

BOTH LEGS CUT OFF.

Corporal Edwin W. Briggs, of Dundas, Fatally Injured.

A Hamilton despatch says: The pleasant outing of the 91st Highlanders at Windsor on Thursday had a sad ending on Friday morning as the boys were returning to the city. While the train with the regiment on board was passing through Dundas about 7.30 o'clock Corporal Edwin W. Briggs, whose home is in Dundas, jumped from the train while travelling twenty miles an hour, and fell beneath the wheels. Both legs were cut off near the trunk, and the unfortunate man died before he reached the city. He was the son of Spencer Briggs, Dundas, and had been attached to the regiment since it was organized.

EGGS FOR EVANGELIST.

Driven From Pulpit and Pursued by Members of Congregation.

An Indianapolis, Indiana, despatch says: The Rev. George Porter, who has been conducting revival meetings in Brown county, was egged by members at his congregation on Monday night. He was driven from the pulpit and pursued and egged for more than a mile. The minister remarked in the course of his sermon that the "Bible is a dead letter," and this appears to have given offence.

\$19; shorts, \$20 to \$21 per ton; Ontario bran, in bags, \$19.50 to \$20; shorts, \$20.50 to \$21; milled mouillie, \$21 to \$25 per ton, and straight grain, \$28 to \$29. Rolled Oats—Firm at \$2.10 per bag. Provisions—Barrels heavy Canada short cut pork, \$23; light short cut, \$21.50; barrels clear fat backs, \$22.50; compound lard, 7½ to 8¢; Canadian pure lard, 11½ to 12¢; kettle rendered, 12 to 13¢; hams, 13½ to 15¢; breakfast bacon, 17 to 18¢; Windsor bacon, 15½ to 16¢; fresh killed abattoir dressed hogs, \$25; alive, \$7.60 to \$7.65 per hundred lbs. Butter—Choice creamery, 19 to 19½¢. Eggs—New laid, 16 to 17¢ per dozen. Cheese—Colored, 11 to 11½¢; white, 11½ to 11¾¢.

UNITED STATES MARKETS.

Milwaukee, May 29. — Wheat—No. 1 Northern, 85 to 86¢; No. 2 do., 82 to 85¢; July, 82½ to 83¢ bid. Rye—No. 1, 62 to 63¢. Barley—No. 2, 55¢; sample, 40 to 45¢. Corn—No. 3, cash, 49 to 49½¢; July, 47½¢.

Duluth, May 29.—Wheat—No. 1 Northern, 84½¢; No. 2 Northern, 82½¢; May, 84¢; July, 83½¢; September, 81½¢.

Detroit, May 29.—Wheat—No. 1 white, cash, 92½¢; No. 2 red, cash, 92½¢; May, 92½¢; July, 85½¢; September, 83½¢.

CATTLE MARKET.

Toronto, May 29.—There was a good demand, and about everything sold out early.

There was a fairly steady, but rather quiet export trade at these prices:—Choice, \$4.85 to \$5.10; medium, \$4.65 to \$4.75; bulls, \$3.75 to \$4; light bulls, \$3.25 to \$3.50; cows, \$3.50 to \$4.25.

Butcher cattle were inclined to be easy. Choice, \$4.50 to \$4.75; medium, \$4.25 to \$4.40; cows, \$3.25 to \$3.65; bulls, \$3.25 to \$3.50.

Feeders and stockers were steady and unchanged.

Sheep and lambs were also unchanged and steady.

Calves were slow of sale at from \$3 to \$6 each.

Milch cows were unchanged.

Hogs are higher at \$7 to \$7.20 per cwt. for choice, and \$6.75 to \$6.90 for fat and light.

SLIDING INTO THE RIVER.

Ogilvie Elevator at Fort William in Danger.

A Fort William despatch says: The Ogilvie Company's grain elevator at this place, which was erected some two years ago, started to slide into the river about nine o'clock on Friday night, caused by the displacement of the pile foundation. The Canadian Pacific Railroad and the other elevator companies promptly rendered all possible assistance, and men were at work all day Saturday making arrangements for the removal of the grain, of which there is about 350,000 bushels, a portion of which belongs to outside parties. At the moment it looks as though 75 to 80 per cent. of the grain might be saved, as the bins are intact, and the total loss on grain and elevator will not amount to more than \$250,000.

The elevator was designed and constructed by the McDonald Engineering Co., of Chicago. It was of fireproof steel and concrete on a pile foundation, which was driven to the rocks and was tested and loaded to its full capacity the past two seasons, and up to the time of the sudden collapse, it showed no signs of weakness.

EARTH'S DISTURBANCES.

Shocks Felt at Houghton and Hancock, Michigan.

A despatch from Houghton, Mich., says: The most severe earth disturbances ever experienced in this region occurred at the Atlantic-Mine on Saturday. There were more than 50 shocks. Buildings rocked violently, and in several places there are cracks in the earth from two to six inches in width. The shocks were distinct in Houghton and Hancock. No damage was done. Great alarm prevails, and miners and their families are preparing to leave for other points in the copper country.

to fight each other as well as those who want to fight the whites. This adds to the difficulty of suppressing it.

WANTS 2,000 MORE MEN.

The Pietermaritzburg correspondent of the London Daily Telegraph says that Col. Mackenzie has notified the Government that he requires 2,000 more men in order to cope with the rebellious natives. It is the opinion of those at the front that the natives will refuse to stand and fight. The prospect of long guerrilla warfare is certain.

FIVE KILLED AT BALL GAME.

Bolt of Lightning Struck Among Spectators in Alabama.

A Mobile, Ala., despatch says: During a ball game in an open field, three miles from this city on Sunday afternoon, a thunderstorm came up accompanied by vivid lightning, which struck in the midst of a crowd of spectators, instantly killing five persons and injuring about 25 others more or less seriously. They were shocked and knocked down by the stroke, but the majority quickly recovered and were able to leave the scene. The field was strewn with bits of shoes and clothing from those who were killed or seriously injured, and the bodies of the dead presented a terrible spectacle. A silver dollar from the pockets of one of the victims was melted on both sides.

THOUSANDS KILLED BY FLOOD.

Chinese Walled City Destroyed by Fire Survivors Fear Famine.

A Victoria, B.C., despatch says: The steamer Teucer, just arrived from Japan and China, brought further advices regarding the disastrous floods of the Hai-Nang-Hao, in China. All the valleys along the river were inundated, homes swept away by hundreds, and thousands of men and animals drowned. At Hsiangtu fire broke out and the greater part of the walled city was destroyed. This news was telegraphed by the Japanese Consul at Hsiangtu, who says that, although an immense loss of life occurred among the Chinese, none of his nationality was lost. It is feared that the destruction of the rice crop in the flooded areas may cause an extensive famine.

CHARGED WITH MURDER.

An Italian Named Boisko Arrested at Kenora.

A Kenora despatch says: David Sawski, an Italian, who while celebrating with a friend named D. Boisko was brutally assaulted last Wednesday night, was found dead by the depot in the morning. Sawski had been working at Gull River, and had considerable money when he came to town. He and his friend had visited a resort, and while returning from there the trouble arose. Boisko is accused of having thrown him from the buggy and clubbed him terribly. He has been arrested on a charge of murder.

FAITHFUL DOG SAVED CHILD.

Girl Had Wandered Three Days in New Brunswick.

A St. John, N. B., despatch says: Little ten-year-old Mamie Gallivan, who has been missing from her home at Drury Cove since Monday last, returned on Thursday, with an astounding story of hardship. For the past three days and nights she has been wandering in the woods, with no food except some berries and water from brooks. Search was unavailing until Thursday, when her dog found her, and guided her to a clearing, where she collapsed. He stayed with her, and finally, by barking, attracted the attention of the chief's brother, who was among the searchers. The girl is in a very exhausted and emaciated condition, and threatened with pneumonia.

The steamer Carriack of Glasgow was sunk in collision in the Firth of Clyde, and six lives were lost.

Hamar Greenwood, M.P., presided at the Canadian Society's fourth annual dinner in London, England.

UNITED STATES.

DOMINION PARLIAMENT

NOTES AND PROCEEDINGS OF THE OTTAWA HOUSE.

FACTS FROM THE BUDGET.

Mr. Fielding was enabled to announce a surplus on Consolidated Fund (or ordinary income and expenditure) of \$12,500,000 for the year ending June.

This surplus and the addition to the Sinking Fund will almost meet the heavy capital expenditure of the year. The net increase of the national debt for the twelve months will be about \$800,000.

Since 1866 there has been a net surplus of \$64,300,165 in Consolidated Fund accounts. This great sum has been spent in enlarging canals, aiding railway construction, erecting public buildings where required, and generally in preparing the way for the making of a greater Canada.

The net debt of Canada is \$7,726,732 more than it was nine years ago. It is less per head of the people than it was then, for there has been a very great increase of population. Mr. Fielding believes there are now over six million people in the Dominion. They are still coming fast, the number of immigrants having been 117,587 for the past ten months, as compared with 99,309 for the same period a year ago.

Finally, the Minister of Finance announces that there is no reason to anticipate disturbance of the revenue from the tariff changes to be made at the November session of Parliament.

REPORT ON THE FALLEN TOWER

The report of the commission that investigated the reasons for the collapse of the tower in the Western block is ready for presentation to the House. It is said that the report reflects on the materials employed and to some extent upon the design and lack of proper inspection. This concerns one of the most experienced officials of the department, Mr. Taylor, who has accordingly been placed under suspension. Contractor Goodwin has been notified to proceed with the work of reconstruction.

ENUMERATORS' REMUNERATION

In taking the census in Manitoba, Saskatchewan and Alberta, the enumerators will be allowed four cents for every living person recorded, for every farm of five acres and upwards twelve cents, and for time employed in receiving instructions \$3 a day, with actual cost of living and transportation during such time.

LIVE STOCK IMPORTATION.

The following new customs regulations have been adopted:—A settler may bring into Canada, free of duty, live stock for the farm on the following basis: If he has actually owned such live stock abroad for at least six months before his removal to Canada, and has brought them into Canada within one year after his first arrival, viz.: if horses, only 16; if cattle, only 16; if sheep, only 160; if swine, only 160. If horses, cattle, sheep and swine are brought in together, or part of each, the same proportions as above are to be observed. Duty is to be paid on live stock in excess of the number above provided for.

G. T. R. RAILWAY.

Mr. Emmerson informed Dr. Chisholm that surveys on the Mountain section of the Grand Trunk Pacific Railway were now being carried on.

SUPREME COURT.

Mr. Monk asked when the vacancy in the Supreme Court would be filled. At present appeals from Quebec were at a disadvantage.

Sir Wilfrid Laurier said the fact that the court was incomplete was no obstacle to business, though it was inconvenient. The matter was under consideration.

LOAN TO QUEBEC HARBOR BOARD.

In committee on Mr. Brodeur's resolution to advance \$150,000 to the Que-

WHITE MAN LEADS REBELS.

Forced to Leave Switzerland for Attack on Soldier.

A despatch from Geneva, Switzerland, says: One of the Zulu chiefs who have rebelled against the British Government is a Swiss named N. Duby. Duby was a hooligan in the Village of Schupfer, in the Bernese Oberland. After a particularly brutal attack on a cavalryman, in 1893, he was forced to leave the country, and he worked his way to South Africa.

After being concerned in some transactions which demanded the attention of the police at Durban, he went into the interior to escape arrest. He mastered the Zulu language and finally married the daughter of the chief of a small tribe. On the death of the chief, Duby was appointed in his place. He fought with the Boers during the late war, and when Bambata revolted, Duby induced his tribesmen to join the rebel forces.

One of the rebel Zulu chiefs frequently mentioned in telegrams from Natal is Ndube, which is the Zulu version of Duby.

THE WESTERN CROPS.

C. P. R. Report Says Spring Wheat is Doing Well.

A despatch from Winnipeg says: The crop report issued by the C. P. R. on Wednesday indicates that spring wheat is doing excellently along the entire system. There has been an abundance of rain and conditions never were more favorable.

However, from outside sources it is learned that winter wheat in Alberta is bordering on a failure. No rain has fallen ever since early fall, and the drouth is already serious. Considerable portions of winter wheat in many sections have been ploughed up and the land resown with coarse grains.

A despatch from Medicine Hat says: Sunday's rain is estimated to have been the heaviest fall in a given time ever experienced in Medicine Hat district. Reports from the south go to show that even more rain fell out in that direction. This will tend to relieve the drouth prevailing and will greatly benefit the winter wheat crop.

NEW GERMAN RIFLE.

Expert Fires Five Well-aimed Shots in Ten Seconds.

A Berlin despatch says: A number of tests have recently been carried out near Berlin in connection with a newly-invented repeating rifle known as the Fjeldel automatic-loading rifle, model 1906. An ingenious system of springs is employed to use the force of the recoil in such a way as automatically to reload the rifle. Almost simultaneously with firing the empty cartridge case is seized and ejected, a fresh cartridge placed in position, the magazine closed, and the trigger reset for firing. A rifle expert fired five well-aimed shots in ten seconds from a sitting posture, and the rifles tested showed equally satisfactory results when fired rapidly from a standing position.

NO FEATHERS IN HATS.

New York State Department Will Strictly Enforce Law.

An Albany, N. Y., despatch says: Commissioner Whipple, of the State Forest, Fish and Game Department, on Thursday served notice, through the press, to the milliners of the State, retail and wholesale, that his department intends to use every legitimate means to enforce the law prohibiting the possession or sale of the bodies or feathers of wild birds, whether taken in this State or elsewhere. The penalty for each violation of the law is a \$60 fine, and an additional \$25 for each bird or part thereof sold, offered for sale, or possessed.

GUARD AGAINST SMALLPOX.

ON THE FARM.

HINTS ON CLOVER GROWING.

The first great essential to successful clover growing is soil humus; clover is humus, and humus means clover writes Mr. J. A. Dewar. Stable manure is the most potent element in enriching the soil, to produce this valuable crop. It will also pay to use lime and commercial fertilizer judiciously. Soils deficient in nitrogen will not grow clover, and when the land is much impoverished, and the supply of stable manure limited, it will be necessary to plough down crops of peas, vetches, or other legumes.

We have found a shorter crop rotation beneficial. A four years rotation, properly understood, and intelligently applied, should give double as much clover as the old eight years system.

All grain crops should be seeded with clover, even if the land is resown with grain the succeeding year, such a process will confirm the land in the clover growing habit, and help to gather from the air the indispensable nitrogen. While a rich soil is the prime essential, there cannot be complete success, unless care and attention be given to combatting the evils that assail the crop.

The two great opposing forces, heat and cold, which in turn may be considered friendly influences, are liable under certain conditions to become enemies.

A long sustained period of drouth will have a perishing influence on the delicate plants, and the "early and latter" frosts acting in conjunction, will cause an upheaval which will break the roots. The work of fighting the enemy begins with the preparation of the soil. The seed bed should be thoroughly pulverized, drainage is necessary for cold, wet lands. Sowing should take place early to secure the moisture incident to the first part of the growing season. The seed should be well covered. Sow a sufficient amount.

We have sown from three to ten pounds per acre, and experience leads us to believe that six pounds with an equal amount of timothy seed is sufficient.

The proper varieties to sow is important. "Mammoth" finds many advocates on account of its great bulk, the "common red" because of its superior aftermath. We are of the opinion that the bulk of the mixture should be mammoth, three pounds to three of alsike and red, the difference in ripening will be immaterial, if cut early, this should be the rule, as it gives a better aftermath, will contain more succulence, there will be less waste, and it will be an insurance for a better crop the succeeding year.

In cutting the grain crop the stubble should be left high, in order to gather the protecting snow, as well as to act as a preventive of smothering out by ice. Animals should be strictly prohibited from grazing in the fields prior to the cutting of the first crop. This mischievous practice results in exposing the plants to the inclemency of the seasons.

One of the greatest writers has said "that while the monuments of art are perishable, that grass is immortal." It is equally true that we cannot divorce clover from a fertile soil. Mr. William Binnie gave utterance to a great truth when he stated that clover is the keystone of successful agriculture. We may add that "soil enrichment" is the key to clover production, and clover in turn unlocks the way to a "Land flowing with milk and honey."

POULTRY YARD.

Keep young turkeys warm and dry the first few weeks.

Cleanliness and dry quarters go a long way in keeping off roup.

Keep the old geese for breeding purposes. Send the young ones to market.

Hamar Greenhead, M.P., presided at the Canadian Society's fourth annual dinner in London, England.

UNITED STATES.

The United States free alcohol bill takes effect January 1st, 1907. The foreign commerce of the United States for April aggregated \$251,000,000.

The United States Supreme Court has confirmed the sentence of six months' imprisonment and \$2,500 fine on Senator Joseph R. Burton.

Alexander Berkman, who served fourteen years for attempting to assassinate Henry C. Frick, at Pittsburg, was married, on Friday at Detroit to Emma Goldman, Anarchist.

Howard Clugston, 16 years old, of Pittsburg, Pa., pulled out a revolver and said, "It must be done," and then opened fire on his aunt, seriously wounding her. The boy is a dime novel fiend.

Buranouski, a saloon-keeper, of Reading, Pa., advertised to buy 1,000 cats to test the replies he would receive. Fifteen hundred were offered, and he was forced to buy 300.

Stanley Burgess, aged 14, of Allentown, Pa., fearing punishment for playing hooky from school, committed suicide by jumping into a slate quarry filled with water. He left a note in the porch of his home.

William B. Schwartz, a lawyer, was arrested at Indianapolis, Ind., on a charge of counterfeiting. Schwartz confessed that his law practice did not yield a sufficient income for the support of his sick wife.

Aaron Armstrong, pioneer farmer, of Bellevue, Mich., fell and expired in a few minutes when he saw a valuable team of runaway horses get tangled in a barbed wire fence, mangle themselves in a shocking manner. Emotion so affected Armstrong's heart that he died on the spot.

GENERAL.

Henrick Ihsen, poet and naturalist, died at Christiania.

Greece has decided to break off diplomatic relations with Roumania.

Baron Komura has accepted the Japanese Ambassadorship at London.

Japan has decided to declare for equal opportunity for all nations in Manchuria.

Amnesty to persons arrested in Russia on administrative order will be granted, but no consideration will be shown assassins.

TOP OF HEAD TAKEN OFF.

William King Killed in His Sawmill at Arkell, Ont.

A despatch from Guelph says: Saturday evening at the Arkell sawmill, while the owner, Wm. King, was operating a saw, a board caught on the saw and was thrown back, striking Mr. King on the left temple, crushing the skull and practically tearing the top of the head off. The board flew fully 100 feet after striking the unfortunate man. Two doctors were summoned from Guelph, but could do nothing, and he died in two hours. The deceased, who was 41 years old, leaves a wife and one child.

FIGHT WITH ANARCHISTS.

Bold Attack Made on a Savings Bank at Warsaw.

A Warsaw despatch says: A brief but bloody battle took place here at 12.30 on Friday afternoon at the Industrial Savings Bank, which was attacked by a band of Anarchists. The latter, with revolvers in their hands, ordered the clerks and customers present to hold up their hands. The chief clerk promptly drew a revolver and fired at the intruders. This was the signal for a brisk fusillade, during which two of the customers were killed and two other customers, five clerks and one of the Anarchists were wounded. The Anarchists then escaped, carrying off their wounded.

stale to business, though it was inconvenient. The matter was under consideration.

LOAN TO QUEBEC HARBOR BOARD.

In committee on Mr. Brodeur's resolution to advance \$150,000 to the Quebec Harbor Commissioners to complete the new deep-water frontage of the Louise embankment, the Minister of Marine said the sum would be loaned to the commissioners on the same conditions as the loan of 1899, the rate of interest being 4 per cent. The money was needed to reconstruct the embankment, part of which fell down last year.

PRINCE EDWARD ISLAND'S COMPLAINT.

In Committee of Supply the estimates of the Marine Department were taken up, and Mr. Martin (Queen's, P.E.I.), Mr. Lefurgey (Prince), and Mr. Maclean (Queen's, P.E.I.) objected to the proposition to place the Montcalm on the Prince Edward Island route in winter because the vessel was not, they contended, good enough for the service.

Mr. Brodeur replied that the Montcalm is reported to be the most powerful boat in America to-day, and would, if any vessel could, keep the route open.

CURFEW MAY RING IN MONTREAL.

Movement to Revive the Ancient Custom in Montreal.

A despatch from Montreal says: The sound of the curfew bell may soon again be heard in the streets of Montreal, pealing out its warning at 9 o'clock every evening to all children under 15 years of age that they must hasten to their homes. It is not improbable that, in the near future the City Council will be asked to revive this custom as a means of protecting the children from the moral dangers to which they are exposed by being allowed to roam around the streets till all hours of the night. A petition to this effect had been circulated and largely signed at the beginning of the year, and steps had been taken to present it to the City Council. The civic elections intervened, however, and the matter was allowed to drop for the time being. There is now talk of reviving the movement.

LIST OF DEAD STILL GROWING.

San Francisco Coroner Believes 1,000 Perished.

A despatch from San Francisco says: The conflagration death list is steadily lengthening. Four skeletons just found swell the roll which Coroner Walsh thinks will reach beyond 1,000, notwithstanding statements that fewer than 500 were actually killed.

Just five weeks after the fire Payot Upham and Company, the largest jobbing book house on the Coast, opened its vaults on Thursday morning. Instantly everything inflammable in the vaults burst into flames. All the company's books, accounts and records were destroyed.

Every possible precaution had been taken to avoid the very thing that happened. Before opening the vault the services of a chemical engine were secured to extinguish any blaze that might occur. The flames that sprang forth when the doors were opened, however, defied the efforts of the engine crew and not a paper was saved.

DESPERATE ATTEMPT TO ESCAPE.

Penitentiary Prisoner Badly Hurt by a Fall in a Chimney.

A despatch from Kingston says: A prisoner named McGee, sentenced for life for criminal assault just after being liberated five years ago, tried to escape from the penitentiary on Thursday night. He dug a passage from his cell to a chimney in course of erection and climbed seventy feet by means of a rope. Near the top his strength failed and he fell, breaking his leg and injuring his spine. He was found at 8.30 o'clock on Friday morning.

additional \$25 for each bird or part thereof sold, offered for sale, or possessed.

GUARD AGAINST SMALLPOX.

All Soldiers Going to Camp Must Be Vaccinated.

An Ottawa despatch says: The Militia Department states that, owing to the existence of smallpox in certain parts of the Dominion, and more especially in the Province of Ontario, none but individuals who have good vaccination marks or who can show evidence of having had smallpox will be permitted to go into or remain at camp. A strict medical inspection will be held on the arrival of the corps in camp. Officers commanding units will be held accountable for the return to their homes of individuals found not vaccinated.

NORTHWEST CENSUS.

Officials Leave Ottawa for the Work on Friday.

An Ottawa despatch says: A proclamation has been issued containing the appointment of the census commissioners to superintend the census of population and of agriculture, to be taken on June 21, in the Provinces of Manitoba, Saskatchewan and Alberta, and defining the boundaries of the census districts in the three Provinces. The commissioners are E. H. St. Denis, Manitoba; J. R. Macpherson, Saskatchewan, and E. S. McPhail, Alberta. These gentlemen left on Friday to enter upon their duties.

SCARLET FEVER IN THE NORTH.

Sanitary Inspector Scott is Enforcing the Quarantine.

A Toronto despatch says: Sanitary Inspector Scott reports to the Secretary of the Provincial Board of Health from Cobalt that he has been busily engaged for some time past in dealing with scarlet fever in the unorganized districts north of New Liskeard. There have been a considerable number of cases, but he has not had much difficulty in enforcing quarantine, and the situation is considerably improved. The sanitary regulations are being well carried out in Cobalt and elsewhere in the district.

CANNOT SEE BY DAY.

A Man Who Can Use His Eyes Only at Night.

A despatch from New York says: Afflicted three years ago with "sun-bligh," a rare disease which renders him totally blind in the day time and permits him to see perfectly at night, Philip Godfrey, after having consulted eye specialists in every part of the world, is utterly discouraged. He has spent \$20,000, the savings of a lifetime, in a vain search for relief, and having a few hundred dollars left, he offers it to the physician who can effect a cure. Godfrey has invested most of what is left of his fortune in a news stand at Forty-second street and Sixth avenue, to provide for himself and his wife, in the event that he becomes totally blind.

REDUCE MINISTERS' SALARIES.

In Order to Meet Western Australian Deficit.

A London despatch says: The Premier of Western Australia has announced a reduction of £200 in the salaries of the Ministers in order to economize to meet the deficit.

DEBT MUST INCREASE.

If Canada's Railway Development be Carried Out.

A London despatch says: The Glasgow Herald editorially comments favorably on Canada's financial position as shown by the budget, and says the debt must increase if the railway development be carried out.

Keep young turkeys warm and dry the first few weeks.

Cleanliness and dry quarters go a long way in keeping off roup.

Keep the old geese for breeding purposes. Send the young ones to market. The hog has been called the "mortgage lifter," but it is the hen that keeps the family in groceries while the hog is growing.

With poultry as with other products, it is a good rule to market as soon as ready.

WINNIPEG'S NEW STATION.

Main Street Property of Canadian Northern for Union Station.

A Montreal despatch says: The official announcement was made on Wednesday that an agreement had been reached between the Grand Trunk Pacific, the National Transcontinental Commission and the Canadian Northern Railway regarding the erection of a new Union Station at Winnipeg. The Main Street property of the Canadian Northern will be used for the new station. The act did not specify whether the G. T. P. or the N. T. Commission should build the station, and now both have agreed to contribute half.

REGINA THE CAPITAL.

Only Two Legislators Voted for Saskatoon.

A despatch from Regina says: Mr. Sutherland's resolution to remove the capital to Saskatoon was discussed and voted on on Wednesday afternoon amidst general interest in the city. Premier Scott made it a Government vote, and was supported by the entire Opposition in the effort to retain the capital here. The vote stood 21 to 2 in favor of Regina.

FORT WILLIAM'S AMBITION.

Steps to be Taken for Incorporation as a City.

A Fort William despatch says: At the regular meeting of the Council the Town Solicitor was instructed to take the necessary steps to have Fort William incorporated as a city at the earliest possible date. The Council is of opinion that the town at present has a greater population and much larger assessment than many of the recently-incorporated cities.

THEIR CANOE UPSET.

Two Young Men Were Drowned Near Westmeath.

A despatch from Pembroke says: A very sad accident occurred near Westmeath, Ont., on Thursday morning. Two Westmeath young men, Thomas Dadsen, school teacher, and Richard Murdock, telegraph operator, attempted to run Pacquet's Rapids when their canoe upset, and both were drowned.

ALL BANKS OPEN DOORS.

The San Francisco Public May Now Draw Money.

A despatch from San Francisco says: Practically every bank in the city that has been able to secure temporary quarters threw open its doors on Wednesday to the public. There was no sign of a run. Never in the history of San Francisco was there so much bank money on hand.

EARTHQUAKE IN UTAH.

An Ogden, Utah, despatch says: An earthquake shock was felt at 2 o'clock on Thursday afternoon at West Weber, four miles west of Ogden. Buildings were shaken, and much excitement prevailed, but there was no damage.

DAY'S WORK OF THE KING

FORTUNATE IF HE CAN GET THROUGH IN TWELVE HOURS.

Answer Given to Church Army Members Causes Writer to Follow Routine.

King Edward, in the course of an audience granted last week to the leaders of the Church Army movement in England, who are endeavoring to deal with the difficult problem created by the appalling condition of laboring men, incidentally mentioned that he was obliged to work hard himself, and that his ordinary working day was not one of eight hours, but twelve hours, and that he considered himself fortunate when he accomplished all he had to do in that time, writes Marquise de Fonlenoy.

This pronouncement, cabled to this country and published in the American newspapers, has excited a considerable amount of amazement among those here who have been accustomed to look upon the British monarch as essentially a man of pleasure; indeed, as one of the greatest sybarites in Europe, and the question has arisen in connection therewith as to what the labors of the British monarch really were.

DOCUMENTS TO SIGN.

It may therefore be as well to explain that the King has hundreds of documents to sign on every day of the year, Sundays included. It must be borne in mind that as a general principle no administrative act by the Government and no act of Parliament is valid in the eyes of the law until it receives the sign manual of the sovereign. Everything done by the Government of the day in behalf of the State and in the name of the nation is a sovereign act, no matter how trivial it may be, and a sovereign act cannot be complete and therefore valid until it has received the sovereign's signature.

Fifteen years ago it was estimated by competent authorities that the number of documents receiving the signature of Queen Victoria averaged at least 60,000 per annum. That would give about 200 for each week day throughout the entire twelve months. Since that time documents requiring the sign manual of the British sovereign have enormously increased, and it is probable that to-day the papers which King Edward is obliged to sign average between 400 and 500 a day.

NONE BUT THE KING.

The commission of every officer of the army and navy and the diplomatic corps, from admirals of the fleet, field marshalls, and ambassadors, down to the most youthful subaltern or beardless attache, requires the signature of the King, whose approval is likewise necessary to the draft of every important dispatch sent out by the Department of Foreign Affairs. All the more important appointments, administrative as well as judicial, must have the sovereign's written consent. No one can relieve the sovereign of this particular portion of his work.

INTERVIEWS ALSO.

The giving of these signatures, arduous as is the work entailed when a monarch is conscientious, constitutes but a part of the day's business. The German and Austrian rulers require their Cabinet Ministers to make at least twice a week verbal reports of all important matters concerning their departments, in addition to their written communications. Queen Victoria insisted on this only in the case of the Foreign Office, but King Edward demands that he should be kept informed about all matters of moment, and he is constantly calling upon this Minister or that Government official to furnish him with special reports. Not a day passes without several Government functionaries

LIFE PRESENT ON MARS

CAMERA'S REVELATIONS AT LOWELL OBSERVATORY.

The Inhabitants Have Adopted A Great System of Irrigation Canals.

That the fabled Martians may be realities, that the planet Mars is inhabited, and, perhaps, by a life even more highly civilized than that of the earth is practically proved by a series of remarkable photographs taken by C. O. Lampland at the Lowell Observatory at Flagstaff, Arizona, established by Prof. Percival Lowell, non-resident professor of astronomy at the Massachusetts Institute, is now preparing to make public together with full details of the observations and his theories and deductions from them.

They are actual photographs, the first really successful ones ever taken, of the famous Martian canals.

When it is remembered that at its nearest point to the earth Mars is still at the enormous distance of 35,050,000 miles the difficulties encountered in this stupendous undertaking can be appreciated. Not only this, but the moments when atmospheric conditions are favorable for photography are few and far between, and even at that out of several hundred negatives perhaps not more than half a dozen are really good.

EARLY DISCOVERIES.

Just 28 years ago Schiaparelli, the great Italian astronomer, discovered about one hundred and twenty faint lines on the surface of the planet which he called "canali," or canals. He believed they were cracks in the surface or the old channels of rivers. Unfortunately, however, this great discovery was greeted with derision by other astronomers, because they were not able to detect the phenomena. So for nine years he went on his discovery to discovery till at last Perrin at Nice furnished the first confirmation. Since then the list of those who have detected the phenomena has increased with every opposition.

Mars through a powerful glass, appears much the same as the moon to the naked eye, mottled with light and dark patches. Schiaparelli observed the canals running through the light patches, what he believed to be land, but could not detect them in the dark patches, what he thought was water. But that the dark is not water but vegetation is the result of the remarkable discoveries at Flagstaff, for the canals have been detected running continuously through light and dark alike.

WINTER AND SUMMER.

Starting at the polar caps or circles of eternal snow and ice at the poles the canals run for thousands of miles to the equator. Cross canals intersect them and in the Martian springtime when the sun melts the polar caps they fill the water and the banks take on the greenish tinge of vegetation. As would be natural under these artificial conditions the wave of vernal changes sweeps from the poles towards the equator, the very opposite of the procedure on the earth. As the Martian winter approaches the canals fade, even the permanent dark patches turn lighter in shade, as if the vegetation were dying, and the general appearance is the same as the earth would look if view from a great distance at the same time of the year.

There is no natural explanation that can account for the phenomena and the only reasonable solution is the canals are the effort of an intelligent and highly civilized life to maintain its existence on a planet whose surface is an arid desert.

NO OCEANS THERE.

Like the moon Mars has no oceans

HOTELS THAT ARE FREE

THEY ARE SCATTERED ALL OVER THE GLOBE.

Established by Various Governments and Supplied With a Stock of Provisions.

When the proposed motor-car dash to the South Pole is actually attempted, the adventurers cannot do better than start from Hut Point, at the foot of Mount Erebus, where is a substantially-built house, furnished with every modern appliance for withstanding the cold weather, and stored with a good stock of provisions, wines and spirits, and medical comforts. This unique caravanserai was left standing—of course, for the benefit of future explorers—by Captain Scott's party, who passed therein the winter of 1902-3.

Another "Antarctic hotel" that is open to occupation by all comers is situated at the foot of Cape Adare, on Roberson Island. It was occupied by the Southern Cross exploring party in 1899, and when left by them was in excellent condition, well-stocked with a finely-selected store of provisions of all kinds. Almost certainly these two refuges are still intact, for they were specially constructed to withstand the climate, and there are no prowling land mammals—as in the North Polar regions—to interfere with the provisions.

It is not, however, only in these ice-packed and inaccessible seas that free hotels of this kind are to be found. They are scattered

ALL OVER THE GLOBE.

many of them being kept up by the various governments which claim jurisdiction over the places wherein they are situated.

Thus, France has erected on Kerguelen Land—a large, uninhabited island in the Indian Ocean—a substantial building of hewn stone, replete with every convenience. Here are stores of tinned soups, vegetables, meat, etc., and also nets for catching fish, harpoons for killing the seals and whales which abound thereabouts, axes for felling timber, and even a small library of nautical books and current works of fiction. All this, of course, is designed for the succor of any destitute castaways who may chance to be shipwrecked on Kerguelen's inhospitable shores, and must on no account be touched by chance visitors.

The British Admiralty maintains similar refuges at Amsterdam Island and St. Paul's, two isolated points of volcanic rock jutting out from the bosom of an ocean that is well-nigh devoid of traffic or shipping of any kind. The provision depot at the first-named spot is situated within a dry, roomy cave, wherein have been erected cots for sleeping. There are also to be found canisters for cooking, preserved beef, biscuits, a quantity of warm clothing, bales of blankets, and—soldiered inside a metal box, painted red—

FOUR PACKETS OF MATCHES.

At St. Paul's the refuge-house has been erected within the crater of an extinct volcano and in close proximity to a natural hot bath, while the provisions, clothing, etc., are contained in a number of water-tight casks.

So far back as the year 1880 there was established on Possession Island, in the Indian Ocean, one of the largest refuge depots in existence, and it has been visited and replenished at intervals ever since by British cruisers detailed for the duty. It consists of five roomy huts fitted with tables, benches, and bunks, while in a separate air-tight store-room are 5,000 pounds of preserved provisions and fifty complete suits of clothes.

At Heard Island, south of Kerguelen Land, popularly reputed by sealers—the only people who visit it—to be the most desolate spot on earth, is a stone

CABUL TRAGEDY 1841-42

THE THRILLING NARRATIVE OF A SURVIVOR.

Story of the Slaughter of a Small Army of British Soldiers in Afghanistan.

A beaten British army is terrible, and, thank God, rare enough. This fugitive rabble was not only beaten—it was disgraced. Incompetency amongst officers, indiscipline amongst men, was its record. A record to be atoned for by the direct suffering for all, the supreme sacrifice for many, and individual acts of such high courage and patient endurance as may take front rank for all time in the annals of our race. It is sorry reading.

"The scene of slaughter was dreadful. All baggage was abandoned. The enemy not only poured in a murderous fire from every rock and cave in the heights on each side, but descended into the Pass and slew men, women and children. The whole road for a distance of five miles is covered with dead and dying. Our loss this day was computed at about 3,000, or one-sixth of our people. The 37th N. I. lost more than half of its men, and other corps in proportion. Even those who remained could scarcely move or hold a musket, from their feet and hands being frost-bitten; and to add to our misery snow began to fall on our arrival at Khurd Cabul.

"Every man among us thought that ere many hours he was doomed to die, either by cold or hunger, or butchered by our enemies—for if attacked, although we might for a short time hold out, nothing could eventually save us. "Hundreds of poor wretches, men and women, who had not been fortunate enough to seize any animal to carry them, or having done so had been dispossessed of them by others stronger than themselves, were left to lie

LIKE DOGS IN THE ROAD.

or to be butchered by the enemy. The sight was fearful."

But set against that such an incident as the stand made by a handful of officers to give the infantry a chance—

"On arriving within two miles of Jagdalak, where the descent into the valley commences, we observed the hills on each side of the road were occupied by the enemy, who with their long jezails fired upon us the whole way, and again the road was covered with dead and dying. We were so thick a mass that every shot told on some part or other of our column. On the advance arriving in the valley, and being hard pressed, we took up a position on the first height we came to, and near some ruined walls. As scarcely any Europeans of the advance now remained, and the enemy were increasing, the General called several officers, about twenty of us, to form line and show a front. We had scarcely done so when my friend, Captain Grant, who was next to me, received a ball through his cheek, which broke his jaw. I lifted him off his horse, and seated him on the ground. Nothing could exceed the bravery displayed by Brig. Shelton, who commanded the rearguard. He was like a bulldog assaulted on all sides by a lot of curs trying to get a snap at his head, tail, and sides. Shelton's small band was attacked by horse and foot and although the latter were fifty to one, not a man dared to come close. The few of us with General Elphinstone, who had formed line to show front to the enemy when we were waiting, were so delighted, not only at the courage displayed by Shelton, but at his manoeuvres to keep off the enemy, that we cheered him in

TRUE ENGLISH FASHION

as he descended into the valley, notwithstanding we at the time were acting as targets for the marksmen of

calling upon this Minister or that Government official to furnish him with special reports. Not a day passes without several Government functionaries being received in audience, and the interview is usually followed by some action on the part of the sovereign or of the dignitary in question.

DESPATCHES FROM ABROAD.

Throughout the entire day, and often far into the night, there is a constant succession of messages arriving for the sovereign. In London, as also in Berlin and Vienna, the Minister of Foreign Affairs is under orders to transmit to the monarch immediately on its arrival a copy of every despatch that arrives from abroad, either by telegraph or by mail, and the reading and discussion of these despatches alone constitute a tax upon royal time and energy.

COOKS' "PERKS."

Magistrate Says Custom is Nothing Less Than Stealing.

The question of a cook's perquisites was raised in the Marylebone Police Court, London, recently, when Annie Slocombe and Frank Pallett were charged with stealing and receiving a chicken, a piece of bacon, and a piece of bread.

Slocombe was the cook at a hotel in Lancaster-gate, Hyde Park, and Pallett is an assistant in the service of Messrs. Evans & Palmer, green-grocers. On Tuesday night Pallett was stopped by a detective when leaving the hotel, and was found to be carrying a parcel containing the chicken and other things. He declared that the parcel had been given to him by the cook for his master.

It was said that Mr. Evans was courting the cook, and in the witness box he stated that he had often sent things over to her to cook. The chicken, however, did not belong to him.

Mr. Freke Palmer urged on behalf of Slocombe that it had really become a habit and custom among cooks to help themselves somewhat largely to their employers' goods, and she sent these riches over as a present to her young man. They were left over from dinner, and she regarded them as her perquisites.

The magistrate said such a habit and custom was nothing less than stealing, and sent the woman to prison for a month. Pallett was discharged.

OLDEST MAN IN THE WORLD.

Is 146 Years Old, and Lives in Cape Colony.

Stuurman, the Bushman, is believed to be the oldest man in the world. He is an old native of Cape Colony, said to be 146 years old. It is known for certain that 65 years ago he was a very old man, and that his son, still living, is over 90 years old. He is one of the few genuine Bushmen still alive, and talks of the days when he wandered over the oldt where Beaufort West now is. He tells that the farm of Stuurman's Puts and the country all round really belongs to him, and, living as he does on the top of a hill in a queer shelter of bushes and rags, he is a monarch of all he surveys. He is in full possession of his faculties, and has a wonderful set of teeth—without a trace of decay, though they are worn down to the gums by a century and a half of use.

AGRICULTURAL MACHINERY.

At the recent annual agricultural exhibition held at the Russian port of Ostoff on Don the chief attractions were the steam threshing sets, and the British Consul calls attention to the efforts of the Australian and German firms to obtain a share of this trade. Hitherto monopolized by British firms, reapers and mowers were exhibited from America, and copies of same by Russian makers. Dairy farm utensils from Germany and Sweden and Russian baths and washing utensils of enamelled metal were shown; these articles have hitherto been wholly supplied by Great Britain.

on a planet whose surface is an arid desert.

NO OCEANS THERE.

Like the moon Mars has no oceans. Ages ago they sank into the interior or evaporated and were lost in interplanetary space. This is proved by the spectroscope. That it has an atmosphere is proved by two things: first, there is a perceptible twilight along the terminator, or edge of the planet, turning into or out of the sunlight; second, it is a scientific fact that no change could take place on the surface if there were not an atmosphere. But this atmosphere is only about one-third of the density of the earth's giving just as much less protection from heat and cold. Most of the water on the surface now is what has been held in form of vapor by this air, as a sponge absorbs moisture. In the cold season it is deposited at the poles in the form of dew, which freezes layer upon layer, to melt in the spring, be distributed by the canals and then be reabsorbed by the air.

ARTIFICIAL CANALS.

Perhaps the strongest argument to advance against the artificiality of the phenomena of the canals is the magnitude of the titanic task, but there is an even better explanation. As a result of its lesser volume and mass, gravity on Mars would be about one-third of that force on the earth. Consequently, if one were transported to Mars he could do three times as much work there as here with an equal amount of energy. Further, he would probably grow three times as large, since he could do so without being any more unwieldy than he was here before. Since his muscles would increase in three dimensions, length, breadth and thickness, he would be twenty-seven times as strong. With this increased strength and diminished gravity he would be eighty-one times as effective. Since gravity on Mars is really a little more than one-third that on the earth, this remodelled man would be about fifty times as strong as his worldly brothers, or be able to do the work of two horses.

AH SIN IN THE KITCHEN.

He's a Very Good Kitchen Maid in the West.

In British Columbia our "heat-handed Phyllis" one wonders if Milton ever had his best china smashed is replaced by Ah Sin, who has good points about him, although his failings do not lean to virtue's side. Ah Sin is clean, diligent, methodical, the will see that the children do their lessons while he cooks the dinner, adaptable, and his memory is marvellous. He told a mistress who asked him for a cookery book to look up the recipe of a cake she had made that she "must have heap poor brain." But sometimes he is too adaptable—as when the mistress, going out early to Church one Sunday, returned to find him asleep in her bed, with her own nightdress on. He had thought her gone out for the day, and was enjoying a little Sabbath rest, he said! He cooks exquisitely, but is not fastidious. Sad is the story told of a pet fox terrier who fell into the hands of a Chinese help. Fido was its name, and before going out on a round of visits one day its mistress gave explicit instructions to Wong, her new Chinese boy, to take great care of Fido and get the dinner ready at seven. A few hours later the lady returned, and, as usual, her first thought was of her little dog. No Fido came running out at the sound of her voice. Fearfully she made her way to the kitchen. "Wong, where is Fido," she asked. "Fido he alright, he looking heap good," replied Wong, cheerfully, and opening the oven door with a flourish, disclosed a little figure lying trussed in the dripping-pan, adding with pride, "I baste him all the time." As much as \$500 per annum is paid in British Columbia to a well-trained Chinaman.

A woman always has to get some other woman to help her keep a secret.

At Heard Island, south of Kerguelen Land, popularly reputed by sealers—the only people who visit it—to be the most desolate spot on earth, is a stone hut built by a pious whaling captain as a thanksgiving for having escaped with his life from an ice-slide. It contains a store of provisions and a quantity of religious literature. At Hog Island, one of the Crozet Group, the British Government has built quite an ornate little "hotel" for possible castaways, and has stocked it with, amongst other luxuries, sardines in oil tinned salmon, preserved potatoes, and ginger in jars. There are also a keg of rum, a small barrel of brandy, hatchets for chopping wood, spears for killing fish, blankets, and

WARM UNDERCLOTHING.

Some of these out-of-the-way spots strike one as being specially suited to the requirements of amateur Robinson Crusoes. For instance, there is Rose Island, amply provisioned, though quite uninhabited, and provided, moreover (in addition to the usual refuge-hut), with a lifeboat, in which the lonely exile from his kind could easily make New Zealand when tired of the charms of solitude.

Snares Island, too, and Antipodes Island would furnish comfortable retreats for anyone wishing to be quite alone for a not too lengthy period. At each there are a comfortable little house of galvanized iron, provisions in plenty, a supply of fishing tackle, and a small library. Moreover, both the islands are visited twice a year by a Government ship specially detailed to look out for and succor castaways, so that none need fear being compelled to emulate Alexander Selkirk for more than a comparatively brief period.

It would be well, however, for anybody having ambitions in this direction to avoid Pagan Island, in the Laccadive Group. Here, it is true, are a refuge-hut (of asbestos) and goodly stores of provisions; but on the island, which is only a few miles in circumference, are no fewer than three active volcanoes in an almost constant state of eruption.—London Tit-Bits.

PASTE FOR ROYALTY.

Cleverly Executed Counterfeits of Crown Jewels.

The visitor to the Tower of London who is permitted to inspect the crown jewels seldom knows that a large proportion of the blazing gems are merely paste, and that although the Tower might be considered a safe enough place for most of the famous stones are in reality stored in the vaults of the King's bankers, their places being taken by cleverly executed counterfeits in paste. The Koh-i-noor is never on exhibition, and some of the other stones are represented by proxy, though the famous ruby worn in his helmet by Henry when he invaded France and which now blazes in the centre of the Maltese cross in the crown made for Queen Victoria is shown.

It was the early custom to provide an ornate but inexpensive crown for the Queen Consort, and though these circlets blaze with jewels none of them are real. When Victoria was to be crowned Queen Regent it was realized that it would never do to offer her paste and a new crown was provided, for which stones were taken from the earlier masculine crowns.

With the exception of the Queen's crown and some few stones in other badges of royalty the entire display is of paste and yet shows the original stones, even the imperial crown never having boasted real jewels.

Oddly enough, most of these paste jewels attract more appreciative comment than the few crowns set with genuine stones, and the sightseer goes on his way rejoicing or envious, according to his temperament, although any fashionable jeweller's store will display ten times the number of real precious stones.

Intrinsically the entire display is not worth more than a quarter of a million.

TRUE ENGLISH FASHION

as he descended into the valley, notwithstanding we at the time were acting as targets for the marksmen of the enemy on the hills.

And in that last appalling struggle in the shambles of Gandamak—

"Our troops at length got to the top of the pass, where a barrier of trees and bushes had been forced across the road. The Ghilzies were lying in wait for the result among the hills. This was soon apparent. The greatest confusion ensued—again were the horrid yells of the enemy heard and again were more victims added to those who had already fallen. "Onward" was still the word. About a mile further a second barrier was encountered, and the results were similar to those of the former, the enemy still pursuing in increased numbers close upon the rear. When near Surhak some officers, seeing all chance of escape was over, pushed on by themselves for Jelalabad, every one of whom, with the exception of Dr. Dryden, was killed. Three (among whom was Captain Hopkins, of the Shah's 6th, and one whose friendship I had enjoyed for years past) had reached within sight of Jelalabad, when attacked and murdered."

When day broke on Jan. 13, some 20 officers, 45 European soldiers, and a few Sepoys had reached Gandamak—"Here was a fresh body of the enemy . . . every hut in the country had poured forth its inhabitants to murder and plunder. Our men had not above one or two rounds of ammunition left. They still, though so small a band, determined

NEVER TO SURRENDER

to the enemy while life remained; their numbers were as 1 to 100, and most of them were already wounded.

"A messenger from the chief of the district arrived and inquired for the senior officer. This was Major Griffiths, 57th N. I., who accompanied the messenger in the hope of persuading him to exert his influence to save the lives of the small band of Europeans that still remained. "Before, however, the Major had reached the chief the enemy had called upon the Europeans to surrender and give up their arms. An attempt was then made by a few to disarm them by force; this was resisted. Blows were exchanged, and a contest between the two parties was thus brought on. A rush was made by the infuriated and savage mob. Further resistance was of no avail, and in the space of five minutes every man, with the exception of Captain Soutar, of the 44th Queen's who had wrapped around him his regimental colors, and five soldiers taken prisoners, were massacred. "Thus perished, after dreadful sufferings, the remnants of an army that had left Cabul seven days previously, composed of 4,500 fighting men and 13,000 camp followers."—From "The Cabul Tragedy," in Blackwoods's Magazine.

HAS THE EQUATOR BEEN SHIFTED?

While Ontario has had a winter season, according to the calendar, but without any winter thrown in, the people of Mexico have been suffering intensely from most unusual cold. In the city of Mexico lightly-clad people have actually perished on the streets, and on the plains a number of shepherds have died from exposure in a temperature that to them was extremely low. With the cold there has been an outbreak of typhus, which ran the death-rate in the City of Mexico from 48 up to 60 per 1,000.

BEGINNING OF DRUNKS.

A scientist says that when people were cave-dwellers their diet consisted entirely of roots and fruits, and that it is not unnatural to suppose that the food was often stored away. In course of time the fruit fermented, the sugar in it was turned into pure alcohol, and the cave-dwellers drank it and got to like it. This was the beginning of the use of alcohol.

2 ATLANTIC IN THREE DAYS

A THE SECRET OF ELECTRICITY OF THE FUTURE.

Thomas Edison Makes Some Forecasts
— How Coal Energy is Wasted.

"We are groping on the verge of another great epoch in the world's history. It would not surprise me any morning to wake up and learn that one of the 200,000 scientific men who are investigating all over the earth has seized the secret of electricity by direct process, and begun another practical revolution of human affairs."

In these words, Mr. Thomas Edison, the world-famed inventor, begins a remarkable forecast of the future of electricity.

"The first great change in the production of electricity will abolish the carrying of coal for that purpose. Instead of digging gross material out of the earth, loading it on cars, and carrying it, say, 500 miles, there to put it under a boiler, burn it, and so get power, we shall set up plants at the mouths of the mines, generate the power there, and transmit it wherever it is needed by copper wires.

COAL MINES ON WHEELS.

"It is preposterous to keep on putting the coal on wheels. It is too clumsy. It is too costly. There is no necessity for it. We can ship a 10,000 horse-power over a wire quicker and more economically than we can send the equivalent in coal over a railroad track.

"Everything points to the fact that in the near future electricity will be produced for general consumption in great power houses at the mouths of coal pits.

"Electricity will soon have completely taken the place of horses. It will solve the traffic problem in cities. My new electric storage battery itself will make electricity cheaper than horses. You see the new factory going up out there? Well, in the spring we will be ready to furnish the new batteries. Not only will they mean half the space of horse traffic, but they will go twice as fast. They can be stored on upper floors by means of elevators. The saving of stable space in New York City will cover at least £40,000,000 worth of property.

WASTE OF COAL.

"Another thing in the future: Wireless telegraph will enable us to reach any ship in any sea. That is a certainty.

"Not only will electric power be developed at and distributed from the coal mines in the future, but all the water power in the world will be used for the production of electricity. That movement has begun and is advancing rapidly. In California they are transmitting electric power 275 miles by wire, and a running street cars and lighting the cities by it. That is the sort of spirit that will wake the world up one of these days.

"From a practical standpoint, the most tremendous thing in the problem of electricity is the fact that we only get about 15 per cent. of the energy of the coal we burn. Eighty-five per cent goes up the chimney. If we could find a way to get the energy out of the coal by some direct process without wasting 85 per cent. of it, it would so multiply and so cheapen electric power as to inaugurate a new epoch in the history of the world. It is practically impossible to exaggerate the consequences of a discovery that would produce electricity direct from coal, or in any way to avoid it the waste consequent upon the use of boilers and engines.

AIRSHIP PROBLEM.

"I have done it myself experimentally, and so have others, but not in the way to make it commercially valuable. I have burned carbon and Chilean saltpetre together in an electrolyte and have thus produced electricity direct. But that was merely a scientific success. It

REGAL WEDDING GIFTS

THE ROMANCE OF SOME LUCKY AMERICAN BRIDES.

Thousands of Costly Presents Have Been Showered on Them From Parents and Friends.

A typical American wedding was that of Miss Louisa Pierpont Morgan, daughter of the multi-millionaire banker, to Mr. Satterlee, a young lawyer of considerable promise but limited purse. The ceremony lasted just a quarter of an hour, but every minute of the fifteen represented an expenditure of \$7,500, a year's income of a successful lawyer or doctor, the total cost being put down at \$112,500; while it was attended by 2,500 guests, whose aggregate fortune was said to be "a billion dollars" at least, or ten times their weight in gold. For the reception which followed, the house of the great financier in Madison Square had been transformed into a veritable Aladdin's palace, the tapestries with which the walls were decorated alone costing \$500,000, while a further \$10,000 was spent on flowers.

The decoration of the church cost Mr. Morgan \$15,000; the bride's gown, a creation of marvellous beauty, was valued at \$5,000; the bridal trousseau, which included several gowns trimmed with cloth of gold, precious stones, and rare antique laces, accounted for \$50,000 more; and the officiating clergyman was made happy with an honorarium of \$1,000. The bride-cake, which was described as an "old-fashioned one," turned the scale at

A QUARTER OF A TON

and contained two costly rings, one for a maid who was to marry, the other for a bachelor for whom a similar happy fate was in store; as well as a gold thimble and a gold bachelor's button, respectively for the maid and man who were doomed to a life of single unblissedness.

As for the gifts lavished on the bride, a mere catalogue of them would fill several columns and would read like a chapter from the Arabian Nights' tales. Her father's presents were bonds worth \$1,000,000, a palatial home on the Hudson, and a tiara of diamonds, a diamond collar, and a corsage ornament of pearl-shaped brilliants such as might have filled a Queen with envy; while among the almost countless other presents were chests of gold and silver plate, priceless paintings and tapestries, and objects of art and vertu for which Europe had been ransacked.

Equally beautiful and costly were the presents lavished on Miss Darcy when she became Mr. Nutting's wife a few years ago. Here are a few of the articles

YOUR MERSCHAUM PIPE

PROCESSES OF ITS MANUFACTURE HERE DESCRIBED.

A German Cobbler Made the Discovery of Its Beauty by Mere Accident.

A certain Hungarian nobleman was one time travelling in Asia Minor. Among the curios he collected was a lump of white clay, very light, which had been dug from the soil. On his return home the notion came into his head that a pipe might be made of it. He sent it to his friend the village cobbler. The latter made two pipes and kept one.

In smoking his pipe the cobbler discovered that two spots, rubbed with beeswax from his fingers, took on a beautiful brown and shining appearance. He rubbed it all with beeswax, and to his delight the polish covered it. So was the beauty of the meerschaum discovered. The nobleman's pipe, similarly treated, also took the glossy brown color. Friends saw it, wanted one like it, and presently lumps of the clay from Asia Minor were imported, and the industry began.

MAKING A MEERSCHAUM.

To this day every meerschaum pipe, before it leaves a maker's hands, is dipped in heated beeswax. It is kept in the liquid several minutes usually. In this time enough of the wax is absorbed to give a glossy surface about one-thirtieth of an inch thick to the bowl, and it is this surface that colors when the pipe is smoked. A pipe not dipped in wax will color, but there will be no life, no gloss, to the brown. It will look dead, so to speak. The waxed surface takes on a high polish; hence, the glossiness of the color produced by the nicotine working on the meerschaum from the inside.

Waxing is the last stage but one in the actual manufacture of meerschaum pipes. The first is to determine how many pipes can be got out of each block of raw material. This is imported from Vienna, the trade's centre, in cases which hold all the way from forty to 300 blocks, arranged in layers, with a bed of cotton for each layer. Every block is more or less shaped like an Irish potato.

SHAPING AND DRYING.

After the blocks have been sawed the pieces are soaked in a tub of water until they are brought to the consistency of cheese. Some pieces have to be soaked for as long as an hour, others for only a few minutes.

While the pipes are still wet they are roughly shaped by hand into the styles of pipes previously agreed on. Next a small hole is bored into the thickest of the rough pipe, so that it can be con-

FROM BONNIE SCOTLAND

NOTES OF INTEREST FROM HENRICKS AND BRAES.

What Is Going On In the Highlands and Lowlands of Auld Scotia.

There are now 25,000 telephones of the National Telephone Company, Limited, working in the Glasgow area.

After a continuous service of 33 years, Mr. J. Beaton, postmaster, Strathpeffer, has been compelled, through failing health, to tender his resignation.

At a meeting of the Wick Burgh School Board the salaries of all the assistant teachers who have been in the service of the Board for a year were increased by £5.

At the Court of Justiciary in Edinburgh on the 5th inst. George Gordon was sentenced to twelve years' penal servitude for having killed Elizabeth Teven dale on 17th December last.

On the 10th ult., John Dryman, plate layer, New Lanark, was run over and killed by a train. Parts of the body were found near Carlisle and other parts at Carstairs, ten miles away.

The annual report of the Scottish Burial Reform and Cremation Society Limited, states that for the first time in the history of the society the income has exceeded all charges, including interest.

The death is announced, at the age of 46, of Mr. J. A. Tait, a director of Sir William Arrol & Co. He was assistant to Sir John Fowler and Sir Benjamin Baker in the construction of the Forth bridge.

Owing to the growth of Paisley in convenience has arisen through insufficient river bridge accommodation, and the town council has resolved to erect a new bridge at Auchentorrie at a cost of £17,000.

Ex-Sergeant Hugh Mackay, and John Cameron Highlander, who had served in the Crimea and in the Indian Mutiny and had been for the last 18 years a his life janitor of Abbeyhill Public school, Edinburgh, is dead.

A prominent figure in medical and political circles in Edinburgh was removed by the death of Dr. Duddingston Wilson, which occurred on the 7th inst. at his residence, West Newington House, after a brief illness.

A buoy has been picked up on the seashore at Barvis, Lewis, containing several letters from St. Kilda, together with a covering letter requesting the finder to post the others, which were addressed to various parts of England and Scotland.

The power-loom weavers in Dundee Forfarshire, have come out on strike because they did not share in the recent advance granted to the spinners, and in consequence the employers have dis-

AIRSHIP PROBLEM.

"I have done it myself experimentally, and so have others, but not in the way to make it commercially valuable. I have burned carbon and Chilian saltpetre together in an electrolyte and have thus produced electricity direct. But that was merely a scientific success. It would cost too much to produce power in that way for commercial purposes. "When that discovery is made, the steam engine will be driven out of use. It will then be possible to have reliable airships that will safely carry passengers. I expect to see airships flying before my death. I do not think that they will fly very high, but they will be able to go a little higher than the trees and buildings.

"Such a discovery will make it possible to drive ships across the sea by electricity at the rate of 50 miles an hour—three days across the Atlantic from shore to shore.

"The direct process will give the world electricity at such a low cost that electric light can be used by everybody, and railways can be operated at a fraction of their present expense. The city of New York could be lit as brilliantly in the night-time as in the day-time, without any additional cost."

HAD MESSAGE OF DEATH.

A Curate's Remarkable Prophecy of Death Made in Welsh Church.

A remarkable incident is reported from Muesseg, South Wales. The Rev. Meredith Morris, curate in charge of Gerth church, in the midst of his discourse on a recent Sunday night, said that he was charged to deliver a solemn message. He had in the past adversely criticised those who had said that they had seen visions. He would not do so again.

There were, he said, many absentees from the Easter communion, including seven young men who had promised to come, but never meant to do so, and he subsequently saw them engaged in gambling under a tree. The message he had to deliver was from God. He had seen a vision, and in it were these seven young men, one of whom would be called to reckoning by his Maker, and that very shortly.

Remarkable to state, on Monday afternoon one of the young men to whom the curate had referred was killed in a local colliery.

HIS VISION.

Interviewed by a pressman, the Rev. Meredith Morris said—"Yes, I have had a remarkable experience. The state of several of our young men filled me with grief and the deepest concern. I spent my time from Sunday until Thursday—I mean Thursday of last week—in urgent prayer for them. The greatest part of Wednesday night was so spent. I was still praying and Thursday afternoon had come. I recall that I seemed to go off in a faint, and then a vision came clearly before me. I saw seven young men. I distinctly recognized four of them, and in the vision I saw one of the young men killed and killed at a colliery.

"I was 'burdened with the message of warning. Until I delivered it from the pulpit, I did not know which of the young men it would be, and, strange as it might seem, it brought me a certain sense of relief when the news of the fatal accident cleared up that part of the mystery. The warning message which came into my sermon on Sunday night was, of course, unpremeditated."

DOGS AS SEWER CLEANERS.

In Nice a system of small sewers, from 30 to 40 centimetres in diameter, has recently been introduced, and the difficulty in cleaning them has led to the use of dogs for that purpose. The dogs are trained to go through the sewers carrying a cord with which a brush can be drawn to and fro. In England electrical engineers have for some time past made use of ferrets for installing cables in small tubes. The ferrets are sent through the tubes carrying strings tied to their tails. Afterward the strings are utilized to pull the electric cables into position.

presents were chests of gold and silver plate, priceless paintings and tapestries, and objects of art and vertu for which Europe had been ransacked.

Equally beautiful and costly were the presents lavished on Miss Darcy when she became Mr. Nutting's wife a few years ago. Here are a few of the articles of personal adornment. A rope of 400 large pearls, of exquisite color and graduated sizes; a gorgeous necklace of pearls and diamonds, set dice fashion, from which depended a single enormous stone of superb lustre; a necklace and earrings of diamonds and turquoises, a diamond sun,

"A DAZZLING BLAZE OF LIGHT."

with long rays; several diamond bangles, and a set of diamond and blue enamel buttons in a rose-leather case.

When Miss Helen McLaughlin was married to Dr. Alexander Carroll, in Brooklyn, her bridal presents filled four large furniture vans. Among them were a solid gold dinner service; a necklace of brilliants, each nine and a half carats in weight; several enormous vases of solid silver; a prayer-book bound in mother-of-pearl, with a picture of Murillo's Madonna carved on the shell; a set of Limoges china containing 150 pieces; no fewer than 400 vases—Royal Worcester, Satsuma, Dresden, and Limoges; and a bundle of cheques, the least of which was for \$5,000.

Another fortunate bride was Miss Mary Amelia Tweed, whose wedding to Mr. Ambrose Maginnis was one of the most gorgeous which even New York has ever witnessed. "An entire upper floor," wrote an enthusiastic reporter, "was given up to a display of the wedding presents. There were more silver and gold plate and jewels than would stock half-a-dozen jewellery shops. It was said that \$750,000 was a moderate estimate of the value of the wedding gifts, but some estimates place it as high as \$1,000,000.

ABOUT BRITISH RAILWAYS.

Figures of the Great System of the Old Land.

The total length of track and sidings is 51,634 miles.

The railways own no fewer than 22,443 locomotives.

The passenger carriages number 50,728 and other vehicles 19,815.

1,000,300,000 tons of general merchandise were carried last year.

£1,268,500,000 is invested in the railways of the United Kingdom.

1,198,774,000 passengers were carried by our railway companies during 1904.

There are 643,873 season ticket holders. The cost of the tickets was £3,990,030.

£4,736,000 was paid by the companies in rates and taxes, and £4,837,000 for coal and coke.

The solicitors' bill for the South-Eastern Railway contained 10,000 folios, and amounted to £240,000.

First-class passengers paid £3,429,000 in fares; second class, £2,265,000; third class, £29,382,000.

The total expenditure of the companies last year reached £69,173,000, and the gross profit was £12,660,000.

Live stock, mineral, and general merchandise waggons number 722,256, and there are 20,351 miscellaneous waggons.

By way of compensation to employees the companies paid £162,155 in 1904; to injured passengers, £134,968; and for damage to and loss of goods, £401,692.

Last year British railways carried 24,000,000 more tons of merchandise than in 1901, and received £2,435,000 more in revenue. This was accomplished with a saving of 17,900,000 train miles and a decreased expenditure of £71,000.

ACCOUNTED FOR.

Mrs. M.'s patience was much tried by a servant who had a habit of standing around with her mouth open. One day, as the maid waited upon table, her mouth was open as usual, and her mistress, giving her a severe look, said: "Mary, your mouth is open."

"Yessum," replied Mary, "I opened it."

ut they are brought to the consistency of cheese. Some pieces have to be soaked for as long as an hour, others for only a few minutes.

While the pipes are still wet they are roughly shaped by hand into the styles of pipes previously agreed on. Next a small hole is bored into the thickest of the rough pipe, so that it can be conveniently held for turning by hand, after which process the regulation holes are bored into it by means of a foot lathe.

The drying oven now claims the pipe for from six to eight hours. The temperature is that desired by the good housewife for quick baking, and when a tray of pipes is removed from the oven each one is as dry as the proverbial bone and baked through.

The next step is to fit its proper amber bit to each bowl. The rims of the tobacco hole and stem are ground level on a sand wheel, a bone screw is inserted in the stem and after the amber has been fitted in the meerschauum is carefully filled until it makes a neat jointure with the amber. The pipe is then ready for what is known as finishing.

GETTING THE POLISH.

In waxing only the bowl of the pipe is placed in the wax; a girl holds the amber bit out of the liquid while the soaking process goes on. Removed from the wax, the bowl is diligently polished with a cloth dipped in drop chalk and water. This polishing removes the faint marks left by burrushes. Thus a pipe is submitted to no less than three distinct smoothing processes.

The only time that meerschauum, after it has been made up into a pipe regains anything like its original cohesive property is after it has been boiled in oil to set its color. A part of the meerschauum pipe manufacturer's business is that of boiling pipes for smokers. Linseed oil, to which a certain coloring is added, is used.

A meerschauum should never be taken from a warm room into cold air, nor should it be laid on a glass case or a marble slab. Any sudden change of temperature from hot to cold is likely to crack the glossy surface, which will frequently curl back at the edges of the cracks. Many smokers, having heard that meerschauum will float, throw their pipes into water to find out if what they have heard is true. This causes a sudden change of temperature and induces cracking.

MISTAKES OF SMOKERS.

Not a few smokers, thinking to hasten the coloring of their pipes, pour alcohol over their tobacco. This is another prolific cause of cracking, the alcohol wreaking this damage as it escapes to the pipe's surface through the pores in company with the nicotine.

The permanent coloring always comes from the inside. You have seen a meerschauum enthusiast carefully blow smoke over his pipe, in the fond belief that he is thereby aiding in the coloring process. Well, the smoke will color the surface, but only temporarily. So in the long run all the carefully given smoke baths go for naught.

COMFORT IN THE LOSS.

"See here, Aunt Dinah, I sent two brand-new shirts of my husband's to the wash last week, and you have brought only one back. Now, what have you done with the other?"

"Yes, Miss Lulu, ma'am, I was coming 'round to the question of dat dar shirt. You knows dat I ain't a pussion dat pretends to one thing and pretends to anudder, so I've agwine to tell de truth 'bout dat shu't. It was dis-a-way. My ole man he up and died las' week, an' de 'Burial Sassiety' dey didn't do nothing but covort 'round, an' I neber had anyting to lay dat man out in. So I helps myself to dat shu't for a fac'. An' oh, Miss Lulu, honey, I jes' wishes you could hab seen how dat nigger sot dat shu't off!"

UNINTELLIGIBLE.

"I am told, professor, that you have mastered nearly all of the modern languages."

"All but two. My wife's when she talks to the baby, and the railroad brakemen's."

with a covering letter requesting the finder to post the others, which were addressed to various parts of England and Scotland.

The power-loom weavers in Dundee Forfarshire, have come out on strike because they did not share in the recent advance granted to the spinners, and in consequence the employers have decided to close the mills and factories. The lockout will affect 35,000 workmen.

By the death of Mr. James Geddie Currie, deputy-commissioner clerk of Edinburgh, the legal profession in Scotland has lost its leading authority or commissary law.

Mr. David Wilson, a well-known journalist, died at Aberdeen, Fife. He was a native of Nairnshire, and a brother of the original proprietor of the Edinburgh Evening News. He was for a number of years manager of the Economist, but had to give up that position owing to ill health.

Hamilton town council have resolved to ask Andrew Carnegie either to lay the foundation stone of the public library or perform the opening ceremony according as it suits his convenience. It was also resolved to confer upon him on the occasion the freedom of the burgh.

The late Mr. Robert Orr, of Kinnaird near Falkirk, who had extensive interests in Glasgow and west of Scotland, as a chemical manufacturer and iron founder, has left bequests amounting to £2,000 to various charities. The three Glasgow infirmaries receive £300 each, the Old Man's Friend Society and Old Women's Home, £200 each, while £250 goes each to the Royal Asylum for the Blind, Falkirk Infirmary, Kelvinside U. F. church and the St. Andrew's U. F. church.

TO CURE CANCER.

Dr. Doyen Again Announces a New Discovery.

Dr. Doyen, the eminent French scientist, in the course of a paper which he read before the Medical Congress, announced his discovery of the fact that inoculation of the patient with the yeast bacillus of beer cures cases of cancer.

The doctor thinks that further investigation will develop discoveries ranking in value with the discovery of the antitoxin treatment by vaccination for smallpox.

Dr. Walter Chase, of Boston, exhibited the results of his research in neurological work, especially epilepsy, with the aid of a cinematograph. Thirty epileptic convulsions were shown in detail enabling the audience to study the action of the muscles during the seizures. This is the first time such work has been accomplished. The studies were made in New York.

Dr. Chase also showed a series of cinematograph pictures illustrating forms of pathological motion. The object of the photographs is the instruction of medical students, and it would be easy for copies to be shown anywhere.

Dr. Rammon Guiteras, of America read a paper describing a new method of removing the prostate gland, and also a method of operating on the kid neys whereby the mortality of such operations could be decreased 25 per cent.

The grand prize of £200 for the greatest scientific work for the benefit of humanity has been awarded to Dr. Severan, of Paris, for his work in isolating the malaria germ.

LIBERIA'S RUBBER FORESTS.

Sir Harry Johnston, the African explorer, is credited with the statement that Liberia possesses an almost unlimited supply of rubber-producing trees, although hitherto but little caoutchouc has been exported from that country. Within half a dozen years, he says, 250,000 cultivated rubber-trees may be yielding sap in Liberia. Another report is to the effect that there are in Liberia at least 20,000 square miles of territory covered with dense forests of rubber trees. On account of the constantly increasing demand for rubber in electrical industries, these reports awaken much interest.

Shoes for the Little Folks

The children are going to have Oxfords and Slippers this year. No reason why they shouldn't, as we have the largest stock ever shown in this vicinity.

Made of Patent Leather, Black Kid, Red Kid, Chocolate Kid, and White Canvas.

Mothers come in and see our Children's Shoes. The price is not higher than you want to pay.

THE **J. J. HAINES** SHOE HOUSES, Napanee, Belleville, and Trenton.

THE BEST FLOUR. DAFOE'S NONESUCH DAFOE'S MANITOBA PATENT

By numerous tests by the best Bakers the above mentioned grades have been proven to be the best Flours in the market.

When buying Flour ask for Dafoe's, and patronize your home mill, thereby producing Bran and Shorts that you can purchase cheaper than the product of the Western mills, which has to be transported thousands of miles at great expense, and usually, when it reaches you, of inferior quality.

The grocer complains if the farmer or the mechanic sends to Toronto or to outside points for an article he can get at the home store just as good, but he does not hesitate to buy Flour from mills hundreds of miles away, and sell you an inferior Flour for more money than you can purchase the home product for, every bag of which is guaranteed.

CHOICE CORN MEAL and BUCK-WHEAT FLOUR always on hand.

FEED GRINDING a specialty, with the best feed mills known to the trade.

A full stock of the best ANTHRACITE COAL. Also in the market for the purchase of all kinds of Grain.

Ask for prices at the big Mill before purchasing your Flour, Feed or Coal.

NAPANEE,
16th January, 1906.

Opera House Notes.

Richard & Pringle Minstrels will appear at the Opera House, Napanee on Tuesday evening June 12th. Be sure and see there immense street parade at noon of the above date. Full particulars next week.

"Faust" will be presented at the Brisco Opera House on June 20th, by Hubert Labadie.

Parish of Camden.

Services on next Sunday (D. V.) as follows: St. Anthony's church, Camden East, 11 a. m.; St. Anthony's, Yarker, at 3 p. m.; St. John's, Newburgh 7 p. m. The offerings for the day are for Domestic Missions in the Northwest. Camden is asked for \$16.42 Yarker for \$7.70; Newburgh \$5.72, to make up in full the assessment of \$85.00 levied on the Parish of Camden.

Election of Officers.

Tuesday evening Napanee Lodge No 80, I. O. O. F., elected their officers for the ensuing term. They are as follows:

Bro. W. Boyes, J. P. G.

W. Maybee, N. G.

Jas. Pringle, V. G.

W. B. Grieve, R. S.

E. McLaughlin, F. S.

G. B. Joy, Treas.

Bro. R. S. Ham and Bro. J. N. Osborne were chosen representatives to Grand Lodge. Bro. W. B. Grieve and Bro. Will Frizzell were chosen as representatives to District Meeting.

Yarker Circuit Methodist Church.

Moved by Bro. Charles Lee, seconded by Bro. John Connolly, and resolved:—That whosoever it be pleased Almighty

Get It at Wallace's

If it is in the Drug line and it is to be had in Napanee, you will find it at Wallace's, Napanee's Leading Drug Store.

Johnny Get Your Hair Cut.

J. N. OSBORNE will cut it right, or give you a nice shave. t f

Georgia Minstrels.

The extreme longevity of Richards & Pringle's Famous Georgia Minstrels is the best evidence of its worth. For over a quarter of a century the public has been amused by these dusky entertainers. Never in the history of the "Georgias" has there been such a program of good things offered as will be seen at Brisco Opera House, Napanee, June 12th.

A big new "First Part," arranged by Clarence Powell, lively with bright new jokes and repartee, lively music, handsome costumes, beautiful scenery and the latest in all songs and music.

Ten new vaudeville acts will be seen in the olio, concluding with the latest absurdity "Jim Jackson." There will be no long waits between acts. The curtain will never fall until the final act on the program. "There is more fun than a circus," is what is claimed for the "Georgias."

Napanee and District as a Summer Resort.

While the Grand Trunk Railway is advertising so largely the Temagami region, it should not be lost sight of, that the Bay of Quinte should be in a position to attract tourists quite as readily as the northern portions of Ontario.

It is true we do not possess the wild woods of our Great North Land, or its magnificent rivers and rapids, but the scenery along the shores of our bay, is, of its kind, hardly to be surpassed. The climate during the summer months is well nigh perfect, the waters clear, and the foliage along the banks, beautiful.

While many sportsmen prefer the wild country, there are many others to whom the diversified scenery of the Bay of Quinte is preferable.

Some sportsmen wish to get away entirely from the telegraph, and these naturally go to the wild north lands, but others prefer being near means of communication, and to these our shores should be particularly attractive. But have we got the fishing to attract them? It is claimed we believe with considerable reason, that were the fishing along our shores of the Bay of Quinte, to be what it was forty years ago, hotels and cottages would be built all along the Bay shores at advantageous points, and places like Napanee would reap the benefit of large sums of money spent annually through the attraction given by our fishing to visitors.

On these grounds we do not hesitate to counsel our readers to take an interest in the Ontario Fish and Game Protective Association, which is doing excellent work to bring about the betterment of the existing condition of things as to fish and game protection.

A meeting will be held in the Town Hall, at Napanee, on Saturday, June 2nd, at 2.30 p. m., for the purpose of establishing a branch of the Association in Napanee and we understand all classes of the community, the ladies included, are cordially invited to attend.

The First Steamer That Plied For Hire in Great Britain.

Among the curiosities of advertising may surely be placed the first advertisement of the first steamer that plied for hire in Great Britain—namely, Henry Bell's Comet. Thus ran the advertisement in the Glasgow Courier of 1812:

"Steam passage boat, the Comet, between Glasgow, Greenock and Helensburg. For passengers only. The subscriber having at much expense fitted up a handsome vessel to ply upon the river Clyde between Glasgow and Greenock—to sail by the power of wind, etc. and steam, he intends that

South Side Dundas Street, Napanee, Ont.

At The Downtown Office of the
NAPANEE CANNING CO., Limited,

Court Lennox No. 78, C. O. F., will attend divine service in the Western Methodist church, on Sunday morning at 10.30.

We have Lawn Mowers that you want and you cannot get them too good. But the best are only to be had in Napanee at **BOYLE & SON.**

In a down-pour of rain on Saturday afternoon the Picton High school football team met and vanquished a team of the Deseronto club. Score one to nil in favor of Picton.

A. S. KIMMERLY has just got in a car of Potatoes, Roses, Hebeons, Seed Peas and Mandscheuri Barley in stock and all kinds of garden and field seeds. I buy clean Timothy Seed, Vetches for sale.

A gang of men are engaged in excavating for the foundation of Mr. A. C. Parks' Cold Storage Warehouse, on Centre Street, near the swing bridge. The building will be three stories in height, the first story of stone and the upper stories frame.

Mrs. Douglas Hooper, Kingston, received word on Wednesday, of last week of the death of her son at Long Pine, Nebraska. Deceased died quite suddenly. He was about forty years of age, and went to the west about twenty years ago. He leaves a wife, mother and sister, Miss Carrie Hooper. Also two brothers, F. L. of Napanee, and Samuel Hooper, Toronto. The remains will be interred in the family plot at Newburgh.

Adjutant Jennings who has just returned from England, where he has been for the past five weeks on immigration business, states that the Salvation Army Immigration department will receive some good reliable married men during the next few weeks, and would like to get a number of applications for this class of immigrant. Farmers who can accommodate a married man should apply at once to Brigadier Thos. Howell, 21 Albert St., Toronto, or to Adjutant, Jennings, Box 49, Peterboro, Ont.

Sylvester Cronk, one of the pioneers of the township of Hinchinbrook, passed to his eternal rest on Sunday afternoon, May 27th. Deceased was born in Canada and resided in Camden, thence he moved to Wagarville, then a wilderness. For forty-seven years he lived a very active life. He was seventy-seven years of age. Death was caused by Bright's disease. He was a staunch liberal. The funeral service was conducted on Tuesday. He leaves a widow and three sons, Lasher, Solomon and Mereneus Cronk.

Mrs. J. McKeown, passed away on Friday last, at her home in Camden, after an illness of nearly a year. Mrs. McKeown was born at Coleraine, Ireland, on the 20th of April, 1813, being thus in her ninety-fourth year. When a young woman she came out to this country and resided for some time at Kingston, where she married. For over sixty years she had resided in Camden. Deceased was an estimable old lady highly respected by all who knew her. She had been for over half a century a devoted member of the Presbyterian church, and for years took an active part in church work. Her end was peace. Seven years ago Mr. McKeown died and this is but the second break in the family. Six sons and four daughters survive. The sons are: James, Samuel and Alexander, of Camden, Angus, of Victoria, B. C.; John and William, of Kingston. The daughters are Mrs. McCutcheon and Mrs. McCracken, and Misses Ellen and Mary, all of Camden.

MADOLE & WILSON.

Obituary.

Mary Isabella Lott, beloved wife of Mr. Alfred Knight, passed away on Friday last aged 68 years. Deceased had been in poor health for a few months past, but nothing of so sudden a nature was anticipated. The immediate cause of death was due to a slight stroke. Deceased was a daughter of the late Joseph Lott. She leaves a sorrowing husband, but no children. For over twenty years she has been a resident of Napanee, a devout Christian lady, a member of the Eastern Methodist church. A nephew and niece, Earl Lake, and sister, Miss Norah Lake were as children to Mr. and Mrs. Knight, and they will miss as a mother the aunt who so lovingly looked after and cared for them. The funeral took place on Monday morning at 10.30 o'clock, to the Eastern cemetery vault.

One gallon of Prism Brand Paint will cover 360 sq. ft., two coats. Every can guaranteed. The Medical Hall.—Fred L. Hooper, sole agent for Napanee.

tween Glasgow, Greenock and Helensburg. For passengers only. The subscriber having at much expense fitted up a handsome vessel to ply upon the river Clyde between Glasgow and Greenock—to sail by the power of wind, air and steam—he intends that the vessel shall leave the Broomclaw on Tuesdays, Thursdays and Saturdays about midday or at such time thereafter as may answer from the state of the tide and to leave Greenock on Mondays, Wednesdays and Fridays in the morning to suit the tide. The elegance, comfort, safety and speed of this vessel require only to be proved to meet the approbation of the public, and the proprietor is determined to do everything in his power to merit public encouragement. The terms are for the present 4 shillings for the best cabin and 3 shillings for the second, but beyond these rates nothing is to be allowed to servants or any other person employed about the vessel."

What would poor neglected Henry Bell have said could he have seen his humble little Comet, of whose elegance, comfort and speed he was so proud, alongside a modern ocean racer or one of the latest palatial river steamers of the Clyde or Thames, all so well advertised?

Why Timothy Grass Is So Called.

The forage grass known to the farmers of the United States as timothy is so called because first introduced and extensively cultivated in this country by one Timothy Hanson, a farmer of Maryland. This species of grass is well known in England and all over western continental Europe, where it is grown extensively by most farmers between the Mediterranean and the North seas. The botanical name of this grass is *Phleum pratense*. Timothy is known in the British Isles as cat's tail grass and in several of our eastern states as herd, or herd's, grass. It was grown in large quantities in Maryland and Pennsylvania long before a spear of it had ever been seen in England, the first seed of it ever seen in the last named country being imported from America.

READY-MADE CLOTHING ARE NOT SHAPE RETAINING.

You know, who have tried. It is in shape retaining qualities next in importance, after Fit, that our Ordered Clothing excels.

It's the careful work and good material we put in the inner hidden parts which makes it so.

JAMES WALTERS,

Merchant Tailor, - Napanee.

Chance.

Chance never yet writ a legible book; never built a fair house; never drew a neat picture; never did any of these things nor ever will; nor can it without absurdity be supposed to do them, which are yet works very gross or rude and very easy and feasible, as it were, in comparison to the production of a flower or a tree.—Barrow.

The Perfect Article.

When they asked Brother Dickey for his idea of perfect happiness he replied:

"A black nigger sleepin' in de shade er a green tree, wid a watermelon underneath his head, two big ones each side er him en a appertite fer all three w'en he wakes up!"

She Knew.

Ann—See what a lovely diamond engagement ring Henry gave me! Jane—Yes, it is. And it's genuine too. Ann—Why, what do you mean? Jane—When Henry gave it to me I sent and had it tested.—Answers.

Gideon Tugwell, a former Napaneean died in Chicago, on May 21st.

Last evening Mrs. John Hawley, Centre street, struck a match and a portion of the head flew into one of the lace curtains. Result a run for the firemen and a couple of pairs of lace curtains destroyed.

DIAMOND DYES

Will Dye any Article of Clothing from Feathers to Stockings.

The Only Package Dyes That Make Fast and Unfading Colors.

Feathers, ribbons, silk ties, dress silks, shirt waists, dresses, costumes, capes, jackets and shawls can be dyed at home with Diamond Dyes so that they will look like new. Try a package of the Diamond Dyes, and see what a bright, beautiful non-fading color it will make, with but little trouble.

Diamond Dyes are the greatest money savers of the age, as many a woman with one or two ten cent packages of these dyes has dyed her old dress a lovely and fashionable color so as to save the expense of a new one. Partly worn clothing can be made over for the little ones, and by dyeing it with Diamond Dyes no one would recognize

PERSONALS

HOSE ANOTHER ITEM FOR SATURDAY

Consecration of S. Mary Magdalene's

(From a Correspondent.)

Thursday and Friday of last week will long be remembered by the congregation of St. Mary Magdalene and their friends in Napanee, and many old friends besides, some far away and scattered almost from pole to pole. The proceedings in connection with the consecration of the church began with a Re-union of the congregation held in the school-room on Thursday evening May 31st. As soon as the room began to fill, an adjournment was proposed by the Rector, who asked all to go up-stairs into the church, and join in singing a solemn Te Deum, as an act of praise and thanksgiving to Almighty God for His great mercies, and more particularly for His goodness in enabling us to complete the church and dedicate it to His service, free of debt and furnished with all things necessary for the due performance of public worship. After prayers for the innovation of the Divine Presence, a familiar Te Deum was sung with a depth of feeling, and a volume of sound that few perhaps of those present had ever felt or heard before. Then followed a short organ recital, when Mr. J. C. Morgan, Director of the Foresters' Home gave a most inspiring interpretation of sacred music—all too short—but if we do not hear from him again it will not be our fault—nor his unless we greatly mistake his good nature. Some of the old timers lingered in the church to examine the many beautiful memorials, which have of late been added to the existing attractions of the church, whilst an eager group pressed round dear old Father Bogert—the Archdeacon will not resent the familiarity—to claim the right of welcoming once more, after so many years, one whom Napanee Churchmen can never forget. The Archdeacon was the central figure of the celebration, and well he might be, for to him is due, under Providence, the inception of the work now brought to so happy and so successful a conclusion. On returning to the schoolroom the meeting was called to order, and after a short address of welcome from the Chairman, who took occasion to refer to the minutes of the vestry of nearly forty years ago, when first the idea of building the present church, began to be talked of. The Rev. Harold Bedford-Jones, son of the late Ven. Archdeacon, predecessor of the present incumbent, was called upon for a speech and gave some amusing and some touching reminiscences of his school boy days in Napanee, and not so very long ago but it does not take long to forget the little things of life which after all make up the greater part of our lives. Mr. Dudley L. Hill, the secretary of the general committee, then read a number of letters in reply to the invitation that had been sent out into all the lands, to "old members," more to let them know we had not forgotten them, than in the expectation that they could be with us except in spirit. All these letters could not be read—there were a few addressed to the Rector, too personal and too sacred for publication—but time had to be considered. We heard enough however almost to justify the doctrine—very doubtful under ordinary circumstances—"once in grace, (i. e. a member of St. Mary Magdalene's) always

HOSE ANOTHER ITEM FOR SATURDAY

at 10 a.m.

12 dozen only, medium weight, ribbed and plain Cotton Hose, just the thing for boys or ladies who wish a cotton hose of medium weight. The sizes are 8 1/2 to 10 inches and are absolutely fast color. This being a regular 25c and 30c hose we say take advantage of this item

considered. We heard enough however almost to justify the doctrine—very doubtful under ordinary circumstances—“once in grace, (i. e. a member of St. Mary Magdalene's) always in grace.” But as the wary preacher says “we must not press this doctrine too far.” Then came the speech of the evening, when Archdeacon Bogert told of the first beginning. He spoke under great self-restraint, no resume of his remarks would be fair to him, or could convey any impression of their effect upon the audience—we will not attempt them into cold print. Refreshments were served by the ladies, and while they were being negotiated, all present were invited to sign their names in an album, in which it is proposed to write up a record of the proceedings connected with the consecration, and some history of the parish from the earliest days down.

A number of photographs and prints of an historical character were on exhibition during the evening, including views of the old church and portraits of many of the Clergy and Bishops who have been connected more or less directly with our parish in days gone by.

It was the intention to have had addresses from others of the Clergy and Laity present, but the hour was getting late and were many preparations to be made against the morrow. So the proceeding were brought to a close.

THE CONSECRATION.

On Friday after the arrival of the G. T. R. train from the east with a large contingent of clergy, including the Lord Bishop and of faithful laity not a few; the Consecration service was begun.

During the assembly of the congregation, volunteers were played upon the new organ, eliciting great admiration for both organ and organist. Every parson swears by his own organ and so he ought, but the most bigotted was generous for once, could be so without disparagement to his own “Kist of Wistles” and there are some fine instruments in the Diocese.

The procession formed in the school room in due order, the choir preceded by the choir banner, leading, then the Clergy, followed by the Church Wardens and their solicitors, the Rector with the Bishop and his Chaplains bringing up the rear.

A halt was made at the principle entrance of the church the Rector called upon the senior Warden Dr. Wager to read the customary “Petition of Consecration,” which was engraved upon an impressive document signed by the Officers of the Church and others representing this congregation. The Bishop graciously consented, and proceeded at once to comply with the prayer of the petition.

The procession then advanced towards the Chancel singing the XXIV Psalm the burden, of which is this refrain, “Lift up your heads O ye Gates, Be ye lifted up ye everlasting doors, and the King of Glory shall come in.”

The Bishop being seated in his official chair, the solicitor, Mr. G. F. Rutten, advanced to him and presented the “Instrument of donation,” conveying the property to the Synod of the Diocese, thus securing it for all time—a sacred thing—God's house—to be used in His service, for no other purpose, forever. This was laid as an offering upon the altar, after which the Bishop called upon all present to join in the prayer of consecration according to the prescribed form, copies of which had been distributed through the church, this done the Bishop instructed the Archdeacon having jurisdiction to pronounce the sentence of consecration. This was read in a most impressive manner by Archdeacon McMorin from another engrossed document which was then presented to the Bishop for his signature by Mr. Chalmers, Churchwarden, and it too was placed upon the altar, ordered to be deposited in the Diocesan Repository Office for safe keeping.

After the Introit (Hymn 230, in parts adapted for the occasion) a solemn celebrating of the Holy Eucharist followed, the Bishop being celebrant, the Rector and Archdeacon Carey acting as Deacon and Subdeacon. The sermon was preached by the Ven.

ADA—FRIDAY, JUNE 8th 1906

Archdeacon Bogert, now of the Diocese of Ottawa, but who twenty-five years ago closed his ministry of nineteen years as priest of the parish. The text was the one which, in an illuminated scroll on the Chancel Arch has been preaching Reverence and Godly Peace to many a generation of worshippers. "O worship the Lord in the beauty of Holiness." We hope in another issue to print the sermon in extenso. It was well worthy the occasion. At the conclusion of the service which was choral throughout, the Clergy withdrew, Hymn 379 being sung as the recessional. Friday being always a fast day, the Bishop was pleased to grant a dispensation to the parish and its visitors for the occasion, and many pleasant family re-unions were celebrated throughout the parish during the afternoon. The Bishop and Clergy were entertained to a sumptuous dinner by Mr. and Mrs. F. E. Miller at their handsome residence on Dundas street, the Officers of the church being invited to a share in their generous hospitality. Congratulatory speeches were delivered by the Bishop, Archdeacon Carey and others, and nothing was omitted to make the occasion most enjoyable.

THE CONFIRMATION.
At Choral Evensong the Bishop held his annual visitation of the parish and as his first episcopal act in the newly consecrated church administered the rite of confirmation or "Laying on of Hands" to twenty-six candidates including many adults. The Bishop preached one of his most impressive sermons on confirmation, from the text "Have ye received the Holy Ghost since ye believed." The conviction which his remarks carried, will be manifest when next he visits the parish on a similar mission.

Thus ended this great "Red Letter Day" (to use a hackneyed but impressive term) of the parish, let us pray that its influence may not soon pass away.

The church and schoolroom were beautifully decorated by a committee of ladies, assisted by the children of the Sunday School, and at the last moment a permanent oak floor was laid in the sanctuary, adding greatly to its dignity.

Much regret was felt that the new bell, the gift of Miss Harding, did not arrive in time to be used in the new tower, also her gift, on the day of the consecration which, by a happy coincidence, fell on the anniversary of her nunc dimittis.

The following Clergy were present at the services in connection with the consecration of S. Mary Magdalene's Church.

The Lord Bishop of Ontario,
Ven. Archdeacon Bogert, Ottawa,

TOWN COUNCIL.
Council Chamber,
Napanee, June 6th 1906.
Council met in special session Wednesday evening. Mayor Lowry in the chair.
Councillors present—Graham, Williams, Kimmerly, Meng.

COMMUNICATIONS.
From the Fire Brigade complaining that hose, wrenches, etc., were taken from the fire hall without the knowledge of the officials of the fire company, and asked that the practice be discontinued, or else the company would feel compelled to tender their resignation.

Moved by Coun. Meng, seconded by Coun. Kimmerly, that in future no fire appliances be taken from the fire hall, without the consent and knowledge of the officials of the fire brigade. Carried.

From M. B. Mills, caretaker of the swing bridge, stating that some repairs were necessary to same, and that it would be advisable to provide some means for safeguarding the public, while the bridge was open. He also wished to know if the bridge had to be swung on Sunday and in the evening after dark. Laid on the table until later in the evening.

From Wm. Close, Deseronto, asking to be appointed assistant engineer at the electric light power house. Laid on the table until later in the evening.

From O. S. Davis, stating that while coming to town on the evening of May 21st he drove into a hole in the road between the B. Q. R. Crossing and the town, with result that two springs were broken in his rig, which cost him \$4.00, and asked that the town settle.

Referred to the Street Committee to report.

From F. T. Allenhart, stating that a company for the manufacture of washing machines had been organized in Ohio and as they were looking for a place to locate, would like to know what inducement the town would offer.

The Clerk was instructed to write and make inquiries.

From an American firm quoting prices on 800 feet of cable to be used in carrying electric wires across river. The cost of the 800 feet, together with duty and freight would be in the neighborhood of \$500.

Referred to R. S. Kelsch, too see if this cable was absolutely necessary.

Moved by Coun. Graham, seconded by Coun. Williams, that the Fire, Water and Light Committee interview Mrs. Bartlett, in reference to rental of land near power house and report. Carried.

On motion of Coun. Williams, seconded by Coun. Graham, the Fire, Water and Light Committee were instructed to consult with the town solicitor and see what course must be pursued in the removal of the poles and wire of the Napanee Electric Co. from the streets of Napanee.

On motion of Couns. Kimmerly and Meng, the Clerk was empowered to advertise for tenders for the position of engineer of the electric light works.

The communication of M. B. Mills was referred to the Street Committee with power to act.

Coun. Graham stated that A. C. Parks wishes the council to grant him 45 feet of 8 inch tile to be used in front of his property at the foot of Centre street, just across the bridge, he to do all work in connection with the laying of it. Petition granted.

The Fire, Water and Light Committee were granted permission to have the floor in the fire hall, repaired.

The tenders of the Canadian General

Beware of Ointments for Catarrh that Contain Mercury,

as mercury will surely destroy the sense of smell and completely derange the whole system when entering it through the mucous surfaces. Such articles should never be used except on prescriptions from reputable physicians, as the damage they will do is ten fold to the good you can possibly derive from them. Hall's Catarrh Cure manufactured by F. J. Cheney & Co., Toledo, O., contains no mercury, and is taken internally, acting directly upon the blood and mucous surfaces of the system. In buying Hall's Catarrh Cure be sure you get genuine. It is taken internally and made in Ohio, by F. J. Cheney & Co. Testimonials free. Sold by Druggists. Price 75c per bottle. Take Hall's Family Pills for constipation.

ODESSA.

St. Alban's church, at Odessa, being now free from debt, was consecrated on Saturday, June 2nd, by the Lord Bishop of Ontario. The church was erected in 1870, for the Methodist Episcopal denomination. After the union of the Methodist Episcopal and Wesleyan bodies, it was occupied for some time by the Salvation Army, and got in a dilapidated state. It was purchased for the use of the Church of England in 1880, during the incumbency of Rev. W. M. H. Quartermaine. The Bishop was received at the door of the church by the clergy (wearing surplices), the churchwarden and others, when the petition of consecration, signed by the incumbent, churchwardens and others, was read and presented to the bishop. The bishop and clergy preceded by the churchwardens, entered the church by the principal entrance and proceeded up the midst thereof, to wards the chancel, singing Psalm xxiv. One of the clergy read the sentences of consecration, which the bishop, sitting in his chair, signed, and ordered to be recorded in the registry of the diocese. The epistle was then read from Ephesians and the gospel from St. John. The sermon was preached by Archdeacon Macmorine, after which the bishop administered confirmation, and holy communion. There were present Rev. Rural Dean Quartermaine, and a large number of visiting clergy. The bishop and clergy were entertained at luncheon by the ladies of the congregation. Much credit is due Rev. Frederick Thomas Dibb, incumbent, and A. H. Shaw and B. Bennett, churchwardens.

Use Prism Brand Floor Enamel. It dries quickly, has a varnish gloss, and is true to color. The Medical Hall.—Fred L. Hooper, sole agent for Napanee.

In Parliament on Tuesday, the debate on Mr. Borden's amendment regarding the administration of western lands was concluded, and the Government was sustained by 60 votes to 52. Sir Wilfrid Laurier proposes that Government business occupy every day of the remainder of the session.

Painting White.

If you intend painting white either inside or outside, use Sherwin-Williams Gloss White. It will cover more surface, wear longer, remain whiter, and cost you less than any other white paint. It will not chalk off like Pure White Lead. Ask us for prices before painting. The Medical Hall.—Fred L. Hooper, Sole agent for Napanee.

Lawn Mowers, Lawn Hose and Nozzles, MADOLE & WILSON.

the bridge, he to do all work in connection with the laying of it. Petition granted. The Fire, Water and Light Committee were granted permission to have the floor in the fire hall, repaired.

THE PLAZA BARBER SHOP
A. WILLIS.

If you are not troubled with rheumatism, and never have been, be thankful and take good care of yourself. If you are a victim of its torturing pains do not be discouraged. You are not doomed to go on suffering forever, because there is a sure and speedy cure for you in

Have You
Rheumatism

???
Tuck's Rheumatic Bone Oil. Perhaps you have tried a lot of patent medicines and now have no confidence in many. Do not condemn this until you have tried it. We have such confidence in it that if you try it and it does not cure you we will refund your money. It is a powerful penetrating oil that acts directly on the bone—the seat of the disease—and has brought deliverance to so many that we have no hesitation in saying it will deliver you. Here is one case:

Dear Sirs—I am free from rheumatism today because I used Tuck's Bone Oil. I had rheumatism in my hands and feet and thought at one time that my life was going to be ruined by it. I consulted a doctor and tried various remedies, but while some of them that I took internally made me feel better for a time none of them took the pain away. After I had suffered for six months or more doctoring all the time, I was advised to try Tuck's Rheumatic Bone Oil. I did and I never can be thankful enough to the man who told me to get it. I had not used a bottle until I was better and before the second one was done my joints were loosened up, the pain was gone and I was well. Tuck's Bone Oil did it. That was six years ago and I have not been bothered since.

H. S. Brown, Merrick, Ill.
For rheumatism, lumbago, neuralgia, sprains, coughs, colds, quinsy or bronchitis, in short for any and all kinds of inflammation there is nothing to equal Tuck's Rheumatic Bone Oil. A bottle should be on the shelf in every home. For sale by all medicine dealers at 50c, a bottle or sent prepaid by the Tuck Bone Oil Co., Limited, Smith's Falls, Ontario.

MURRAY CANAL.

NOTICE TO CONTRACTORS.

SEALED TENDERS addressed to the undersigned and endorsed "Tender for Concrete Structures" will be received at this office up to 10 o'clock on Friday, the 15th day of June, 1906, for the construction of concrete superstructures for the wooden piers at the entrance to the Murray Canal, and reinforced concrete bridges to span the openings between piers.

Plans and specifications of the work can be seen on and after Monday, the 21st of May, 1906, at the office of the Chief Engineer of the Department of Railways and Canals, Ottawa, and at the office of the Superintendent of Operation, Corawall, Ont., at which places forms of tender may be obtained.

The Department does not bind itself to accept the lowest or any tender.

By order,

L. K. JONES,

Secretary.

Department of Railways and Canals, Ottawa, 17th May, 1906. 24c

ATTEND THE BEST.

Ambitious young men and women who are contemplating a Commercial Education in shorthand, typewriting, bookkeeping, etc., or Civil Service course, will find the

Stoutens Business College

Kingston, Ontario.

the best equipped and most up-to-date business training institution in Eastern Ontario. Students may enter at any time, and all graduates are assisted to good paying situations. Write for catalog and rates.

THE HYPOCRITE'S HEART

It Is a Rocky Place, Seared and Scarred By
Habits of False Living.

"If therefore the light that is in thee be darkness how great is that darkness?"—Matt. vi., 23.

He who pretends to virtues he does not possess soon loses those he may have had. Professional holiness brings about the death of ordinary honesty. The most unscrupulous men in this world are those who make the noisiest parade of their scruples. It is never safe to trust your possessions to those who advertise their piety.

It is better to be honestly, avowedly bad than to attempt to acquire spiritual standing by means of padded assets. There is always the hope that the bad man may become good; his heart is soil in which good seed may germinate.

Professional religion spells the paralysis of religion. He who simulates emotions he does not feel, who excites himself into asserting convictions that have not gripped his heart, or who loudly proclaims virtues he does not practice, is sealing himself to the doom of all liars, that his life itself should become one dark, black lie, his soul forced to go on singing the songs of paradise while it still sinks deeper and deeper into the mire of perdition.

Let a man beware how he falls into the habit of substituting coats for character, shibboleths of holiness for the substance thereof. The love of the approbation of others.

THE DEMANDS OF SOCIETY.

the possibility of turning an honest penny out of a holy pretense, may all easily lead a man into the path of the living lie; many are the ways into it, but few there are who come out into truth again.

Self-deceit is the consequence of deceiving others, and a deadly consequence it is. A man ceases to discern the nature of his hypocrisy; his darkness seems to be light. He mistakes his simulated sanctity for that which springs from a chastened spirit and a pure love. So long has he fed himself on the husks of pretence that he has forgotten the clean and nourishing grain of reality. The simulation of emotions or of virtues benumbs the finest sensibilities and robs life of its keenest joys.

THE S. S. LESSON

INTERNATIONAL LESSON,

JUNE 10.

Lesson XI. Peter's Great Confession.

Golden Text: Matt. 16.16.

THE LESSON WORD STUDIES.

Note.—The text of the Revised Version is used as a basis for these Word Studies.

Items Chronological.—Returning from the vicinity of Tyre and Sidon, Jesus made a tour through the region of Decapolis, teaching and performing many miracles. Two of these miracles, the healing of the deaf man and the feeding of the four thousand, are specially mentioned, the former by Mark (Mark 7. 32-37), and the latter by both Matthew and Mark (Matt. 15. 32-38; Mark 8. 1-9). Both Matthew and Mark also record the fact that about this time the Pharisees and Sadducees approached Jesus, tempting him and demanding of him a sign from heaven. To all such demands for miracles, merely to satisfy the curiosity of some one, the answer of Jesus was either silence or a word of stern rebuke. In this case it was the latter (Comp. Matt. 16. 4). Mark alone inserts in his

If these hypocrites be nominal religious leaders, how heavy is their responsibility, how dark the day when the lights emit darkness. Men judge religion by its fruits. If your protestations of devotion do but increase your heavy heartedness, or, worse yet, do but serve your shiftiness and double dealing, you have, by your falsehood, built a barrier against the entrance of truth to your neighbor's heart.

Yet few are in a greater danger of paralyzing the good they have by pretending to that they do not possess than those who adopt religion as a profession. They are tempted to proclaim for others planes of living they have seen only far off as though they were already walking on them. They are tempted to pose as martyrs, to serve the truth

BY LIVING A LIE.

You can never give to others the truth, the moral impetus, or the soul uplift you do not have yourself. Many a sermon, though freighted with eloquence, comes empty to the heart of the hearer because it carries nothing from the heart, the secret place of life's verities. But when men find the man who, standing in the pulpit or by the wayside, tells them the things of his own life, that which he knows and feels so deeply he can no longer be silent, they listen, and, no matter how rudely or inelegantly the truth be told, they feel and thrill, soul answers to soul; they hasten to obey.

If you would be a light to others let your own light shine; one little candle may lead the traveler while the gaudy painted pretense but casts a shadow on his path. The size of your virtues is of less importance than their sincerity, their clearness and light.

The good we have is too valuable to be spoiled by turning the whole life into a lie in the effort to be credited with the good we envy. If you cannot grow great, luscious palms you may still keep fresh and beautiful your modest daisies; they are worth more to you and to a weary world that sees them from its dusty highway than the longest and most thrilling vistas of painted palms.

a tool in Satan's hands to tempt the Christ (verse 23) Jesus certainly did not give unlimited and absolute authority to bind or loose in the kingdom of heaven. To a Jew the expression, "the keys of the kingdom of heaven" could convey but one meaning. He was familiar with the custom of presenting to a scribe about to be admitted to his office a large key, symbolic of the fact that as a teacher of the Scriptures he was now to open the treasury of divine truth. In like manner Christ's words to Peter signified that Peter was henceforth to be a scribe or teacher in the kingdom of heaven. He, and those with him—for Jesus is still addressing him as spokesman of the group of disciples—were given authority to teach the truths of the Kingdom.

Whatsoever thou shalt bind—The meaning of the verb to bind in this clause is to impose as binding, and likewise the verb loose means to declare a precept or rule as not binding. The sense of the passage, therefore, is that the decisions of Peter and the other apostles as authorized scribes in the kingdom of God, will be ratified in heaven, that is to say, that all those who in obedience to their word shall seek to do the will of God through faith in Christ shall be saved.

23. Get thee behind me, Satan.—The suggestion of Peter assumes the form of a temptation to Jesus. Peter thus takes the place of the tempter or adversary. His argument is for the fact

TRIP THROUGH THE AIR

JOURNEY FROM LONDON TO BRIGHTON BY BALLOON.

Songs of Nightingales Two Thousand
Feet Below Have Strange
Effect.

Details of a fascinating balloon trip by moonlight from London to Brighton, England, which was successfully completed in the early hours of Wednesday morning, were given to a reporter.

The travellers were Frank Hedges Butler, C. F. Pollock, and Martin Dale. They ascended from Wandsworth gas works at 9 o'clock on Tuesday night, an hour and a half after the full moon had risen, in Mr. Butler's new balloon, the Dolce Far Niente, of 45,000 feet capacity.

The journey was made amid the ceaseless singing of nightingales, swelling up in one great chorus from 2,000 feet below. All night, too, the peewits called, and the cuckoos only rested for two short hours.

Through the glorious light of the moon, so clear and shining that the travellers could see to read the evening papers, summer lightning played continually with weird splendor. It was a night of rare delight for the naturalist.

Brighton was their intended destination. They wished to escape from the sweeter of London, and see some new phases of the earth, particularly to see the sunrise from a height of several thousand feet. They took their supper aboard, and kept a log of the journey.

LIGHTS OF LONDON.

"The first thing that struck us as we sailed away over Surrey," said Mr. Butler, "was the marvellous effect of the lights of London. It was a most impressive sight. Imagine millions on millions of lights, like a vast starry firmament, only upon the earth itself, with the lights of the great wheel at Earl's Court standing out for many miles into the heart of Surrey.

"And then our own electric lights were the cause of a most interesting state of things, for at an altitude of something like 2,000 feet they attracted a host of midges of gnats. We could not think it possible they could fly so high.

"Right through the night the blue lightnings vied with the silver moonlight in lighting our way; but when we lost the last of London's lights we lost all clues to our whereabouts, for we knew no familiar landmarks in the sleeping country underneath us.

"If we had been able to sail a straight course we should have kept our bearings all right, but the electric storm caused the wind to vary so much that it was only by descending now and then, and once by making enquiries, that we quite knew where we were. We did not want to find ourselves at sea.

SONG OF BIRDS.

"It was delightfully cool, the air so soft and genial that we needed no overcoats. The dead quiet (and no one can realize what stillness means till he has been up in a balloon at night) was only broken by the songs of birds. There must have been hundreds of nightingales singing the whole night through."

At the great height at which the balloon travelled the voices of all the nightingales in many square miles of country below would be heard, as Mr. Butler went on to describe, as one "constant chorus."

It was just after midnight that the cuckoos started calling, and these were heard about half a dozen together. Also the log-book contains the following entry: "2 a.m. Lark began." The peewits never ceased their plaintive notes.

"Once we heard a mournful moaning like the cry of a wounded dog," continued Mr. Butler. "We concluded that it was a fox caught in a gin.

"Half a dozen times we descended to rest, for we did not want to reach Brighton before dawn. The wind was never strong, however, so our journey was as steady as we could have desired.

HEALTH

FELONS.

A felon or whitlow is an inflammation of the hand or finger, usually of the last joint of the finger. Its importance varies with the seat of it; that is to say, with the portion of the finger involved. It may affect the skin only, the tendons or sinews, or the fibrous covering of the bone—the periosteum.

A superficial whitlow, where the inflammation is confined to the skin, may be extremely painful, but otherwise it is not a very serious matter; but this cannot be said of the other two forms.

In the tendinous whitlow pus forms in the fibrous sheath surrounding the tendon; and unless the inflammation quickly subsides, or the matter is let out by the surgeon's knife, the pus may burrow down through the sheath into the palm of the hand, and result in a permanent crippling of the member.

The third variety—called by physicians the sub-periosteal—is that in which matter forms beneath the membrane which covers the bone. As this membrane is tough and inelastic, the tension due to the increasing volume of matter becomes very great, and gives rise to a throbbing, maddening pain. The relief afforded by a deep cut into this inflamed finger, right down to the bone, is magical, although the cut hurts. This is the only treatment for this form of felon, and the incision should be made early, for if it is too long delayed the bone will be killed, and a discharging sore will remain which will later necessitate a surgical operation, even if it does not result in the loss of the last joint of the finger.

The superficial whitlow does not usually call for such radical treatment. A clay poultice often affords great relief. This may be made by making a paste of clay,—previously sterilized by baking in a very hot oven,—and adding glycerin to prevent too rapid drying; or the clay may be obtained ready prepared in the drug-store. This protects the finger from injury, keeps it cool, and if applied early enough, may prevent the formation of matter. When once pus has formed, however, no matter what the variety of the felon, the safest plan of treatment is to cut into the inflamed finger, and give exit to the confined matter and relieve the tension of the parts.—Youth's Companion.

HEALTH HINTS.

Many colds and more serious illness will be avoided by keeping the feet perfectly dry.

The juice of a roasted lemon squeezed on sugar and taken will often prevent a heavy cold from developing.

When bathing the sick add a small quantity of alcohol or bay rum to the water, to produce a refreshing sleep.

A mixture of camphor, sweet oil and turpentine applied to the affected parts will relieve neuralgia and sore throat.

Persons who wish to gain flesh should drink pure milk, hot or cold, in large quantities, remembering to sip and not gulp it.

Round shoulders are too often the result of sleeping on pillows that are too high, because a high pillow holds the head at an unusual angle.

Any clothing worn during the day should be loose in order that the air may pass freely through them.

People with poor digestion should drink no water with meals, but take a glassful half an hour before, and drink plentifully an hour or so after each meal.

Fruit is a great beautifier. Fruit, such as grapefruit, oranges, grapes and apples, aid in clearing the skin and preserving the freshness of youth which consists of bright eyes, living hair and a vital complexion.

The following is a splendid remedy for toothache: Saturate a piece of cotton wool in boiling vinegar and rub the gum around the aching tooth with it. Fill

ing him and demanding of him a sign from heaven. To all such demands for miracles, merely to satisfy the curiosity of some one, the answer of Jesus was either silence or a word of stern rebuke. In this case it was the latter (Comp. Matt. 16. 4). Mark alone inserts in his narrative the account of the healing of the blind man near Bethsaida (Mark 8. 22-26). In his journey through the region of Decapolis Jesus came finally into the region of Caesarea Philippi, far to the north. It was here that the incidents connected with Peter's confession, about which we are to study in to-day's lesson, occurred.

Verse 13. Caesarea Philippi—The most northerly point reached by our Lord. A Roman city, beautifully situated on a rocky terrace on the slopes of Mount Hermon, a few miles east of Dan, the old frontier city of Israel. Named after Herod Philip, and to be carefully distinguished from the Caesarea on the Mediterranean coast.

That the Son of man is—Many ancient authorities read that 1. the Son of Man, am (Comp. Mark 8. 27; Luke 9. 18).

14. Some say John the Baptist—For example, Herod, and doubtless many others.

Elijah—The famous prophet of the northern kingdom in the time of Ahab (Comp. 1 Kings 17. 1 to 2 Kings 2. 12).

Jeremiah—One of the greater prophets of the Old Testament who lived during the early part of the sixth century B. C.

16. The Christ—Lit. The anointed one, that is, the Messiah.

The Son of the living God—The question of Jesus, "but who say ye that I am?" had been addressed to all the disciples. Peter is therefore merely acting as spokesman for the group. There was no doubt in the minds of any of the disciples as to the divinity of Christ or as to his Messiahship.

17. Bar-Jonah—Lit. Son of Jonah, or Son of John. Bar is the Aramaic word for son; compare the names Bar-abbas, Bar-tholomew, Bar-nabas.

Flesh and blood—A common Hebrew expression to designate the human in contrast with the Divine. Not man but God had revealed to Peter the truth which he had spoken in his testimony.

18. Thou art Peter—(Gr. Petros) and upon this rock (Gr. Petra) I will build my church—In view of the enormous pretensions of the Pope and the Roman Church, based largely on this text, it is well for us to remember in the interpretation of this passage the careful distinction observed quite generally in classic Greek between the words Petra, the massive, living rock, and Petros, the detached, but large fragment. The church is built on the massive living rock (Petra) of prophets and apostles in unity with Christ. "Built upon the foundation of the apostles and prophets, Jesus himself being the chief corner stone" (Eph. 2. 20). (For other foundation can no man lay than that which is laid, which is Jesus Christ" (1 Cor. 3. 11). Of this living Petra Simon was a true fragment (Petros), firm and unyielding, hence worthy in the estimation of his Master to be surnamed Peter. Peter, then, is a worthy type of the Christian church, not, however, the foundation on which that church itself rests. It has been pointed out by some that Jesus, in all probability, spoke Aramaic, and that in that case there can have been no difference in the two words used; but the very fact that the evangelist narrator is careful to use the two Greek words seems clearly to indicate that he intended by this choice of words to point out the exact meaning intended by Jesus.

Gates of Hades—A figurative expression equivalent in meaning to the power of Hades, or of the underworld.

19. I will give unto thee the keys of the kingdom—It is clearly to Peter with the testimony to Christ's divinity on his lips that the words of this verse, as those of the last, are addressed. That Peter was not infallible is shown in the mistaken attitude which he took toward Jesus when the latter announced that he was soon to "suffer many things of the elders and chief priests" (Comp. verse 21). To a man who was soon to become

in obedience to their word shall seek to do the will of God through faith in Christ shall be saved.

23. Get thee behind me, Satan—The suggestion of Peter assumes the form of a temptation to Jesus. Peter thus takes the place of the tempter or adversary. His argument is for the false kingdom instead of the true. The fact that Jesus thus addressed Peter throws much light on the interpretation of verse 18 above. Peter, with the words of the tempter on his lips, is addressed as the tempter; with the words of truth on his lips, he is part of the very foundation stone of the church.

25. Whosoever would save his life shall lose it—To strive after the things of this life involves separation from Christian ideals and from Christ, and therefore separation, also, from life eternal. But devotion to Christ, regardless of consequent disadvantages in this life, insures the higher life with Christ in eternity.

28. Till they see the Son of man coming in his kingdom—Various explanations of the probable time referred to have been suggested: 1. the Transfiguration; 2. the Day of Pentecost; 3. the Fall of Jerusalem (70 A.D.). Many of the best commentators think that the last best fulfills the conditions of interpretation—a judicial coming—a signal and visible event, and one that would happen in the lifetime of some, but not of all that were present.

CANADA GOT \$17,408,178

INSURANCE RECEIVED BY THIS COUNTRY LAST YEAR.

Statement of American and Canadian Life Insurance Payments For 1905.

The Insurance Press of New York has issued its annual statement of the amounts paid by life insurance companies in the United States and Canada. Life insurance organizations distributed in the United States and Canada, in 1905, \$307,019,972. These figures represent what was paid to policyholders or their beneficiaries in the form of death claims, maturing endowments, or other benefits under the policies of level premium companies or the certificates of assessment orders. It does not include the sums paid by the regular companies in dividends to policyholders, cash surrender values, claims paid in foreign countries, or payments to annuitants.

The total payments in Canada were \$17,408,178, and this sum was exceeded only in the great commonwealth of New York, where \$62,473,353 were paid; Pennsylvania, where \$31,341,090 were paid; and Massachusetts, where \$20,773,947 were paid.

The following table shows the volume of payments to the twenty-five chief cities of the United States and Canada:

1—New York	\$26,785,797
2—Philadelphia	9,840,271
3—Brooklyn	9,182,463
4—Chicago	8,894,732
5—Boston	7,248,140
6—Baltimore	4,043,321
7—St. Louis	3,885,532
8—Cincinnati	3,756,832
9—Pittsburg	3,208,282
10—Buffalo	2,407,030
11—San Francisco	2,357,333
12—Detroit	2,307,852
13—Cleveland	2,268,856
14—Montreal	2,266,023
15—New Orleans	1,996,844
16—Newark	1,928,655
17—Washington	1,902,045
18—Providence	1,650,538
19—Milwaukee	1,562,478
20—Louisville	1,496,244
21—Toronto	1,450,610
22—Indianapolis	1,121,575
23—Denver	1,077,831
24—Jersey City	1,037,861
25—Rochester	1,021,803

The Canadian cities coming next are—Ottawa, \$605,519; Quebec, \$493,788; St. John, N.B., \$408,971; Hamilton, \$203,868.

like the cry of a wounded dog," continued Mr. Butler. "We concluded that it was a fox caught in a gin."

"Half a dozen times we descended to rest, for we did not want to reach Brighton before dawn. The wind was never strong, however, so our journey was as placid as we could have desired. Sometimes we dropped in gentlemen's parks, the car resting lightly on the ground, and the inhabitants of the mansion close by sleeping, all unconscious of our presence."

LIGHT ENOUGH TO READ.

"We never left the car. If one of us had done so the balloon would quickly have risen to an altitude of something like 15,000 feet. We could not smoke, either, but we could always read, though we much preferred watching and listening."

"At about 2 a.m., just as the first lark soared singing to us, we dropped, thoroughly mystified as to our whereabouts, in a rookery close to a house. The rooks, startled out of their sleep by the sudden advent of our great car among their nests, made an extraordinary clamor."

"We hallooed, and very quickly, what with our noise and the increasing cawing of the rooks, a gentleman put his head out of a bedroom window. Judge of his surprise to see us sitting in the top of his tree with the great balloon towering above. A conversation after this sort passed:

"'Goodness, gracious! Who are you?'
" 'Balloonists resting. Where are we?'
" 'Twelve miles from Brighton, going south. Are you stuck?'
" 'Oh, no. We're very happy. You don't mind us sitting on the top of your tree, do you?'
" 'Not at all. Good night.'
" 'And then the window banged, and I should think he was soon snoring. But the rooks didn't settle down so quickly. 'It was during one of these rests, by the way, that we ate our supper, afterward reascending into the moonlight and lightning. But when we found ourselves on the south side of Redhill we trailed all the way, otherwise we should have reached the sea too soon.'"

SO LIKE A WOMAN.

Jack Crosby and his sister were going to a birthday party the other evening, and Jack was tuning and fretting in the hall, where he was waiting for his sister to "hurry up," or everything would be over before they got there.

Presently the girl came hurrying down the stairs, and, glancing at her brother, said:—

"Oh, Jack, wait a moment! You—" "What now?" said the brother, furiously. "I never saw the equal of you women! We have been to several parties together, and not once, no, not once—have I ever known you fail to forget something and delay us just when we ought to be off. It's always your handkerchief or your fan or something that—"

"But, Jack—" "Go and get what you've forgotten, and don't stand there excusing yourself forgetting it. All the other guests must be there by this time, and here you are—"

"Jack, listen to me! I—" "You've forgotten your fan, I suppose? Well, tell me where it is, and I'll go and get it for you. I don't know when we should ever get—" "For goodness' sake, Jack, keep still and—"

"How can I keep still when you provoke me so? Here I've been all dressed and waiting a solid half-hour, and you come down simply to tell me that you have forgotten something and—" "I haven't forgotten anything, Jack."

"Then what under the sun and moon and stars are we waiting here for?" "Simply because you have forgotten to put on your necktie."

"What! No necktie?" "No; you haven't any necktie on, and I'm not going with you without one, for—"

"Goodness!" cried Jack. "Why didn't you tell me that I didn't have on a tie, and not stand there staring at me and saying nothing? You girls beat anything I ever heard of."

pies, aid in clearing the skin and preserving the freshness of youth which consists of bright eyes, living hair and a vital complexion.

The following is a splendid remedy for toothache: Saturate a piece of cotton wool in boiling vinegar and rub the gum around the aching tooth with it. Fill the cavity in the tooth with wool. If the pain does not cease within five minutes make another application.

WORK OR PLAY.

Do not exhaust yourself and use up all your nervous energy over petty cares. Remember every time you lose control of your nerves that you take a fresh step down the path that leads to premature old age. Do not pester, but work when you work, and rest when you rest. Put work away and play when you play. Do not fret, do not worry, and do not nurse troubles. This is such a pernicious habit, and one that works much evil to us and ours in this should-be-happy world.

AN INVALID'S BED.

In cases of long illness it is a great relief to the invalid if the patient has one bed for day and another for night. This seems a trivial matter to one in good health, but it is not so really. A fresh bed is a great incentive to sleep, and it will be found that the patient will sleep more soundly, and be more refreshed after, if his bed is changed. Single beds are much more comfortable for invalids than double ones, and, moreover, they are more convenient for the nurse.

LABRADOR IS A PEACEFUL LAND.

There Is No Court or Jail, Magistrate or Policeman.

Sir William MacGregor, Governor of Newfoundland, of which Province Labrador is a dependency, has recently issued a report of scientific and official visit which he made to that remote seaboard last summer, and among other aspects of the subject he treats especially of the absence of crime in that region.

Labrador, Sir William says, has a resident population of 10,000, of whom 3,500 are white, settled along its south coast. Many of the Indians are half-breeds, and there are 3,000 Esquimaux scattered along the northern waterfront. In addition it is visited each summer by some 20,000 Newfoundlanders, who engage in fishing, which is the chief pursuit of these people. Yet there is no court or jail, magistrate or policeman or any other officer of the law on these 1,000 miles of seaboard, where all these people are wrestling a subsistence from the ocean. For thirty-three years there has been no session of court held, and in fifty years the only criminal charge which is recorded is that against an Esquimaux whose jealousy was aroused against a rival in his wife's affection, and who shot the man as he walked with her. Forty years ago there was a circuit court sent there every summer, but as it found nothing to do it was abolished. In the past Labrador was a famous pirate stronghold and required a French squadron to reduce it.

Unusual attention has been called to Labrador within the last year and this may lead to a change. When any serious charge is made now a magistrate is sent from Newfoundland to attend to it.

HORSES THAT COUNT.

A Russian doctor has spent a great deal of time finding out what animals can count, and has found that horses can count more numbers than any other animals. He states that a parrot can count four, a cat six, crows ten, and some few dogs twenty. But he found horses that could count more than this. One would plow across a field twenty times, and would then stop and rest, but it never stopped at nineteen or twenty-one; always just twenty. Another horse always counted the miles along the road by the white mile-posts that were set up, and stopped every twenty-five miles, as it had been taught to do, to be fed.

GRAMOPHONE A WITNESS

IT GIVES EVIDENCE ON ITS OWN BEHALF.

"Bedelia, I'd Like to Steal You." Worries the Life Out of Young Married Couple.

That very much up-to-date and more or less musical instrument, the gramophone, had a lawsuit all to itself the other day in the High Court, London, England. During the proceedings it gave evidence on its own behalf.

The suit was technically one asking for an injunction and claiming damages for broken health.

In opening the case Mr. Hume Williams, K.C., transported his hearers to placid Littlehampton-on-Sea, where he showed them a pair of semi-detached villas separated by a party wall.

JUST AT BEDTIME.

In one of those villas, the one styled Townsend, there came to reside early last year a young couple who had just got back from their honeymoon. They were Mr. H. A. Butt, a timber merchant and his wife. Among the many things they shared in common was a dislike for gramophones when set a-going after bedtime, which, in their case was eleven o'clock p.m.

It so happened that in the semi-detached villa next door there lived, with his family a Mr. Griffith. This gentleman, said Mr. Williams, was very fond of entertaining, and of an exceedingly cheerful disposition. He loved to hear the merry sound made by the gramophones, and suchlike producers of harmony.

GRAMOPHONE'S ARRIVAL.

At first Mr. Griffith was content with the liveliness engendered by the family of seven children, a strong-lunged dog, and a phonograph; but after a short while he went away for a holiday, and returned the proud owner of a £20 gramophone.

This instrument had a most extensive and, in Mr. Butt's opinion, noisy repertoire, including "Bedelia." Mr. Griffith's favorite was "Bedelia," and by an unfortunate coincidence "Bedelia" was Mr. and Mrs. Butt's bete noir.

The gramophone played "Bedelia" and other selections at all hours of the day, Mr. Williams' tale of woe continued, and, worse still, went on playing it at all hours of the night.

"HOME SWEET HOME."

Mr. Williams said that he was quite prepared to admit that the Griffith house was sweet, but why should this fact be emphasized by the playing of "Home, Sweet Home" six times in succession? The charms of "Bedelia" would pall in the ears of any ordinary person after it had been played a hundred times.

Counsel endeavored to indicate to the court what a sad effect the energy of the gramophone had had on the nerves of the young married couple, and with this end he called into the witness-box Mr. Butt himself, a low-spoken, pleasant-looking young man, who carried in his hand a small pocket diary.

This proved to be a diary compiled by Mr. Butt in truly remarkable circumstances. At night, when the gramophone became very energetic and Mr. Butt was aroused from slumber by its strains, he took the diary from his pocket, switched on the electric light, and recorded his impressions. Here they are, as read to the court by Mr. Butt, in a voice ringing with pathos:

"Had no sleep since awakened by gramophone. Loud gramophone started at 2.15.

LOUD CORNET SOLO.

Had to have dinner in hall, as noise was insupportable. Sunday night had to leave supper unfinished and leave table.

"Had to quit lunch on account of

SEA WAIFS LONG TRIPS

DERELICTS THAT CRUISE FOR THOUSANDS OF MILES.

British and American Navies Occasionally Destroy Them — Record-Breaking Journeys.

The quest by British warships and the Newfoundland sealer Adventure for the derelict freighter Dunmore, adrift in the ocean shipping track since January, emphasizes the necessity for some concerted measures by the great marine powers for ridding the North Atlantic of these dangers to traffic, writes a St. John, Newfoundland, correspondent.

When we recall how the Elbe was sunk by collision with the collier Craithie after leaving Southampton on a snowy winter morning in January, 1895, and when we remember how the Bourgoigne went down after striking the bark Cromartyshire on the Grand Banks in a summer fog in 1898 it requires little effort of the imagination to conceive of similar, if not worse, disasters due to derelicts, which roam at will over the waters of the Western ocean.

It is not unreasonable to conclude that through such cause the Naronic vanished in February, 1893, with 72 souls; the Georgia passed from human ken in March, 1897, with 54; the Huronian was blotted off the ocean in February, 1903, with 49, or that a score of tramp freighters were sent to the bottom in the last fifteen years.

Special interest attaches to the Dunmore because hers is one of the comparatively rare instances where a metal derelict has remained above water any length of time after being abandoned, and because, moreover, she lies in the liner track and is thereby a more serious danger to transatlantic shipping than any other tenantless shell of modern times. Usually when a steel or iron craft is abandoned she is

ON THE POINT OF SINKING.

The Dunmore left Cardiff on December 20th for Newport News, was buffeted by tempests the whole way, had her shaft broken and her hull so strained that the leaks threatened speedy submersion. Her crew were taken off and she was left adrift, remaining above water for three months, being sighted by more than twenty passing steamers thus far.

The complaints of owners of other ships spurred the British admiralty to action and they ordered cruisers from Bermuda to proceed in quest of her, while the underwriters had the Adventure sent out from this port on a similar quest, to tow her to port. The Adventure failed to locate her, not possessing wireless telegraphy, and, therefore, being unable to learn where the wreck was last seen, and the two cruisers scoured the ocean for a long while in the endeavor to bring her aimless voyage to an end.

The most common derelicts are lumber-carrying vessels of wooden build and moderate size which meet bad weather, become dismantled, and having no steam power are helpless waifs in the Atlantic fairway, sometimes drifting about for months, if not for years, because their buoyant cargoes will not let them sink.

One of these, the Alma Cummings, an American schooner from Boston, made a record voyage of 54 days, during which she covered 5,000 miles, and was sighted over 50 times. She was caught in a blizzard off Cape May in February, 1896, and her masts and rigging were carried overboard, the jagged stumps of the spars battering her sides apart. The seas swept everything overboard, flooded her hull and cabin, drenched her food stuffs with brine and formed a coating over the deck three feet thick. The wretched crew, the matches being all soaked, could not make a fire to warm themselves until they fired a rifle into a can of kerosene

being stricken down by scurvy, and the two ships barely escaped a collision, there being only a boat's length between them when the wind drove them apart. The steamer was helpless for eight hours, during which period the Oakes was driven out of sight by a storm. The Kasbek's engineer had to force out her shaft by means of wooden plugs. The hawser was worked clear of the propeller and then the steamer started off in quest of the Oakes, sighting her again some hours later in a worse storm, which lasted for two days, during which time it was impossible to send a boat to her, but the steamer lay by her till the weather abated and then took the effective steps to succor the crew and get the craft under control.

It was found that everybody on board the Oakes was afflicted with scurvy, of which five seamen had died.

SAVE THE CAPTAIN'S WIFE,

upon whom, through sheer pressure of necessity, much of the labor of working the ship fell. The second and third mates were unable to go aloft. The Chinese steward was also incapable of sailor tasks. Twelve seamen lay in their berths helpless. The captain had been stricken with paralysis. In the China Sea two typhoons drove the ship out of her course, and, though intending to round the Cape of Good Hope, she had to make for Cape Horn.

Another remarkable case was that of the steamer Perthshire, off the Australian coast in 1899, which drifted about for 45 days helplessly, covering 1,400 miles before being rescued. On April 26th she left Sydney for Bluff Head, a four-day voyage. On May 26th a schooner put into Sydney reporting that she had sighted the missing steamer two weeks previously, when the Perthshire had been adrift ten days without sighting a sail, her propeller being broken clean off in the tailshaft and her spread of canvas being too limited to give her even steering way.

As she had nearly 70 persons aboard and was drifting north toward some evil reefs, every available craft was sent in quest of her, including two warships, several liners and a flotilla of tugs. Eventually, the steamer Tolune came upon her before daylight on June 13th, some 750 miles off her course, the Perthshire being described just an hour before the Tolune's captain had determined to abandon the search. A tow line was passed and for 36 hours the Tolune got her along. Then a heavy sea tore them apart and to get them coupled again rockets, with lines attached, had to be fired from one ship to the other.

Another almost incredible story of a derelict is that of the wooden bark Siderelict is that of the wooden bark Siderly 16, 1899, lumber laden, for Liverpool, and became dismasted in a gale, a heavy sea then drenching her from stern to stern, destroying all the provisions and carrying away the galley. For twenty days her crew of twelve subsisted

ON RAW POTATOES.

The captain had his forehead laid open and one eye blinded by a blow from a stanchion; the boatswain had an arm broken, the chief mate and two seamen were stricken with serious illness due to their weakened condition, and as day succeeded day without prospect of rescue despair settled upon all.

Two steamers passed without sighting her, and then the Norwegian bark Verdanee came by and took them off. For nearly five months after this the derelict drifted helplessly about the ocean, covering more than 1,800 miles, and being reported no fewer than 41 times. The captain of the steamer Oakmore set her on fire in hope of ridding the seas of such a menace, but the fire failed to destroy her. Ultimately, after a chorus of complaints from steamship captains as to her obstructing the liner track 300 miles off the Irish coast, H. M. S. Melampus was sent out and secured her, towing her into Bantry Bay, where she was subsequently used as a coal hulk.

There are more than 120 derelicts logged by the marine officers as being adrift in the North Atlantic at the present

YOUNG FOLKS

AN ALPHABET OF INANIMATES.

U was an Umbrella
Who mourned one day,
'When I am shut up,
I have nothing to say.'
Useful Umbrella.

V was a Vase
Who said to itself,
'I must be quite old;
I am placed on the shelf.'
Valuable Vase.

W was a Wheel
Who, when they enquired
Why he did not go,
Replied he was tired.
Weary old Wheel.

X was a Xebec.
A very fine boat,
Who said, "I can't swim,
But I think I can float."
Excellent Xebec.

Y was a Yardstick
Who said, "I've three feet,
So I think I will take
A walk down the street."
Yellowish Yardstick.

Z was a Zither
Who hadn't a tongue.
But he said that, he felt
Completely unstrung.
Zealous old Zither.

THE LITTLE RAILROAD HERO.

Andy, ~~name~~ was a little country boy. Sometimes he wore a cap and sometimes he did not. He, perhaps, thought his shaggy hair was a good enough covering for his head. He did not care at all about his looks. He knew a great deal more about squirrels and bird's-nests than he did about the fashions.

Andy's home was a rough house on the side of a hill. It was built of mud and logs, with holes for windows.

Now, perhaps you may wonder how we are going to find a little hero in a poor country boy, living in a mud house. But wait a little. The diamond is a coarse, dull stone till it is cut and polished; and there was the heart of a true hero under Andy's torn jacket.

Near the hut of Andy's father was a railway. The boy often watched the black engines as they came puffing fast, giving out great clouds of steam and smoke, and screeching through the valleys and under the hills like mad things.

One day as Andy was crossing the line, he saw that there was something wrong. He did not know much about railways, for he was very young; but something was surely wrong, and Andy had heard of carriages being thrown off when the rails were out of place.

Just then he heard a low, distant noise. A train was coming! He was only a boy, but perhaps he could stop the train in some way. He felt that he must try, for there was nobody else to do it.

Andy never thought that he might be killed, but went and stood right in the middle of the line, just in front of the place I have told you about, and stretched out his little arms as far apart as he could.

On, on came the train, nearer and nearer, and louder and louder! The driver saw the boy on the line, and whistled for him to get out of the way. Andy did not stir an inch.

Again the engine whistled. The boy never moved; he might have been made of stone for all the notice he took of it. So the driver had to stop the train.

He jumped down from the engine, and ran along the track towards Andy. The train was late, and the driver was angry. But when he saw how the brave little fellow had saved his life, and the lives of all the people in the carriages, his anger changed to gladness.

LOUD CORNET SOLO.

Had to have dinner in hall, as noise was insupportable. Sunday night had to leave supper unfinished and leave table.

"Had to quit lunch on account of gramophone's noises. Gramophone started at 10.10 in the evening. Loud cornet solo still at it past eleven o'clock, when we were undressing.

"Noise of gramophone was such that we could not say our prayers in the bedroom on account of it.

"The gramophone roared out. Thought spout of gramophone had been put in the chimney to make it louder in our room.

"Mep' (Mrs. Butt) was so upset that she had to lunch at the Ferns. At 1.15 the gramophone was belching out 'Bedelia'.

"Bedelia" was started just before 9.15. It seems as noisy as a smoking concert.

"Wife very poorly and gramophone belching hard.

"Gramophone played 'Loch Lomond,' 'Bedelia,' 'Killarney,' etc. Although I stuffed the bed-clothes into my ears the noise was dreadful.

"Wife in dead faint on floor. Her nerves a wreck."

DRIVEN FROM HOME.

Mrs. Butt's tale was even more pathetic. She had had to get up in the middle of the night and retreat for refuge into a room as remote as possible from the gramophone. She had asked her husband to take her out of the house for a walk, even though it was in the small hours of the morning, to be out of earshot of the instrument.

Hardly had Mrs. Butt completed her evidence when the maligned gramophone was borne proudly into court by its attendant. It was of enormous size, and painted a brilliant red.

"We will hear it play," said Mr. Justice Jeff.

Mr. Hume Williams protested. "Your Lordship adds to the horrors of litigation," he exclaimed entreatingly. "Surely not here. Let us have it in the next court."

But his Lordship was obdurate. "We will have it here and in the next court, too," he said.

Thus it was that the gramophone was called as a witness. It did not go into the witness-box, but began its testimony from a seat on the solicitors' table. It sang a song that was the reproduction of an effort of Signor Caruso's.

HAPPY ENDING.

"We want 'Bedelia,'" demanded Mr. Hume Williams. The gramophone at once obliged, and the curious spectacle was seen of the judge and jury, and smiles, revelling in the glorious refrain:

Bedelia, I'm going to steal yer,
Steal yer, Bedelia, dear.

At the judge's suggestion the instrument was removed to the corridor between the bench and the judge's room, where it obliged with an encore.

Here it continued to dispense "Bedelia" until a judge from another court, as it was rumored, sent round to threaten to commit it for contempt.

There was a happy ending to the case in the afternoon. The parties agreed on a "modus vivendi," and the judge suggested an amount which it would be fair that the aggrieved Mr. Butt should receive towards his legal expenses.

Every man is willing to patch up a quarrel—providing he is allowed to select the patch.

At a dinner-party recently a lady illustrated admirably a point which she wished to make in reply to a man who had just said that "women are vainier than men." "Of course," said the lady, "I admit that women are vain and men are not. There are a thousand proofs that this is so. Why, the necktie of the handsomest man in the room is even now up the back of his collar." There were six men present, and each of them put his hand gently behind his neck. And the ladies smiled.

overboard, flooded her hull and cabin, drenched her food stuffs with brine and formed a coating over the deck three feet thick. The wretched crew, the matches being all soaked, could not make a fire to warm themselves until they fired a rifle into a can of kerosene of that set the hull on fire, and the blaze attracted the steamer Queensmore, which rescued the crew, the idea being that she would burn so that the seas would.

EASILY TEAR HER APART.

But the wood of the cargo was too wet, the fire failed and she started on her long voyage around the Atlantic. At various times she was seen, till she nearly reached England; then she drove south past the French coast; next she was sighted off the Azores; later she appeared near the Equator and, finally, after eighteen months she drifted ashore at San Blas Island, near Colon, Panama Isthmus. During her amazing cruise at least six ships tried to set fire to her, but without avail and though she was burned to the water's edge, she remained afloat.

A derelict lumber-carrier with an almost equally curious record was the Fannie Wolston, which was afloat for 1,407 days and covered more than 9,000 miles but her voyage which was apparently much longer than that of the Cummings, was really not so, because she spent much of her time crossing and recrossing her own tracks, moving around in circles about 200 miles off the Atlantic coast, being sighted by no fewer than 46 ships during her aimless wanderings.

Her range was from the Delaware capes south to the lonely Sargasso Sea, her swinging round this circle occupying about two years. She then went back and forth through this ghostly region, and next started north for Florida, off which coast she was sighted 23 times by other vessels. She then made two more circles and then went north, being about 600 miles off Cape Cod when last sighted. It is supposed she went down, probably by being struck by another vessel, as she was never seen again.

The Norwegian barge Birgitte of Grimsstad, while bound from Mobile to Queenstown with pitch pine, was abandoned, with all sails standing; but her bowsprit gone and her hull leaky. On February 17, 1896, her crew were taken off by the British steamer Snowflake near the Irish coast, and for four months she drifted to and fro across the tracks of the Atlantic passenger liners. She was sighted no less than 22 times and the British admiralty sent out a warship which found her and

TOWED HER TO LAND.

This process was also adopted by the French admiralty with regard to the British brig Hyaline, which had traveled 3,500 miles and been adrift 411 days, being sighted nineteen times before she got near enough to the coast of France to enable a warship to secure her. She had been several times set afire, but refused to burn, and she was merely a hulk when secured.

These cases refer to crafts which are tenantless on the ocean, but there are as many instances on record of waifs which retain their crews. Perhaps the most remarkable of all these was the sky sail clipper T. F. Oakes, the first American iron square rigger ever launched. She enjoyed the distinction of being one of the very few vessels ever posted at Lloyds as missing and subsequently showing up. She left Hong Kong on July 4, 1896, for New York, for which voyage her usual time was about 120 days. She was out more than 250 days, and not reinsurable, her agents having given her up as lost, and the relatives of her master, Captain E. W. Reed and his wife, who was on board with him, had gone into mourning. Then on the 260th day, March 22, 1897, she was brought up in New York, having been towed in by the oil tank steamer Kasbek, which came upon her 300 miles east of Sandy Hook, the steamer being outward bound from Philadelphia.

In trying to take her in tow the hawser caught in the steamer's screw and jammed it, rendering her helpless. The Oakes was equally helpless, her crew

M. S. Melampus was sent out and secured her, towing her into Bantry Bay, where she was subsequently used as a coal hulk.

There are more than 120 derelicts logged by the marine officers as being adrift in the North Atlantic at the present time, two lumber-laden craft, the Bronson H. and the Mary Mannering, being right in the liner track east of the Dunmore. Along the Atlantic seaboard from the Florida Reefs to Cape Race is a procession of drifting waifs. At times the American Navy sends out a gunboat to destroy some specially objectionable or dangerous hulk, the British admiralty doing the same on the other side. But there is no concerted policy for ridding the ocean lanes of them, and no general crusade by these two governments.

MARRIAGE TANGLE.

Signor Zenone, of Milan, Does not Know "Where He Are."

Cases of persons getting married without their knowledge are fortunately rare, which is all the more reason to sympathize with Signor Zenone Panarani, of Milan, Italy, who is sorely perplexed. In fact, he does not know "where he are," and no one can tell him. The circumstances of his strange predicament are as follows: Zenone's brother, Roberto, a married man and the father of a family, became enamoured of a young woman named Poddighe, and married her, posing as his bachelor brother Zenone, whose identification papers he had in some manner managed to purloin. Thus, Roberto Panarani led a double life. Recently he died somewhat suddenly, leaving things in a pretty mess. For Zenone found himself to his great surprise married to a young woman he had never met, and the latter discovered that she was sister-in-law to herself—a brain-racking complication hardly rare in civilized countries. The question now is: Can the parties be legally divorced in Italy under these circumstances? Though the case is a painful one, especially to Roberto Panarani's first wife, yet the comic element is not lacking, and, suitably elaborated, might serve as the central plot of a stage play.

ANOTHER ALPINE DISASTER.

Lady on Tourist Coach: "I say, driver, do serious accidents ever happen on these mountains?"

Driver: "Oh, yes, ma'am. Do you see that mountain up there?"

Lady: "Yes."

Driver: "Well, one day last year a party of ladies and gentlemen started from here to climb that mountain, and we never saw them again."

Lady: "Indeed! What happened to them?"

Driver: "Oh! they went down the other side."

He jumped down from the engine, and ran along the track towards Andy. The train was late, and the driver was angry. But when he saw how the brave little fellow had saved his life, and the lives of all the people in the carriages, his anger changed to gladness.

Everybody got out of the train to see what was the matter. Then they saw that if Andy had not stopped the train, the carriages would have been thrown down a steep bank and dashed to pieces. The ladies kissed Andy's rough, freckled face, and cried over him; and the gentlemen, as they looked at their wives and children, wiped their eyes, and said: "God bless the boy!"

And that is not all. They took out their purses and made up a large sum of money for him, not to pay him for what he had done—they knew they could never do that—but to show the little lad, better than words could show him, how grateful they felt to him.

Good, brave little Andy! The passengers all wrote down his name—Andy Moore—and the place where he lived.

Fifteen years have passed since Andy's brave deed, and if you wish to know where he is now, I will tell you. He is a driver on this very railway.

SENTENCE SERMONS.

Life without restraint is without righteousness.

Trains of lies are made up by switching the truth.

A little great man can always be filled with vanity.

Strength in public must have sources in private.

The funeral kind of religion is most properly dead.

You cannot learn to be a guide by studying a guide book.

He who stands for the right will not come to a standstill.

Reverent reasoning may be the best kind of a revelation.

Ethics is good, and so is a motor; but it needs a dynamo.

No man gets worthy riches unless he is willing to be poor.

Only the dead heart wants to be dead-headed to heaven.

You cannot separate society from sin by separating yourself from society.

It is never safe to trust the man who carries his virtues on the tip of his tongue.

People will believe in the virtues of your character without the evidence of its vinegar.

A man's vocabulary is measured by his dictionary; but his message depends on his heart.

You do not have to throw prudence to the winds in order to prove that you steer by principle.

When a man talks about the necessity of the divorce of religion and business the chances are that he is not acquainted with either.

First Diner: "That waiter is either a dunce or a humorist." Second Diner: "What's the matter?" First Diner: "I ordered extract of beef, and he brought me milk."

OPEN FOR SUGGESTIONS.

"Sonny," said the good old man, "I'm surprised that you should tease the dog in that way."
"Why?" replied the boy, pausing in his inhuman work, "do you know any better way?"

THOUSANDS OF VICTIMS CHINA OPENS HER EYES MAKE-BELIEVE SOLDIERS IN MERRY OLD ENGLAND

SLAVE TRADE FLOURISHES IN PORTUGUESE AFRICA.

The Poor People Are Sent to Work in Plantations Under Alleged Five-year Contracts.

Henry W. Nevinston writes as follows concerning the slave trade in Portuguese Africa:-

Just a year ago I was starting for my walk of 300 miles across the Cuanza River and through the Hungry Country of Angola, south of the Congo State. I had already come up from the West Coast by a roundabout route to the district of Bihe, and there I joined the path which has for centuries been one of the chief trade roads into the interior. It is merely a track in most places so narrow that you have to walk like a native, putting one foot exactly in front of the other, but it leads in almost a direct line from the sea near Benguela across the thirsty mountain belt, to the copper ranges of Katanga, and so to the lakes and away to the eastern sea. And this little track, which turns and twists to avoid every tree stump and tuft of grass, has from time immemorial been one of the great slave routes of the world.

SHACKLED SLAVES.

It is so still. As I entered the Hungry Country I found slave shackles hanging on almost every bush. They are the wooden fetters with which the hands or feet of the slave are tied at night, or with which slaves are linked together on the march.

The path through the Hungry Country is strewn with bones and skulls, and I found there the fresh bodies of slaves, some murdered, some left to starve, because through fever or fatigue they had been unable to keep up with the party on the march, and in going through the Hungry Country no one waits.

STOLEN OR BOUGHT.

In most cases the slaves are originally obtained by natives, who buy them on some charge of witchcraft, or for debt, or for drink. Sometimes they are kidnapped, or captured in raids. Sometimes they are mere plunder of Portuguese traders. They are brought to the so-called "emigration agents," who are established at various points in the country under Portuguese regulations, and are forwarded by them to the coast, where they are received by other agents, chiefly at Benguela, but also at Novo Redondo and Loando. The average price given for emigration slaves is £16, though I have known a man give as much as £25 there for a really nice-looking girl! She, however, was not required for emigration.

TO WORK ON PLANTATIONS.

Large numbers of the slaves are kept to work the plantations on the mainland or other industries along the shore. But I wish now to speak only of the export trade to the Portuguese islands of San Thome and Principe, in the Gulf of Guinea. The slaves are conveyed on the ordinary passenger steamers, which run about once a fortnight. A day or two before the steamer starts they are collected in a public building before a Portuguese official called the Curador. They are asked whether they are willing to labor on the islands for five years. Not the slightest attention is paid to their answer. A tin disc with a number and a tin cylinder containing a paper with particulars as to their names, etc., are hung round their necks, and having entered the office as slaves, they go out as "contracted laborers." The planters pay from £26 to £30 for a grown slave delivered in good condition.

NEVER GO BACK.

It is almost entirely for the cultivation of cocoa that the slaves are required, and the cocoa trade is now of

COMMISSION VISITS THE WORLD'S METROPOLIS.

Study People, Manners and Customs—Visit Public Buildings and Scotland Yard.

Members of the Imperial Chinese Commission did not enjoy the sights of London. Their object in visiting the world's metropolis is to study the customs of the English people, and they go quietly around in hansom cabs, with note books ever in use observing and observed.

KIND OF FIELD DAY.

They drove on to the Law Courts and were duly introduced to Mr. Justice Grantham, of the King's Bench Division. His Lordship took the commissioners with him into court, and invited them to take seats on the bench.

Mr. Justice Grantham explained to the jury and the bar that the commissioners had come to England to study our customs, and particularly our laws. With the object of seeing an English court of justice, with its jury, barristers and judge at work, they had therefore visited this court. Unfortunately, his Lordship continued, the chief commissioner, Duke Tsai, had found the English, or rather London, climate exceedingly trying, and was at present laid up suffering from the effects of the London atmosphere, with its very large admixture of smoke and coal fumes.

VISIT SCOTLAND YARD.

Through the interpreter, his Lordship then with great care explained the modus operandi of court procedure to the commissioners, especially the first case on the list about to be begun. The commissioners took the deepest interest both in the explanation and in the subsequent proceedings as the case went on. The commissioners then went into the Lord Chief Justice's court, and for a while observed the court at work there.

In the afternoon a visit was paid to Scotland Yard, where the head officials did everything in their power to explain the principal workings of the great criminal bureau. The detective section greatly interested the visitors as the system was unfolded for their instruction. The Thieves' Gallery, the fingerprint section—copied directly from the Chinese criminal department, where it has been in use thousands of years—the criminal measurement department, the offices and elaborate system of photography, bookkeeping, and reference, all excited the wonder of the visitors, some of whom have had extended experience in the Imperial Chinese police service.

Yet another event was a visit to the headquarters of the London Fire Brigade.

The commissioners visited Fleet street by night to see the great newspapers being produced and despatched.

FIVE TONS OF GOLD.

Armed Guards Protect One Hundred Thousand Sovereigns.

The Cunard steamer Lucania, which left Liverpool for New York recently, had on board five tons of bullion and specie valued at half a million sterling. A portion of this shipment was in the form of 100,000 sovereigns, which were carried by special train from London to Liverpool.

The most elaborate precautions were taken at Euston to safeguard the treasure. It was brought from the British Liner Bank in ten wooden boxes, bound with great hoops of iron. Guarded by specially selected detectives and constables, it was placed in a special bullion car, which can hold £200,000 in gold.

The car was locked and armed detectives took their places in a small compartment at the rear of the bullion

GEN. KITCHENER TALKS TO ARMY CORPS IN INDIA.

The Brother of Lord Kitchener Hits Straight From the Shoulder.

Gen. Walter Kitchener, who commands the Lahore Division of the Northern Army Corps in India, has delivered a striking address to the British officers, after some arduous field operations at Lahore.

"Gentlemen," he says, "you have had two hard days' manoeuvring. You have been knocked about; you have suffered hardship in the field. You have been compelled to bivouac all night in the open, on the cold, dewy ground. Possibly some of you didn't like it; possibly some of you didn't like me for ordering it. My critics, I know, say of me that I am a confounded enthusiast. Well, I must admit that I am an enthusiast; I even hope that I shall be able to infuse enthusiasm into you, gentlemen. I am fairly of opinion that a field-day is no good—is a waste of time and a waste of energy—unless it lasts for more than twenty-four hours.

HUNGER, THIRST FATIGUE.

"You cannot produce in a field-day which lasts only a couple of hours the severe conditions of real warfare. You cannot produce in a couple of hours such conditions as hunger, thirst, fatigue, discouragement, exhaustion; yet unless you can produce these and the other hard conditions of genuine field service you cannot learn useful, practical lessons from your manoeuvres. It is all very well to manoeuvre on paper or to manoeuvre in theory, but what you have to learn is that theory is governed in practice by the limitations of human nature. You have, therefore, to find out exactly, what your men are capable of doing, how far their fighting spirit can be maintained under adverse circumstances, what are the limits of their powers of endurance, how far you can trust them to press a strong enemy when they are hungry and weak and decimated. All this you can discover only by extending the period of field exercises in peace time from hours to days. This is why I have had you out in bivouac, and worked you in a way that some of you may have thought severe. And this is why I say to you that if you do not understand and appreciate these extended field-days, and would prefer just a morning manoeuvre, you would do better to stay at home altogether.

RECALLS BOER WAR.

"A field-day fitted in conveniently between two square miles not only teaches you nothing useful, but gives you false impressions, and tends to make you theoretical rather than practical tacticians.

"Look at Gatacre at Stromberg. From a brigade field-day point of view, Gatacre on that occasion did splendidly. Yes, on paper it was a beautiful operation. If Gatacre had started out on it after a good square dinner, and had finished it before his men had time to tire, one would have had to say, 'I pass that general.' Gatacre took the Boer position in reverse, he surprised the Boers absolutely, and yet it was a disaster. Why? Because the whole of the previous day Gatacre's army had been preparing for it, and he had imposed heavy fatigue duties on his men. Because they started out without breakfast, because for twelve hours the men were starving, and were afterwards called upon to do a big night march; because when they reached the Boer position, the men were done; because, in short, Gatacre finished this brilliant tactical movement with an exhausted fighting line, and, mind you, his men were not wanting in pluck. He had the Irish among them—the bravest of the brave. They were not afraid to die. They were

The well-known Black Dike Mills Band of Messrs. John Foster and Sons' works at Bradford, are to visit Canada and America in July.

Among those discharged from Chatham Dockyard, who are emigrating to Canada, is an old man of seventy-five who is going out with his family.

Householders in Hornsey are being canvassed by the Milkmen's Sunday Rest Society to agree to one delivery of milk for the whole day's supply on Sundays.

A lady who last week visited the House of Commons and attracted a good deal of attention has been identified as the daughter of Field-Marshal Oyama.

Erected 120 years ago at Worsley, near Manchester, by the Duke of Bridgewater, a chimney has just been cut down and converted into a monument to the Duke.

Another West Australian stamp. 4d. blue of the first issue, with the swan inverted, is to be sold in London by the auctioneers who recently obtained £400 for a specimen.

The death has just occurred of Mr. G. M. Randolph, C.M.G., one of the earliest settlers on the Rand, and principal guide to General Sir Redvers Buller during the war.

Measuring 5 feet 10 inches high by 4 feet 8 inches wide, and clasped with gold, an atlas of the world as known to Dutch geographers in 1650 has just been discovered at the British Museum, after lying hidden for many years.

It was announced at the annual meeting of the trustees of Shakespeare's birthplace and Anne Hathaway's cottage that the number of paying visitors to Shakespeare's house last year exceeded 35,000. About 10,000 were from the United States.

Many boxes, containing swords studied with jewels, Satsuma vases, and other Japanese works of art, the presents of the Mikado to Prince Arthur of Connaught, have arrived at Liverpool with the members of the Garter Mission on board the Victorian.

FLIES WILL BE SCARCE.

NEVER GO BACK.

It is almost entirely for the cultivation of cocoa that the slaves are required, and the cocoa trade is now of great and increasing value. I believe it amounts to about £1,000,000 a year. And the value of the slaves is consequently so great that I think their masters try in most cases to keep them alive. Yet, as our Consul, Mr. Nightingale, said in his last published report, the death rate, where we can check it, is enormous. Among the slaves of the Principe, one in five dies every year, and where I have been able to test the rate on San Thome, it is almost equally high.

At the end of the five years the survivors are culled up in batches of about fifty before the Curador and are informed that their contract has been renewed for another term of five years. They never go back.

BRITISH INTERFERENCE.

As a nation we have the right to interfere. In 1830 we paid Portugal £300,000 to stop her slave trade. By the Berlin and Brussels Acts of only twenty-one and sixteen years ago, Portugal bound herself, in common with us, to put down the slave trade from the Congo Basin and Central Africa generally. We have also the right of common humanity, which we have always claimed. I go about the world a good deal, and I know only too well how much of her reputation for humanity and justice England has lost in the last ten years.

A FINE GUNNER.

Britisher Establishes a New Record in the Navy.

Bombardier Edwin J. Nichol, of the Royal Marine Artillery, son of Mr. Edwin Nichol, town postman at Worthing, England, has become the champion shot in the British navy. During the recent gun-laying tests on H.M.S. Hindustan, off the Portuguese coast, he made the most remarkable score of ten hits with ten rounds in two minutes with a 9.2 B.L. gun. The previous best performance was one of seven hits in two and a half minutes with nine rounds. Admiral Percy Scott, who was on board the Hindustan at the time, heartily congratulated Nichol on the fine performance, by which he not only became champion shot in the navy, but has established a "record" for the whole world.

RATS DRILLED THERE.

Amusing Action taken by Tenant in a Dublin Court.

A house, which was said to be infested with rats, and the refusal of the tenant to pay rent in consequence, led to an amusing action at Dublin recently, the tenant seeking to recover damages for fraudulent representation.

Mr. Ingoldsbey, the tenant, said that the house was regularly honeycombed by the rats. The landlord sent a man to catch them, but they were too clever, and simply stole the bait. The rats used to drill in the hall at night and run up and down the stairs and under bedroom and dining-room floors.

A servant declared that the rats came in thousands each night, and the children saw as many as eight together. She borrowed a ferrier, but when the fog was in the kitchen the rats used to go to the drawing-room. (Laughter.) The case was settled out of court.

MADE HIM EXCLAIM.

"Yes, sir!" he exclaimed, "Mose is sure a sick man. He's got exclamatory rheumatism."

"You mean inflammatory rheumatism," explained the better-informed colored man; "de word 'exclamatory' means to yell."

"Yes, sir; I knows it does," quickly responded the other, in a tone of decided conviction, "and dat's jest what de trouble is—de man jest yells all de time."

studies, it was placed in a special bullion car, which can hold £200,000 in gold.

The car was locked and armed detectives took their places in a small compartment at the rear of the bullion compartment, into which they could see through small holes. The train did not stop between London and Liverpool, all of which time the precious boxes were under observation. Cipher messages had been sent to the more important stations on the route, and every precaution was taken to prevent any possible holding up of the car. The officials of the London and North-Western were relieved of a heavy responsibility when the boxes of gold reached the steamer in safety, for the railway company would have been responsible if any loss had occurred during the journey.

Much of the same precautions were taken in the shipment of bullion valued at £850,000 which arrived at Southampton on the Walmer Castle recently. This valuable cargo was consigned to London.

GIANT'S DREARY LOT.

Machnow's Health Suffering From His Close Confinement.

They have in England societies for the prevention of cruelty to children, and for the protection of birds and all sorts of animals, but not a society for the protection of giants.

The lot of the giant is in many ways a hard one. If a man is of such abnormal size that people will pay for the privilege of shaking him by the hand, it almost certainly means that he will die before he is forty. Very few giants have lived after that age.

And Machnow, the Russian giant, who after a long tour has reappeared at the London Hippodrome, is of all men in the kingdom one of those who should be most pitied.

What can a poor giant expect when for him to be seen walking out of doors decreases his market value by about half. The only exercise Machnow can take has to be taken under a roof, and so tired of this restricted exercise has he become, that his appetite has fallen off almost entirely, and he has lost all his interest in life.

During his stay in London he lives in a room on the top of a high building, from which he can only see the sky, and during almost the whole of the day he lies upon a bed scarcely covering what becomes of him. Not knowing the language, he cannot talk or read the papers, and so has nothing to do but brood.

Of course his salary is a fabulous one, but salary is, after all, not much when one's interest in life has almost entirely vanished, and when, like Machnow, one only finds a pleasure in smoking cigarettes.

HIS LUCID ANSWER.

One day as Pat halted at the top of the river bank, a man famous for his inquisitive mind stopped and asked:

"How long have you hauled water for the village, my good man?"

"Tin years, sor."

"Ah! How many loads do you take in a day?"

"From tin to fifteen, sor."

"Ah, yes! Now I have a problem for you. How much water at this rate have you hauled in all, sir?"

The driver of the watering-cart jerked his thumb backward towards the river, and replied:

"All the water yez don't see there now, sor."

ZULUS' WITCH DOCTORS.

Witchcraft is playing a conspicuous part in Great Britain's latest war drama, that in Natal, South Africa. Bambata is the name of the leading rebel, and the natives are discussing the marvellous effects produced on his men by the witch doctors. Several of the latter have had marvellous escapes and the natives now believe that the witch doctor's magic turns the white men's bullets.

movement with an exhausted fighting line, and, mind you, his men were not wanting in pluck. He had the Irish among them—the bravest of the brave. They were not afraid to die. They were quite ready to die, but they were not ready to fight.

LEARN DEPENDENCE.

"Another moral I want to bring home to you is the importance of looking after yourselves, and not expecting other people to look after you when you are in the field. It is easy to complain that the staff is inconsiderate or is not treating you well. Gentlemen, it is not for the staff to nurse and tend to you; it is for your own commanding officers to do that. Regiments have no business to be looking helplessly to the staff on all occasions, and to be grumbling because they think the staff neglects them. The staff has its own work to do—a very important, difficult, and anxious work, too—and regiments must learn to depend on their commanding officers to make things easy and comfortable, while commanding officers must learn to depend on themselves."

LAZY, PEACEABLE LION.

Young Englishman's Unexpected Meeting With the King of Beasts.

That the lion is not always the roaring, tearing beast of legendary description may be seen in the following extract from the diary of a young Englishman who is at present serving his country in northern Nigeria:

"I had just topped a long incline and was walking my pony, when, on coming around a corner of the road, hidden by some trees, I saw, seventy yards in front of me, basking in the sun on an open patch of burned grass, a magnificent full grown lion. The sun was not strong, and he was very lazily flicking his tail from side to side. He had a short mane, and his eyes were a lovely amber red in the weak sunlight."

"My first sensation was one of astonishment, profound amazement and a delight at seeing such a fine beast. He was a beauty, and it seemed impossible to realize that he was really wild as he lay on his side, looking at me with his head raised as a dog does when he hears his master's footstep. He was fat as butter, sleek coated and glossy."

"My pony, as the breeze was coming from the other direction, did not wind him, and went steadily on without so much as pricking up his ears. My dog was walking on in front, about ten yards, and, luckily, did not notice him. It was not until I was actually passing him, which I did within twenty yards, that I realized that the lion took it into his head to fancy a bit of white man I should be unable to dispute his right."

"After I had proceeded some 150 yards the lion got up leisurely and followed along the road behind me, but, after going about 100 yards, he turned into the bush at the side of the road."

RICH MAN'S SIMPLE LIFE.

Mr. George Mead, an interesting Peterborough (England) personality, has died somewhat suddenly at the age of 79. He was the son of a Coventry ribbon weaver, and after being a chemist for some time, he became a farmer. Possessing great speculative instincts, he invested and reinvested with the skill of a keen financier, and his land possessions were of considerable dimensions. His whole estate is estimated to be worth £50,000, and he left no will. He led a simple life, his diet chiefly being bread, potatoes, and hot water, and he was in the habit of running a mile every morning.

SAVINGS IN IRELAND.

On December 31 last the estimated balances in the Post-office Savings Bank in Ireland amounted to £10,230,000, as compared with £9,847,000 in 1904—an increase of £383,000. In the Trustees' Savings Banks an increase of £7,000 is shown. In the case of the Post-office Savings Banks the number of depositors has more than trebled in the course of twenty years.

with the members of the Garrier Mission on board the Victorian.

FLIES WILL BE SCARCE.

Mildness of British Winter to Have Effect.

Common house flies, which are a source of dangerous epidemic summer illness among infants, will this year, it is believed, be unusually scarce in Great Britain.

The scarcity not only of the flies, but of all insects, will be the natural consequence of the mild winter. Insects do not mind cold weather—they simply sleep through it; and after a hard winter insect life is nearly always abundant, as the insectivorous birds have been prevented from getting at their victims. In a mild winter like the last, however, insects perish by millions, from mildew, as well as from the beaks of birds.

ELECTRICITY IN FRANCE.

Official reports from Paris and Marseilles indicate the immense strides made by the movement to obtain electric power from waterfalls in that country. Many factories and trolley-lines are now operated by electric power brought over a distance of 100 miles. The effects of the new system are practically felt in the hilly and mountainous district stretching from the Mediterranean Sea to the Alps, and along the western borders of the latter. It is believed that 2,000,000 horse-power may be economically obtained, and of this total about one-fifth has already been utilized, or is in process of utilization. The work now in progress on new plants in the French Alps will, it is believed, revolutionize manufacturing conditions in the whole Mediterranean region of France, and greatly stimulate and increase the industries of that country.

FLATS FOR MILLIONAIRES.

Luxurious Modern Flats at \$10,000 a Year Rentals.

When the flats which are now being erected in Park Lane, London, are finished, millionaires will have the satisfaction of knowing that at least they have something very much out of the common.

Life in the ordinary £500 a year flat seemed "cribb'd, cabined, and confined" to them, while even the £1,000 flats in Berkeley square, hitherto the most expensive in London, had terrible shortcomings.

In Park Lane, however, the rent will be £2,000 a year, while living will cost another £10,000. The accommodation in each flat is: Hall 40 feet long, drawing room, dining room, smoking room, billiard room, boudoir, 11 bedrooms, kitchen, servants' hall.

The block of six flats when completed will be valued at £250,000, out of which workmanship alone will have cost £100,000.

DOG TRIED FOR MURDER.

Then Ordered by Swiss Court to be Shot.

Two men named Scherrer have been sentenced to imprisonment for life, and their dog to be shot, by the court at Delemont, in the Canton of Soleure, Switzerland.

They were charged with the murder of a wealthy farmer named Merger. The dog had torn the throat of the farmer, who was also wounded severely by a knife.

The two men pleaded that the murder was committed by the dog, and much of the time of the trial was occupied in hearing evidence for and against the animal.

When the maximum penalty allowed by the Swiss law was passed on the Scherrers, they burst into tears. The dog, which was muzzled, fought savagely as it was removed from the court to be shot.

It frequently happens that a man's meanness isn't noticed until after he suddenly acquires a little money.

BIBLE IN 400 LANGUAGES

THE BOOK IS NOW READ IN A BABEL OF TONGUES.

British and Foreign Bible Society, Have Record Year's Sale of Six Millions.

The British and Foreign Bible Society now distributes the Scriptures in no fewer than 400 languages.

This was one of the many interesting facts presented at the society's recent meeting in Exeter Hall, London.

During last year the Bible was issued in the following new languages:—Ladakhli, Singpho, Kuliviu, Mech (o. Kachari), Zigula, Laotian, Saa, Bena, Colloquial Arabic, East Santo, Bri-Bri. SPECIAL TYPE.

Ladakhli is spoken on the Tibet frontier. Singpho is the language of the people residing among the hills in the far east of Assam. Kuliviu is spoken on one of the islands in the New Hebrides. The people pay for these books in arrowroot.

Mech is a dialect spoken by about a quarter of a million people living on the plains of North Assam. Zigula is spoken by the Wa-Zigulas, who cover a large area in German East Africa.

Laotian is spoken by the Laos tribes, who live in the interior of Annam, French Indo-China, and in order to print this, special type has to be cast from the designs that have been supplied by native scribes.

STRANGE LANGUAGES.

Saa is spoken on the island of Wwala, one of the British Solomon Islands which have become Christianized. Bena is spoken by the tribes living in Central Africa to the north of Lake Bangweolo.

Colloquial Arabic is being prepared for the unlearned in Egypt, who do not understand classical Arabic. East Santo is another of the many languages spoken in the New Hebrides.

Bri-Bri is the language of Indians near Panama.

At Winnipeg the society's depot supplied the Scriptures in forty-three languages to the polyglot stream of emigrants pouring into Canada. Amid the babel of tongues in Johannesburg Bibles in forty-two languages had been sold, but the resources of the depot there were beaten when a newcomer to the "Golden City" asked for the Bible in Icelandic.

There was a record output of the Scriptures last year, the volumes issued being only a few short of six millions.

The Rev. J. H. Ritson, who read the annual report containing the above figures said the price of Bibles in England had been slightly increased, and he hoped no one would grumble. The Sunday schools of the country might learn a lesson from the South Sea Islanders, who never asked for the Bible below cost price, and never bargained for a discount.

THE NEW PSYCHOLOGY.

Animals Have Reason That Differs Only From That in Man in Degree.

The discoveries now being made in the great psychological laboratories of the world are of the highest possible interest, writes Prof. Edgar L. Larkin, in the New York Journal. The leading psychologists now assert that the only difference between the minds of the lower animals and man is merely one of degree only. That is, the minds of men are of the same kind as those of all other animals, only many times stronger.

Careful and long-continued experiments have demonstrated that even low types of animals have reason that differs only from that in man in degree.

All organic beings are mere colonies of cells—i.e., cities of individual living entities. At present it is unknown what life is, but each cell is a centre or source of life. Ganglia are nodes or collections of cells into smaller com-

EMPIRE DAY MOVEMENT

LORD MEATH'S CATECHISM FOR THE CHILDREN.

The Day Was Celebrated by 3,000,000 Children in Various Parts of Britain's Realms.

The promoters of the Empire Day movement in England—and Lord Meath has been the life and soul of it from the first—have every reason to be satisfied with their efforts, for, according to their present information, Empire Day was celebrated by 3,000,000 children in various parts of the British realms. Lord Meath has issued an Imperial catechism for the children of the Empire, which should be kept for future celebrations on Victoria or Empire Day. It is as follows:

FOR THE USE OF CITIZENS OF THE BRITISH EMPIRE.

Query. What is your relation to the British Empire?

Answer. I am a subject of King Edward VII. and a citizen of the British Empire.

Q. What is the extent in square miles of the British Empire?

A. About twelve million square miles (12,000,000 square miles), of these only 121,000 square miles are in the United Kingdom.

Q. What proportion of the earth's surface does the British Empire cover?

A. About one-fifth, or 21 per cent.

Q. How does the extent of the British Empire compare with that of other countries?

A. The extent of the British Empire is greater than that of any other State. The nations outside the British Empire possessing the largest extent of territory are: Russia, 8,000,000 square miles; United States, 3,623,000 square miles; Brazil, 3,320,000 square miles.

Q. What is the number of the subjects of King Edward VII.?

A. About 400 millions (400,000,000). Of these, only about forty-three millions (43,000,000) live in the United Kingdom.

Q. What proportion of the inhabitants of the earth are the subjects of King Edward VII.?

A. About one-fifth, or about 22 per cent.

Q. How does the population of the British Empire compare with that of the most populated countries outside the Empire?

A. The population of the British Empire is about equal to that of China, and more numerous than that of any other country.

The most populated countries outside the Empire are:

	People.
China with about	400,000,000
Russia with about	130,000,000
United States	84,000,000

Q. What are the numbers of the inhabitants of the principal cities in different parts of the Empire?

A. London	4,648,950
Calcutta	910,117
Glasgow	798,337
Manchester	557,938
Salford	228,983
Bombay	776,006
Liverpool	723,430
Birmingham	537,965
Sydney	511,030
Madras	509,346
Melbourne	496,079
Dublin	387,994
Montreal	267,730
Johannesburg	155,642
Cape Town	77,668

Q. The inhabitants of the earth vary in race, and in the color of their skins. The principal colors are white, copper, yellow and black. Among how many of these races and colors are the subjects of King Edward to be found?

A. Among all. Of these about fifty-four millions (54,000,000) are white, and 344 millions (344,000,000) colored.

Q. What are the numbers of the sub-

THINGS MOVE VERY FAST

STATISTICS OF NEW YORK'S FRENZIED LIFE.

Rapidity of Happenings in the Metropolis of the United States is Amazing.

New Yorkers are generally accused of being a little too rapid. Their health and their manners are said to suffer from the habit of always hurrying. But it is hardly any wonder that her citizens acquire this habit, for things happen rapidly in New York.

Every six minutes, for instance, a child is born, and every seven there is a funeral. In the course of last year, according to the statistics of the New York City Health Department, 99,555 babies opened their eyes on this busy, restless town, and in the same length of time, 78,000 human beings, weary of its din, found the rest of the grave. Should New York, therefore, be regarded as one great family it could not be accused of race suicide. Every 42 minutes the births exceed the deaths by one, so that if it should close its doors on all the rest of the world there would still be 35 more inhabitants every morning.

HEAVY DEATH RATE.

The fearful ravages of consumption among the people of the city are little realized until it is understood that on an average throughout the year one New Yorker succumbs to this disease every 28 minutes. Indeed, every fourth person that is buried in this city is a victim of tuberculosis of the lungs. In some months, however, pneumonia kills still more. In March, as a rule, deaths from pneumonia are nearly twice as many as from tuberculosis, and in the early spring are wont to die here from this disease at the rate of one every 15 minutes.

Those who say that "it is safe to stay at home" do not know much about New York. As a matter of fact, it is 2,500 times safer to travel on a railroad train than to move about in the streets of this city or on the waters within its boundaries. And it is also dangerous simply to box one's self up in a house. From some accidental cause or other a New Yorker is killed every hour and three-quarters.

ACCIDENTS ARE MANY.

Some one is killed by a street car or an elevated or subway train, either by being run over or in a collision, every six hours. Some one drowns in New York every eight hours, and some life is lost in a burning building every 14 hours. To show that life in this city is far more dangerous than riding in a steam railroad train one need simply compare the number of passengers killed in all parts of the United States in a year and the number of accidental deaths in New York. Out of 700,000,000 people who travelled on steam trains in the year 1903, according to the Interstate Commerce Commission, only 355 met death, or one in 2,000,000. The accidental deaths in New York last year amounted to 5,191, or one for every 800 inhabitants.

The sheer dread of living kills a New Yorker every ten hours. In the last year there were 853 suicides. Poison was the means used most, and on an average some one in this city seeks death in this way once in every 24 hours. The less painful method of suffocation by gas comes next in popularity, one dying in this way every 40 hours, while some one commits suicide by shooting every two and a half days. In April people kill themselves faster than in any other month.

Murder in New York strikes down a victim once every two days, and every eight hours an attempt is made to kill. Once every two weeks there is a murder which baffles solution, and which would seem to belie the old adage that murder will out.

MARRIAGE AND DIVORCE.

SUNLIGHT SOAP

is better than other Soaps but is best when used in the Sunlight way. Follow directions.

SUNLIGHT WAY OF WASHING

FIRST.—Dip the article to be washed in tub of lukewarm water, draw it out on a washboard and rub the soap lightly over it. Be particular not to miss coupling all over. THEN roll it in a tight roll, lay in the tub under the water, and go on the same way until all the pieces have the soap rubbed on, and are rolled up.

Then go away for thirty minutes to one hour and let the "Sunlight Soap" do its work.

NEXT.—After soaking the full time rub the clothes lightly out on a wash board, and the dirt will drop out; turn the garments inside out to get the seams but don't use any more soap; don't scald or boil a single piece, and don't wash through two sudas. If the water gets too dirty, pour a little out and add fresh. If a streak is hard to wash, rub some more soap on it, and throw the piece back into the sudas for a few minutes.

LASTLY COME THE RINSING, which is to be done in lukewarm water, taking special care to get all the dirty sudas away, then wring out and hang up to dry.

For Woollens and Flannels proceed as follows:—Soak the articles free from dust. Cut a tablet of SUNLIGHT SOAP into shavings, pour into a gallon of boiling water and which into a tub. When just lukewarm, work articles in the lather without rubbing. Squeeze out dirty water without twisting and rinse thoroughly in two relays of lukewarm water. Squeeze out water without twisting and hang in the open air.

For the most delicate colors may be safely washed in the "Sunlight" way.

\$5,000 REWARD will be paid to any person who proves that Sunlight Soap contains any injurious chemicals or any form of adulteration.

Your Money Refunded by the dealer from whom you buy Sunlight Soap if you find any cause for complaint.

LEVER BROTHERS LIMITED, TORONTO

AN ATHLETIC BABOON.

Defies Recapture in a Steamship's Hold.

On board the Comrie Castle, of the Union Castle Line, which arrived at Plymouth, England, recently from South Africa, is a large collection of wild animals, brought home by Mr. H. Windhorn, a German collector.

Mr. Windhorn stated in an interview that on the present trip he had lost a large male sphinx baboon. About a week after leaving Cape Town it broke out of its cage, and for two days it was at liberty in the hold, and defied all attempts at recapture, showing fight whenever anyone ventured near.

Efforts were made to recapture the baboon, but whenever nothing was

ments have demonstrated that even low types of animals have reason that differs only from that in man in degree.

All organic beings are mere colonies of cells—i.e., cities of individual living entities. At present it is unknown what life is, but each cell is a centre or source of life. Ganglia are nodes or collections of cells into smaller communities; and in the human brain different combinations of the same kinds of cells may produce different faculties of mind. For differing associations of the same kind of ultimate corpuscles—there is but one kind—give rise to all the phases revealed by ordinary chemistry, and by the spectroscope. The universe is made up of varying combines of life corpuscles into infinite diversity; and variations in thought, from late analysis of mind and brain, seem to be caused by varying clusters together of one kind of brain cells into ganglia.

Mind is now known to be the product of brain activity—that is, mind is a result. Mice, birds, insects have been shown to be possessed of reason. Animals learn by experience and store this experience in memory for long periods of time. Love, affection, veneration, love of the beautiful, gratitude, conscience, consideration, contrition, sorrow, trouble, care, mercy, pity and many other attributes for long deemed to be human only are now known to be possessed by animals, in many cases to a high degree.

Several books giving thousands of instances are published. The most rigid scrutiny made by careful and conservative psychologists during the last twenty years has been totally unable to detect any trace in body or brain or find any analogy in nature concerning the existence of what is popularly called the soul. Blood cells build flesh, stomach cells digest and brain cells evolve mind. Psychologists are incapable of finding any difference between the three processes. In the present state of psychic science it is not known what mind is, but whatever it may be it is known that it is caused by the action of brain and nerve cells. When this activity ends all traces of mind come to an end. Cells that originate mind are far more complex than those that perform the office of secretion in glands. The secretion of mind is of greater complexity than the secretion of bile or gastric fluids. But all are developed by the work of cells.

Perhaps the world is now ready to receive this generalization, thus: The human mind contains no faculty that cannot be found in the minds of animals, in less degree.

GREAT ATHLETIC FEAT.

Run, Walked, Rode and Cycled a Mile in Nineteen Minutes.

It is many years ago since Mr. Bulpett, the famous old Rugbeian athlete, made a match to walk a mile, run a mile, and ride a mile, all in 15 minutes. He won with some seconds in hand, and the fact was rightly considered a notable one, as Mr. Bulpett at the time was no longer a boy, but a professional man who had been some years in business. It is interesting to see that an even more exciting all-round test has just been accomplished by a young Indian officer, Mr. K. Barge, of the 17th Cavalry. The scene of this exploit was a level mile on the road between Banu and Dehra Ismail Khan, and this mile Mr. Barge had to cover four times—at a run, at a walk, on a horse, and on a bicycle—in 20 minutes. He walked the first mile in 7 minutes 52.3 seconds, ran the second in 5 minutes 12 seconds, galloped the third in two minutes 4 seconds, and bicycled the fourth in 2 minutes 59.2 seconds, thus achieving his task in 19 minutes 8 seconds, inclusive of the time taken in changing mounts, and winning with 52 seconds to spare. All who know anything of athletics will appreciate the merits of this very remarkable performance.

COULDN'T BE IN TWO PLACES.

"Pa," said little Tommy, "my Sunday school teacher says if I'm good I'll go to heaven."

"Well?" asked his pa.

"Well, you said if I was good I'd go to the circus. Now, I want to know who's lyin', you or her?"

The principal colors are white, copper, yellow and black. Among how many of these races and colors are the subjects of King Edward to be found?

A. Among all. Of these about fifty-four millions (54,000,000) are white, and 344 millions (344,000,000) colored.

Q. What are the numbers of the subjects of King Edward belonging to the close principal religions?

A. There are about 208 million Hindus 208,000,000
There are about 94 million Mohammedans 94,000,000
There are about 58 million Christians 58,000,000
There are about 12 million Buddhists 12,000,000
There are about 23 million of other religions and pagans 23,000,000

Q. What was the value of the total trade of the British Empire in the year 1904?

A. Thirteen hundred and five million pounds (£1,305,283,000), of which 73.3 per cent. was with foreign countries and 26.7 per cent. between different parts of the Empire.

Q. What is the amount of tonnage of steam and sailing vessels owned by the Empire?

A. The Empire owns 9,426,493 tons of steamships, and 2,719,608 tons of sailing vessels. Total, 12,146,101 tons.

Q. How is the British Empire governed?

A. Different portions are governed in different ways. Some portions, like the United Kingdom, the Canadian Dominion, the Australian Commonwealth, New Zealand, Cape Colony, Natal, and Newfoundland, are self-governing; others are partly self-governed and partly governed by officials appointed by the British Government; and others, again, like India, are governed by officials appointed by the Home Government; but all acknowledge allegiance to the King-Emperor.

Q. Why should a citizen of the British Empire owe duties to the State?

A. Because citizens of the British of personal liberty and freedom unsurpassed by those enjoyed by the citizen of any other State in the world, and therefore owe a debt of gratitude to the Empire, which protects them in the enjoyment of these unrivalled privileges, liberty and freedom.

Q. What is the "Empire Day" movement?

A. An organized effort throughout the King-Emperor's dominions to impress on all British subjects the importance of cultivating the virtues which tend towards good citizenship, such as loyalty, patriotism, courage, endurance, respect for and obedience to authority; to encourage self-sacrifice in the public interest; and to instill into all, but especially into the rising generation, an uncompromising belief in the sacredness of the trust imposed on British subjects by the responsibilities of the Empire, and a determination, if possible, never to fail in the fulfillment of duty.

Q. By whom should the "Empire Day" movement be promoted?

A. By every British subject.

Q. What is the meaning of "Empire Day"?

A. May 24th is annually observed throughout the dominions of the King-Emperor as the outward sign of the "Empire Day" movement.

May 24 is the anniversary of the birthday of the late Queen Victoria, during whose long reign of sixty years the Empire grew to its present vast dimensions, as year by year her people increased in health, strength, numbers, wealth, and happiness.

Q. What is the name of the British national flag?

A. The "Union Jack."

Q. Why is it called the "Union Jack"?

A. Because it is composed of a union of the English, Scotch, and Irish national ensigns or "Jacks": The crosses of St. George, St. Andrew and St. Patrick.

Q. Should the "Union Jack" be flown on "Empire Day," May 24?

A. Yes, certainly, from all public buildings, and church and chapel towers and steeples, and the "red ensign" from private buildings.

God Save the King!

Murder in New York strikes down a victim once every two days, and every eight hours an attempt is made to kill. Once every two weeks there is a murder which baffles solution, and which would seem to belie the old adage that murder will out.

MARRIAGE AND DIVORCE.

Cupid travels fast and furious in New York, for he causes a marriage every 13 minutes, and, perchance, because of his speed, like the reckless automobilist, the tender boy god suffers many an upset. One wedding in every 40 that he brings about leads to a divorce. Every eight and one-half hours some man and wife are parted permanently. Inasmuch as many New Yorkers when seeking a divorce go out of the State to procure it, Dan Cupid suffers far more reverses than he is, perchance, aware of. Indeed, it is estimated that one out of 20 marriages contracted in that city is legally broken here or elsewhere. For every wedding, however, three children are born.

Yet faster than Cupid and faster even than the storks are the barges of Ellis Island. Every 40 seconds an immigrant enters New York. The aliens come 29 times faster than the children. Of all those who come from Europe, one in every four settles in New York, or one every two and two-thirds minutes. This shows that New York city is growing nearly three times faster from immigration than from births.

SWEETHEART'S "GHOST."

A Dead Girl Revisits Her Praying Lover.

The story of the return of the spirit of a dead sweetheart is told on the authority of the Rev. A. Chambers, of Brockenhurst, Hants, England, in the Occult Review.

The vicar relates how a young man in grief at the death of his sweetheart prayed earnestly and constantly for a sign that she lived beyond the grave. The sequel was that while at work in his office one day he looked up and saw the dead girl on the other side of the room. She moved a little towards him and tried to speak. When he rushed towards her she vanished.

After this occurrence he woke one night and found the girl standing by his bedside. Three times she laid her right hand across her mouth in a peculiar manner. Later he remembered that before the body of his sweetheart was put in the coffin he had tried to kiss her, and a sister pulled his head back and laid her hand across his mouth.

ILL-EDUCATED OFFICERS.

20 Per Cent. of British Lieutenants Not Ready for Promotion.

The British War Office report on the last promotion examination for junior officers of the Regular Army shows that a slight improvement has undoubtedly taken place. Of the 633 captains and lieutenants examined, 110 have failed to show themselves qualified for higher rank.

A comparison of the results at home, where there are fewer distractions of the social kind, shows that only two per cent. of the captains stationed abroad failed, while at home there were only 1.56 per cent. who passed.

The Royal Engineers did best, and of their forty-two candidates only one lieutenant failed. There were 19.5 and over 20 per cent. of failures in the Infantry and Cavalry respectively, and over 44 per cent. of the lieutenants of the Army Service Corps failed.

There still seem to be some officers who would let men work in December for an hour at a stretch in water that varied in depth from four feet to seven feet.

A ROSY EXISTENCE.

"Women are not expected to know much about business."

"No," answered the man, with the worried look, "Most women believe that a man does at his office is to sit in an armchair, smoke cigars and listen to funny stories."

that on the present trip he had lost a large male sphinx baboon. About a week after leaving Cape Town it broke out of its cage, and for two days it was at liberty in the hold, and defied all attempts at recapture, showing fight whenever anyone ventured near it.

Efforts were made to recapture the baboon, but whenever netting was thrown it would leap clear, jumping fifteen feet at a time. It was allowed to quiet down, and while the keeper was offering it food, Mr. Windham got to close quarters with it. He, however, slipped, and the baboon fastened its teeth in his leg. He forced open the animal's jaws, and then it fastened its fangs in his hand, badly maiming it. It also bit the keeper and the boatswain of the ship.

They attempted to drug the animal, but it swallowed half a bottle of whiskey without effect. They gave it opium enough to kill ten men, in a bottle of lemonade, but this had no effect upon it.

Finally the baboon was coaxed through the companion-way, bound securely and conveyed to its cage. It died four days later, however—from a broken heart, in Mr. Windhorn's opinion.

VOICE FROM GRAVE.

Robert Louis Stevenson's Prophecy About 'Frisco.

It is almost startling, after reading the accounts of the San Francisco disaster, to turn to the late Robert Louis Stevenson's essay on that city. After an extremely beautiful description of the place and its suburb, Oakland, he goes on:—"Thus, in the course of a generation only, this city and its suburbs have arisen. Men are alive by the score who have hunted all over the foundations in a dreary waste. But I wonder what enchantment of the Arabian Nights can have equalled this evocation of a roaring city, in a few years of a man's life, from the marshes and the blowing sand. Such swiftness of increase, as with an overgrown youth, suggests a corresponding swiftness of destruction. We are in early geological epochs, changeable and insecure, and we feel, as with a sculptor's model, that the author may yet grow weary of and shatter the rough sketch."

Never, surely, have the musings of a poetic genius been so suddenly and startlingly verified.

KAISER AND PEASANT.

Wilhelm Hears Candid Things About His Army.

An amusing anecdote about the Kaiser is told by the "Frankischer General-Anzeiger."

While visiting his chateau, Schlitz, the Kaiser one day lost his way, and asked an old peasant to give him a lift in his cart. Seeing the Kaiser's shooting uniform, the old man said to him, "Well, are you one of the Kaiser's gentlemen, or, perhaps, one of the Count's gamekeepers?" "No, I am with the Kaiser," was the reply. "What do they think of him about here?" "Oh, he is all right," answered the peasant, "we all like him; he is said to be a quite capable man."

While relating his adventures in the war of 1866, when he fought the Prussians, the peasant told the Kaiser that on his side there were "lots of drums, but few soldiers."

Much amused, William II. related his adventure to his courtiers, and sent the peasant his portrait with the inscription, "To my faithful companion; 'lots of drums and few soldiers.'"

RAISING YOUNG SALMON.

All of the hatcheries of British Columbia have secured a full supply of salmon spawn, and by the erection of fish ladders a very large district has been opened that had been cut off from the salmon for a number of years. The number of young salmon that will go to the ocean this year will be far greater than in any previous year, and an exceedingly large run may be expected in 1907.

Debt is something we run into and crawl out of.

A Hair Dressing

Nearly every one likes a fine hair dressing. Something to make the hair more manageable; to keep it from being too rough, or from splitting at the ends. Something, too, that will feed the hair at the same time, a regular hair-food. Well-fed hair will be strong, and will remain where it belongs—on the head, not on the comb!

SEASON OF 1906.

UNTIL FURTHER NOTICE THE

Str. REINDER

Fishery Inspector Shelley, who has made some reputation for himself by his efficient enforcement of laws long ignored, by boarding trains and seizing shipments of fish that have been unlawfully taken in Ontario waters, has been dismissed from his position. The reasons are not made public. The officer hit the bull's-eye. He made illegal fishing unprofitable, by destroying its market, and the official who accomplishes so much in so short a time, is bound to make enemies. It is to be hoped the government is not handing him over to the enemies he has made through the doing of his duty. Shelley has shown the way, and if he be dropped, and another appointed who does not follow his decisive methods, it will be reasonable to conclude that there are fishermen who have a pull somewhere else than in a fish-pond—Toronto Saturday Night.

The retirement of Hon. Mr. Fitzpatrick from the Federal Government in order to become Chief Justice of the Supreme Court of Canada is an event upon which the judicial life of the country may sincerely be congratulated, while it is, nevertheless, a distinct loss to Parliament. Mr. Fitzpatrick had made himself a sure place there. His urbanity did not conceal from his opponents the strong personality and the unusual intellectual gifts which accompanied it. He was unquestionably one of the best debaters in the house, and his ability to carry his measures successfully through it grew greater from session to session. His bonhomie, his knowledge of men, and strong tincture of Hibernian humor enabled him to gauge the temper of Parliament and to gain the complaisance and regard of the opposing host to an unusual degree.

The Premier will find it no easy task to fill the void which his departure leaves. So far as the Ministry of Justice is concerned, it is fortunate, however, that Mr. Aylesworth's recent admission to the administration makes it easy to provide Mr. Fitzpatrick's immediate successor. If this proves to be Sir Wilfrid's solution of the task of reconstruction, a change will be necessitated in other portfolios, and in filling these we may be sure that he will put aside every other consideration except the duty of making the Cabinet as strong as strong men can make it.

Barrie Advance.

There was one thing the budget speech of the Minister of Finance about which there can be no controversy, and that related to the continued prosperity of the country. The splendid material progress that the Dominion is making forms a topic for sincere and hearty congratulation. Canada's revenue has indeed, been buoyant.

Wellesly Maple Leaf.

It is laughable to read in some of the more rabid party papers a commendation of the late Provincial Parliament because of the immense number of bills which were rushed through during the session. These journals lead one to think that the members of Parliament literally took off their coats and turned some immense crank until they perspired, while bills dropped out at the other end of the machine faster than the other fellows could make it work. That argument might hold good in a sawing match, but in law-making it is quality rather than quantity that counts.

BUSINESS LAWS.

It is a fraud to conceal a fraud. Ignorance of the law excuses no one. The acts of one partner bind all the others.

An agreement without consideration is void.

A personal right of action dies with the person.

The law compels no one to do impossibilities.

A contract made with a minor or lunatic is void.

A receipt for money paid is not legally conclusive.

Signatures made with a lead pencil are good in law.

Agents are responsible to their principals for errors.

Each individual in a partnership is responsible for the whole amount of the debts of the firm.

A draft becomes an acceptance when the party upon whom it is drawn writes "accepted" across its face and signs his name.

Had No Time to Vote.

President Zachary Taylor in 1810, when only twenty-two years of age, was appointed to a lieutenancy in the regular army. He served in the army up to or near the time of his nomination for the presidency in 1848. After he had carried off the prize friends of Henry Clay and others who wanted the nomination sneeringly spoke of Taylor as an ignorant frontier colonel, who had not voted for forty years. It is probable he had not voted, as he had been away from home in the military service most of the time and came into prominence only through his brilliant military record in the Mexican war.

The Ohio River.

No part of the Ohio river is in Ohio, the boundary of the state is the northern or northwestern margin of the river. The stream itself is wholly in West Virginia and Kentucky, where it flows past Ohio. The northwest territory, out of which Ohio was formed, was defined as the territory north and west of the Ohio, not north and west of the middle of that great river.

ECZEMA.

The Way to Treat This Distressing Affliction.

Eczema can, even when inherited, be controlled by attention to the general principles of health—cleanliness, exercise, proper diet, clothing and ventilation. Eczema patients, old and young, should never use stimulants in any form. They should take daily baths and be most particular as to the regularity of all important bodily functions. Occasional doses of mild saline aperients, such as cream tartar, phosphate of soda or the old fashioned remedy of lac sulphur and cream tartar, mixed in equal quantities, with enough molasses to form a creamy paste and taken three times a day for ten days running, then omitted until again required, will be found of wonderful benefit. Let the patient drink freely of lemonade and avoid salt meats, pork in any form, and live upon a diet of fruits, red meats and antiscorbutic vegetables.

Many people are particularly susceptible to shellfish, and a case of eczema sometimes follows the eating of lobster repeatedly. Strawberries will also produce this effect frequently. Vigorous exercise will often, by inducing excessive perspiration, act as a curative for eczema, particularly when combined with the use of a harmless external application. Sulphur baths are efficacious for most skin diseases. If possible, it is well to take them in an established bath house, but they may be prepared at home as follows: To each ten gallons of water add an ounce of sulphuretted potassium, or to each fifteen gallons of water add an ounce of sulphuretted of calcium. Where there is itching and the eruption seems virulent the sulphur bath is excellent as a preliminary treatment.

GREAT MUSIC.

The Mystical Influence It Wields Over Our Sensibilities.

Great music is a physical storm, agitating to unimaginable depth the mystery of the past within us—or we might say it is a prodigious incantation, every different instrument and voice making separate appeal to different billions of prenatal memories. There are tones that call up all the ghosts of youth and joy and tenderness; there are tones that evoke all phantom pain of perished passion; there are tones that resurrect all dead sensations of majesty and might and glory, all expired exultations, all forgotten magnanimities. Well may the influence of music seem inexplicable to the man who idly dreams that his life began less than a hundred years ago! But the mystery lightens for whosever learns that the substance of self is older than the sun. He finds that music is a necromancy; he feels that to every ripple of melody, to every billow of harmony, there answers within him out of the sea of death and birth some eddying immeasurable of ancient pleasure and pain.

Pleasure and pain! They commingle

always in great music, and therefore it is that music can move us more profoundly than the voice of ocean or than any other voice can do. But in music's larger utterance it is ever the sorrow that makes the undertone, the surf mutter of the sea of soul. Strange to think how vast the sum of joy and woe that must have been experienced before the sense of music could evolve in the brain of man!

The Stone Forests of Arizona.

The regions of the Little Colorado river in Arizona abound in wonderful vegetable petrifications, whole forests being found in some places which are hard as flint, but which look as if but recently stripped of their foliage. Some of these stone trees are standing just as natural as life, while others are piled across each other just like the fallen monarch of a real wood forest. Geologists say that these stone trees were once covered to the depth of a thousand feet with marl, which transformed them from wood to solid rock. This marl after the lapse of ages washed out, leaving some of the trees standing in an upright position. The majority of them, however, are piled helter skelter in all directions, thousands of cords being sometimes piled up on an acre of ground.

Obsolete Foods.

In Great Britain we have left off eating many wild creatures that formerly were accounted delicacies. For example, the young gulls—we mean the black headed, inland nesting variety—used to be collected and sold for pies and puddings. There is still a tradition in favor of rook pie, but the number of rooks that come on the market is a decreasing quantity every year. Squirrel used to be eaten quite commonly too.—London Country Life.

Eminent Doctors Praise its Ingredients.

We refer to that boon to weak, nervous, suffering humanity known as Dr. Pierce's Favorite Prescription.

Dr. John Fyfe one of the Editorial Staff of THE ECLECTIC MEDICAL REVIEW says of Unicorn root (*Holmisia Divina*) which is one of the chief ingredients of the "Favorite Prescription":

"A remedy which invariably acts as a uterine invigorator * * * makes for normal activity of the entire reproductive system." He continues "In *Holmisia* we have a medication which more fully answers the above purposes than any other medicine which is so accurately adapted to the treatment of diseases peculiar to women it is seldom that a case is seen which does not present some indication for this remedial agent." Dr. Fyfe further says: "The following are among the leading indications for *Holmisia* (Unicorn root): Pain or aching in the back, with leucorrhoea; atonic (weak) conditions of the reproductive organs of women, mental depression and irritability, associated with chronic diseases of the reproductive organs of women, constant sensation of heat in the region of the kidneys; menorrhagia (flooding), due to a weakened condition of the reproductive system; amenorrhoea (suppressed or absent monthly periods), arising from cold, or accompanying an abnormal condition of the digestive organs and anemic (thin blood) habit; dragging sensations in the extreme lower part of the abdomen."

If more or less of the above symptoms are present, no invalid woman can do better than take Dr. Pierce's Favorite Prescription, one of the leading ingredients of which is Unicorn root, or *Holmisia*, and the medical properties of which it most faithfully represents.

Of Golden Seal root, another prominent ingredient of "Favorite Prescription," Prof. Pinley Ellingwood, M. D., of Bennett Medical College, Chicago, says: "It is an important remedy in disorders of the womb. In all catarrhal conditions * * * and general enfeeblement, it is useful."

Prof. John M. Scudder, M. D., late of Cincinnati, says of Golden Seal root: "In relation to its general effects on the system, there is no medicine in use about which there is such general unanimity of opinion. It is universally regarded as the tonic useful in all debilitated states."

Prof. Bartholow, M. D., of Jefferson Medical College, says of Golden Seal: "Valuable in uterine hemorrhage, menorrhagia (flooding) and congestive dysmenorrhoea (painful menstruation)."

Dr. Pierce's Favorite Prescription faithfully represents all the above named ingredients and cures the diseases for which they are recommended.

Disease takes no summer vacation.

ANTIQUITY OF BEER.

This Beverage Was First Brewed by the Egyptians.

Beer is of great antiquity. It was manufactured first by the Egyptians and afterward by the Greeks, Romans and ancient Gauls. Beer was mentioned by the following ancient writers: Tacitus, Pliny, Xenophon and others. The Romans are supposed to have introduced the brewing of beer or ale, as it was then called, to the Britons, at the time of the latter's conquest by the former. The Britons continued the brewing of barley malt, calling it ale, until about 1524, when the Germans introduced the brewing of hops with the barley malt, calling it bier or, in English, beer.

The history of the New England colonies shows that the Puritans were great beer drinkers and that for a long time every innkeeper made his own beer. In those years beer was the general and popular drink. In the colony of Massachusetts its retail price was fixed by law at a penny a quart. Its sale to Indians was not forbidden. A law of 1649 ordered that every victualer or ordinary innkeeper should always be provided with good wholesome beer for the entertainment of strangers.

The laws of the colony always favored the manufacture of beer, and even as late as ten years after Massachusetts had become a state a law was passed entitled, "An act to encourage the manufacture and consumption of beer, ale and other malt liquors."

The ale freed beer from all taxation, but it came too late after a series of fiscal laws which for revenue purposes had made beer dear and led to the importation of cheap rum from Jamaica.

HUNTING BEARS.

If You Meet a Wounded Grizzly Give Him a Wide Berth.

A wounded grizzly is a mean thing to fight, and if there is a tree handy it is a pretty good thing to climb if anything gets wrong with your shooting irons. I do not think a grizzly will climb a tree, though brown and black bears will. Any bear is pretty sure to fight if crippled, but I know there is this difference between a black or brown bear and a grizzly: If you meet a black bear face to face unexpectedly give him five seconds and he will be out of sight, but meet a grizzly the same way and give him five seconds and you will be out of business.

About the most fascinating way to hunt bear, which is even better than night work, is to trail him right to his home and meet him in broad daylight on his own doorstep, as it were. It can be done, but everything must be just right. The ground might be covered with a light fall of snow, and the snow ought to be melting. Then the twigs won't break. One has to be very careful, and when bruin is found, which is generally at the foot of a large tree, one must never forget that instead of one there may be two, and, in that case, one must be able to shoot fast and straight, and implicit confidence in the gun he carries is about the best stock in trade a man can possess. About the surest place to shoot a bear to stop him quickly, to my way of thinking, is directly in the brain. It is really not a hard shot, usually at short range, and it puts him out mighty quick.—Field and Stream.

MARINE SUPERSTITIONS.

The Changing Tides and the Launching of the Wick Smack.

In Orkney the ebb and flow of the tides were attributed to the breathing of a sea monster which lay outstretched on the confines of the world. So gigantic was he that the simple acts of expiration and inspiration took twelve hours to perform. The resemblance between this nature myth and that of the Greeks is very remarkable. North country sailors scorned at one time to use a compass, for by the motion of the ninth wave, the mother wave, they could, even in the densest fog, ascertain their exact whereabouts and gain the shore in safety. The launching of a Wick smack was for years regarded as unlucky unless the words which follow were repeated by the onlookers:

Far rocks an saans,
An barren lan's
Keep's free,
Weel out, weel in,
We'll a' gweed shot.

Harmful if not fatal results are believed to follow the utterance of certain words at sea. The salmon is ever a "fine bit fish," and swine, minister, kirk, hare and numerous other words are solemnly interdicted. The presence of a minister in a boat is by many regarded with grave concern, and it is sometimes with the utmost difficulty that a crew can be induced to go to sea if a minister is on board. Those who have sailed with these half Norse, half Celtic fishers must have taken note of the method adopted to raise the "wum." The mainmast is scratched energetically, and the men "whistle" the while. —London Standard.

Erratic Anne Boleyn.

Of the unfortunate Anne Boleyn, who was the second wife of King Henry VIII. of England and who was beheaded in 1536, a writer says: "Even at this distance of time she rises before us as a living, breathing woman of flesh and blood. She was witty, passionate, vivacious and moody in turn; she was essentially variable and four-

Ask Your Grocer About Red Rose Tea

MOST good Grocers sell Red Rose Tea.

If a grocer recommends Red Rose Tea, it will be an honest opinion, because he makes less profit on Red Rose Tea than on most others.

When a merchant recommends an article upon which his profit is less than upon other similar goods, it is because he wants to sell satisfactory goods and to please his customers.

Your grocer knows he can recommend Red Rose Tea for its "rich fruity flavor" and its strength, and because

Red Rose Tea is good Tea

CUTTLE BONE AND SEPIA.

Where They Come From and What They Are Used For.

Cuttle bone was once made use of as a medicine, but it is now used by goldsmiths as a polish and by bird fanciers as food for caged birds.

This cuttle bone, so called, is no bone at all, but a very wonderful structure consisting almost entirely of pure chalk and having been at one time loosely imbedded in the substance of some departed cuttlefish. It is an oval bone, white and hard on the outside, but soft and friable within, and is inclosed by a membranous sack within the body of the cuttle.

When the cuttle is living this structure runs through the entire length of the abdomen and occupies about one-third of its breadth. In weight cuttle bone is extremely light, and if it be cut across and examined through a lens the cause of the lightness will at once be apparent. It is not solid, but is formed of a succession of exceedingly thin floors of chalk, each connected with each by hundreds of the smallest imaginable chalky pillars.

Many persons attribute sepia, or Chinese ink, to the cuttlefish. They are, however, in error, for sepia is a manufacture of soot and fine gums. The error may be due to the fact that the cuttlefish has an internal sac under the throat, near the liver, that contains a very dark natural ink. When pursued by enemies the cuttle ejects this inky substance and thereby forms a cloud of darkened water all about it and hides in this water until out of danger.

Snow and Hail of Queer Colors.

Storms in which red, yellow and orange colored snows fell were recorded as long ago as the sixth century. Humboldt mentions a hailstorm which once occurred in Palermo in which every hailstone was as red as a globe of

NERVOUS DEBILITY CURED

Excesses and indiscretions are the cause of more sorrow and suffering than all other diseases combined. We see the victims of vicious habits on every hand: the pallid, pinched face, dark circled eyes, stooping form, scanty development, bushy, melancholic countenance and timid bearing proclaim to all the world his folly and tend to blight his existence. Our treatment positively cures all weak men by overcoming and removing the effects of former indiscretions and excesses. It stops all losses and drains and quickly restores the patient to his natural state—a healthy and happy man with physical, mental and nerve powers complete.

For over 25 years Drs. K. & K. have treated with the greatest success all diseased men and women.

It is a happy remedy for disease of the brain and a menace to your health consists of a small and painless medicine who do not have to expectant on it.

We guarantee to cure Nervous Debility, Blood Diseases, Stricture, Varicocele, Kidney and Bladder Diseases, Consumption, etc. If unable to call, write for a Question Blank for Home Treatment.

DRS. KENNEDY & KERGAN, 148 Shelby Street, Detroit, Mich.

Heart, Throat, Liver and Skin

DR. AGNEW'S FOUR FAMOUS SPECIFICS CURE COMPLETELY THE WORST DISEASES OF THESE PARTS—DREADFUL HEART DISEASE RELIEVED IN THIRTY MINUTES.

Heart disease will affect people differently, but in all cases it must be viewed with great alarm. Dr. Agnew's Cure for the Heart is the one remedy that can be safely depended upon in times of trouble. It will give relief in thirty minutes.

Mr. Thomas Petry, of Aylmer, Que., was troubled with severe heart complaint for five years, the pain, at times, being so severe that he could not attend to business. Every other remedy failed until he tried Dr. Agnew's Cure for the Heart, which gave immediate relief, and his words are these: "I have now taken four bottles of the remedy and am entirely free from every symptom of heart disease."

A cold in the head need not be trifled with, for it is catarrh in an incipient condition, and catarrh is not to be trifled with. Dr. Agnew's Catarrhal Powder, as scores of clergymen, members of parliament, and prominent citizens in the Dominion have borne testimony, drives away a cold in the head like magic, and where this has assumed the shape of aggravated catarrh, producing deafness and throat trouble, it effects a permanent cure.

It is not always safe to take pills for liver trouble. They not unfrequently create other troubles that are serious. Dr. Agnew's Liver Pills, whilst thoroughly certain of removing all liver trouble, give no delicacy either at the time or afterwards. They are pleasant to take and cost only a cent.

The faculty that Dr. Agnew has displayed in getting at the root of trouble is manifest.

Storms in which red, yellow and orange colored snows fell were recorded as long ago as the sixth century. Humboldt mentions a hailstorm which once occurred in Palermo in which every hailstone was as red as a globe of frozen blood. On March 14, 1813, there was a hailstorm in Tuscany in which the individual stones were each of a bright yellow color. In 1808 at Carniola, Germany, they had a fall of crimson snow which was nearly five feet in depth. Snow of a brick red hue fell in Italy in 1816 and in the Tyrol in 1847. In some sections of Iceland snow seldom falls to any considerable depth without being composed of alternate layers of frozen crystals of different colors. There are arctic banks of red snow which are so well known to explorers that they are called the "crimson cliffs."

Bird Preferences in Food.

Experiments have shown that birds avoid the bright colored caterpillars, as a rule. And this seems almost to have become a second nature, for a jackdaw, which had been raised in captivity and had had no experience in judging the edible qualities of caterpillars, was observed to regard the brilliant caterpillar of the figure of eight moth with suspicion and aversion, although it eagerly devoured dull, plain caterpillars placed within its reach. When it was driven by hunger to attack the other it finally refused to eat it, giving plain evidences that there was something distasteful about the prey.

Book Learning.

Book learning is the curse of our whole educational system. The average mechanic is far better educated in the real sense of the term not only than the average clerk, but than the average clerk's average employer, and I should say most gardeners have more real knowledge than most schoolmasters.—Rambler in London Dispatch.

Vivid Description.

Mrs. Hornhand—What does Cousin V's husband look like, Silas? Farmer Hornhand—Well, he hain't no blushin' beauty. His mouth looks like a wall pocket, and his face looks like it had wore out fourteen bodies.

Cunning leads to knavery. It is but a step from one to the other, and that very slippery. Lying only makes the difference. Add that to cunning and it is knavery.—Bruyere.

Not Marriageable.

Miss Boston—Oh, aren't you very much interested in the study of primitive man? Miss Cleveland—Not much. He's dead.—Cleveland Leader.

Origin of the Orange.

It is to India and to the Arabs as middlemen that Europe, and through Europe America, owe the orange. The orange crossed from Africa to Spain with Mohammedanism, while probably the crusaders are to be thanked for bringing it to Italy and western Europe among their trophies of the east. The very name is really Arabic—"naranj"—and of eastern origin, though the legend that it comes from two words meaning "elephant" and "be ill," because elephants ate oranges to make themselves ill, is absurd. Probably in French the initial "n" is dropped off from naranj, with the final "n" of the indefinite article, just as our "an apron" represents "a napron," and the spelling with an "o" points to false association with "or" (gold).—Economista, Havana.

By Mr. O. Douglas and Mrs. Anne. At this distance of time she rises before us as a living, breathing woman of flesh and blood. She was witty, passionate, vivacious and moody in turns; she was essentially variable and journalist. After her elevation to the throne she became vindictive and cruel, but she had many charming qualities. While awaiting her doom at the Tower she was wretched and merry in turns, sometimes imitating her uncle Norfolk, who had conducted her to the Tower, with his head shakings and his "Tut, tut, tut," sometimes calling for supper directly after dinner, sometimes deep in her devotions. It is the same Anne to the last—high spirited, unreasonable, with highly strung nerves and a good deal of courage at the back of her tendency to be hysterical.

Swords and Beards.

At one time in England all "gentlemen" wore swords as well as beards, and their habit of drawing these weapons to settle the most trivial disputes is said to have had much to do with the cut and styles in beards. During this sword wearing period all "bluffers" wore their beards cut and hacked in most outlandish shapes, trying to convey the impression that they were bad men, who had been in many terrific sword combats.

Stingy.

A lawyer was pleading a case before a jury the other day. The party on the other side had a reputation for stinginess. "Why, gentlemen of the jury," said Sutton in his speech, "if an ant would carry a grain of sand off that fellow's arm he would law him clear to the supreme court and back."

It Would Come.

"I'd like to go away for the rest of the week, sir," said the tired book-keeper.

"There is no need for you to do that," replied the employer. "Stay here, and the rest of the week will come to you."

What She Wanted.

Agent—Here, madam, is a book that will tell you how to manage a husband. Woman—But, my dear lady, what I want is a book that will tell me how to get one, and I'll manage him all right.

Joy is as much a virtue as beneficence is.—Vandyke.

Removed the Growth.

DOUGLAS & CO., NAPANEE, ONT.

DEAR SIRS,—During year 1890-91 I was troubled with a large lump growing on the right side of my neck near the ear. Had consulted several physicians and used everything I could hear of, all to no use. Was told to use

Douglas' Egyptian Liniment.

I did, and before I had used half a twenty-five cent bottle was permanently cured. Since then I have used it for everything where outward application is required; am yet to learn of anything in reason that I cannot cure with it. No man has any idea of its value until he has used it; would not be without it under any circumstance

Respectfully yours,

NATHANIEL W. REID.

Enterprise P. O.

S. BOND & CO., ODESSA.

TO THE PUBLIC—

We have a full supply of Groceries, Flour, and Feed, Patent Medicines, Boots and Shoes, and Hardware, in fact everything kept by a general store.

We are able to compete with any general store in the provinces

We pay Highest Price for all Farm Produce.

S. BOND & CO., ODESSA.

and Heard It Before.
Mamma—It is strange that girls have not more sense. Grandpa—I think you inherit that opinion. Mamma—What do you mean? Grandpa—Well, it is exactly what your mother used to say twenty-five years ago.

Price or Reason?

Hewitt—A doctor is going to perform an operation on me tomorrow. Jewett—What for? Hewitt—The usual rate, \$200.

When placing himself under medical advice Carlyle once told a doctor, "I'll do anything ye tell me, but ye maunna stop ma pipe."

No Restored Castle For Him.
"You must admit," said the earl, "that my—ah—ancestry dates back much farther than your daughter's." "Yes," replied the girl's rich old father. "We ain't been able to trace ours back any farther than a certain robber who was hanged in 1691. Now, I s'pose you have a clear record right back to the ape, haven't you?"

A Lost Art.
We know innumerable things that were not known a hundred years ago, but thousands of years ago some men and nations had learned the art of living happily, which we have forgotten or neglected.

WHAT

Fruit-a-tives

OR "FRUIT LIVER TABLETS"

ARE

Fruit-a-tives are the marvels of modern medicine. They have accomplished more actual cures—done more good to more people—than any other medicine ever introduced in Canada for the time they have been on sale.

Fruit-a-tives are fruit juices. They are nature's cure for

- CONSTIPATION
- BILIOUSNESS
- BAD STOMACH
- DYSPEPSIA
- HEADACHES
- IMPURE BLOOD
- SKIN DISEASES
- KIDNEY TROUBLE
- RHEUMATISM
- IRRITATED HEART

Fruit-a-tives are the juices of apples, oranges, figs and prunes. These juices are concentrated—and by a secret process, the juices are combined in a peculiar manner. This new combination is much more active medicinally than fresh juices—yet so perfect is the union that Fruit-a-tives act on the system as if they were in truth a natural fruit, medicinally stronger than any other known fruit.

To this combination of fruit juices, tonics and internal antiseptics are added, and the whole made into tablets.

These are Fruit-a-tives—sold everywhere for 50c a box or 6 boxes for \$2.50.

FRUIT-A-TIVES LIMITED • OTTAWA.

Sea Salt.

It seems that the sea was made salt in the beginning as a part of the grand design of the Creator to provide for the system of evolution which has been going on since the creation. Many distinct species of living organisms exist in the sea as a result of its salinity, and their remains have largely contributed to the growth of continents. The three great factors in accounting for the system of currents in the ocean by which it becomes the great heat distributor of the globe are changes of temperature, the winds and salinity. The last mentioned becomes an important factor through the immediate and essential differences of specific gravity and consequent differences of level that it produces in different parts of the ocean through the action of evaporation and rainfall.

Stung Him.

Two very great swells, one a young duke and the other a young viscount, brushed against each other one night at the theater. The duke, anxious to snub the viscount, pretended to take him for an usher and said, holding out his hand, "Have you a programme?" But the viscount, too quick for the duke, smiled and replied: "Yes, thank you, my man. I got one from the other fellow."

How He Told It.

Papa—Is the teacher well satisfied with you? Toby—Oh, quite. Papa—Did he tell you so? Toby—Yes. After a close examination he said to me the other day, "If all my scholars were like you I would shut up my school this very day." That shows that I know enough.

FIRST TRAMWAY ENGINE.

Believed to Have Been Invented by Richard Trevithick.

Who was the great genius, for he must have been such, first to conceive and apply steam locomotion? According to a drawing of one of the earliest steam locomotives, or, as it was designated at that time, "high pressure tram engine," invented by Richard Trevithick, which drawing was made in accordance with the testimony of Rees Jones, who aided in the fitting, and William Richards, its driver, it is proved to the satisfaction of historians that to Trevithick is due the credit for the application of steam to locomotion. In this engine the exhausted steam was discharged into the chimney stack and the wheels were combined together. Underneath the drawing it is stated that the engine was designated on the original plan, dated 1803, as "Trevithick's high pressure tram engine" and was constructed partly in Cornwall and partly at Pen-y-Darren works by Richard Trevithick, engineer for Samuel Homfray, proprietor of the Pen-y-Darren Iron works.

The story is related as a historical fact that Merthyr Tudyvil, while discussing the principles and feasibility of locomotive steam engine power with Richard Crawshay of the Cyfarthfa Iron works, made a bet of 1,000 guineas that he would convey by steam power a load of iron to the capital navigation house (nine miles distant) along the basin tram road, which by means of this engine of the great Trevithick he afterward effected and won his wager, although the heavy gradients, sharp curves and fragile nature of the cast iron trackway operated against the return of this ingenious but rudely constructed machine with the empty trains; hence its discontinuance.

Royal Household Flour

is made from spring wheat only. It is milled by the newest and best machinery. It is purified by electricity.

Use it and you get bread not only light, crisp and appetising, but also wholesome, digestible and nourishing.

You will better your baking by buying Ogilvie's Royal Household Flour from your grocer.

TOUCHING FOR KING'S EVIL.

Extent of the Custom in the Seventeenth Century.

Between the years 1661 and 1682 as many as 92,107 persons were touched for the king's evil. Each of them received a gold coin, with a hole in it, which—the coin, not the hole—"was suspended from the neck by a ribbon." It became necessary to limit the number of patients to be touched, and at last no person was allowed in the king's presence for that purpose who had not previously obtained a certificate from the minister of the parish in which he or she lived that he or she was suffering from the disease.

"Hambledon, Bucks, 1685, May 17. Mary Wallington had a certificate to go before the king for a disease called the king's evil."—Parish Registers, Page 81, R. E. Chester Waters.

From a proclamation issued by Charles II., dated Jan. 9, 1683, appointing the times at which the touch should be administered:

"And all such as shall hereafter come or repair to the court for this purpose shall bring with them certificates under the hands and seals of the parson, vicar or minister and of both or one of the churchwardens, testifying according to the truth that they have not at any time before been touched by his majesty to the intent to be healed of their disease. And all ministers and churchwardens are hereby required to be very careful to examine into the truth before they give such certificates and also to keep a register of all certificates they shall from time to time give."—London Notes and Queries.

EYEGLASSES.

How to Put Them on and Take Them Off Properly.

There is nothing which more completely changes the effect of a pair of eyeglasses than the habit of crowding them on the nose with one hand. The best efforts at fitting and adjusting are all brought to naught by a person who has acquired that habit.

The proper way to take off glasses is to take hold of the bridge and lift off gently without dragging or pulling out of shape. To take off spectacles take hold of the right temple with the right hand and lift it off the ear. Then turn the head to the right and the left temple will fall off easily.

The average wearer of glasses when he is cleaning them takes hold of the bridge. The consequence is that he gradually works the bridge out of shape, and every rub he gives the lens gives a twist to the bridge, and in course of time the bridge or the lens breaks when he least expects it. There are probably more glasses broken in this way than any other.

The correct way to clean them is to take hold of one of the eye pieces where the glass is screwed on the outer edge and clean the lens, and then reverse the glasses, take it by the other end piece and repeat the process on that lens.

THE SEISMOGRAPH.

How the Earthquake Indicator Records the Shocks.

In its simplest form an earthquake indicator might be a tray with notched edges so filled with mercury that a shaking of the earth would cause an overflow in the direction of the movement. In the instrument used by sci-

PINEAPPLES.

The Juice of This Fruit Is a Great Aid to Digestion.

The word enzyme does not appear to have any connection with pineapple, yet it is the name of the chemical that gives to the luscious fruit the remarkably digestible property which it possesses. The prevailing notion that pineapple juice is excellent for the digestion is supported by medical testimony. Eat a slice of the fruit after dinner, say the doctors, and you will not suffer from dyspepsia.

If you want to see what pineapple can accomplish in the way of digestion, you can easily test it on a piece of raw steak. The action of pineapple juice on meat is to transform it into jelly and then dissolve it when in the human stomach.

Place a slice of the fruit on the raw meat as it lies on a plate, and the upper surface of the steak where the fruit touches it will soon become gelatinous. Enzyme, the active principle of the juice, can be obtained by throwing salt into the juice, thus producing a precipitate.

A good sized pineapple contains two pints of juice, a fact that gives an idea of what a slice of the fruit will do for digestion. If cooked, the pineapple loses its virtue in this respect. It may be asked whether the consumption of the somewhat woody fruit itself is beneficial or not, for that can scarcely be easily digested.

Without doubt it is the juice which does the good, not the flesh of the pineapple, but the property of the juice is so effective that the eating of the fruit itself can do no harm and may even be beneficial, inasmuch as it takes some of the strength of the juice to dissolve it and so prevents the stomach suffer-

STORY OF THE FLOOD

THERE ARE MANY AND VARIED VER-
SIONS OF THE DELUGE.

The Great Event is Chronicled Not Only in the Talmud and Koran, but in the Legends of Almost Every Race That Ever Lived on Earth.

One of the most powerful and vivid descriptive portions of the book of Genesis is that devoted to the wonderful story of the deluge. Together with the accounts of Adam's fall, the slaying of Abel and the turning of Lot's wife into a pillar of salt, every one remembers from childhood how Noah was warned of the doom impending over the children of men and how he constructed a huge ark in which he did live, himself and his family and two of every beast of the field and fowl of the air, for the space of 190 days, or until the waters subsided and the dry land appeared. But the Biblical recital of this terrible visitation of divine wrath is by no means the only one. In fact, the most skeptically inclined must believe that something of the sort actually occurred long ago, for it has been perpetuated not only in the Talmud and Koran, but in the legends of almost every nation and race that ever lived on the face of the earth, including the Chinese, the ancient Aztecs of Mexico, the Indian tribes of North and South America and even the savages of Africa.

The story, of course, varies materially in the multitudinous traditions, but the gist of it remains substantially the same—namely, that the earth was once visited by a great flood in which nearly every living thing was overwhelmed and lost. Thus in the Koran we read that Noah constructed the ark with divine assistance and was railed at for his pains by the wicked. When the time prescribed for the punishment of mankind arrived, water was seen to flow from the burning oven of Noah's wife, and immediately all the veins and arteries of the earth broke and spouted out water.

Noah was then admonished in these words: "Take and bring into the ark two couples of every kind of animal, male and female, with all your family, except him who has been condemned by your mouth, and receive the faithful and even the unbelieving, but few only will enter." The Koran also says that the ark was built in two years and that it contained three stories, the upper one for the birds, the middle one for the men and the provisions and the hold for the beasts. Canaan, the son of Ham, refused to be saved. Therefore Noah cursed him, and his posterity became black and were enslaved. The Persians assert that Ham incurred his father's malediction as well. When six months had passed the ark rested on the top of Mount Djondi (Ararat), after having made the circuit of the world. Tabari says that two sorts of animals left the ark which had not entered it—the pig and the cat. Concerning the latter we have this interesting piece of information: When the rats began to make trouble the voyagers complained to Noah. Whereupon the patriarch "passed his hand down the back of the lion, who sneezed, and the cat leaped out of its nose. And the cat ate the rats."

According to the Talmud, Noah and his family and one pair of each kind of beast were to be saved in the ark, but of every clean beast seven were to enter in. The rhinoceros, however, had to be left out, for the simple but sufficient reason that its neck alone was three miles long. Nevertheless all the rabbinic writers agree that the rhinoceros survived the flood; hence it is

COUNTY COUNCIL.

Tuesday, 5th June, 1906.

Council met at 2 p.m., all the members present but Mr. Bryden, the Warden presiding.

Minutes of last day of April session were read and confirmed.

Mr. Warden Bowen, Mr. Aylsworth and James Reid, present, were asked to take seats with the board.

COMMUNICATIONS

From Mr. James Bryden, Mannville, Sask., tendering his resignation as commissioner for the Highland Division, was read, and on motion the resignation was accepted.

From Secretary of Provincial Constables Association, stating that the annual meeting will be held in Toronto in September, and asking Council to pay expenses of a delegate. Filed.

A. J. Kelso, Supt. Neglected Children's Home, re Lillian Files, asking the Council to pay its share of her expenses in the home, which was refused at last session. Referred to Finance committee.

From Crown Bank, to County Treasurer Parks, offering interest on current accounts on the daily balance at 3 per cent., the same to be compounded monthly. Cheques on Toronto to be taken at par. Rates on overdrafts, 5 per cent.

From Dominion Bank, re overdrafts, reducing the rate to 5 per cent. On credit balances the rate will be, after 1st July next, 3 per cent. per annum on the daily balance, compounded monthly. Both referred to Finance committee.

Mr. S. Asselstine was heard respecting Coe's lane, a piece of road north of the boundary road between North and South Riding, which is in a dangerous state for travel. It is on the County road.

Mr. Creighton corroborated the statements of Mr. Asselstine. The road he said was in a desperate state.

Mr. Martin said this was what he expected, when the Council decided not to appoint a superintendent over all the County roads. The worst portions of the roads should be put in shape first, before the better roadways were attended to. This must be done, and perhaps this is a case where a special grant should be made, if there is not sufficient in the appropriation.

Permission was given that a commission, composed of Inspector Burrows, James Reid and W. G. Wilson, be granted the use of the Council to arbitrate a school dispute.

ACCOUNTS.

From Alexandra School, Toronto, with account for keeping of Lillian Files, \$13.22; to Finance committee. Napanee Express, \$1.00; paid. Robt. Leger, \$5.50, wood for Court House, paid. J. H. Dufor, \$33; paid. Dominion Rock Drill Co., \$2.55; paid. For road machinery, Sawyer-Massey Co., \$68; to Roads and Bridges committee. E. B. Miller, \$5.00, for repairing covering of Mink's bridge; paid. Sawyer-Massey Co., \$4.00; to Roads and Bridges Committee. Hart & Riddell, \$30.80; to County Property committee. The Municipal World, \$2.75; paid. J. I. Case, steam roller, \$2,500; to Roads and Bridges committee.

Col. Clyde had not seen the new roller in operation, and asked for information as to its work.

Mr. Miller stated that he did not think the roller was much good. It had been a failure as far as he had seen it operated in his division.

Mr. Martin fancied the machine had not been given a fair show. It is difficult to make a machine of that weight, with smooth wheels, to operate on from 8 to 10 inches of loose gravel, and that with a pretty steep crown on the road.

Mr. Baker thought a test should have been made of the machine, and the Company should have sent a competent man to operate it, when it was first used.

The Warden said he was now very favorably impressed with the work done by the roller on the road leading to Desrochers. In fact, he thought the road bed that had been prepared was in his opinion damaged instead of improved. Perhaps the machine had not had a fair trial. If so, this should be done at once.

Mr. Frank Sager, who had operated the roller, thought the work the machine was asked to do was not suitable. The gravel was loose, and when the crusher was attached, of course it could not draw it. The expert was stowing when the roller went into the ditch. No machine would work well on a narrow crowned road.

Mr. Allen, representative of the Company, stated that if a ten-ton roller would not work on the roads as they are at present, a thirteen or fifteen-ton roller would be still worse. The machine is the size generally made for County roads, and had

SYSTEMIC CATARRH

IS LITTLE
UNDERSTOOD.

It Claims Thousands—A Prominent Canadian Cured.

WARM weather, poor appetite, ice cold drinks and foods cause a general derangement of the entire system. Stomach troubles follow. Biliousness, indigestion and general derangement of the stomach are caused by a diseased condition. This is generally, if rightly termed, catarrh of the stomach.

Catarrh will attack that organ of the body which is the weakest. If it be the stomach—Peruna cures catarrh of the stomach. Peruna cures catarrh wherever located.

MR. ARTHUR PERKS,
80 Cathcart St.,
MONTREAL, CANADA.

CATARRH is a systemic disease, curable only by a systemic treatment. A remedy that cures catarrh must aim directly at the depressed nerve centers. This Peruna does.

Catarrh affects the liver and kidneys and is more often the direct cause of all the suffering endured of the back, liver and kidneys, that is supposed to be something else. In fact, when doctors disagree, and you have found no cure, try Peruna.

Mr. Arthur Perks, late of England, writes from 80 Cathcart St., Montreal, Can., as follows:

"I have used your Peruna for indigestion and kidney trouble and find it an excellent remedy for these complaints. I cheerfully recommend Peruna for indigestion and kidney disease."—Arthur Perks.

Pe-ru-na—A Systemic Catarrh Remedy.

Mr. E. C. Pinsonneault, box 64, Prescott, Ont., member Order of the World, of Holyot, writes:

"Peruna is a most excellent preparation, especially for stomach troubles, constipation and catarrh. It acts as a stimulating tonic for the entire system, induces good appetite and regulates the bowels.

"I have found it very pleasant to take and very effective and one of the very few medicines which deserve endorsement.

"It is often a serious question to know what medicine is reliable, and I am therefore glad to give my experience with Peruna, believing that it will continue to give general satisfaction."—E. C. Pinsonneault.

Peruna will be found to effect an immediate and lasting cure in all cases of systemic catarrh. It acts quickly and beneficially on the diseased mucous membranes, and with healthy mucous membranes, catarrh can no longer exist.

Completely Cured by Pe-ru-na.

Mr. J. E. Lacombe, 1013 Chaussee, Montreal, Can., writes:

"I suffered for a long time with liver trouble and after having used several remedies without good results, I resolved to try Peruna. After a comparatively short treatment, I am completely cured."

Pe-ru-na for Indigestion.

Mr. Joseph D. Guyette, 12 Vitre St., Montreal, Can., writes:

"For more than a year I have been troubled with indigestion and most agonizing headaches. I doctored continually, but got no help until I took Peruna.

"I have taken four bottles and can truthfully say that it has entirely cured me."

Pe-ru-na Recommended for Dyspepsia.

Mr. H. Longpre, 381 Amherst Street, Montreal, Can., writes:

"I have used Peruna for a severe case of dyspepsia and am feeling very much better. To all that suffer from dyspepsia, I highly recommend Peruna."

The above testimonials cite the experience of thousands of people who have been cured of obstinate and severe cases of catarrh by taking Peruna.

A reward of \$10,000 has been deposited in the Market Exchange Bank, Columbus, Ohio, as a guarantee that the above testimonials are genuine; that we hold in our possession authentic letters certifying to the same.

During many years' advertising we have never used, in part or in whole, a single spurious testimonial. Every one of our testimonials are genuine and in the words of the one whose name is appended. All correspondence held strictly confidential.

CENTREVILLE.

Rain is badly needed in this part as there has been none of any account for over a month.

Our base-ball club is practicing three times a week. They expected to play their returned match with Wesley on Saturday next.

Rev. Father McPaul, S. J., conducted a mission in the R. C. Church here and at Chippewa during the past two weeks.

Archbishop Gauthier paid an official visit to Camden and Chippewa last week.

The Court of Revision held in the Town Hall here on Monday was largely attended.

The meeting of the Farmers Institute held in the Town Hall here on the 1st of June was well patronized. Mr. W. F. Kydd, of Simcoe, gave an excellent address on heavy and light horses also cattle.

The Gardener.

It is at once the joy and the despair of a gardener that his work is never done. His materials are growing changing, ever varying things. This is an endless delight to a man who live with his garden and watches his plan grow up. When he makes a garden for another it is a different matter. Then after spending his best thought and skill, the garden must be turned over into the hands of the Philistine, who may, doubtless will, spoil his color of facts, make gaudy what before was rich, introduce tawdry display when before was a sensitive delicacy. These are the things that try men's souls and will continue to try them until the owners of large places acquire some degree of sympathy with and understanding of art.—Century.

Courage is resistance to fear, mastery of fear—not absence of fear.

ter left. The rhinoceros, however, had to be left out, for the simple but sufficient reason that its neck alone was three miles long. Nevertheless all the rabbinic writers agree that the rhinoceros survived the flood; hence it is reasonable to suppose that the huge beast was taken in tow by a rope attached to its horn. Some authorities likewise declare that Noah extended his hospitality to another outsider in the shape of Og, the giant, who climbed on the roof of the ark and received his daily food through a hole bored in the side of the vessel.

Ararat has been known under this name for 3,000 years, and an Armenian writer declares that an entire country was so called after Arat the Fair, an ancient Armenian king, who lived about 1750 B. C. He fell in a bloody battle with the Babylonians, and the scene of his death was thenceforth known as Arat-Arat, or the Fall of Arat. Josephus refers to the mountain as Nazuana and declares that the remains of the ark were there to be seen carefully preserved.

Almost all the Asiatic traditions closely resemble the Biblical account. Berosus in his Chaldean history (B. C. 260) speaks of ten kings, who appear to correspond to the ten patriarchs in Genesis before the flood. The last of these kings was called Xisuthrus. Berosus relates that "Kronos appeared to Xisuthrus in a dream and warned him that all men would be destroyed by a deluge on the 15th of the month Daeios and commanded him to write down all the learning and science of men and to hide it in the sun city Siparis and then to build a ship and enter it along with his family and relatives and nearest friends and to take into it with him food and drink and beasts and winged fowl. When he was asked whether he was about to sail, he was bidden to reply, 'To the gods to pray them that men may prosper.'" Xisuthrus did as he was commanded, and when the flood showed signs of abating he sent out three birds in succession. The first and second came back, the latter with mud on its feet, but the third returned not. Soon after this the ship was stranded on a mountain, and Xisuthrus disembarked with his family, offered thanks to the gods and vanished. Subsequently the remaining survivors heard his voice in the heavens, bidding them fear God and to take his writings out of Siparis and from them instruct men.

Child's View of Art.

A lover of rare old china had a collection that was the envy of her visitors. One day a little girl came with her mother for a call, and, being seated in the living room, wonderingly eyed the array of antique dishes. The hostess was much pleased at the child's evident admiration of her treasures and said, "Well, my dear, what do you think of my china?" The child looked up, and pity was in her eyes as she asked, "Hasn't you dot any pantry?"

Not Matched.

"Mustache cups?" said the salesman. "Yes, sir. Here's a pretty design. Cup and saucer \$1.98."

"But," said Mr. Nurich, "that ain't the saucer that goes with it."

"Oh, yes."

"Not much it ain't. There ain't no mustache guard on it."

Unnecessary.

"Monsieur," said the duelist's second, "all is ready. Let me shake your hand."

"Voila!" exclaimed the duelist, with chattering teeth. "Can you not see eet es shake too much as eet eet?"

American and Canadian Coal Oil and Gasoline, MADOLE & WILSON.

ter would work well on a narrow crowned road.

Mr. Allen, representative of the Company, stated that if a ten-ton roller would not work on the roads as they are at present, a fifteen-ton or fifteen-ton roller would be still worse. The machine is the size generally made for County roads, and had plenty of power. He thought the roads were crowned too steep.

Mr. Jas. McElenny addressed the Council as to a ditch which was stopped and drowned a quantity of his swamp land, in the Township of Richmond.

On motion consideration of the steam roller account was laid over until to-morrow morning.

ACCOUNTS

From C. A. Anderson, \$2.30, for "boze fare," paid.

Moved by Mr. Miller, seconded by Mr. Creighton, that each member of Council occupying the back pay his share. Lost.

Moved in amendment by Col. Clyde, seconded by Mr. Martin, that the account be paid to Charles G. Baker, Yorks-Baker, Bogart, Clyde, Hall, Paul, Woods—6.

Nays—Creighton, Miller—2.
From M. S. Madole, \$3.75; paid. Madole & Wilson, court house \$10.75; to County Property committee. Madole & Wilson, \$84.87; to same committee.

Moved by Mr. Martin, seconded by M. Paul, that Messrs. H. A. Baker and F. P. Johnston be allowed to erect and maintain a private telephone line between their dwellings in the Township of Cumlin. Carried.

Council adjourned till 10 a.m. to-morrow.

WEDNESDAY—SECOND DAY.

Council met as per adjournment; Warden presiding. All the members present.

Minutes of yesterday were read and confirmed.

An account of Wm. Templeton, \$10, was ordered paid.

Mr. Allen, of the J. L. Case Co., was heard respecting the steam roller. He stated that the Company had fulfilled their part of the agreement, and would expect the Council to fulfill their part of the contract.

Col. Clyde stated that he and his associate, Mr. Paul, did not like the way the matter had been managed. They had not seen a work neither had it been in their division at work. He was not in a position to act on the matter.

The Warden thought the ten days' test was not a fair one to a corporation like Lennox and Addington. It was for a private individual, but a longer period was necessary for the test in this case. He did not think the Company were acting fairly.

ACCOUNTS.

Victoria Industrial School, re

Manson Abrams, \$10.71; paid. Madole Bros., \$1.20; paid. Jas. Richardson, \$1.25; paid. Jas. Richardson, \$4.50; paid. Boyle & Son, Jail, \$13.56; to County Property committee. Boyle & Son, Jail, \$2.05; paid.

Mr. Martin stated that he and Mr. Baker had found that on some parts of the County road system, where farm lands were drained into the road, that the earth had been thrown up on the side of the road. As it was not a desirable material to place on the road, he wished to know whether the County should be at the expense of removing it. He would bring in a motion later dealing with the matter.

Moved by Mr. Wood, seconded by Mr. Hall, that the equalization of the County be the same as last year.

Moved in amendment by Mr. Martin, seconded by Mr. Baker, that the motion lay on the table until to-morrow. Lost.

The matter was discussed at length, and it was decided to leave the original motion on the table until later.

Mr. Woods was on motion added to the Finance committee in place of Mr. Bryden, resigned.

An order was granted for payment of Insurance on Court House and Jail, for three years, of \$166, to Mr. J. Frank Chalmers. Also, an order for \$7.20, Insurance on jailer's residence, which will expire in August.

Mr. Miller presented an account of \$14.60, for expenses of delivering road-making machinery from the Township of Richmond to North Frieslandburgh.

Council adjourned till 130 p.m.

Balance of report next week.

Their Annoyances.

Neighbor—I called to say that you must keep your dog from barking. He won't let our baby sleep. Householder—I'm glad you called. I wanted to say that if you don't keep your baby from crying I shall have to enter a complaint. It annoys my dog awfully.

Works Like Magic.

Caller—Have you ever known any cures effected by what they call suggestion? Mrs. Hewjams—Oh, yes; I once cured Willie of a violent toothache by suggesting that he go to the dentist's and have the tooth extracted.

Vapo-Resolene

Established 1879.

Whooping Cough, Croup, Bronchitis, Cough, Crip, Asthma, Diphtheria

Resolene is a boon to Asthmatics

Chloroform is a long established and standard remedy for the diseases indicated. It cures because the air rendered relatively pure is inhaled over the diseased surfaces of the bronchial tubes with every breath, giving prompt relief and constant treatment. Those of a consumptive tendency, or sufferers from chronic bronchitis, find immediate relief from coughs or inflamed conditions of the throat.

Vapo-Resolene is a mild, dry, pleasant, pure, and safe remedy. A few drops of the Vapo-Resolene in a glass of water, or a little of the Vapo-Resolene in a glass of water, will cure the most severe cases of Whooping Cough, Croup, Bronchitis, Cough, Crip, Asthma, Diphtheria, and all other diseases of the throat.

KAI WANG;

A TALE OF SOUTHERN CHINA.

CHAPTER X.

Lord Rackett was hardly the man to show signs of alarm when there existed no reason for such a condition of affairs, and knowing this fact, Larry felt certain a new twist had been given to the conspiracy—that the coming of this yellow hotel servant had brought additional cause of anxiety.

There flashed through his mind what he had just been saying at the time the fellow hove in sight, and the argument he had been pressing upon the attention of his new and valued ally.

That Count Petoskey was in the deal to a large extent he saw no reason to doubt.

"Courage! Face the music, my boy, and don't forget you are all she has to lean upon now that she's a widow," was the way he buoyed up his spirits as Plympton drew near.

Thus in a measure he buckled on his armor and girded himself for the fray. There is a deal of common sense in thus preparing for bad news. When Lord Rackett came up, the frown upon his usually genial face was so strongly defined that it would have frightened the average pagan into spasms.

He was shaking his head doubtfully.

"The deuce take it; your croaking about that sly Russian must have affected me, my dear boy, for I seem to see a fully armed Zulu crouching behind every innocent bush; even the most common-place incident begins to loom up in the most alarming manner; and if I am so fortunate as to get any sleep to-night, surely there will be phantoms to wrestle with, every one of them having a bristly gray, spiked mustache, such as the count wears," was the dolorous wail to which he gave vent as he reached Larry.

"You have reasons for reproaching me—you have heard something that arouses your fears in spite of your desire to laugh them off?"

"Ah, Larry, to the happy role of philosopher you add that of a seer, a prophet, to whom all thoughts are an open book. I confess to the soft impeachment. What that yellow garcon told me gives me concern."

"About Avis?"

"No one else."

"Well, let me share your uneasiness. Two heads may be better than one, if there is any puzzle to be solved."

"Good! This, then, is how the case stands. The heathen Chinese went up and knocked seven distinct times upon the door of her room before trying to see if it was locked, and upon discovering it to be fast he came below to report at the desk."

"Then the gentlemen in charge, remembering he had come on duty just before I made inquiries, began to hustle about. He now sends word that upon hunting up the other booking clerk whom he relieved he learned that Mrs. Evans is not in the house at present."

Larry gritted his teeth and stifled a groan.

"Just what I anticipated—my worst fears are on the point of coming to pass," and half under his breath the little man uttered a most ferocious threat as to how he would handle the Russian bear if the latter had a finger in this pie. Could Count Petoskey have heard the threat he must have dropped down on his marrow bones instanter, to plead for mercy, such was the terrifying

they were really no nearer an explanation than before, since the mystery remained just as dark as ever.

Larry knew immediate action was the order of the hour; if harm had descended upon Avis they could not reach her side any too rapidly.

He asked his questions with this idea in view, seeking to lay hold of enough clues to follow the case out.

In this peculiar affair his genius shone forth so remarkably that it could not be mistaken, and Lord Rackett, recognizing it, was quite content for the time being to play second fiddle, believing that his hour would come when other qualities were essential.

Larry's judgment was quick and keen; he did not stop to simply reason matters to their legitimate conclusion, but jumped there with an abounding faith regarding the truth of his hazard that was more than half the battle.

Not a single thing came out in this cross-questioning of the hotel man that contradicted the conclusion to which he had jumped at the start.

This was to the effect that Petoskey, the Russian schemer, was at the bottom of the whole game.

CHAPTER XI.

Having strengthened their belief through this interview with the clerk, Larry and his big friend were at the parting of the ways, where plans and consultations must give place to action.

The little man was fully aroused.

He strengthened his resolution by endeavoring to imagine what a hurricane Dr. Jack would prove could he have been present to take up the business.

They were not foolish enough to believe such an affair could be undertaken without more or less danger.

Hence it became a matter of some moment with them that they should go armed, since no man could say what resistance might be met during their adventure.

For one, Larry had had bitter experience with Chinese mobs, and believed an enraged Celestial almost as dangerous as a Malay "running amuck" with his murderous kris.

A quick inventory taken on the spot disclosed the fact that both were fairly well supplied with weapons.

When Larry remembered the shrieking mob that awoke the echoes in the street before Kai Wang's domicile, he was secretly of the opinion that should they be unfortunate enough to encounter such a crowd in the course of their hunt, a few Gatling guns, more or less, would not come in amiss.

According to the clerk's narrative, Avis had left the hotel at Shamien just as darkness was settling over the great city.

A Chinaman had brought her a note.

Of course it must be the old story over again—a clever imitation perhaps of Larry's old chirography, begging her to come to him at once, that he had discovered wonderful news concerning one in whom her deepest interests were centered. Such a trap could not fail of success, with Avis occupying the condition of anxious suspense Larry knew her to be in.

What then?

They must find the vehicle in which she had gone away, and by bribes or threats induce the man to take them to the same place.

Perhaps he desired to constantly keep dangling before the fellow's mind the consequences dependent upon his action, and to exhort him to carry out his promises to the letter.

Being quite familiar with all parts of Canton, Lord Rackett speedily realized where their course was apt to land them.

In all Chinese cities bordering upon a river, fully one-fourth of the population live upon the water—to them the stream furnishes both food and sepulchre; the darkest of tragedies are constantly taking place among this floating people, who hardly seem amenable to the law that governs those dwelling ashore.

Larry was more than a little worried when his companion announced that they were heading directly for this quarter.

Awful fancies began to dart through his brain, and he felt almost sick at the thought of such things happening to his sweet relative.

Bitterly he inveighed the Russian schemer, who would not even allow the taking of human life to stand in the way of bringing his gigantic scheme to a successful termination.

And Lord Rackett's blood seemed to boil in almost the same fashion.

How easily we forget; it had not been many years back when Larry's righteous indignation was aroused against this same Plympton because, forsooth, he had kidnapped Dr. Jack's wife in pretty much the same fashion.

However, it was love that urged him upon such a mad, headlong course, and men can forgive more easily when such a motive is the cause rather than the desire for gain.

Lord Rackett saw into these things better than Larry, and he found occasion to put the matter before his despondent companion in such a way as to arouse his hopes anew.

The precious papers were the supreme desire of the Russian; he cared not the snap of his fingers for the lives of Dr. Jack and his lovely wife if he could only lay hands on the documents so they might be destroyed, and leave his company, backed by the power of the Dowager Empress, the only one in the field.

This being the case, the abduction of Avis was not intended to work her personal injury, since such a thing would effectually block his game, but to bring about the delivery of the papers.

Larry knew his cousin well, and he declared they might despair of ever forcing her to give up the last legacy left to her by a loving husband.

While Lord Rackett did not doubt in the least the truth of his words with relation to her indomitable spirit—and he had occasion to remember it, though the recollection only brought a blush of shame to his cheeks—still he knew there were ways whereby even the most stubborn native may be conquered.

"Depend upon it they will endeavor to reach her through her husband," he said.

"But—by Jove—he is dead!" gasped Larry, slow to grasp the point.

"You have said so—you even believe so; but we lack the most positive evidence. Besides, even if this be the truth, and brave Dr. Jack has crossed the Styx with the grim boatman Charon, that little fact would never dismay such a bright mind as this Count Petoskey. Why, he would deliberately deceive Avis by declaring they held her husband in chains—that if she handed the papers over he would be released, while if she refused his blood must be on her head."

Larry groaned.

He saw the situation now and realized, as never before, what an awful lever an unscrupulous mind may make of divine love.

"So you see," concluded mildred, grimly, "unless we force his hand, this scoundrel may be in a position to call the game."

Larry could only grind his teeth and more fervently clutch his weapon, mentally praying Heaven would be very good to them for the sake of the woman who was in peril.

Meanwhile Lord Rackett maintained a careful watch upon their course and kept up his communication with the man upon whom they were placing so much

His Family Tree

1.

Beneath the out-flung branches of a mighty oak tree, a giant who has stood sentinel in that lonely dip on the world for twice three hundred years, two men were standing, their figures made more or less distinct by the rays of a big conical lantern of antique pattern that the elder of the two carried in his gnarled and bloodless fingers, a figure strangely akin to the giant tree beneath which he stood.

An aged man was Zachary Doy, his back bent by years of hard labor such as few of the modern generation of laborers know; a man who had been an experienced farm-hand, while the man beside him, his master, was still a puling infant.

The old fellow set down his lantern on the ironbound earth. His quavering voice stabbed the silence.

"Now, do 'ee harken unto me, Master Alaric," he said, slowly. "I've served 'ee faithful, you and your feyther afore 'ee, for nigh on fifty year, and I tell 'ee, master, that what 'ee do purpose for to do is agin all right and reason. This yere oak-tree—the Kingscote Oak, as all the countryside do know her for to be—ha' bin here as a pour and a pride for longer than us pour souls can reckon. To cut her down do mean, as I be right well assured, that Kingscote luck will fall wi' 'un. If so be—"

Alaric Kingscote broke in upon his garrulity with a forced laugh.

"If Kingscote luck could fall lower than it has, Zachary," he said, bitterly, "you need have little fear that I would touch bark with axe. Now, hear me, old friend. This tree represents the last thing upon the farm that can bring in the money I must have to tide over the bad times in store. The merchants have offered me two hundred pounds for the tree. There's only one rotten limb upon it. They'll come to-morrow with their carts to take it away." He laid his hand upon the old man's shoulder. "Get you home to bed, Zachary," he added, gently. "You can do nothing here. It's nine o'clock now. By midnight, with luck, the Kingscote Oak will be down."

The old fellow looked wistfully into the handsome face of his young master.

"Master Alaric," he said, hoarsely, "I've fifty-five pun, three shillin', and fipence yappenny laid away in a hole in the floor of my cottage. If so be as that'll save the Kingscote Oak, why—"

"Go home with you, Zachary!" broke in the young man roughly, though his roughness hid an emotion almost too deep for any words. "Go home, and God bless you, old friend."

Zachary thrust his roughened hand across his eyes. Without another word, a strangely pathetic, bowed old figure, he turned and shamled off across the field, towards the stile into the lane that led to the little thatched cottage that had been his home for years.

He never once looked back. For a few seconds Alaric Kingscote stood looking after him. Then, with a strangely fierce gesture, the young fellow flung off across his waistcoat that concealed the magnificent breadth of his chest, and turned up the sleeves of his coarse flannel shirt.

At the foot of the oak lay the woodman's huge axe that was to be the instrument of death, that was to cut short the growth of centuries.

Alaric Kingscote swung the great weapon aloft, and the cold starlight ran along the shining steel. Like some Viking warrior of old—like the re-embodiment of one of his Saxon forebears, Alaric brought down the instrument of destruction with a blow that gashed deep into the corrugated skin of the oak. The doom of the Kingscote Oak had been

little man uttered a most heroic threat as to how he would handle the Russian bear if the latter had a finger in this pie. Could Count Petoskey have heard the threat he must have dropped down on his marrow bones instantly, to plead for mercy, such was the terrifying aspect of the speaker.

"It may be all right," began mildred. "But it isn't—the hand of the plotters is seen back of it. Think for a minute, what would take Avis out after dark in such a city as this, and knowing as she does that the enemies of her husband are on the alert. It's a put-up job, depend on that, and it settles Petoskey's hash when I land on him."

Had the affair been less serious Plympton might have been inclined to smile at the idea of this little feather-weight throwing his castor into the ring in defiance of such an antagonist as the big Russian; but perhaps he had learned through experience not to despise the day of small things, for even a hornet may be able to enforce respect.

"I have an idea, my dear boy," "Then let us have it, for Heaven's sake, since just at this minute that seems to be the very stock of which I am decidedly short."

"The only place we might secure information is with the man who knows—the looking clerk who is off duty."

Larry nodded; he was endeavoring to whip his faculties into line, so that when the time came he might make proper use of such gifts as nature had generously bestowed upon him.

At least, he was quick to recognize the worth of the suggestion advanced by this comrade, and ready to second whatever he proposed.

"Then let us look that man up without a moment's delay, and find out what he has to say about this singular matter," continued the Englishman, resolutely.

Larry waved his hand, the gesture signified that he was quite satisfied with the pointed suggestion, and desired Lord Rackett to lead the assault on the den of the looking clerk.

A pointer at the desk told them where to go, and presently they were knocking at a door, beyond which an irritable voice bade the disturbers of his rest to enter.

Thus they swooped down upon the weary knight of the pen and the diamond start-stud, who was a fair sample of his class as found under every sun on earth.

He saw them coming, and started up with some little astonishment and concern. His curious gaze glancing from the rosy countenance of mildred to the peculiar phiz of Kennedy, which, in itself, when screwed into a savage frown, was enough to give a man a fleeting suspicion that he had a mild touch of *dolorum tremens*, for Larry was no beauty, and his singularly moulded head reminded one irresistibly of an ape's.

It was a holdup, pure and simple. The looking clerk loses much of his swagger and importance when off duty.

This party proved to be docile enough, at any rate, and realizing that those who had thus swooped down upon him must have some very good reason for this anxiety, he set about answering their questions as well as his knowledge of the facts would allow.

With two eagerly at work pumping him he had soon related all he knew.

It was not a great deal, after all. Several facts were brought out, but

of anxious suspense Larry knew her to be in.

What then?

They must find the vehicle in which she had gone away, and by bribes or threats induce the man to take them to the same place.

Here the clerk declared he could help them, since he had had curiosity enough to notice particularly what happened after Mrs. Evans left the hotel door.

He accompanied them to the street, and no sooner reached that thoroughfare than he uttered a cry of pleasure and pointed out a native cab driver as the party with whom Avis and the coolie messenger had gone.

Which was quite enough for Larry, who, with the big Englishman at his heels, descended upon the fellow very much as a hurricane sweeps over the southern seas.

The fellow might have arranged a line of action if given time, but being taken by surprise, he became flustered. Perhaps he had reasons for remaining a spinster; but, whatever these were, they did not hold good when confronted with two very determined foreigners who demanded on pain of instant death in case of refusal, that he take them to where he had left the lady.

Whether fear or greed influenced him, the man readily agreed to oblige them.

A Chinese Jehu would promise to take one to the infernal regions with cheerful alacrity if asked; and should he be given full license in the matter the chances are he would not fall far short of reaching the suburbs of Hades, if such a place exists on earth.

Larry was grimly pleased, but, being cautious by nature, would not allow himself to indulge in too sanguine hopes, lest they be doomed to disappointment.

He put little trust in the Chinese character, perhaps because Kai Wang was the only man of that guild who had commended himself to his respectful consideration; still his qualities were of so sterling a nature that he balanced the accounts of many delinquents.

It was very much the same with Plympton, who entertained a feeling of scorn and contempt for the natives of the Flowery Kingdom, having had some experience during the Japanese war that appeared to have utterly disgusted him with the abilities of the Chinese soldiers.

Apparently, then, it behooved Jehu to walk a pretty straight line if he hoped to satisfy his present captives.

Lord Rackett was probably better accustomed to dealing with this peculiar class of fellows than Larry, and his tactics were of a decided nature which might bring about success.

It was the old story of reward or punishment—he was abundantly able to bring about either, and there could be no evasion—if the fellow did what he was told, his pockets would later on be crammed full of taels until he was as rich as he had ever imagined while in an opium dream; on the other hand, did he swerve one jot from the truth and play them false, the vengeance of the gods and of English law would descend upon him long before the fall festival of Kuan-ti came about.

Knowing the Chinese mind as well as he did, Lord Rackett was pretty confident the fellow would give them faithful service so long as they could hold him in hand; once he fell under Russian influence the game would be up.

Of course, they speedily plunged into the Chinese quarter, and Larry felt something of a chill pass through his little figure as he speculated as to whether or not the vagaries of fortune would bring him once more in contact with the inflamed mob that shouted for his blood.

The prospect was far from alluring. Still, a man can die but once, and as he possessed true valor, he did not believe he could shuffle off this mortal coil in any better cause than that of gentle woman; for the sake of his charming cousin the brave little warrior stood ready to meet any and all sacrifices to which he might be called.

Plympton kept a bright lookout, and supplemented this caution with sundry digs in the back of the wretched Jehu, to whom he muttered words in the original Chinese.

tally praying Heaven would be very good to them for the sake of the woman who was in peril.

Meanwhile Lord Rackett maintained a careful watch upon their course and kept up his communication with the man upon whom they were placing so much dependence.

He believed that such vigilance paid. Larry was aroused from the seeming lethargy into which his ruminations and worries had thrown him by the sudden stopping of the old vehicle.

"Here we are," said Lord Rackett, quickly, as he sought the open air, and when Larry followed at his heels he found him in deep conversation with their conductor.

(To be continued).

DEATH SEEMED NEAR.

Three Doctors Baffled But Dr. Williams' Pink Pills Came to the Rescue.

Just a few months ago the home of Mr. James Beers, of Emerson, N. B., was filled with sorrow. It seemed that death would claim the life of their bright little girl. To-day this gloom is changed to joy. The little one is no longer ill, but is now bright, active and happy.

Dr. Williams' Pink Pills brought this change after three doctors had failed. Concerning this illness and cure Mrs. Beers says:—"At the age of six my little girl became very ill. At different times for the next year and a half three doctors treated her without benefit. She was terribly run down and her blood was nothing but water. Then dropsy set in. She would swell so that her clothes were much too small for her. Her legs and feet were nearly twice their natural size. To make her torture worse rheumatism set in. Her state was pitiable. Sometimes we thought she could not live much longer and for three months she could not walk a step. To touch her was to cause her the greatest agony. The doctors were baffled—they could do nothing for her and as a last resort we began the use of Dr. Williams' Pink Pills. She took the pills several weeks when we saw there was a slight improvement. The improvement gradually became more marked and by the time she had taken twenty-one boxes her cure was complete. It is now nine months since she took the pills, and she is now as well as she ever was and goes to school every day. I cannot speak too highly in favor of Dr. Williams' Pink Pills for I feel they saved my little girl's life."

Watery blood is the cause of over half the sickness which prevails to-day. To have health, strength and happiness you must have rich, red blood. Dr. Williams' Pink Pills make this rich, red blood, that is why they cure anaemia, indigestion, loss of appetite, rheumatism, neuralgia, nervous troubles, heart palpitation and all the ailments peculiar to growing girls and women. Sold by dealers in medicine or by mail at 50c a box, or six boxes for \$2.50 from The Dr. Williams' Medicine Co., Brockville, Ont.

SAD FATE OF WEDDING CAKE.

Eaten by Horde of Rats in the Dublin Post-office.

"A horde of rats as big as rabbits" haunts the Dublin General Post-Office, according to a statement of an official reported in the Irish Independent, which tells an amusing story of a wedding cake dispatched from Dublin for Canada.

The wedding-cake was packed in a box and duly posted at the Dublin post-office. In the night the rats attacked the parcel and ate not only the cake but the box itself. Nothing was left but the string and part of the address label, and with these slender clues the sender of the wedding cake was traced.

A fresh wedding-cake is now going out to Canada at the expense of the Postmaster-General.

The German Empress is a sculptor of more than usual ability.

along the shining steel. Like some Viking warrior of old—like the re-embodiment of one of his Saxon forebears, Alaric brought down the instrument of destruction with a blow that gashed deep into the corrugated skin of the oak. The doom of the Kingscote Oak had been proclaimed.

As he stood braced up for the second stroke, the bulging sinews of his forearm responding to the generous rise of chest and thigh muscles, a curious-sound from behind him caused him to swing around with a faint cry. Then he lowered the axe with amazing gentleness.

Another figure had appeared upon the scene—the figure of a woman, clad in a cloak of fur that hid the contours of her form.

"Damaris!" The word fell from the young man's lips like a caress.

II.

"So you've come," he said softly. "You see I am as good as my word. The Kingscote Oak must go. It is the last link between me and the workhouse—for it almost comes to that."

It was very evident that the relationship between these two was something more binding than the ordinary ties existent between casual acquaintances of opposite sex. Each seemed to accept the situation as inevitable. Then the girl went on, hurriedly:

"You'll catch cold, Alaric dear, if you stand still without your coat in this bitter cold. Let me hold the lantern for you while you work."

She snatched up the light. He, obedient to her injunction, replied his weapon with renewed vigor. The lamplight threw a warm glow over his weather-tanned face and muscular arms.

For a time he labored on, his whole being concentrated on the performance of his herculean task. After a space he paused to rest. A great wound on the mighty bole of the oak showed how sure had been his strenuous endeavors.

When he ceased she broke into quick speech.

"It seems incredible," she murmured, "that you, a Kingscote, of the same race, the same blood, as ourselves, should be forced to toil like this—like a common laborer, when—"

The man came quickly forward, and flung his arm around her waist. Their lips met in a kiss that could not be mistaken for a mere cousinly salutation.

"Damaris Kingscote," he said, steadily enough, "let us be frank one with another. What are the facts? I am the poor relation—the blot on the family scutcheon of the squire, your father. He resents my proximity; loathes the very idea of our love. Therefore he has brought his batteries to bear upon me and mine. All that he could do to ruin me he has done. And Heaven knows that he has been successful enough."

The girl's eyes brimmed over with tears. Alaric was quick to note her ready sympathy.

He gripped his axe anew, and the silence vibrated once more with the ringing cadence of his rhythmic blows.

Presently he rested once again.

"Damaris," he said, "did you ever hear the legend that runs in our branch of the family, that but for some strange whim of chance I should have been in the squire's place to-day, the ruler of the destiny of Kingscote Glebe Farm? From father to son the tradition has been handed down that Nigel Kingscote, the cavalier, juggled in some unknown way with the laws of succession—that it was not the son of the eldest son who was your own father's ancestor, but mine; that could the truth only be known aright, I should be reigning at Kingscote Manor, instead of being what I am—a pauper, fated to cut down the family tree to raise a pitiful sum of money that must be procured."

And at last the end came. With a cry to the girl, Alaric flung down his axe and leapt backward. His hand sought hers. Side by side, drawn apart from the tottering giant, they stood as though spell-bound, the only spectators of the end of so many hundred years of silent, strenuous majesty.

And even as the mighty tree went shuddering to its tremendous fall a crack, as of a pistol shot, foreshadowed its overthrow. The noise came from the

one rotten bow that the tree had possessed—a huge limb some half-way up its stem, which now detaching first from its parent crashed down at the very feet of the wondering couple.

Nor was that all. A metallic tinkle accompanied the crash. Damaris was the first to recognize the solution of the puzzle.

It was a metal cannister—a long, time-stained box of rusted tin, closed at both ends—a thing of mystery, of untold possibilities. She picked it up. As she did so, one end fell apart. The cannister contained nothing but a stained, yellow piece of parchment upon which something was written in a close and crabbed caligraphy, archaic, hard to decipher.

Alaric swung the lantern up from the ground.

"What is it, Damaris?" he said, breathlessly.

Slowly, laboriously, the girl read out the following amazing declaration:

"Mayhap a day will come when that which I, Nigel Kingscote, do set down here in writing, in the years of Grace, 1647, and do hide in the hole of the Kingscote Oak, may be sette out in the cleare light of day. And even as Esau of old did sell his birthright, so do I, Nigel Kingscote, head of the house of Kingscote, renounce my right and the right of those who come after me to be the true and lawful possessors of the faire lands of Kingscote Manor. Yet not voluntarily doe I do this, but for the life of him, my son. Know, then, that I must flee the country. Cromwell, the regicide, hath decreed that I shall die. Therefore, have I given my infant son to my younger brother James, who will bring up my son as his own. Thus it may come to pass that the descendants of Nigel, my son, may be passed over in the right of succession by the descendants of Richard, the eldest son of my younger brother James, who stands well in the eyes of Cromwell the regicide and renegade. And that this be true, and that Nigel, supposed younger son of James Kingscote, of Kingscote Manor, be really the eldest son of Nigel Kingscote, eldest son of Alaric Kingscote, father of Nigel and James, and therefore heir to the Manor of Kingscote, its hereditaments, messuages, and all that do thereto appertain, and his seed hereafter him, if so be there should be any, I do most solemnly swear and protest in the presence of witnesses. To which I do set my hand and seal this sixteenth day of March, one thousand, six hundred, and forty-seven. Signed: Nigel Kingscote, in the presence of Rupert Mainwaring, Knight Banneret of Mainwaring Hall, in the County of Berkshire, and Anselm Wolf, Priest."

The parchment fluttered crisply from the girl's nerveless hands.

"Damaris!" cried Alaric hoarsely—"Damaris!" Coherent speech he could not find.

The girl raised her head.

"It is true—it is true!" she said, brokenly. "We, father and I, are the usurpers! Kingscote Manor is yours, and we are—paupers!"

"Not paupers, dearest, but partners," answered Alaric, and in his eyes there was that which told her how Kingscote love stood wind and weather as steadily as Kingscote Oak.

Squire Kingscote now sleeps with his fathers in the little Berkshire churchyard. But ere he died his declining years were brightened by the generous forgiveness of "the undesirable poor relation."

A young and sturdy sapling oak now flourishes on the spot where stood the ancient tree—a true symbol of the lasting power of Kingscote luck and Kingscote love.—London Answers.

THE USE OF THE LEECH

THEIR MEDICINAL VIRTUE WAS ONCE HIGHLY ESTEEMED.

The usual quantity of blood drawn by an average leech averages from one drachm to half an ounce. It is digested very slowly, and after being gorged in this manner, the leech lies for several days before it regains its normal size and appearance.

Leeches are mostly imported from Hamburg, and are also collected largely in Spain, France, Italy and Hungary.

NICKEL COINS FOR NATIVES.

Tourists and others staying in Belgium have probably noticed certain nickel coins with a hole drilled neatly through the centre. At first the stranger naturally thinks that the hole has been pierced by some industrious individual to pass the time or "to bring luck," and he is dubious about accepting such a coin; but he soon finds that his notion is incorrect. In the first place, the hole is made in a workmanlike manner; it appears to have been cast with the coin, and not to have been drilled afterwards. The hole has rather spoilt the appearance of the effigy of King Leopold, but no one is indignant, and the coins pass freely—for the tourist finds that there are many about. Further, these nickel coins appear to be somewhat larger than the majority of coins of the same value. These coins are for the Congo natives, to be worn as ornaments, if so required. But they are actual coins, and intended to be used as such; they are made with a hole in order to accommodate the natives, who have no clothes worth troubling about, and consequently no pockets. They thread the coins on a string and wear them round their necks like a row of beads.

BILLIARD BALLS.

Real ivory billiard balls that are cracked or useless are bought up and cut into dice or other small articles, for there is a constantly growing demand and diminishing supply of the best ivory. Ivory is sensitive to weather. Exposure to cold soon cracks it and renders billiard balls untrue. They are easily knocked out of shape, too, if not well seasoned or not well made. The centre of the tusk should go through the centre of the ball to preserve best a true spherical form. The best ivory comes from Zanzibar, the African elephant being more highly prized than the Asiatic on that account. Little ivory now comes from India, where the animal is so highly prized as a beast of burden that only the tusks of elephants that have died a natural death are obtainable. The tusks of the walrus and sea-horse form but a small part of the world's product, so that the African jungles are scoured to keep up the demand. London is the world's ivory auction mart.

MEDICINE FOR CHILDREN.

A medicine which keeps the babies and children well, or restores them to health when they are ill, is a priceless boon to humanity. Such a medicine is Baby's Own Tablets. These Tablets cure all stomach and bowel troubles, allay the pain of teething and give sound healthy, refreshing sleep. And the mother has the guarantee of a government analyst that this medicine does not contain one particle of the poisonous opiates found in so-called soothing mixtures and most liquid medicines. The Tablets are equally good for the newborn baby or the well grown child. Mrs. Robt. Currie, Loring, Ont., says—"I have found Baby's Own Tablets a splendid medicine for curing constipation and other ills of little ones." You can get these Tablets from any medicine dealer or by mail at 25c a box by writing The Dr. Williams' Medicine Co., Brockville, Ont.

"John, dear," said the invalid's wife, "I'll have to run away from you for an hour or so to-day. I have to get the material for a new dress that the dress-maker—" "But," complained the sick man, "do you think it is right to be thinking of dress while I am so ill?" "Why, John, it will be all right, no matter what happens. It's a black dress."

THEIR MEDICINAL VIRTUE WAS ONCE HIGHLY ESTEEMED.

Some Druggists State That Application of Leeches Is Not to Be Re- commended.

Leeches are mostly bought by people who have had a blow or fall, causing a blue spot to appear where the blood has congested. They apply leeches to take out the blood from these spots.

The best leeches are known as the Mediterranean leech and come from San Guiguela, Spain. They are about three inches long, with a soft smooth body tapering to each extremity, and are marked with from ninety to one hundred fine annulations; their backs are olive green with six rusty red longitudinal stripes. The ends are terminated by suckers.

DANGER IN THEIR USE.

A peculiar medical law provides that a druggist must not apply a leech. He may sell them to persons, but only a doctor is allowed to apply it. One well-known druggist told The Star that he once applied a leech to an abrasion on a man's forehead, because a doctor could not be got as the hour was late. "After the leech had gorged itself and rolled off the mark left by the leech bled so profusely that it took me over four hours to stop it; and then the man's face was ten times worse with the marks left by the acids I had to use."

The favorite method employed to induce a leech to fasten itself to the part whence the blood is to be drawn is to drop its tail first into a narrow bottle, and then invert the bottle over the spot where the leech is supposed to go to work. If it does not attach itself readily a little sweet oil rubbed on the spot will sometimes be effective. The leech nearly always falls off after it has gorged itself.

Some druggists put salt on a leech after it has been applied to a person, and this makes them sick, and they emit all the blood. This practice is very dangerous, as the leech may have been applied to a person who was suffering from some infectious disease, and no matter how long after it is applied the second time there is always a danger of blood poisoning.

They are very excitable, and may be seen stretching their bodies along the glass side of the bottle or bowl in which they are kept. At times you may see them writhing excitedly through the water, after the tiny animalcules that constitute their diet. They are only fairly good swimmers, but have extraordinary vigor.

Leeches possess wonderful power in extending and contracting their bodies. One moment they are stretched out to three inches, the next they are curled up in a tiny ball.

THEY LEAVE A SCAR.

Some druggists state that the application of leeches is not to be recommended; the cure is almost as bad as the disease. The leech has three small, sharp, semi-circular teeth that radiate from a centre. They cut deep, and always leave a scar of the same shape as themselves. On the common leech the mouth where the cutting teeth are found is at the anterior sucking disc. Just back of this, and on the upper side, are ten small black spots that serve for eyes.

material for a new dress that the dress-maker—"But," complained the sick man, "do you think it is right to be thinking of dress while I am so ill?" "Why, John, it will be all right, no matter what happens. It's a black dress."

We have no hesitation in saying that Dr. J. D. Kellogg's Dysentery Cordial is without doubt the best medicine ever introduced for dysentery, diarrhoea, cholera and all summer complaints, sea sickness, etc. It promptly gives relief and never fails to effect a positive cure. Mothers should never be without a bottle when their children are teething.

Agent: "I have called, sir, to show you our new patent cash-register; prevents all peculation, sir; makes it utterly impossible for any assistant to steal a penny." Mr. Slowgo: "Don't want it." Agent: "You don't?" Mr. Slowgo: "No, sir. The man next door put in one of them things last Monday, and before night the whole staff had struck for higher wages."

Is there anything more annoying than having your corn stepped upon? Is there anything more delightful than getting rid of it? Holloway's Corn Cure will do it. Try it and be convinced.

"To what do you attribute the Sultan's long life despite his illness?" asked the prominent Turk. "Bad marksmanship principally," answered the Court Physician, brusquely.

A Great Combination, "verovin" the best tonic is. It should be taken by all invalids, by all who are run down or out of sorts. It builds up, gives new life.

Master: "You'll find when you get your cheque, Mr. Pennink, that I have added \$5 a month to your salary. I believe you didn't make a single mistake in your figures during the entire year." Bookkeeper: "Yes, I did, just one." Master: "What was that?" Bookkeeper: "I figured on a bigger advance."

Not a Nauseating Pill.—The excipient of a pill is the substance which enfolds the ingredients and makes up the pill mass. That of Parmelee's Vegetable Pills is so compounded as to preserve their moisture, and they can be carried into any latitude without impairing their strength. Many pills, in order to keep them from adhering, are rolled in powders, which prove nauseating to the taste. Parmelee's Vegetable Pills are so prepared that they are agreeable to the most delicate.

Mrs. Clubwoman: "All the lecturing in the world doesn't seem to improve my husband a bit." Mrs. Homebody: "Perhaps you'd get along better, dear, if you spent your time mending his clothes instead of his ways."

THEY KNOW IT

Thousands of people throughout the country know that the ordinary remedies for piles—ointments, suppositories and appliances—will not cure.

The best of them only bring passing relief. Dr. Leonhardt's Hem-Roid is a tablet taken internally that removes the cause of Piles, hence the cure is permanent. Every package sold carries a guarantee with it.

It is perfectly harmless to the most delicate constitution. A month's treatment in each package. Sold at \$1.00. At any drug store, or The Wilson-Fyle Co., Limited, Niagara Falls, Ont.

Wilfer: "These are hard times. Why, I heard of a man the other day who couldn't raise money even on Government bonds." Slimwit: "Indeed! What was the reason?" Wilfer: "Well, you see, he didn't have the bonds."

How to Cleanse the System.—Parmelee's Vegetable Pills are the result of scientific study of the effects of extracts of certain roots and herbs upon the digestive organs. Their use has demonstrated in many instances that they regulate the action of the liver and kidneys, purify the blood, and carry off all morbid accumulations from the system. They are easy to take, and their action is mild and beneficial.

KNIGHTS OF WINDSOR.

The Military Knights of Windsor are an exceedingly ancient institution. They date from 1339. The pensions vary from \$125 to \$650 a year, and are supplemented by free quarters, in which nine months' residence out of the twelve is compulsory. Their duties are nominal—attendance in St. George's Chapel on saints' days, and at royal weddings and funerals, and supplying a guard of honor when foreign royalties visit Windsor Castle.

NEW CURE FOR HAY FEVER.

The latest treatment for the prevention of Hay Fever prescribes systematic and continued exercise taken in timely advance of the season for the appearance of the complaint. Specialists in the disease do not understand its nature. It is not now thought to be a form of catarrh and local applications have been largely abandoned. The theory that it is rheumatism of the mucus membrane is not accepted. A more favored idea attributes the inception of Hay Fever to sluggishness of the liver and bicycle riding is recommended to keep this organ in an active and healthy condition. After Hay Fever has arrived, the sufferer will find neither comfort or relief in bicycling, but systematic and easy wheeling during the preceding months is warranted to greatly modify the severity of an approaching attack, or to entirely prevent it.

THEN HE GOT A GOOD ONE.

"My wife is very fond of trout, so the other day I took off and went fishing." "Did you catch anything?" "Not until I got home."

Sunlight Soap is better than other soaps, but is best when used in the Sunlight way. Buy Sunlight Soap and follow directions.

Ethel: "How did you like the new curate, Maud?" Maud: "He made an indelible impression on me." Ethel: "How so?" Maud: "He emptied a cup of tea on to my new white silk dress."

Worms cause feverishness, moaning and restlessness during sleep. Mother Graves' Worm Exterminator is pleasant, sure and effectual. If your druggist has none in stock, get him to procure it for you.

"There are many things in this world to which we must shut our eyes," said the paternal Gibson. "Yes, pa, and soap is one of them," chimed in the pride of the family.

Many Thanks are due from the proprietors of Weaver's Cerate to friends who have written to tell of the Cerate's good word in curing scrofulous humors, scald head and other skin diseases.

"Do you buy your music by the sheet?" inquired a young lady of the deacon's daughter. "Oh, no," she replied, "I always wait until Sunday, and then get it by the choir."

It is the Farmer's Friend.—The farmer will find Dr. Thomas' Eclectic Oil a potent remedy for wounds or pains in the body or for affections of the respiratory organs and for household use generally. He will also find it a convenient friend in treating injured horses, cattle, etc., or relieving them when attacked by colds, coughs or any kindred ailments to which they are subject.

One miner is killed for every million tons of coal produced.

TRAGEDY FOLLOWS WEDDING

Providential Escape of Spain's Young King and Queen.

A despatch from Madrid says: Alfonso and his bride had come from the altar to-day and were receiving an ovation from their myriad of subjects such as even this proud capital had never seen before, when suddenly they were brought face to face with the peril of assassination in its deadliest form. Roses flung from every side were falling in a soft cascade upon the royal chariot. The young Queen, in unfeigned delight, was bowing right and left in acknowledgment of the deafening, unending cheers of welcome and congratulations, and the King, ignoring the multitude, was feasting his eyes upon the face of his bride, when a bunch of roses, flung from a balcony, fell with a rush as though made of lead in front of the chariot, and just behind the mules drawing it. There was a terrific crash, and a little smoke rose in the air. Death and consternation in an instant supplanted the mirth and rejoicing. A score of men and women lay dead or mutilated.

There was a moment of paralysis and horror. All eyes turned instinctively towards the bridal couple and saw their pale faces amid the ruins, gazing pitifully at the terrifying scene around them. The first man to regain his self-possession was the Duke of Cornuchuelos. He rushed forward, opened the door of the royal coach, and fairly dragged the King and Queen to the ground. Others of the royal escort instantly surrounded them, and they were

LED TO ANOTHER CARRIAGE.

The young King speedily mastered his emotion, and gave all his attention to his terrified bride. The line of march was quickly taken up to the palace, which was only a quarter of a mile away. Neither the King nor Queen were hurt, although how they escaped seems little short of miraculous.

The bride made a brave effort to control her feelings, but the fearful transition from joy to horror was too much for human nerves to endure, and presently she burst into tears. If the truth must be told, the King himself wept in sympathy. Meantime, at the scene of the outrage the first paralysis was succeeded by great confusion. The crowd, when it realized what had happened, became infuriated and surged toward the spot intent upon wreaking vengeance upon the author of the crime. Quickly a coronation of troops was formed and it was with the greatest difficulty that the dead and injured were cared for and removed.

ABOUT A SCORE KILLED.

The dead are given as from eight to twelve, and the wounded from twenty to thirty. Some say the bomb was thrown from No. 88 Calle Mayor. Others assert that it came from a top storey window. Still another version is that two bombs were thrown, one of which struck a balcony as it fell from above, while the second one was thrown directly in front of the wheels of the royal carriage. It was a powerful engine of destruction, being of polished steel two-fifths of an inch thick. Its explosion instantly killed two mules, four soldiers, a lieutenant, and two women, and beheaded a policeman. The passion for revenge was so great among the spectators that they attempted to lynch three French detectives, assuming that they were assassins.

of the tenant of the room from which the bomb was thrown, and the police identified it as that of Mateo Moral or Morales.

KINGSTON PENITENTIARY.

Some Interesting Facts Concerning that Institution.

From the last annual report the following information was gleaned concerning the Kingston Penitentiary. The number of inmates is 448, the number received during the year being 134. The annual cost of maintaining the institution is \$146,447, but this can be reduced by a revenue of \$42,800, making the cost per capita \$209.

There is a special department maintained in the prison for female convicts, and it is interesting to note that there are only seven in custody at the present time. On this point the warden very naturally remarks, "The gradual but persistent annual decrease in this class of prison population points to a time in the near future when the question of further maintenance of a full penitentiary establishment for female convicts will demand consideration. For this little family of seven delinquents we at Kingston Penitentiary are keeping up a prison establishment of thirty-two cells, with matron, assistant matron, kitchen, work rooms, wash rooms, etc. It would be infinitely better and cheaper to separate the women from the Penitentiary. There are over thirty unoccupied cells, but they are useless, as they cannot at present be used for male convicts."

Some years ago a suggestion was made to the Department at Ottawa that an arrangement might be made with the Ontario Government for the care of these women at the Mercer Reformatory. That institution has only between fifty and sixty inmates, although there is accommodation for three times the number.

The desirability of keeping youths under twenty out of the Penitentiary is emphasized by the inspector, who, very rightly, remarks, "This institution is adapted to those whose criminal habits have been formed and whose characters are yet in the plastic or formative condition." As those under twenty years of age now constitute one-eighth of the entire prison population, the removal of the half-dozen women would provide separate accommodation for young men under twenty, who could be placed under more distinctively reformatory influence.—J. J. Kelso, Toronto.

SIX MEN DROWNED.

Employees of Sydney Mines Meet at Watery Grave.

A Halifax despatch says: One of the worst tragedies in the history of Sydney Mines occurred there early on Sunday morning, when six miners lost their lives by drowning off Cranberry Head. The names of the men are Daniel McMullin, of Reserve Mines; Harry and Alexander Wilsonholme (brothers), John Fifefoot, Roderick McNeil, and Michael McPhee, the last five belonging to Sydney Mines. Details of the accident are meagre, but from what can be gathered from those who were with the men on Saturday night it appears that after leaving a saloon about 10.30 o'clock Sunday morning, the two Wilsonholmes, McNeil and McMullin decided to overhaul lobster traps off Cranberry

LEADING MARKETS

BREADSTUFFS.

Toronto, June 5.—Flour—Ontario—Exporters bid \$3.15 for 90 per cent patents, buyers' bags, for export; millers are asking \$3.20. Manitoba—First patents, \$4.40 to \$4.60; seconds, \$4 to \$4.10; bakers', \$3.90 to \$4. Wheat—Ontario—83c bid outside for No. 2 mixed, 84c asked; goose, 75½c bid, 78c asked. Wheat—Manitoba—No. 1 Northern, 85c asked, Point Edward. Oats—No. 2 white, 89c bid, in store, Toronto, 37c bid outside, east or west. Corn—No. 2 yellow, 58c asked, Toronto, 57½c bid. Barley—No. 3, 46c bid, C.P.R., 47 asked, main line, Michigan Central or Pere Marquette. Bran—\$16.50 asked outside.

COUNTRY PRODUCE.

Butter—Creamery prices are firm, with the demand active. Creamery 20c to 21c do. solids 19c to 20c Dairy 1b rolls, good to choice 16c to 17c do. large rolls 15c to 16c do. medium 14½c to 15c Cheese—Old is quoted here at 14c for large and 14½c for twins, and new at 12c to 12½c. Eggs—17c to 17½c for new-laid, and 13½c for splits. Potatoes—Ontario, 70c to 85c out of store; eastern Delawares at 85c to 97½c; Quebec 73c, and Nova Scotia at 75c. Baled Hay—\$10 for No. 1 timothy per ton in car lots on track here, and \$7.50 to \$8 for No. 2. Baled Straw—\$6 per ton for car lots on track here.

MONTREAL MARKETS.

Montreal, May 30.—Grain—The feature of the local grain situation was a further advance in oats as a result of continued scarcity of supplies. No improvement in demand from over the cable for Manitoba wheat. No new features in flour; demand continues only fair, but the market is still firm in tone. Millfeed continues in fair demand, trading in mouillie and shorts being active. Bran is moving slowly. The market for rolled oats continues quiet and steady. Baled hay continues firm in tone, though cable advices received this morning reported Liverpool and London markets to be easier, with a downward tendency.

Oats—No. 2, 43c; No. 3, 42c to 42½c; No. 4, 41c. Peas—78c f.o.b. per bushel. Corn—No. 3 mixed, 57½c; No. 3 yellow, 58½c ex-track. Flour—Manitoba spring wheat patents, \$4.60 to \$4.70; strong bakers', \$4.10 to \$4.20; winter wheat patents, \$4 to \$4.25; straight winter patents, \$4.20 to \$4.40; straight rollers, \$3.90 to \$4.10; do. in bags, \$1.85 to \$1.95; extras, \$1.50 to \$1.65. Millfeed—Manitoba bran, in bags, \$18 to \$19; shorts, \$20 to \$21 per ton; Ontario bran, in bulk, \$18.50 to \$19.50; shorts, \$20 to \$20.50; milled mouillie, \$21 to \$25; straight grain mouillie, \$25 to \$27 per ton. Rolled Oats—Per bag, \$2 to \$2.10, in car lots; cornmeal, \$1.30 to \$1.40 per bag. Hay—No. 1, \$9.50 to \$10.50; No. 2, \$8.50 to \$9.50; clover, mixed, \$7.50 to \$8.50, and pure clover, \$7 to \$8.

BUFFALO MARKETS.

Buffalo, June 5.—Flour—Steady. Wheat—Spring, dull and easy; No. 1 Northern, 86½c; winter, unsettled; No. 2 red offered 95c to arrive on track. Corn—Firm; No. 2 yellow, 56c; No. 2 mixed, 55½c. Oats—Dull; No. 2 white, 39c. Barley—Malting, in store, quoted 47 to 52c. Rye—No. 1, 66½c. Canal freights—Steady.

NEW YORK WHEAT MARKET.

DOMINION PARLIAMENT

GRANTS TO VETERANS.

Mr. Oliver's bill to make further provisions respecting grants of land to members of the militia force who were on active service in the North-West was introduced and read a first time.

TICKET-OF-LEAVE.

Mr. Bergeron learned from Mr. Lemieux that 890 prisoners from the penitentiaries of Canada had been liberated on ticket-of-leave since the system was adopted. Of these 78 had been taken back. The ticket-of-leave was based on the principle of considering each case on its merits.

THE SAN FRANCISCO GRANT.

On the suggestion of Mr. Fielding, the resolution to grant \$100,000 for the relief of the afflicted people of San Francisco was put through, and a bill based upon it was introduced, carried and included in bills which were sent to his Excellency's representative for Royal assent.

In answer to Mr. Borden, Mr. Fielding said that, although at first some difficulties had arisen in regard to the matter on account of the position taken by President Roosevelt, it had now been learned that if the money was sent to certain bodies it would be acceptable. The Government was now making inquiries to find out the best quarter to which the money should be sent. In view of this, it was necessary that the money should be available.

Mr. Borden acquiesced heartily in the proposal.

When the bill was put through the Senate under suspension of rules, Mon. Mr. Scott said it had not been decided whether the money would be transmitted to the sufferers through the British Ambassador at Washington or through the Red Cross Society. It would be one of them.

CHIEF JUSTICE FITZPATRICK.

At Saturday's meeting of the Cabinet Mr. Fitzpatrick was appointed Chief Justice of the Supreme Court of Canada. Mr. Aylesworth is transferred to the portfolio of Justice, while Mr. Lemieux attains Cabinet rank by his appointment as Postmaster-General.

ROSES LONDON FAD.

Exclusively Used for Dress and Table Decorations.

A despatch from London says: The present season's fashionable rage for roses for dress and table decorations eclipses any fad that has prevailed here for many years. Separate petals, as well as complete blossoms, are used. Dinner tables are sprinkled with petals, which are sometimes dusted with silver powder. Women pull artificial roses to pieces and scatter the petals on their hats. At a forthcoming society wedding the bride's train of white tulle will be sprinkled with white velvet petals, in each of which a tiny brilliant will be fixed to represent a dewdrop. The bridesmaids' dresses will be similarly sprinkled, one with pink, another with crimson, and another with yellow petals. The bouquets will all be of choice roses. The craze is in evidence at the drug-stores, the windows of which are filled with various rose lotions and perfumes.

WEDDED IN CELL.

Girl Married to Young Canadian Prisoner in Michigan.

A despatch from Grand Rapids, Michigan, says: Standing within a jail cell, seemingly unconcerned at the incongruity of their surroundings and impending separation, Thomas Walsh and Cora Ellis joined hands and were married on Wednesday. Walsh, who is 24 years old, was sentenced on Tuesday to from two and one-half years to five

and beheaded a policeman. The position for revenge was so great among the spectators that they attempted to lynch three French detectives, assuming that they were foreign Anarchists.

ALMOST LYNCHED HIM.

As soon as the bomb was thrown, the thrower was seized and was taken down stairs. As he entered the street the people flung themselves upon him, shrieking: "Kill the assassin!" They would have torn him to pieces, if the mounted guardia civile had not wheeled and charged the mob. Under a strong escort the murderer was led away while the royal procession was panic stricken. The King, however, quickly recovered himself and speaking through a broken window of the royal carriage, enquired what damage had been done. He immediately sent an orderly to reassure his mother and Princess Henry of Battenburg. Then His Majesty, raising his voice, commanded the procession to move on. Queen Victoria was deathly pale, but she smiled courageously. At that moment all the King's thoughts evidently were for her. He patted her arm and spoke to her continuously all the way to the palace.

BOMB-THROWER KILLS HIMSELF.

Madrid, June 3.—The wretch who ruthlessly slaughtered a score of fellow-beings in Calle Mayor on Thursday in a vain attempt to murder the King and Queen of Spain is dead by his own hand, after adding another cowardly crime to the list before he died. He killed himself in the Village of Torrejon de Ardoz, about 15 miles from Madrid, on the road to Saragossa. On Saturday afternoon a stranger, wearing a mechanic's blue blouse, ill-fitting trousers, and sandals in place of shoes, attracted the attention of the villagers by his travel-worn and fatigued appearance and by his evident nervousness and manners, which did not comport with his workman's clothes. He went to the railway station and asked at what time the next train left for Saragossa. On being told there was no train until the night mail, he entered a poor inn, called the Ventorra de los Jaramas, near the station, and ordered a meal. The inn is only used by peasants and muleteers, and supplies only such accommodation as these demand.

SUSPICION AROUSED.

Among the guests was a local jam-maker, of the name of Reyes, whose suspicions were confirmed by the anxious questions the traveler put concerning trains to a serving maid. Reyes conferred with the landlord, and they communicated with the rural police. Thereupon the gendarme named Vega went to the inn, accosted the stranger, and asked whether he had papers of identification. The reply being in the negative, the gendarme said, "You must come with me."

"What for?" the man queried. "You'll see at the police office," the gendarme responded.

KILLED OFFICER AND HIMSELF

The stranger rose and walked to the street, closely followed by Vega, the other occupants of the cabaret following them to the door. Vega and the other man had only gone a few yards when the prisoner made some remark to the gendarme and pointed across the street. Vega turned to look in the direction indicated, whereupon the prisoner drew a revolver from his blouse and shot the gendarme through the head. Vega fell dead. Instantly the murderer started to run, but he was so near the inn that its occupants, who had seen all, immediately fell upon him. Seeing an escape was hopeless, he turned the revolver upon his own breast, fired and fell across Vega's body.

The authorities at Madrid were informed of the circumstance, and some hours later officials from the Ministry of the Interior went to Torrejon to investigate.

POSITIVELY IDENTIFIED.

They returned to Madrid this morning, bringing the body on the train. It was taken to the little hospital attached to the Church of Good Success. The proprietor of No. 88 Calle Mayor, where the assassin had rented a room for his nefarious purpose, was summoned. He immediately declared the body was that

Saturday night it appears that after leaving a saloon about 10.30 o'clock Sunday morning, the two Wilson-holmes, McNeil and McMullin decided to overhaul lobster traps off Cranberry, and persuaded the other two to accompany them. The boat in which they put off was a mere shell, 13 feet long. On reaching the trap, about a hundred yards from the shore, it is supposed that all the men leaned over the same side of the boat to pull the trap in, with the result that the craft upset, throwing the six occupants into the water. Harry Wilsonholmes's body was found lying on the shore, and, fifty yards away, in a little cove, the body of McPhee was discovered, lying face downwards in the water. Ten yards from the latter was the upturned boat.

BOY MANGLED BY BULLDOG.

Animal Thought He Was Defending His Master's Children.

A St. John, N. B., despatch says: Seven-year-old Roy Campbell, of Carleton, was nearly torn to pieces on Wednesday by a bulldog acting in imagined defence of his owner's children. The lad was playing with the five and three-year-old children of David Robb, when Robb's dog leaped upon him, dragged him downstairs to the woodshed and was mangling him there, when a man, attracted by the screams, appeared. With difficulty he beat the dog off, and was carrying the horribly-mutilated child upstairs, when the infuriated animal again seized him and tore him from the rescuer's arms. When finally rescued the boy had one cheek bitten off and the muscles of his arms and legs torn to shreds. The dog fled, leaped 20 feet down from a wharf, and hid in a coal barge, where he was later found and killed.

WINNIPEG POWER PLANT.

New Supply of Cheap Electrical Energy for the City.

A despatch from Winnipeg says: Sir Daniel McMillan turned on the power at the Winnipeg Electric Street Railway Company's great plant on Pinnawa Channel, Winnipeg River, on Wednesday, inaugurating a new era in the city's development. The plant is located sixty miles from the city, and is capable of developing 10,000 horsepower, which will be transmitted to Winnipeg for the company's street railway system, lighting, manufacturing purposes, and will enable them to practically cut their former charges in half. The informal opening of the enterprise was witnessed by a representative gathering of city business men, including members of the Council.

BIG CUSTOMS SEIZURE.

Found on Montreal Steamer.

A Montreal despatch says: A big Customs seizure was made on Wednesday, when 50,000 German cigarettes were seized on board the steamship Montreal. The vessel calls at Antwerp, where the cigarettes were smuggled aboard and given to one of the crew with the object of getting them into Canada free of Customs. It is expected that arrests will follow in connection with the case.

MICHAEL DAVITT DEAD.

The Well Known Irish Leader Passes Away at Dublin.

A London despatch says: A notable career closed on Wednesday night, when, after a long and painful illness, Michael Davitt died peacefully and painlessly at 12 o'clock in the presence of his eldest son, Michael, and his two daughters, who had devotedly attended him through his illness, and many of his most intimate friends, including John Dillon. Mrs. Davitt, who had been in constant attendance on her husband, lies prostrated in the same hospital, too weak to leave her room.

39c. Barley—Mauing, in store, quoted 47 to 52c. Rye—No. 1, 66½c. Canal freights—Steady.

NEW YORK WHEAT MARKET.

New York, June 5.—Spot steady; No. 2 red, 93½ nominal elevator; No. 2 red, 95c nominal f.o.b. float; No. 1 Northern Duluth, 92½ nominal f.o.b. float; No. 1 Northern Manitoba, 89½c f.o.b. float.

CATTLE MARKET.

Toronto, June 5.—A good brisk trade was doing in all lines of cattle at the city market this morning.

Export Cattle—Choice, \$4.90 to \$5.20; medium to good, \$4.50 to \$4.75; bulls, \$3.50 to \$4; cows, \$2.75 to \$4.25.

Butcher Cattle—Picked lots, \$4.60 to \$4.70; good to choice, \$4.40 to \$4.60; fair to good, \$3.75 to \$4; common, \$2.50 to \$3; cows, \$3 to \$4; bulls, \$3.25 to \$4; canners, \$1.50 to \$2.

Stockers and Feeders—Short-keep feeders, \$4.75 to \$4.85; heavy feeders, \$4.40 to \$4.90; medium, \$2.50 to \$3.50; bulls, \$2 to \$2.75; good stockers run at \$3.75 to \$4; light at \$3.25 to \$3.70; rough common, \$2 to \$2.75, and bulls at \$1.75 to \$2.50.

Milch Cows—The market is quoted unchanged at a range of \$30 to \$60 each.

Calves—Prices were easier at 3c to 6c per lb.

Sheep and Lambs—Export ewes are quoted at \$4 to \$4.50 for shorn and \$4.50 to \$5.25 for unshorn; bucks at \$3 to \$3.50 for shorn and \$3.50 to \$4 for unshorn. Grain-fed yearling lambs are quoted at \$7 to \$7.50 and springs at \$3 to \$5.50 each.

Hogs—Are quoted steady at \$7.30 per cwt. for choice lightweights and \$7.05 for lights and fats, fed and watered.

BRACEBRIDGE SHAKEN.

Fire Explodes Four Boxes of Dynamite Stored in Building.

Bracebridge despatch says: A terrific explosion occurred within one hundred yards of the business portion of the town on Saturday evening about 7.30 o'clock. A shack, in which was stored, as near as can be ascertained, eleven cases of dynamite, took fire and blew up. Rocks and timber flew in all directions, and the narrow escape of many people from death is miraculous in the extreme. As it was, no one was hurt, although a number only a few yards away were thrown to the ground. The loss in property, glass, etc., will reach nearly four thousand dollars; almost every business house in town suffered through broken window panes. The British Lion and Dominion Hotels had the glass in nearly every window demolished. Dr. Williams' residence in the rear of which the explosion took place, was badly damaged. The Bird woolen mills and the Gazette office are also heavy losers. The shock was felt for miles, and dishes in houses half a mile away were thrown from the shelves. The dynamite was being used for blasting in connection with the building of the road to the new wharf, which is almost completed.

WINNIPEG HOTEL SCORCHED.

Leland is Damaged to Extent of About \$25,000.

A despatch from Winnipeg says: Fire, which originated in the flooring between the second and third flats on Saturday afternoon damaged the Leland Hotel to the extent of about \$25,000 and for a time threatened the destruction of the hostelry. The fire was got under control after six streams of water were kept playing for nearly half an hour. Everyone in the hotel was ordered to leave, and a considerable quantity of baggage and effects, together with the hotel books and papers, were carried out to the street, and considerable baggage was thrown downstairs. There was no panic. The proprietor places the damage at \$25,000. There was little or no confusion among the guests. The building was insured for \$50,000.

ding separation. Thomas Walsh and Cora Ellis joined hands and were married on Wednesday. Walsh, who is 24 years old, was sentenced on Tuesday to from two and one-half years to five years for larceny from a dwelling in the daytime. He is a handsome young man, and claims to have wealthy and influential parents in Montreal. Miss Ellis and Walsh were friends before either came here. Walsh was taken to Marquette on Wednesday to begin his service in the northern prison.

A CANADIAN'S SUICIDE.

C. W. Young, of Summerland, B. C., Takes His Own Life.

A Duluth, Minn., despatch says: C. W. Young of Summerland, B. C., committed suicide on Tuesday by shooting it is thought that despondency resulting from business troubles led to the tragedy. He was 50 years old and was for ten years cashier of the Rat Portage Lumber Company at Kenora, Ontario. Last February he resigned because he had health and engaged in the real estate business here. It is said that \$5,000 would have covered his obligation.

OCEAN COVERED WITH PUMICE.

Evidence of Subterranean Disturbances Near Laysan Islands.

A Honolulu despatch says: The schooner Lavinia arrived on Tuesday from Laysan Island and reported that the ocean in that vicinity is covered for many miles with a heavy coating of pumice. At Laysan Island and on the French Frigate shoals there were piles of pumice prior to the San Francisco earthquake. It is believed that there were some subterranean outbreaks, probably in connection with the Formosa earthquake. Capt. Schlemmer of the Lavinia says that the overseer at Laysan asserted that the shock of April 16 was felt on the island.

ZULUS WERE REPULSED.

They Fought Obstinately for Several Hours.

A despatch from Durban, Natal, says: The rebel Zulus again attacked Col. Leuchar's column on Tuesday. They fiercely assaulted the British camp, fought obstinately for several hours, but finally were beaten off with heavy loss by the steady fire of the troops. The British had three men killed and twelve wounded. In an important circular operation under the command of Col. MacKenzie, forty to fifty of Chief Bambata's followers were killed, and big herds of cattle and many women and children fell into the hands of the British.

SENTENCED TO BE HANGED.

Nova Scotia Murderer Beheaded His Victim.

A despatch from Windsor, Nova Scotia, says: George Stanley is guilty of the murder of Freeman Harvie, at Ellerhouse, where the head of a lonely farmer was completely severed from the body. He will pay the penalty of the law with his death on the 1st of August. Such was the verdict of the jury and the sentence of the judge on Wednesday.

THE PENALTY WAS DEATH.

A Little Lad Was Killed While Tormenting a Cat.

(A despatch from Terrebonne, Que., says: Narcisse Briere, a lad five years of age, and a companion of the same age named Drouin, on Thursday tied a package of paper to a cat's tail and then applied a match. The cat ran into a hay barn and the boys followed. The hay took fire and before young Briere could get out the flames surrounded him and he perished. The barn was turned as well as several other small buildings owned by Drouin's father, who is a neighbor of the Briere family.

EVILS OF CHILD LABOR.

Not Yet Entirely Suppressed But Great Progress Made.

"There are two great causes for child labor," writes J. J. Kelso, "the first is a rapacious commercialism that knows no compassion, and the second is the idea of many poor parents that, having 'raised' children, they have a right to their earning power at the earliest possible moment. The latter are not altogether to blame, however, for they are often driven in despair and poverty to sacrifice their children. In Ontario the school age extends to fourteen and the factory inspectors are vigilant in trying to suppress the evil of employing young children in factories. Still there are cases that may escape their observation, and persons knowing of children sent to work too young should send information to the Parliament Buildings. As showing the great advance that has been made the following extract from an article by Prof. Graham Taylor is worthy of perusal."

Facing the railway entrance to Bradford, England, is the monument to a young man. Clinging to his stalwart form is the figure of a little girl. Beneath his outstretched arm a boy has fled for refuge from a pursuer, whose approach is ward off by the protector. On the base of the monument is inscribed the belated tribute to the man who dared lead the forlorn hope against child labor in England seventy years ago—"Richard Ostler was born in Bradford." Belated indeed, long after the hero had suffered his martyrdom in the debtor's prison, and neglected old age.

Of that generation which Thomas Sadler arraigned before Parliament, as first guilty of child labor, he said in 1831: "Our ancestors could not have supposed it possible, posterity will not believe it true, that a generation of Englishmen had existed that would work lapping infancy of a few summers' old, regardless alike of its smiles or tears, and unmoved by its unresisting weakness, twelve, thirteen, fourteen, sixteen hours a day, and through the weary night also, till in the dewy morn of existence the bud of youth faded and fell where it was unfolded."

It seems hardly possible that the light from our statue of "Liberty enlightening the world," seventy-four years after England began to repent of its crime against childhood, should fall upon a generation of Americans as heartlessly repeating the same cruel folly, as though the experience and law of civilization had not outlawed the barbarity. But by that light a new generation of Americans is emerging, who will cease not to lift and bear the gauntlet that fell from Richard Ostler's stricken hand, until every child in America is assured its right to play and learn, as the best assurance of the nation's perpetuity and progress.

BRITISH WARSHIP DAMAGED.

Battleship Montagu Runs Aground on a Granite Cone.

A Bristol, England, despatch says: The British battleship Montagu, of 14,000 tons and belonging to the channel fleet, went ashore during a dense fog on Wednesday morning at the entrance of the Bristol channel. The vessel struck on a granite cone, south-west of Lundy Island, known as Shutter Point, at 2.10 on Wednesday morning and remains on the rocks with bad rents in her bottom. Several of her compartments are full of water, and the engine-room, boiler-rooms and stoke holds are flooded, and with the water still gaining. She has lost both propellers and her wireless apparatus, and besides has several holes in her plates. It is doubtful whether she can be refloated. Her crew has been transferred to other ships.

Naval experts are of opinion that to attempt to refloat the Montagu under present conditions will mean her disappearance in 30 fathoms of water, as she is fixed precariously on a ledge and in danger of overturning. If possible an attempt will be made to patch up the vessel before any attempt is undertaken to float her off.

ENA NOW QUEEN OF SPAIN

Magnificent Spectacle in the Streets of Madrid.

A despatch from Madrid says: The marriage of King Alfonso to Princess Ena Victoria was celebrated on Thursday.

The city awoke on Thursday under a cloudless sky with dazzling sunshine adding its glories to the bewildering maze of colors in which the streets were enveloped. From an early hour the centres presented an aspect of extreme animation. The entire night had been passed amid the din of fireworks, singing and dancing, and thousands of provincials, unable to secure shelter, spent the night in cafes and in the streets. At 8 o'clock crowds densely packed the main thoroughfares and the troops took up their positions, stopping all traffic, and the whole city took on an air of feverish expectancy. The esplanade fronting the royal palace was occupied by regiments of the Royal Guards in full gala uniforms, with glittering breast plates and helmets. Detachments of halberdiers with quaint cockades, stood with weapons crossed at the Princes' Gate leading to the palace courtyard. All along the route of the cortege hurried preparations were going on. Troops lined both sides of the streets in solid ranks for miles.

BRILLIANT DECORATIONS.

The scene from the Puerto Del Sol to the Pardo Palace was one of striking brilliancy. All the buildings were resplendent with the yellow and red colors of Spain woven into sunbursts, huge rosettes and graceful streamers looped from roof to roof, and arches of roses from which were suspended enormous flower baskets and trailing vines. Under this dazzling canopy of flags and flowers surged dense masses of humanity in festival attire, the women wearing white mantillas and bunches of bright flowers in their hair and with bright colored fans whipping the air. The population of Madrid had turned out in a body and was augmented to twice its usual size by visitors from the country and neighboring towns.

BRIDE'S ARRIVAL.

Princess Victoria came from the Pardo Palace to Madrid early in the morning, accompanied by her mother, Princess Henry of Battenberg, and her ladies of honor, and escorted by a regiment of the Royal Guards. The bride's party was installed in the Ministry of Marine, which had been sumptuously prepared for her. There the Princess put on her wedding dress and Queen Christina greeted the bride, after which the ladies breakfasted together in the Blue Salon of the Ministry.

WEDDING PROCESSION.

The wedding cortege started from the Royal Palace at 9.30 a.m. amid the ringing of church bells, the firing of artill-

ery salutes and the clamorous enthusiasm of the crowds massed along the route.

Ahead rode trumpeters in crimson velvet suits of the time of Philip II, sounding the approach of the royal party. Following them came the personnel of the royal household; the heralds mounted on stallions from the royal stud and caparisoned in Oriental style. The magnificent coaches of the Spanish grandees followed. But the brilliancy of this part of the cortege was far surpassed when the famous royal gala coaches came into view, each drawn by eight superb white horses with golden and silver harness and lofty colored plumage, looking like the coaches depicted on some illustrated page of a fairy book.

Following the Spanish grandees and princes were the visiting princes, including the Prince and Princess of Wales.

ROYAL BRIDEGROOM.

As the King's coach appeared it was greeted by a great roar, while the multitude wildly waved handkerchiefs, fans and parasols. His Majesty could plainly be seen smiling and bowing to the popular greetings. He wore the uniform of a field marshal, his hat surmounted by a sweeping white plume. Around his coach was a cavalcade of royal guards, heralds, equerries and pages, holding back the enthusiastic populace. Immediately following the royal coach came the bride's party, forming another glittering array of gala coaches, bearing the lords and ladies in waiting and the princes and princesses of the House of Battenberg, and finally came the famed mahogany coach with the radiant bride, Princess Victoria, attended by her mother and Queen Marie Christina.

FLOWERS SHOWERED ON BRIDE. The appearance of the Princess who was about to become their Queen aroused the people to the highest pitch of emotion. Men and women cheered and shouted friendly salutations, while others from the balconies of the houses along the route showered flowers on the Princess and let loose hundreds of pigeons carrying long bright streamers. The bride looked most charming and graciously acknowledged the continued ovations.

CEREMONY AT CHURCH.

On reaching the Chamber of Deputies the cortege came in sight of the Church of St. Jeronimo Real, which was magnificently adorned for the ceremony. Over the entrance was suspended an immense canopy of red and yellow velvet, embroidered with Spanish escutcheons and supported on gold-tipped lances. Awaiting the bridal party stood lines of halberdiers and palace guards.

At 11 a.m. the bridal party entered the church and the ceremony began.

King Alfonso and his bride left the church at 12.30 p.m.

The announcement of the wedding, by the firing of artillery salutes, was wildly acclaimed by the people.

BARLEY AS A NURSE CROP AND FOR FEED.

Repeated failures with wheat led my brother and me to investigate heedless barley, writes Mr. Chas. B. Wing. We

firm seed bed, and for a nurse crop sow one bushel seed per acre, covering about 1 inch, and sowing at early cut seeding time. Practically no commercial fertilizers are used on the farm, as we have some 800 loads of stable manure a year. It is important to cut early, as the grain shatters easily. July 12 is about the average harvest time with us. The yield when one bushel per acre is used, is usually from 20 to 40 bushels per acre. If sown for grain alone at the rate of two bushels per acre, it is from 30 to 50 bushels per acre. We handle the grain just as wheat, both in cut-

Naval experts are of opinion that to attempt to refloat the Montagu under present conditions will mean her disappearance in 30 fathoms of water, as she is fixed precariously on a ledge and in danger of overturning. If possible an attempt will be made to patch up the vessel before any attempt is undertaken to float her off.

Little is as yet known as to what happened when the vessel struck. All the members of the crew were saved, but several of the men had limbs broken or were otherwise injured. It is reported that something in the nature of a panic occurred when the Montagu struck.

The Montagu is a first-class steel battleship. She was launched in 1903, cost about \$5,250,000 and carried a crew of 750 officers and men.

MY NEVER BE REFLOATED.

A Plymouth, England, despatch says. The latest news of the Montagu deepens the gravity of the disaster. The vast rents in her bottom render it doubtful whether she can be refloated. Her crew have been transferred to other ships. According to latest reports received at Davenport at midnight Wednesday the battleship is not likely to be refloated.

FAMINE IN RUSSIA.

Peasants Dying From Starvation and Epidemics.

A despatch from London says: The St. Petersburg correspondent of the Tribune prints a distressing picture of the famine in Russia. He says that peasants lie prostrate in their huts, dying from lack of food and from the epidemic which swiftly follows in the wake of famine. However loudly the sufferers complain no help comes to them. Twenty-two provinces are affected, and the victims number 20,000,000. The distress exceeds that which prevailed in the famine years of 1891 and 1892. Such help as is possible needs to be increased fivefold to be in the least degree effective. Private subscriptions come in slowly. The Government's subsidy is insignificant, while the officials place obstacles in the way of every unofficial helper. The Minister of the Interior, fearing that reformers will come in contact with the starving peasants, has ordered all soup kitchens that have been opened without the permission of the local Governors, to be closed. The obeying of this order has closed what in some cases were the only channels of relief.

COLD FOR THE WHEAT.

The Western Crop is Not Making Much Progress.

A Winnipeg despatch says: The weekly report of agents of the Canadian Pacific Railway regarding the condition of the wheat crop was received on Wednesday, and continues very satisfactory. Growth has not been rapid during the past few days owing to the prevalence of cool weather, but the grain has received an excellent start and with the advent of warm days will spring up and grow vigorously. From five to eight inches is the greatest height reported. The weather has been undoubtedly cool, the warmth not being sufficient to induce much growth during the past week. Many agents report cool weather, some cold and a few very cold, with hard frost. The frost, however, has done no damage and moisture has been on the whole ample.

A REIGN OF TERROR.

Revolutionists Are Visiting Summary Vengeance.

A despatch from Mitau, Russia, says: A reign of terror exists in Courland province, no less terrible than the situation during the suppression of the revolution by the troops. Revolutionists are visiting summary vengeance on all witnesses appearing against them in the military or civil courts. Murders are of daily occurrence. At Frederikstadt on Thursday the Lutheran church sexton and his son who appeared against the assassins of the pastor, were kidnapped by a band of twelve men and were taken to the woods and shot.

Josephine Terranova, the Italian girl admitted killing her aunt and uncle in New York, was found not guilty on Friday.

Pendennis White, millionaire banker, was killed at Buffalo on Thursday in a collision between an automobile and street car.

The House Committee at Washington favorably reported on the bill making eight hours a legal day's labor on Government work.

Walter Ninoli, a chauffeur, of New York, was convicted of driving an automobile at excessive speed and was fined \$100. Justice Keady announced that he had determined in future to dispense with fines and to send offenders to jail.

Wm. Watkins, a mine worker of Edwarsville, Penn., received notice that he has been awarded a Carnegie medal and \$1,200 for heroism. He is the first anthracite mine worker to get such a reward. On Sept. 3, 1904, he carried three men from a burning mine.

GENERAL.

The assassins of Vice-Consul Stuart at Batoum have been arrested.

At Riga, Livonia, an excursion steamer upset and fifteen persons were drowned.

A horse was gored to death at the bull fight under the box occupied by the King and Queen of Spain, on Saturday.

EATEN BY SLEDGE DOGS.

Terrible Tragedy Reported From Indian Harbor, Labrador.

A Halifax, N. S., despatch says: Wm. McKay, formerly of Halifax, now assistant manager of a lumber company in Labrador, is home on a visit. Mr. McKay says that on his way here, while at Indian Harbor, Straits of Belle Isle, he heard of a tragedy which had occurred there just previous to his arrival, when a man named Robert Crumby had been killed and eaten by the dogs he was driving. Crumby lived in a region several miles from firewood supplies, and he was on his way for a load, with a sledge drawn by nine dogs. When out of sight of the village he had left, and 20 minutes in advance of another dog team that was following, his dogs turned on him and tore him to pieces. When the other team came up Crumby was dead and the pack were devouring him. So intent and fierce were the canines, Mr. McKay says, that two of them, before they would cease tearing at the human flesh, had their heads stricken off with axes. Subsequently the dogs were all shot. The pack of dogs was known to be bad, and it was not customary for one man to go with them alone. Crumby on this occasion, however, did so, and the poor fellow perished. He was about 25 years old, and unmarried.

Mr. McKay says that this kind of thing is not infrequent. Some time before John Laine, his wife and granddaughter started for Nain, a Mevavian settlement, north of Gillisport. They were never heard of again, and the supposition is that their dogs killed and devoured them.

TRAIN ROBBERS CONVICTED.

Edwards and Dunn Get Life—Colquhoun, 25 Years.

A despatch from Vancouver, B. C., says: The train robbers were convicted on Friday afternoon at Kamloops and sentenced, Edwards and Dunn for life, and Colquhoun for 25 years. No new evidence was put in at the new trial, which began on Thursday. The same witnesses gave the same evidence, and by holding a night session all the testimony was in shortly after 11 o'clock on Friday morning. Dunn went to pieces, becoming quite hysterical.

REWARD FOR GALLANTRY.

Decoration and Annuities for 6,500 of Japan's Naval Heroes.

A despatch from Tokio says: The Official Gazette on Thursday published the first batch of naval rewards for gallant conduct during the war. Nearly 6,500 warrant officers and men will receive the Order of the Golden Kite and an annuity of \$50 to \$100.

BARLEY AS A NURSE CROP AND FOR FEED.

Repeated failures with wheat led my brother and me to investigate beardless barley, writes Mr. Chas. B. Wing. We bought ten bushels of Success beardless barley, sowed as a nurse crop for alfalfa, not realizing its value as such, but as an experiment. It came up and grew well, headed out when only a foot high, and I think never reached a greater height than 2 feet. Although it was sown on our richest land, which would produce 100 bushels corn per acre, it did not lodge at all. The rate of sowing was two bushels per acre, and the first year the crop was between 30 and 40 bushels per acre. It ripened about July 5, and came off the ground leaving the alfalfa in fine shape.

This first experience proved to be a very valuable nurse crop, the best that we had ever seen. Subsequent experiences have confirmed this opinion so much that we now think no other nurse crop compares with it and therefore use no other, either for alfalfa or clover. Beardless barley does not stool out as much as oats, has fewer leaves to shade the young clover and comes off the ground before there has been time to injure the young grass. It seems to be a decided benefit to the grass, which it does not rob as oats are sure to do. It shades the ground just enough to protect the grass from the sun's extreme heat, and it keeps all injurious weeds from choking the tender young meadow. Very rarely does it lodge; not at all, unless there is a great deal of rain, and the ground is very fertile.

Subsequent experiments were made with other varieties, such as hullless, Champion and others. Hullless barley yields a great deal of grain, but is not fit for a nurse crop. Champion, however, has finally replaced the Success with us. It yields heavier, has fully as stiff straw and if sown at the rate of one bushel per acre, will not choke the meadow. It ripens by July 15, which is early enough. We think so much of securing the best stand of alfalfa, that beardless barley would have preference, even if it would give us only our seed back as grain. But the condition is not as bad as this.

THE MAIN USE FOR BARLEY

of any sort, has always been in the manufacture of liquor, but brewers have objected to beardless spring varieties, and yet they have offered us 50 cents a bushel. At any time one ought to secure 40 cents, which pays fairly well for the use of the land, even if there were no other use to which the grain could be put.

After 12 years' experience we have come to value barley highly as a feed. It is not safe for horses, unless fed in very small amounts, ground, and as a conditioner rather than as feed. A pint a day per head a day will put a horse into fine condition. We have not found it to be suitable for poultry unless mixed with other grain. The tendency is to cause scouring. Sheep do well on it. They must be accustomed to it very gradually, however, as they are greedy for it and will kill themselves if allowed to. After it has been fed for a short time, the amount may be gradually increased until as much is given, nearly as could be fed on any other grain. It need not be ground for sheep.
